Action: This error should not normally occur. If it persists, contact Oracle Support Services.

ORA-24820: Different LOB function called while another OCI LOB call is in progress

Cause: An attempt was made to execute a new OCI LOB call while another OCI LOB call was in progress.

Action: Wait for the ongoing LOB streaming call to finish before issuing the next server call, or use OCIBreak() to abort the current LOB streaming call.

ORA-24850: failed to startup shared subsystem

Cause: While attempting to initialize OCI in shared mode, a problem was encountered in starting up the shared subsystem.

Action: Contact Oracle Customer support.

ORA-24851: failed to connect to shared subsystem

Cause: While attempting to initialize OCI in shared mode, a problem was encountered in connecting the process to the shared subsystem.

Action: Contact Oracle Customer Support.

ORA-24852: protocol error during statement execution

Cause: An internal protocol error occurred while receiving describe data from the server during execution of a statement.

Action: Contact Oracle Customer Support.

ORA-24853: failed to connect thread to shared subsystem

Cause: While attempting to initialize OCI in shared mode, a problem was encountered in connecting the thread to the shared subsystem.

Action: Contact Oracle Customer Support.

ORA-24854: invalid pieceinfo provided

Cause: While making the first call to write LOB data, an invalid pieceinfo value provided.

Action: Correct the call to use OCI_ONE_PIECE or OCI_FIRST_PIECE. If using OCCI, make sure to call writeBuffer before calling writeLastBuffer.

ORA-24900: invalid or unsupported mode parameter passed in call

Cause: The mode parameter passed into the OCI Client Notification call is incorrect.

Action: Please correct the mode parameter passed into OCI.

ORA-24901: handles belonging to different environments passed into an OCI call

Cause: All handles passed into an OCI call should belong to the same environment. In the call that returned this error, handles belonging to different environments were passed in.

Action: Please ensure that the handle parameters in the call to come from the same OCI Environment.

ORA-24902: invalid subscription name or name-length in subscription handle

Cause: The subscription handle passed into the OCI call does not have a proper name or name-length attribute.

Action: Please set the name and name-length attributes using the OCIAttrSet() call.

ORA-24903: invalid namespace attribute passed into OCI call

Cause: The subscription handle passed into the OCI call does not have a proper namespace attribute.

Action: Please set the namespace attribute using the OCIAttrSet() call.

ORA-24904: invalid callback attribute passed into OCI call

Cause: The subscription handle passed into the OCI call does not have a proper callback attribute.

Action: Please set the callback attribute using the OCIAttrSet() call.

ORA-24905: invalid recipient protocol attribute passed into OCI call

Cause: The subscription handle passed into the OCI call did not have a proper recipient protocol attribute.

Action: Please set the recipient protocol attribute using the OCIAttrSet() call.

ORA-24906: invalid recipient attribute passed into OCI call

Cause: The subscription handle passed into the OCI call did not have a proper recipient attribute.

Action: Please set the recipient attribute using the OCIAttrSet() call.

ORA-24907: invalid pair of callback and recipient protocol attributes

Cause: The subscription handle passed into the OCI call can't have both the callback defined and a recipient protocol other than OCI_SUBSCR_PROTO_OCI at the same time.

Action: Please set the appropriate callback and recipient protocol attributes using the OCIAttrSet() call.

ORA-24908: invalid recipient presentation attribute

Cause: The subscription handle passed into the OCI call does not have a valid recipient presentation attribute.

Action: Set the recipient presentation attribute using the OCIAttrSet() call

ORA-24909: call in progress. Current operation cancelled

Cause: The OCI call was invoked when another call on the connection was in progress.

Action: Check if the OCI call is supported when the call is in progress under special conditions; for example, if it is being used by a signal handler.

ORA-24911: Cannot start listener thread at specified port

Cause: Thread already running at a different port.

Action: Set the correct port in the environment handle or let the system choose the port.

ORA-24912: Listener thread failed. *string*

Cause: Thread listening for event notification exited because of an error. The error encountered is appended to the error message.

Action: The client needs to be restarted.

ORA-24915: Cannot start Listener at specified IP address

Cause: Thread was already listening at a different IP address.

Action: Set the correct IP address in the environment handle or let the system choose the correct IP address.

ORA-24916: cannot use IP address attribute before release 11.2 compatible notifications

Cause: An attempt was made to use OCI_ATTR_SUBSCR_IPADDR attribute before release 11.2 compatible notifications.

Action: Change the compatibility to 11.2.

ORA-24940: invalid combination of *string* namespace, *string* presentation and *string* receive protocol

Cause: An invalid combination of namespace, presentation and receive protocol was specified during notification registration. Currently, only AQ namespace is supported with XML presentation. Non-AQ namespace is not supported for e-mail and HTTP receive protocols.

Action: Please change the register call appropriately.

ORA-24941: invalid combination of notification grouping attributes

Cause: An invalid combination of notification grouping attributes was specified. Currently, only TIME notification grouping class is supported. If notification grouping class is zero, all other notification grouping attributes must be zero.

Action: Refer to documentation and change the attributes appropriately.

ORA-24942: cannot use ntnfn grouping attributes on before release 11.0 compatible ntnfns

Cause: An attempt was made to use notification grouping on before release 11.0 compatible notifications.

Action: Change the compatibility to 11.0.

ORA-24943: cannot use ntnfn grouping with this receive protocol, presentation and/or QoS

Cause: An attempt was made to use notification grouping with e-mail or HTTP receive protocol or XML presentation or payload delivery or reliable QoS. Currently, only OCI and PLSQL receive protocols and default presentation are supported with notification grouping.

Action: Refer to documentation and change the call appropriately.

ORA-24944: cannot use timeout or grouping with ANONYMOUS namespace

Cause: An attempt was made to use timeout or grouping with ANONYMOUS namespace. Currently, timeout and grouping are supported only with AQ and DBCHANGE namespaces.

Action: Refer to documentation and change the call appropriately.

ORA-24945: cannot use context, QOS and timeout attributes of notification on lower than 10.2 compatible notifications

Cause: An attempt was made to use context, QOS and timeout attributes of notification on lower than 10.2 compatible notifications.

Action: Change the database compatibility to 10.2.

ORA-24946: invalid registration callback

Cause: An attempt was made to use a reserved callback for notification registration.

Action: Choose a different name for the notification callback and change the register call appropriately.

ORA-24947: Invalid namespace attribute specified for the subscription *string*

Cause: An attempt was made to register with invalid namespace attribute.

Action: Refer to documentation and change the namespace appropriately.

ORA-24950: unregister failed, registration not found

Cause: The registration that was asked to be unregistered could not be found.

Action: Please check the callback function name and the subscription name in the unregister call.

ORA-24952: register, unregister or post has incorrect collection count

Cause: The register, unregister or post function was invoked with a collection that was smaller than the size specified by the parameter to the function.

Action: Please check the function's use and ensure that the size parameter is correct.

ORA-24960: the attribute *string* is greater than the maximum allowable length of *number*

Cause: The user attempted to pass an attribute that is too long

Action: Shorten the specified attribute and retry the operation.

ORA-25000: invalid use of bind variable in trigger WHEN clause

Cause: A bind variable was used in the when clause of a trigger.

Action: Remove the bind variable. To access the table columns use (new/old).column_name.

ORA-25001: cannot create this trigger type on this type of view

Cause: INSTEAD OF triggers can be created on any view which is not an Editioning View, while BEFORE and AFTER triggers may only be created on Editioning Views.

Action: Change the trigger type to INSTEAD OF or change the view on which you are attempting to create a DML trigger.

ORA-25002: cannot create INSTEAD OF triggers on tables

Cause: Only BEFORE or AFTER triggers can be created on a table.

Action: Change the trigger type to BEFORE or AFTER.

ORA-25003: cannot change NEW values for this column type in trigger

Cause: Attempt to change NEW trigger variables of datatype object, REF, nested table, VARRAY or LOB datatype which is not supported.

Action: Do not change the NEW trigger variables in the trigger body.

ORA-25004: WHEN clause is not allowed in INSTEAD OF triggers

Cause: WHEN clause is specified in an INSTEAD OF trigger.

Action: Remove the WHEN clause when creating an INSTEAD OF trigger.

ORA-25005: cannot CREATE INSTEAD OF trigger on a read-only view

Cause: attempt to create an INSTEAD OF trigger on a view created with read-only option. The view cannot be updated using INSTEAD OF triggers.

Action: Do not create the trigger.

ORA-25006: cannot specify this column in UPDATE OF clause

Cause: Attempt to create a trigger on update of a column whose datatype is disallowed in the clause, such as LOB and nested table.

Action: Remove the UPDATE OF clause.

ORA-25007: functions or methods not allowed in WHEN clause

Cause: PLSQL function call or method invocation is not allowed in the WHEN clause when creating a trigger.

Action: Remove the function call or method invocation from the WHEN clause.

ORA-25008: no implicit conversion to LOB datatype in instead-of trigger

Cause: When inserting or updating a view using instead-of trigger, the new value for a LOB view column is of a different datatype.

Action: Specified a LOB value as the new value for the LOB view column.

ORA-25009: Nested table clause allowed only for INSTEAD OF triggers

Cause: Triggers on nested tables can only be created on view columns using INSTEAD OF triggers.

Action: Use view nested table columns for defining nested table triggers.

ORA-25010: Invalid nested table column name in nested table clause

Cause: The column name specified in the nested table clause of an INSTEAD OF trigger does not correspond to a nested table column.

Action: Specify a nested table column on which the trigger is to be defined.

ORA-25011: cannot create trigger on internal AQ table

Cause: An attempt was made to try to create a trigger on a table that is used internally to support the Advanced Queueing (AQ) feature.

Action: Do not create the trigger.

ORA-25012: PARENT and NEW values cannot be identical

Cause: The referencing clause specifies identical values for PARENT and OLD.

Action: Re-specify either the PARENT or NEW referencing value.

ORA-25013: OLD and PARENT values cannot be identical

Cause: The referencing clause specifies identical values for OLD and PARENT.

Action: Re-specify either the OLD or PARENT referencing value.

ORA-25014: cannot change the value of a PARENT reference variable

Cause: Parent values can only be read and not changed.

Action: Do not attempt to change a Parent variable.

ORA-25015: cannot perform DML on this nested table view column

Cause: DML cannot be performed on a nested table view column except through an INSTEAD OF trigger

Action: Create an INSTEAD OF trigger over the nested table view column and then perform the DML.

ORA-25016: cannot specify column list for insert into nested table view column

Cause: A column list cannot be specified for inserts into the nested table view column.

Action: Specify all the columns for insert into the nested table.

ORA-25017: cannot reference NEW ROWID for movable rows in before triggers

Cause: NEW ROWID was referenced in a before row trigger which is defined on an index-organized table, or a partitioned table with enabled movement of rows. The ROWID cannot be computed in a before row update trigger because it depends on the actual values of the row

Action: Remove references to NEW ROWID from the trigger definition.

ORA-25018: conflicting trigger *string* already exists

Cause: Conflicting instead of DDL trigger on schema/database already exists.

Action: Remove the old trigger

ORA-25019: too much concurrency

Cause: cannot pin the database/schema because of too much concurrency

Action: try the operation later

ORA-25020: renaming system triggers is not allowed

Cause: renaming system triggers is not allowed

Action: Drop the trigger, and create a new one for the same

ORA-25021: cannot reference a trigger defined on another table

Cause: Referenced trigger in the FOLLOWS clause was defined on another table.

Action: Create the referenced trigger on the same table

ORA-25022: cannot reference a trigger of a different type

Cause: Referenced trigger in the FOLLOWS or PRECEDES clause was either a different type or not a compound trigger.

Action: Create the referenced trigger as the same type or a compound trigger.

ORA-25023: Cyclic trigger dependency is not allowed

Cause: A cycle of trigger dependency can be formed.

Action: Do not create a trigger that can formed a cyclic dependency.

ORA-25024: cannot specify FOLLOWS for a REVERSE CROSSEDITION trigger

Cause: The FOLLOWS clause was specified when creating the REVERSE CROSSEDITION trigger.

Action: Do not create a REVERSE CROSSEDITION trigger with a FOLLOWS clause.

ORA-25025: cannot specify PRECEDES clause

Cause: The PRECEDES clause was specified when creating a FORWARD CROSSEDITION trigger or a regular trigger.

Action: Do not create a FORWARD CROSSEDITION or a regular trigger with a PRECEDES clause.

ORA-25026: FOR EACH ROW was specified with compound triggers

Cause: FOR EACH ROW is not allowed with compound triggers.

Action: Remove the FOR EACH ROW clause.

ORA-25027: compound triggers cannot be used as system triggers

Cause: Compound trigger was defined as system trigger.

Action: Do not use compound trigger as system trigger.

ORA-25028: regular trigger body can not start with keyword COMPOUND

Cause: Regular triggers body should start with BEGIN/DECLARE etc .

Action: Fix the syntax and recompile.

ORA-25029: compound triggers should always start with keyword COMPOUND

Cause: Compound trigger body was started with incorrect keyword.

Action: Fix the syntax and recreate.

ORA-25030: crossedition trigger cannot be owned by a non-editioned user

Cause: An attempt was made to create crossedition trigger in a non-editioned schema.

Action: Enable editions for the user and then create the crossedition trigger.

ORA-25031: only a crossedition trigger may be specified

Cause: The trigger specified was not a crossedition trigger.

Action: Specify a crossedition trigger.

ORA-25032: crossedition trigger cannot be created in ORA\$BASE

Cause: An attempt was made to create crossedition trigger in the ORA\$BASE edition.

Action: Do not create a crossedition trigger in the ORA\$BASE edition.

ORA-25033: triggers cannot be executed at this time

Cause: An attempt was made to execute a trigger when the session was almost finished.

Action: Do not attempt to DML with triggers that are expected to execute when session has almost ended.

ORA-25034: cannot bypass trigger owned by another user

Cause: An attempt was made to do DML from a crossedition trigger on an object that has a non-crossedition trigger owned by another user. DML from a crossedition trigger bypasses the running of non-crossedition triggers; this cannot be allowed for triggers owned by other users.

Action: Permit the non-crossedition trigger to be bypassed by attaching it to the editioning view rather than the table, moving one of the triggers to be in the same schema as the other, or explicitly disabling the non-crossedition trigger.

ORA-25035: cannot perform DML on remote object from a crossedition trigger

Cause: An attempt was made to do DML from a crossedition trigger that would modify data in a remote database. DML from a crossedition trigger has special rules applied regarding what triggers will fire as part of that DML; these special rules cannot be applied across database links and therefore the DML cannot be allowed.

Action: Perform the DML in a helper function separate from the crossedition trigger itself; the special rules are not applied when the DML is not issued from within the crossedition trigger itself.

ORA-25100: TABLESPACE option can only be used with ALTER INDEX REBUILD

Cause: The TABLESPACE option to ALTER INDEX was used without the REBUILD option.

Action: Use ALTER INDEX REBUILD TABLESPACE tablespace name.

ORA-25101: duplicate REBUILD option specification

Cause: The REBUILD option to ALTER INDEX is specified more than once.

Action: Specify the option at most once.

ORA-25102: PARALLEL option can only be used with ALTER INDEX REBUILD

Cause: The PARALLEL option to ALTER INDEX was used without the REBUILD option.

Action: Use ALTER INDEX REBUILD.

ORA-25103: NOPARALLEL option can only be used with ALTER INDEX REBUILD

Cause: The NOPARALLEL option to ALTER INDEX was used without the REBUILD option.

Action: Use ALTER INDEX REBUILD.

ORA-25104: UNRECOVERABLE option can only be used with ALTER INDEX REBUILD

Cause: The UNRECOVERABLE option to ALTER INDEX was used without the REBUILD option.

Action: Use ALTER INDEX REBUILD.

ORA-25105: RECOVERABLE option can only be used with ALTER INDEX REBUILD

Cause: The RECOVERABLE option to ALTER INDEX was used without the REBUILD option.

Action: Use ALTER INDEX REBUILD.

ORA-25106: only one of PARALLEL or NOPARALLEL clause may be specified

Cause: PARALLEL was specified more than once, NOPARALLEL was specified more than once, or both PARALLEL and NOPARALLEL were specified in an ALTER INDEX REBUILD statement.

Action: Remove all but one of the PARALLEL or NOPARALLEL clauses.

ORA-25107: duplicate TABLESPACE option specification

Cause: the TABLESPACE was specified more than once in an ALTER INDEX REBUILD statement.

Action: Remove all but one of the TABLESPACE clauses.

ORA-25108: standby lock name space exceeds size limit of *string* characters

Cause: The lock name space for the standby database exceeded the maximum string length.

Action: Change initialization parameter `_STANDBY_LOCK_NAME_SPACE` to a character string of less than the specified characters.

ORA-25109: standby lock name space has illegal character '*string*'

Cause: An invalid lock name space was specified for the standby database. The lock name space for the standby database can only contain A-Z, 0-9, '_', '#', '\$', ':' and '@' characters.

Action: Change initialization parameter `_STANDBY_LOCK_NAME_SPACE` to a valid character string.

ORA-25110: NOSORT may not be used with a bitmap index

Cause: An attempt was made to create a bitmap index using the NOSORT option.

Action: Remove NOSORT from the CREATE BITMAP INDEX statement.

ORA-25111: creation of BITMAP cluster indices is not supported

Cause: An attempt was made to create a cluster index with the BITMAP attribute.

Action: Remove BITMAP from the CREATE INDEX statement.

ORA-25112: maximum number of BITMAP index columns is 30

Cause: Too many columns were specified for the index.

Action: Create an index on fewer columns.

ORA-25113: GLOBAL may not be used with a bitmap index

Cause: An attempt was made to create a bitmap index using the GLOBAL option.

Action: Remove GLOBAL from the CREATE BITMAP INDEX statement, and/or add a LOCAL partition descriptor if the table is partitioned.

ORA-25114: invalid file number specified in the DUMP DATAFILE/TEMPFILE command

Cause: An invalid file number was used in dumping a datafile or tempfile.

Action: Specify a valid file number.

ORA-25115: duplicate BLOCK option specification

Cause: BLOCK (MIN/MAX) was specified more than once in the DUMP DATAFILE/TEMPFILE command.

Action: Specify only one BLOCK option.

ORA-25116: invalid block number specified in the DUMP DATAFILE/TEMPFILE command

Cause: An invalid block number was used in dumping a datafile or tempfile.

Action: Specify a valid block number.

ORA-25117: MIN/MAX/Block Number expected

Cause: A value other than MIN/MAX, or a block number was entered in the DUMP DATAFILE/TEMPFILE command.

Action: Correct the syntax.

ORA-25118: invalid DUMP DATAFILE/TEMPFILE option

Cause: An invalid option was specified for the DUMP DATAFILE/TEMPFILE command.

Action: Correct the syntax.

ORA-25119: LOGGING/NOLOGGING option already specified

Cause: In CREATE TABLESPACE, the LOGGING and/or NOLOGGING options were specified more than once.

Action: Remove all but one of the logging specifications.

ORA-25120: MINIMUM EXTENT option already specified

Cause: In CREATE TABLESPACE, the MINIMUM EXTENT option was specified more than once.

Action: Remove all but one of the MINIMUM EXTENT specifications.

ORA-25121: MINIMUM EXTENT value greater than maximum extent size

Cause: In CREATE/ALTER TABLESPACE, the value specified for the MINIMUM EXTENT option was greater than the maximum extent size.

Action: Choose a lower value for the MINIMUM EXTENT option.

ORA-25122: Only LOCAL bitmap indexes are permitted on partitioned tables

Cause: An attempt was made to create a global bitmap index on a partitioned table.

Action: create a local bitmap index instead.

ORA-25123: Too many components specified in the name.

Cause: Specifying more components to a name than allowed.

Action: Check the name specified for the operation.

ORA-25124: Database link name not allowed.

Cause: Specifying a database link name when it is not permitted.

Action: Check the name specified for the operation.

ORA-25125: BUFFER_POOL/FLASH_CACHE/CELL_FLASH_CACHE storage option not allowed

Cause: An attempt was made to specify the BUFFER_POOL, FLASH_CACHE, or CELL_FLASH_CACHE storage option. This option may only be specified during

- CREATE or ALTER TABLE

- CREATE or ALTER CLUSTER

- CREATE or ALTER INDEX

Action: Remove this option and retry the statement.

ORA-25126: Invalid name specified for BUFFER_POOL/FLASH_CACHE/CELL_FLASH_CACHE

Cause: The name of the cache hints specified by was invalid. The only valid names for BUFFER_POOL are KEEP, RECYCLE and DEFAULT. The only valid names for FLASH_CACHE and CELL_FLASH_CACHE are KEEP, NONE and DEFAULT.

Action: Use a valid name or remove the BUFFER_POOL, FLASH_CACHE, or CELL_FLASH_CACHE clause.

ORA-25127: RELY not allowed in NOT NULL constraint

Cause: An attempt to set RELY on for NOT NULL constraint.

Action: only NORELY may be specified for a NOT NULL constraint.

ORA-25128: No insert/update/delete on table with constraint (*string.string*) disabled and validated

Cause: Try to insert/update/delete on table with DISABLE VALIDATE constraint.

Action: Change the constraint's states.

ORA-25129: cannot modify constraint (*string*) - no such constraint

Cause: the named constraint does not exist for this table.

Action: Obvious

ORA-25130: cannot modify primary key - primary key not defined for table

Cause: Attempted to modify a primary key that is not defined for the table.

Action: None

ORA-25131: cannot modify unique(*string*) - unique key not defined for table

Cause: attempted to modify a unique key that is not defined for the table.

Action: None

ORA-25132: UNIQUE constraint (*string.string*) disabled and validated in ALTER TABLE EXCHANGE PARTITION

Cause: cannot ALTER TABLE EXCHANGE PARTITION when the partition and the table have a disabled and validated unique constraints AND the unique keys in the partition is not mutually exclusive from the rest of the table.

Action: Change the constraint's status.

ORA-25133: duplicate SINGLE TABLE option specified

Cause: The SINGLE TABLE option was specified more than once.

Action: Specify the SINGLE TABLE option only once.

ORA-25134: keyword TABLE expected

Cause: The keyword TABLE is missing from the SINGLE TABLE option.

Action: Place the keyword TABLE after the keyword SINGLE in the command.

ORA-25135: cannot use the SINGLE TABLE option

Cause: The SINGLE TABLE option is only valid for hash clusters.

Action: Do not specify the SINGLE TABLE option.

ORA-25136: this cluster can contain only one table

Cause: An attempt was made to store more than one table in a cluster that was created with the SINGLE TABLE option.

Action: Do not attempt to store more than one table in the cluster.

ORA-25137: Data value out of range

Cause: Value from cast operand is larger than cast target size.

Action: Increase size of cast target.

ORA-25138: *string* initialization parameter has been made obsolete

Cause: An obsolete initialization parameter has been specified

Action: The system will come up, but parameters must be examined

ORA-25139: invalid option for CREATE TEMPORARY TABLESPACE

Cause: An invalid option appears.

Action: Specify one of the valid options: TEMPFILE, EXTENT MANAGEMENT LOCAL, UNIFORM

ORA-25140: *string* space policy cannot be specified for the *string* extent management

Cause: An invalid option appears.

Action: Make sure that for LOCAL extent management UNIFORM or AUTOALLOCATE is specified, and for DICTIONARY extent management UNIFORM or AUTOALLOCATE are not specified

ORA-25141: invalid EXTENT MANAGEMENT clause

Cause: An invalid option appears for EXTENT MANAGEMENT clause

Action: Specify one of the valid options: UNIFORM SIZE, AUTOALLOCATE

ORA-25142: default storage clause specified twice

Cause: default storage clause was specified twice for create tablespace

Action: Specify it once.

ORA-25143: default storage clause is not compatible with allocation policy

Cause: default storage clause was specified for a tablespace with AUTOALLOCATE or UNIFORM policy

Action: Omit the storage clause

ORA-25144: invalid option for CREATE TABLESPACE with TEMPORARY contents

Cause: An invalid option appears.

Action: Specify one of the valid options: EXTENT MANAGEMENT DICTIONARY, USER

ORA-25145: allocation policy already specified

Cause: In CREATE TABLESPACE, the allocation policy was specified more than once, for example, AUTOALLOCATE and UNIFORM.

Action: Remove all but one of the allocation policy specifications.

ORA-25146: EXTENT MANAGEMENT option already specified

Cause: In CREATE TABLESPACE, the EXTENT MANAGEMENT option was specified more than once.

Action: Remove all but one of the EXTENT MANAGEMENT specifications.

ORA-25147: UNIFORM SIZE value greater than maximum extent size

Cause: In CREATE/ALTER TABLESPACE, the value specified for the UNIFORM SIZE option was greater than the maximum extent size.

Action: Choose a lower value for the UNIFORM SIZE option.

ORA-25148: ONLINE option not permitted

Cause: An attempt was made to specify ONLINE for ALTER TABLE MOVE on a table that is not index-organized. The ONLINE option is currently supported only for index-organized tables.

Action: Remove the ONLINE option from the command.

ORA-25149: Columns of UROWID type may not be indexed

Cause: An attempt was made to create an index on a column of UROWID type

Action: Remove the column from the list of indexed columns

ORA-25150: ALTERING of extent parameters not permitted

Cause: An attempt was made to alter the extent parameters for a segment in a tablespace with autoallocate or uniform extent allocation policy.

Action: Remove the appropriate extent parameters from the command.

ORA-25151: Rollback Segment cannot be created in this tablespace

Cause: An attempt was made to create a rollback segment in a tablespace with autoallocate extent allocation policy.

Action: Specify a different tablespace for the rollback segment

ORA-25152: TEMPFILE cannot be dropped at this time

Cause: An attempt was made to drop a TEMPFILE being used by online users

Action: The TEMPFILE has been taken offline. Try again, later.

ORA-25153: Temporary Tablespace is Empty

Cause: An attempt was made to use space in a temporary tablespace with no files.

Action: Add files to the tablespace using ADD TEMPFILE command.

ORA-25154: column part of USING clause cannot have qualifier

Cause: Columns that are used for a named-join (either a NATURAL join or a join with a USING clause) cannot have an explicit qualifier.

Action: Remove the qualifier.

ORA-25155: column used in NATURAL join cannot have qualifier

Cause: Columns that are used for a named-join (either a NATURAL join or a join with a USING clause) cannot have an explicit qualifier.

Action: Remove the qualifier.

ORA-25156: old style outer join (+) cannot be used with ANSI joins

Cause: When a query block uses ANSI style joins, the old notation for specifying outer joins (+) cannot be used.

Action: Use ANSI style for specifying outer joins also.

ORA-25157: Specified block size *string* is not valid

Cause: An attempt was made to create a tablespace with a block size which is not supported.

Action: Specify one of the valid block sizes i.e the standard block size or one of (2k, 4k, 8k, 16k, 32k) subject to the maximum and minimum block sizes supported by the platform.

ORA-25158: Cannot specify RELY for foreign key if the associated primary key is NORELY

Cause: RELY is specified for the foreign key constraint, when the associated primary key constraint is NORELY.

Action: Change the option of the primary key also to RELY.

ORA-25159: Must specify a valid tablespace number

Cause: A valid tablespace number was missing.

Action: Specify a valid tablespace number.

ORA-25160: Must specify a valid relative data block address

Cause: A valid relative data block address was missing.

Action: Specify a valid relative data block address.

ORA-25161: Cannot have both DBA and RDBA options

Cause: Both the DBA and RDBA options were passed to ALTER SYSTEM DUMP REDO.

Action: Use either the DBA option or the RDBA option but not both.

ORA-25162: Must specify both RDBA MIN and RDBA MAX options

Cause: Only one RDBA option was passed to ALTER SYSTEM DUMP REDO.

Action: Specify both RDBA MIN and RDBA MAX.

ORA-25163: Invalid tablespace number or relative data block address

Cause: The relative data block address is invalid for the given tablespace number or the table space number is invalid.

Action: Specify a valid tablespace number or relative data block address.

ORA-25164: The tag expression is too complex.

Cause: The statement tag value was not specified using a simple expression.

Action: Reduce the complexity of the statement tag expression. For example, assign the tag expression to a variable and reference the variable in the error logging clause.

ORA-25175: no PRIMARY KEY constraint found

Cause: A PRIMARY KEY constraint must be defined for a table with this organization

Action: Define a PRIMARY KEY

ORA-25176: storage specification not permitted for primary key

Cause: Storage parameters cannot be defined for a PRIMARY KEY constraint for a table with this organization

Action: Remove storage specification for primary key

ORA-25177: UNRECOVERABLE option not permitted

Cause: The UNRECOVERABLE option may not be specified for a primary key for a table with this organization

Action: Remove UNRECOVERABLE option for primary key

ORA-25178: duplicate PCTTHRESHOLD storage option specification

Cause: The storage option PCTTHRESHOLD is specified more than once.

Action: Specify storage options at most once.

ORA-25179: invalid PCTTHRESHOLD storage option value

Cause: The specified value must be a positive integer.

Action: Specify an appropriate value.

ORA-25180: PCTTHRESHOLD only valid for certain table organizations

Cause: PCTTHRESHOLD can only be specified for tables with certain organizations.

Action: Remove the PCTTHRESHOLD option.

ORA-25181: missing ON keyword for NESTED INDEX

Cause: ON keyword required to specify nested index column nest

Action: Add ON keyword

ORA-25182: feature not currently available for index-organized tables

Cause: An attempt was made to use one or more of the following feature(s) not currently supported for index-organized tables: CREATE TABLE with LOB/BFILE/VARRAY columns, partitioning/PARALLEL/CREATE TABLE AS SELECT options, ALTER TABLE with ADD/MODIFY column options, CREATE INDEX

Action: Do not use the disallowed feature(s) in this release.

ORA-25183: index-organized table top index segment is in a different tablespace

Cause: An attempt was made to drop a tablespace which contains an index only table's overflow segment but not the top index segment"

Action: find index-organized tables which span the tablespace being dropped and some other tablespace(s). Drop these tables.

ORA-25184: column name expected

Cause: A column name is not present where required by the CREATE TABLE for specifying last column to be included in the index segment of the index-organized table

Action: Specify a column name where required by the syntax.

ORA-25185: index column other than last can not be specified for INCLUDE clause

Cause: An index column name other than the last is specified as including column

Action: Specify either a column name which is not part of index-organized table primary key index , or the last key column of the primary key for the INCLUDING clause.

ORA-25186: INCLUDING clause specified for index-organized table without OVERFLOW

Cause: INCLUDING clause of a CREATE TABLE is a valid option only for index-organized tables with OVERFLOW clause (at creation time) or if an OVERFLOW segment already exists (at ALTER time).

Action: Specify OVERFLOW clause for the index-organized table : For ALTER, perform ADD OVERFLOW first.

ORA-25187: specified exceptions table form incorrect

Cause: The specified table does not have the proper field definitions.

Action: Specify the correct table to use.

ORA-25189: illegal ALTER TABLE option for an index-organized table

Cause: During ALTER of a index-organized table, the user attempted to enter one or more of the following options: TABLESPACE, ALLOCATE/DEALLOCATE EXTENT, PCTFREE/PCTUSED for IOT top index segment

Action: Remove the illegal option(s).

ORA-25190: an index-organized table maintenance operation may not be combined with other operations

Cause: ALTER TABLE statement attempted to combine an index-organized table maintenance operation (e.g. changing physical attributes) with some other operation (e.g. ADD constraint) which is illegal

Action: Ensure that a index-organized table maintenance operation is the sole operation specified in ALTER TABLE statement;

ORA-25191: cannot reference overflow table of an index-organized table

Cause: An attempt to directly access the overflow table of an index-organized table

Action: Issue the statement against the parent index-organized table containing the specified overflow table.

ORA-25192: invalid option for an index-organized table

Cause: An attempt to specify one or more of the following options for an index-organized table: [NO]CACHE, NO LOGGING, CLUSTER

Action: Remove the illegal option(s)

ORA-25193: cannot use COMPRESS option for a single column key

Cause: An attempt to use COMPRESS option on single column key

Action: Remove the COMPRESS option.

ORA-25194: invalid COMPRESS prefix length value

Cause: The specified value must be a positive integer less than the number of key columns

Action: Specify an appropriate value.

ORA-25195: invalid option for index on an index-organized table

Cause: An attempt to specify one or more of the following options for index on an IOT: BITMAP, REVERSE, PCTUSED

Action: None

-
- ORA-25196: keyword MOVE in ALTER TABLE MOVE must immediately follow <table name>**
Cause: MOVE specified after one/more other ALTER options
Action: Remove the illegal option(s)
- ORA-25197: an overflow segment already exists for the indexed-organized table**
Cause: An attempt was made to ADD OVERFLOW segment on an index-organized table that already has an overflow segment
Action: None
- ORA-25198: only range, list, and hash partitioning are supported for index-organized table**
Cause: System, or Composite partitioning schemes are not supported yet
Action: Select a different partitioning scheme
- ORA-25199: partitioning key of a index-organized table must be a subset of the primary key**
Cause: An attempt to specify a partitioning key which is not a prefix of the primary key of the index-organized table
Action: Select a different partitioning key
- ORA-25200: invalid value *string*, QUEUE_NAME should be [SCHEMA.]NAME**
Cause: A NULL parameter was specified for QUEUE_NAME.
Action: Specify a non-NULL queue name.
- ORA-25201: invalid value, VISIBILITY should be ON_COMMIT or IMMEDIATE**
Cause: An invalid value specified for parameter VISIBILITY.
Action: Specify either ON_COMMIT or IMMEDIATE.
- ORA-25202: invalid value NULL, *string* should be non-NULL**
Cause: A NULL value was specified for the parameter.
Action: Specify a non-NULL value.
- ORA-25203: invalid value *string*, DELAY should be non-negative**
Cause: A negative value or NULL was specified for DELAY.
Action: Specify a non negative integer for DELAY.
- ORA-25204: invalid value, SEQUENCE_DEVIATION should be BEFORE or TOP**
Cause: An invalid SEQUENCE_DEVIATION was specified.
Action: Specify either the option 'BEFORE' or 'TOP'.
- ORA-25205: the QUEUE *string.string* does not exist**
Cause: The specified queue does not exist.
Action: Create the queue first before specifying it for enqueue or dequeue.
- ORA-25206: enqueue failed, enqueue to exception queue *string.string* not permitted**
Cause: An attempt was made to enqueue to an exception queue.
Action: Try enqueueing to another queue.
- ORA-25207: enqueue failed, queue *string.string* is disabled from enqueueing**
Cause: The queue has been stopped to prevent any further enqueueing.

Action: Enable the queue first by using an administrative operation.

ORA-25208: RELATIVE_MSGID must be specified if SEQUENCE_DEVIATION is BEFORE

Cause: A relative message identifier should be specified if sequence deviation is specified as BEFORE.

Action: Either specify an existing relative message identifier or don't specify sequence deviation as BEFORE.

ORA-25209: invalid value *string*, EXPIRATION should be non-negative or NEVER

Cause: The expiration is less than zero or NULL.

Action: Specify a valid value for expire_after which should be greater than or equal to zero or NEVER.

ORA-25210: invalid value for RELATIVE_MSGID, no message in queue with that msgid

Cause: No message in the queue with the msgid equal to the specified RELATIVE_MSGID.

Action: Try again with a valid RELATIVE_MSGID.

ORA-25211: invalid DELAY specified when using sequence deviation

Cause: The DELAY specified in the enqueue is greater than the delay of the message with the given relative message id.

Action: Set the DELAY to be less than or equal to the delay of the message with the given relative message id. If the TOP option is used the delay must be less than or equal to the delay of all the messages in the queue.

ORA-25212: invalid PRIORITY specified when using sequence deviation

Cause: The PRIORITY specified in the enqueue is less than the priority of the message with the given relative message id.

Action: Set the PRIORITY to be less than the delay of the message with the given relative message id. If the TOP option is used the priority must be greater than or equal to the priority of all the messages in the queue.

ORA-25213: message with specified RELATIVE_MSGID has been dequeued

Cause: The message specified by the RELATIVE_MSGID field in the sequence deviation BEFORE option has been dequeued.

Action: None

ORA-25214: cannot specify delay or expiration for enqueue to exception queue

Cause: A message was enqueued to the exception queue with either delay or expiration specified.

Action: Enqueue a message without delay or expiration.

ORA-25215: user_data type and queue type do not match

Cause: A user tries to enqueue an object to a queue that was created for objects of different type.

Action: Try enqueue again with an object of the right type.

ORA-25216: invalid recipient, either NAME or ADDRESS must be specified

Cause: Both attributes, NAME and ADDRESS, were specified null for one of the recipients in the recipient list.

Action: Specify a non-null NAME or ADDRESS for the recipient.

ORA-25217: enqueue failed, visibility must be IMMEDIATE for queue *string.string*

Cause: An attempt was made to enqueue to a non-persistent queue without setting visibility to IMMEDIATE.

Action: Set visibility to IMMEDIATE.

ORA-25218: enqueue failed, delay must be zero for queue *string.string*

Cause: An attempt was made to enqueue to a non-persistent queue with delay greater than zero seconds.

Action: Set delay to zero.

ORA-25219: enqueue failed, sequence deviation not allowed for queue *string.string*

Cause: An attempt was made to enqueue to a non-persistent queue with sequence deviation specified.

Action: Do not specify sequence deviation.

ORA-25220: enqueue failed, signature not specified for a non-repudiable queue

Cause: An attempt was made to enqueue to a non-repudiable queue without specifying the signature

Action: Give the signature

ORA-25221: enqueue failed, signature specified queue not supporting non-repudiation

Cause: An attempt was made to enqueue to a queue specifying the signature for a queue not supporting non-repudiation

Action: Remove the signature

ORA-25222: enqueue failed, complete sender info. not provided for a queue supporting non-repudiation

Cause: An attempt was made to enqueue to a queue without giving the complete sender information (name) for a queue supporting non-repudiation

Action: Provide the sender information

ORA-25223: user_data type used is not supported

Cause: An attempt was made to enqueue data into a non persistent queue that is of a type other than the supported raw or object type.

Action: Enqueue the message again with data of raw or object type.

ORA-25224: sender name must be specified for enqueue into secure queues

Cause: An attempt was made to enqueue into a secure queue without specifying a sender name.

Action: Enqueue the message with sender name specified.

ORA-25225: invalid value *string*, DEQUEUE_MODE should be REMOVE or BROWSE or LOCKED

Cause: An invalid parameter has been specified for DEQUEUE_MODE.

Action: Specify either REMOVE, BROWSE or LOCKED.

ORA-25226: dequeue failed, queue *string.string* is not enabled for dequeue

Cause: The queue has not been enabled for dequeue.

Action: Enable the queue using START_QUEUE.

ORA-25227: Propagation job *string* doesn't exist

Cause: The job doesn't exist in AQ\$_SCHEDULES or cache.

Action: None

ORA-25228: timeout or end-of-fetch during message dequeue from *string.string*

Cause: User-specified dequeue wait time has passed or the end of the queue has been reached but no message has been retrieved.

Action: Try dequeue again with the appropriate WAIT_TIME or the FIRST_MESSAGE option.

ORA-25229: error on transformation of message *string string*

Cause: There was an error when transforming a message at enqueue, dequeue or propagation time.

Action: Correct the transformation function.

ORA-25230: invalid value *string*, WAIT should be non-negative

Cause: A negative value has been specified for WAIT.

Action: specify a non negative value or FOREVER.

ORA-25231: cannot dequeue because CONSUMER_NAME not specified

Cause: A user tried to dequeue from a queue that has been created for multiple consumers but a CONSUMER_NAME was not been specified in the dequeue options.

Action: Specify the CONSUMER_NAME in the dequeue options.

ORA-25232: duplicate recipients specified for message

Cause: An enqueue was performed with duplicate queue agents in the recipients parameter.

Action: Remove the duplicate queue agent and retry the call.

ORA-25233: invalid parameter specified for NAVIGATION

Cause: An invalid parameter has been specified for NAVIGATION.

Action: Choose one of FIRST_MESSAGE, NEXT_MESSAGE or NEXT_TRANSACTION. Use FIRST_MESSAGE for dequeuing the first message that satisfies the criterion, NEXT_MESSAGE for dequeuing the next message that satisfies the criterion and NEXT_TRANSACTION for moving to a set of messages enqueued by another transaction.

ORA-25234: NEXT_TRANSACTION navigation option invalid for queue table *string.string*

Cause: The NEXT_TRANSACTION navigation option was used in a dequeue from a queue in a queue table that was not created for transactional grouping.

Action: Specify either FIRST_MESSAGE or NEXT_MESSAGE as the navigation option. If you want to dequeue messages using transactional grouping create the queue in a queue table that has transactional grouping enabled.

ORA-25235: fetched all messages in current transaction from *string.string*

Cause: The NEXT_TRANSACTION navigation option was used in a dequeue when there were no more messages that belong to the same transaction.

Action: Use the NEXT_TRANSACTION navigation option to move to the next also use the FIRST_MESSAGE option to start from the head of the queue again.

ORA-25236: buffer too small for user data

Cause: The variable or buffer used for the out parameter payload is too small for the user data dequeued.

Action: Increase the size of the buffer or the size of the variable. Maximum size allowed is 32K.

ORA-25237: navigation option used out of sequence

Cause: The NEXT_MESSAGE or NEXT_TRANSACTION option was specified after dequeuing all the messages.

Action: Reset the dequeuing position using the FIRST_MESSAGE navigation option and then specify the NEXT_MESSAGE or NEXT_TRANSACTION option.

ORA-25238: too many recipients specified for message destination *string*

Cause: An ENQUEUE was performed with more than 32 recipients for the given destination (address).

Action: Reduce the number of recipients to 32 or less, and retry the call.

ORA-25239: message ID not supplied when dequeuing from exception queue *string.string*

Cause: An attempt was made to dequeue from a release 8.0-compatible exception queue without including a message ID in the dequeue options.

Action: Check the application to ensure that the queue name has been specified correctly. If the queue name is correct supply a message ID when dequeuing from a release 8.0-compatible exception queue. Otherwise, upgrade the queue_table containing the queue to release 8.1-compatible using the DBMS_AQADM.MIGRATE_QUEUE_TABLE procedure.

ORA-25240: message ID and dequeue condition/correlation ID specified in dequeue options

Cause: An attempt was made to dequeue by including both a message ID and a dequeue condition/correlation ID in the dequeue options. In the dequeue options, you are permitted to specify either message ID or dequeue condition/correlation ID, or neither.

Action: To dequeue a message, specify a message ID or a dequeue condition/correlation ID in the dequeue options, but do not specify both. If you want to dequeue in the queue's sort order, then do not specify either the message ID or dequeue condition/correlation ID in the dequeue options.

ORA-25241: cannot change correlation ID from *string* to *string* without FIRST_MESSAGE option

Cause: An attempt was made to change the correlation ID while using the NEXT_MESSAGE or NEXT_TRANSACTION option for dequeuing.

Action: To use a correlation ID that is different from the previous dequeue call, reset the dequeuing position by using the FIRST_MESSAGE navigation option.

ORA-25242: cannot change subscriber name from *string* to *string* without FIRST_MESSAGE option

Cause: An attempt was made to change the subscriber name while using the NEXT_MESSAGE or NEXT_TRANSACTION option for dequeuing.

Action: To use a subscriber name that is different from the previous dequeue call, reset the dequeuing position by using the FIRST_MESSAGE navigation option.

ORA-25243: CONSUMER_NAME cannot be specified when dequeuing from exception queue *string.string*

Cause: An attempt was made to dequeue from an exception queue by specifying the CONSUMER_NAME in the dequeue options. CONSUMER_NAME can only be specified when dequeuing from a normal queue created for multiple consumers.

Action: Specify only the message id in the dequeue options to dequeue a message from an exception queue.

ORA-25244: dequeue index key not found, QUEUE *string*, rowid *string*

Cause: An internal error was encountered. There may be an inconsistency in the queue table index.

Action: Contact your Oracle customer support representative. You may need to provide the trace file and information about reproducing the error.

ORA-25245: agent name cannot be specified if address is a single-consumer queue or an exception queue

Cause: The agent name for the agent in the LISTEN call was specified when the agent address was a single-consumer queue or an exception queue.

Action: Do not specify the agent name.

ORA-25246: listen failed, the address *string* is an 8.0 style exception queue

Cause: An 8.0 style exception queue was specified in the agent-list for the LISTEN call.

Action: Specify a normal 8.0 style queue or an 8.1 style queue in the agent-list.

ORA-25247: *string* is not a recipient of specified message

Cause: The consumer name specified in the dequeue options is not a recipient of the message specified by the message id.

Action: Ensure that the agent specified by the consumer name is a recipient of the message specified by the message id.

ORA-25248: duplicate agent specified in the agent list

Cause: An agent was specified more than once in the agent list of the LISTEN call.

Action: Remove the duplicate agent specification(s), and retry the call.

ORA-25249: dequeue failed, dequeue not allowed for queue *string.string*

Cause: An attempt was made to dequeue from a non-persistent queue.

Action: Dequeue from a different queue.

ORA-25250: Cannot specify a remote recipient for the message

Cause: A recipient for the message enqueued to a non-persistent queue had a non-local address.

Action: Do not specify the address field or specify the queue which is the target of the enqueue

ORA-25251: exceeded maximum number of recipients for message

Cause: An attempt was made to issue an ENQUEUE call that exceeded the maximum number (1024) of recipients per message.

Action: Reduce the number of recipients to 1024 or less, and retry the call.

ORA-25252: listen failed, the address *string* is a non-persistent queue

Cause: A non-persistent queue was specified as an address for an agent in the LISTEN call.

Action: Specify a normal queue as address for the agent, and retry the the LISTEN call.

ORA-25253: listen failed, queue *string.string* is not enabled for dequeue

Cause: An attempt was made to specify a queue that is not enabled for dequeue in a LISTEN call.

Action: Enable the queue for dequeue using START_QUEUE, and retry the LISTEN call.

ORA-25254: time-out in LISTEN while waiting for a message

Cause: The specified wait time has elapsed and there were no messages for any of the agents in the agent-list.

Action: Try the LISTEN call with an appropriate time-out.

ORA-25255: incorrect subscription string *string*

Cause: An incorrect subscription string was specified with OCIRegister.

Action: Specify a subscription string using the [CONSUMER:]SCHEMA.QUEUE form.

ORA-25256: consumer cannot be specified with a single-consumer queue or an exception queue

Cause: An attempt was made to specify a consumer in the subscription string when registering for notification on a single-consumer queue or an exception queue.

Action: Do not specify the consumer in the subscription string.

ORA-25257: consumer must be specified with a multi-consumer queue

Cause: An attempt was made to register on a multi-consumer queue without specifying a consumer in the subscription string.

Action: Specify a consumer in the subscription string.

ORA-25258: cannot register for notifications on an 8.0 style exception queue

Cause: An attempt was made to specify an 8.0 style exception queue in the subscription string of OCIRegister.

Action: Specify a normal queue or a non-persistent queue.

ORA-25259: cannot specify protocol for agent

Cause: The user specified the protocol attribute for an agent in the agent list.

Action: Do not specify the protocol attribute of the agent object type.

ORA-25261: JOB_QUEUE_PROCESSES must be at least 2 for AQ propagation

Cause: AQ Propagator encountered a setting for JOB_QUEUE_PROCESSES that is insufficient for AQ propagation.

Action: Set the number of JOB_QUEUE_PROCESSES to at least 2 for AQ propagation.

ORA-25262: agent name cannot be NULL if address is a multi-consumer queue

Cause: The name for the agent in the LISTEN call was not specified when the agent address was a multi-consumer queue.

Action: Specify a non-NULL name for the agent.

ORA-25263: no message in queue *string.string* with message ID *string*

Cause: An attempt was made to dequeue a message with a specific message ID, but no such message exists in the queue.

Action: Try dequeue again with a valid message ID.

ORA-25264: cant get signature for this queue

Cause: An attempt was made to dequeue the signature from this queue, which is not receiver non-repudiable.

Action: Try dequeue again without the get signature option

ORA-25265: specified signature for a queue which does not support receiver non-repudiation

Cause: An attempt was made to dequeue the message from a queue which does not support receiver non-repudiation, but the signature was specified for verification

Action: Try dequeue again without the signature

ORA-25266: didnt try to dequeue by message id. with the signature

Cause: The signature was specified for a queue, but the dequeue was not done by message id.

Action: Try dequeue again by message id.

ORA-25267: didnt specify the signature for a receiver non-repudiable queue

Cause: The signature was not specified for a receiver non-repudiable queue

Action: Try dequeue again along with the signature

ORA-25268: didnt dequeue in browse mode with get signature option

Cause: The dequeue was not performed in browse mode with get signature option

Action: Try dequeue again in browse mode

ORA-25269: cant specify signature with get signature option

Cause: The signature is not required for the dequeue with get signature option

Action: Try dequeue again without the signature in dequeue options

ORA-25270: sender info does not match with the actual sender of the message

Cause: The sender info. and the message id. do not match

Action: Try dequeue again without the signature in dequeue options

ORA-25271: queue table not found for the given queue

Cause: The queue table does not exist for the given queue

Action: Provide the right queue name

ORA-25272: Signature does not exist for the given receiver and message id.

Cause: Signature does not exist for the given receiver and message id.

Action: Check the message id. and the receiver's information

ORA-25276: table specified is not a queue table

Cause: An invalid queue table name is specified.

Action: Check the dictionary views to see if the table is a queue table.

ORA-25277: cannot grant or revoke object privilege on release 8.0 compatible queues

Cause: An attempt was made to grant or revoke object privilege on release 8.0 style queues.

Action: Convert the release 8.0 compatible queue table to release 8.1 compatible using DBMS_AQADM.MIGRATE_QUEUE_TABLE before granting or revoking object privilege.

ORA-25278: grantee name cannot be NULL

Cause: An attempt was made to specify NULL for the grantee parameter.

Action: Specify a valid grantee parameter.

ORA-25279: dequeue as select not supported before 8.2

Cause: Dequeue as select not supported before 8.2.

Action: Dont use select condition while dequeuing

ORA-25280: complete sender information not provided to non-repudiate sender

Cause: complete sender information not provided to non-repudiate sender

Action: Provide the complete sender information

ORA-25281: complete reciever information not provided to non-repudiate reciever

Cause: complete reciever information not provided to non-repudiate reciever

Action: Provide the complete reciever information

ORA-25282: message id. not provided for non-repudiation

Cause: message id. was not provided

Action: Provide the message id.

ORA-25283: either agent's name or address needed for non-repudiation

Cause: neither agent's name nor address provided for non-repudiation"

Action: Provide the agent info.

ORA-25284: Invalid value *string* for *string*

Cause: An Invalid value or NULL was specified for the parameter.

Action: Check the documentation for valid values.

ORA-25285: Invalid value *string* for *array_mode*

Cause: An Invalid value or NULL was specified for the *array_mode*.

Action: Check the documentation for valid values.

ORA-25286: Invalid number of elements in the message properties array

Cause: Number of elements in the message properties array do not match the number of elements in the payload array.

Action: Create a message property array with one element (that applies for all the elements in the payload array) or create a message property array with the same number of elements as there are in the payload array.

ORA-25287: Invalid value *string*, *string* should be non-negative

Cause: An Invalid value or NULL was specified for the parameter.

Action: Specify a non negative integer.

ORA-25288: AQ HTTP propagation encountered error, status-code *number*, *string*

Cause: AQ propagation's HTTP request to the propagation servlet at the specified address encountered an error

Action: Specify a valid address in the connect string of the propagation destination dblink, the dblink user has the correct permissions, check if the AQ propagation servlet was properly installed.

ORA-25289: Buffer Already Exists

Cause: Buffer already exists for the specified queue.

Action: None

ORA-25290: Cannot complete operation on queue *string* with existing messages

Cause: Queue already has messages. Cannot complete operation

Action: Truncate the queue before adding/dropping a buffer

ORA-25291: Buffer does not exist for the specified queue

Cause: Buffer does not exist for the specified queue

Action: Operation on the buffer cannot be performed. create the buffer

ORA-25292: Buffer operations are not supported on the queue

Cause: Buffer operations are not supported on the specified queue type

Action: Buffered operations are only supported on to 8.1 style queues, which do not have transaction grouping.

ORA-25293: Lob attributes must be null for buffered operations

Cause: Enqueue of a buffered message with a non-null lob attribute was attempted

Action: Set the lob attributes to null before enqueueing the buffered message

ORA-25294: Cannot propagate user buffered messages to a database with version lower than 10.2

Cause: Propagation of user buffered messages was attempted to a database with version lower than 10.2.

Action: Do not propagate buffered messages to the database.

ORA-25295: Subscriber is not allowed to dequeue buffered messages

Cause: Subscriber is only allowed to dequeue persistent messages

Action: Drop the subscriber and re-create it, or dequeue only persistent messages for the subscriber

ORA-25296: Queue Table *string* has a buffered queue *string*

Cause: Buffered message was enqueue by specifying delay or sequence deviation.

Action: Do not specify delay of sequence deviation when enqueueing buffered messages.

ORA-25298: Only immediate visibility mode supported for buffered message enqueue or dequeue

Cause: A visibility of dbms_aq.ON_COMMIT was supplied with the buffered message enqueue or dequeue

Action: Supply a visibility of dbms_aq.IMMEDIATE

ORA-25299: Invalid message delivery_mode

Cause: Invalid value was specified for delivery mode

Action: Specify `dbms_aq.BUFFERED` or `dbms_aq.PERSISTENT` during Enqueue or `dbms_aq.BUFFERED`, `dbms_aq.PERSISTENT` or `dbms_aq.PERSISTENT_OR_BUFFERED` during Dequeue and Listen.

ORA-25300: Cannot drop buffer for queue with buffered subscribers

Cause: Cannot drop buffer for queue with buffered subscribers

Action: Either drop buffered subscribers or forcibly drop the buffer

ORA-25301: Cannot enqueue or dequeue user buffered messages to a database with version lower than 10.2

Cause: Enqueue or dequeue of user buffered messages was attempted to queues in a database with version lower than 10.2.

Action: Do not attempt to enqueue or dequeue user buffered messages.

ORA-25302: Operation not possible for non-buffered queue *string*

Cause: Last enqd/ackd message is only supported for buffered queues

Action: The operation is not supported.

ORA-25303: Buffered operation allowed only on the owner instance

Cause: Operation was not performed on the owner instance.

Action: Perform operation on the owner instance.

ORA-25304: Cannot use priority order queues for capture LCRs

Cause: Capture LCRs can only use commit time or enqueue time ordered queues.

Action: Use the appropriate type of queue for captured LCRs.

ORA-25305: enqueue failed, expiration must be zero for queue *string.string*

Cause: An attempt was made to enqueue to a buffered queue with expiration greater than zero seconds.

Action: Set expiration to zero.

ORA-25306: Cannot connect to buffered queue's owner instance

Cause: cannot connect to the owner instance of the buffered queue

Action: set listener information in `REMOTE_LISTENERS` or `LOCAL_LISTENERS` initialization parameter.

ORA-25307: Enqueue rate too high, flow control enabled

Cause: Subscribers could not keep pace with the enqueue rate.

Action: Try enqueue after waiting for some time.

ORA-25310: Subscriber is Notification only; dequeue not supported

Cause: Notification only subscribers are not allowed to dequeue.

Action: Recreate subscriber if necessary.

ORA-25311: *string* not supported for non-persistent queue

Cause: Specified QOS is not supported for non-persistent queues.

Action: Specify the right QOS.

ORA-25312: Cannot specify nonzero sender protocol

Cause: Sender protocol was specified during an enqueue operation.

Action: Specify the enqueue sender protocol as null or zero.

ORA-25313: a queue may not subscribe to itself for propagation

Cause: The specified subscriber had a NULL name and an address equal to the queue name.

Action: Provide a valid subscriber and retry the operation.

ORA-25314: a commit-time queue table cannot be migrated to 8.0

Cause: An attempt was made to migrate a commit-time queue table to an unsupported compatibility level.

Action: Provide an appropriate compatibility level, and retry the operation.

ORA-25315: unsupported configuration for propagation of buffered messages

Cause: An attempt was made to propagate buffered messages with the database link pointing to an instance in the destination database which is not the owner instance of the destination queue.

Action: Use queue to queue propagation for buffered messages.

ORA-25316: Late in the current transaction to begin an Enqueue/Dequeue operation

Cause: Check if the Enqueue/Dequeue operation is performed via triggers on Materialized Views which isn't supported.

Action: Triggers on materialized views aren't supported. Workarounds are on-demand materialized views or execution of trigger code within an autonomous txn.

ORA-25317: Propagation stopped because of instance shutdown

Cause: A propagation job has stopped because the instance is shutting down.

Action: No user action is required.

ORA-25318: Propagation stopped because of instance affinity change

Cause: A propagation job has stopped because its instance affinity has changed.

Action: No user action is required. The job will restart on the appropriate instance.

ORA-25319: Queue table repartitioning aborted

Cause: During instance restart in an Oracle RAC environment, queue table repartitioning aborted due to errors.

Action: Look at the incident generated for this error and report the problem to Oracle Support Services.

ORA-25320: Failed to create, alter, or remove Subscriber

Cause: There is a pending enqueue or dequeue operation on this queue from the same session.

Action: Either COMMIT or ROLLBACK pending enqueue or dequeue operation before attempting to create, alter, or remove the subscriber.

ORA-25321: enqueue failed, user property specified but queue *string.string* is not an 8.1 style queue

Cause: user properties can only be specified when enqueueing into 8.1 style queues.

Action: Specify an 8.1 style queue or pass user property as NULL.

ORA-25326: Array *string* operation failed for message at index *string*

Cause: Array operation fails for the message at specified index. Look at the remainder of the error stack to see what the problem was.

Action: Fix cause of error and retry array operation.

ORA-25327: Array size is invalid

Cause: Array size must be a positive, non-zero integer.

Action: Use corrected array size and retry array operation.

ORA-25328: *string* argument size *string* is smaller than array size

Cause: The size of the argument is smaller than the given array size.

Action: Lower array size or use a larger sized input argument.

ORA-25329: AQ array operations not allowed on 8.0 queues

Cause: An array enqueue/dequeue was attempted on an 8.0 queue.

Action: Use single enqueue/dequeue with this queue.

ORA-25330: PL/SQL associative arrays may not be used with AQ array operations

Cause: A PL/SQL associative array was provided for the payload parameter in an enqueue/dequeue array operation.

Action: Use VARRAY or NESTED TABLE types with AQ array operations.

ORA-25331: cannot downgrade because there are commit-time queue tables

Cause: An attempt was made to downgrade a database that has commit-time queue tables.

Action: Drop all commit-time queue tables before attempting the downgrade.

ORA-25332: Invalid release value *string* for queue table compatible parameter

Cause: The release level given for the queue table compatible parameter is invalid

Action: Specify a valid release value for the queue table compatible parameter

ORA-25333: Buffered Queue to Queue propagation did not connect to the correct instance

Cause: Queue to Queue propagation for buffered messages didn't connect to the correct instance, most likely because service was not started for the destination queue.

Action: No user action is required. Propagation will start the service for the destination queue and retry.

ORA-25334: Buffered propagation must restart as the destination queue was recreated/moved

Cause: Buffered propagation destination queue was recreated or its ownership was moved to another instance during propagation.

Action: No user action is required. Propagation will reinitialize its metadata and retry.

ORA-25335: AQ array operations not allowed for buffered messages

Cause: An array enqueue/dequeue was attempted for buffered messages

Action: Use single enqueue/dequeue for buffered messages or an array size of one.

ORA-25336: Cannot contact instance *string* during Streams AQ operation

Cause: The specified instance was not responding to AQ requests.

Action: Set parameter `aq_tm_processes` to a non-zero value. If the problem persists, contact Oracle Support Services.

ORA-25337: Cannot propagate in queue-to-queue mode to a database with version lower than 10.2

Cause: Remote subscriber with `queue_to_queue` mode set to TRUE was added. The remote subscriber is on a database version lower than 10.2. Propagation was scheduled to a destination database with version lower than 10.2.

Action: Remove the remote subscriber with `queue_to_queue` mode and add the subscriber back with `queue_to_queue` set to FALSE. Unschedule the queue-to-queue propagation and schedule propagation in queue-to-dblink mode.

ORA-25338: operation '*string*' is not allowed for sync_capture '*string*'

Cause: An attempt was made to execute the specified operation for a `sync_capture` process.

Action: Remove the offending call.

ORA-25339: STREAMS '*string*' must be sync_capture

Cause: The specified capture STREAMS did not exist or was not a `sync_capture` process.

Action: Remove the offending call.

ORA-25340: must use commit-time queue for sync_capture

Cause: An attempt was made to create a `sync_capture` without using a commit-time queue.

Action: Rerun statement with a commit-time queue.

ORA-25341: sync_capture does not support "*string*".*string*" because of the following reason:

Cause: `sync_capture` encountered a table with an unsupported property. The most common reason is an unsupported column data type.

Action: Revise the Capture rules to skip over the table in question. One option is to remove the rule that captures changes from the unsupported table. Check `DBA_STREAMS_TABLE_RULES` to determine the rule on the table specified in the error. Also query the `DBA_STREAMS_UNSUPPORTED` view to determine which tables are not supported by STREAMS and for what reason. For potential workarounds to certain unsupported properties, see Metalink.

ORA-25342: cannot downgrade because there are apply processes for user buffered messages

Cause: An attempt was made to downgrade a database that has apply process for user-buffered messages.

Action: Drop all the apply processes for user-buffered messages before attempting the downgrade.

ORA-25343: Streams error queue cannot be exported

Cause: An attempt was made to export a database that has apply errors.

Action: Delete or reexecute errors before attempting the export.

ORA-25344: statement has bind variables

Cause: Current API could not handle a statement with bind variables.

Action: Use alternative API which handles bind variables.

ORA-25350: maximum number of concurrent transaction branches exceeded

Cause: the limit on the number of concurrent transaction branches has been reached

Action: Increase the INIT.ORA parameter 'transactions' and restart the system.

ORA-25351: transaction is currently in use

Cause: The transaction is currently used by a different session.

Action: Do not switch to a transaction attached to some other session.

ORA-25352: no current transaction

Cause: The user session is not attached to any transaction.

Action: Do not attempt to detach when there is no current transaction.

ORA-25353: branch marked for deletion

Cause: The branch specified cannot be killed immediately because another session is using the branch, but it has been marked for kill. This means it will be deleted as soon as possible after the current uninterruptable operation is completed.

Action: No action is required for the branch to be deleted.

ORA-25400: must replay fetch

Cause: A failure occurred since the last fetch on this statement. Failover was able to bring the statement to its original state to allow continued fetches.

Action: This is an internally used error message and should not be seen by the user.

ORA-25401: can not continue fetches

Cause: A failure occurred since the last fetch on this statement. Failover was unable to bring the statement to its original state to allow continued fetches.

Action: Reexecute the statement and start fetching from the beginning

ORA-25402: transaction must roll back

Cause: A failure occurred while a transaction was active on this connection.

Action: The client must roll back.

ORA-25403: could not reconnect

Cause: The connection to the database has been lost, and attempts to reconnect have failed.

Action: Manually reconnect.

ORA-25404: lost instance

Cause: The primary instance has died.

Action: This is an internally used error message and should not be seen by the user.

ORA-25405: transaction status unknown

Cause: A failure occurred while a transaction was attempting to commit. Failover could not automatically determine instance status.

Action: The user must determine the transaction's status manually.

ORA-25406: could not generate a connect address

Cause: Failover was unable to generate an address for a backup instance.

Action: Contact Oracle customer support.

ORA-25407: connection terminated

Cause: The connection was lost while doing a fetch.

Action: This is an internally used error message and should not be seen by the user.

ORA-25408: can not safely replay call

Cause: The connection was lost while doing this call. It may not be safe to replay it after failover.

Action: Check to see if the results of the call have taken place, and then replay it if desired.

ORA-25409: failover happened during the network operation,cannot continue

Cause: The connection was lost when fetching a LOB column.

Action: Failover happened when fetching LOB data directly or indirectly. Please replay the top level statement.

ORA-25425: connection lost during rollback

Cause: The connection was lost while issuing a rollback and the application failed over.

Action: The connection was lost and failover happened during rollback. If the transaction is not externally coordinated, then Oracle implicitly rolled back, so no action is required. Otherwise examine `pending_trans$` to determine if "rollback force" is required.

ORA-25426: remote instance does not support shared dblinks

Cause: A shared dblink is being used to connect to a remote instance that does not support this feature because it is an older version.

Action: Use a normal dblink if you need to connect to this instance.

ORA-25427: cannot downgrade database links after database link data dictionary has been upgraded

Cause: An attempt was made to downgrade after the upgrade of the database link data dictionary.

Action: Drop the database links before attempting the downgrade.

ORA-25429: Break request cannot be propagated over shared database link.

Cause: No call in progress over shared database link.

Action: No action required. This is an informational message only.

ORA-25436: invalid table alias: *string*

Cause: An attempt to evaluate was made, which failed because one of the table values specified had an invalid alias.

Action: Check the valid table aliases in the evaluation context, and try again with a valid alias.

ORA-25437: duplicate table value for table alias: *string*

Cause: An attempt to evaluate was made, which failed because some of the table values specified had the same table alias.

Action: Check the table values specified, and try again with only one value per table.

ORA-25438: invalid variable name: *string*

Cause: An attempt to evaluate was made, which failed because one of the variable values specified had an invalid name.

Action: Check the valid variable names in the evaluation context, and try again with a valid name.

ORA-25439: duplicate variable value for variable: *string*

Cause: An attempt to evaluate was made, which failed because some of the variable values specified had the same variable name.

Action: Check the variable names specified, and try again with only one value per variable.

ORA-25440: invalid table alias: *string*

Cause: An attempt to evaluate was made, which failed because one of the column values specified had an invalid table alias.

Action: Check the valid table aliases in the evaluation context, and try again with a valid name.

ORA-25441: duplicate column value for table alias: *string*

Cause: An attempt to evaluate was made, which failed because one of the column values supplied a value for a table alias, which already had a table value supplied.

Action: Check the table and column values specified, and try again with either a table value or column values for each table alias.

ORA-25442: too many column values for table alias: *string*

Cause: An attempt to evaluate was made, which failed because too many column values were supplied for the specified table alias.

Action: Check the column values specified, and try again with the right number of column values.

ORA-25443: duplicate column value for table alias: *string*, column number: *string*

Cause: An attempt to evaluate was made, which failed because duplicate column values were supplied for the specified table alias and column number.

Action: Check the column values specified, and try again with only one column value for each table alias, and column number.

ORA-25444: invalid ROWID: *string* for table alias: *string*

Cause: An attempt to evaluate was made, which failed because an invalid ROWID was supplied for the specified table alias.

Action: Check the column values specified, and try again with only one column value for each table alias, and column number.

ORA-25445: invalid column number: *string* for table alias: *string*

Cause: An attempt to evaluate was made, which failed because an invalid column number was supplied for the specified table alias as a part of a column value.

Action: Check the column values specified, and try again with a valid column number.

ORA-25446: duplicate column value for table alias: *string*, column: *string*

Cause: An attempt to evaluate was made, which failed because duplicate column values were supplied for the specified table alias and column name.

Action: Check the column values specified, and try again with only one column value for each table alias, and column name.

ORA-25447: encountered errors during evaluation of rule *string.string*

Cause: An attempt to evaluate was made, which failed during the evaluation of the specified rule.

Action: Check the rule and the values passed to evaluate, and try again with valid values.

ORA-25448: rule *string.string* has errors

Cause: An attempt to load the specified rule failed due to errors in the rule.

Action: Check the rule and retry the operation.

ORA-25449: invalid variable name: *string*

Cause: An attempt to evaluate was made, which failed because one of the attribute values specified had an invalid variable name.

Action: Check the valid variable names in the evaluation context, and try again with a valid name.

ORA-25450: error *string* during evaluation of rule set *string.string*

Cause: The specified error occurred during evaluation of the rule set.

Action: Check the error and take appropriate action.

ORA-25451: too many attribute values for variable: *string*

Cause: An attempt to evaluate was made, which failed because too many attribute values were supplied for the specified variable.

Action: Check the attribute values specified, and try again with the right number of attribute values.

ORA-25452: duplicate attribute value for variable: *string*, attribute: *string*

Cause: An attempt to evaluate was made, which failed because duplicate attribute values were supplied for the specified variable and attribute name.

Action: Check the attribute values specified, and try again with only one attribute value for each variable, and attribute name.

ORA-25453: invalid iterator: *string*

Cause: An attempt to get rule hits or to close an iterator was made, which failed because an invalid iterator was passed in.

Action: Check the iterator, and try again with a valid iterator.

ORA-25454: error during evaluation of rule set: *string.string* for iterator: *string*

Cause: An attempt to get rule hits for an iterator was made, which failed because of an error in evaluation of the specified rule set.

Action: Check the validity of the rule set and try again.

ORA-25455: evaluation error for rule set: *string.string*, evaluation context: *string.string*

Cause: An attempt to evaluate the specified rule set using the evaluation context specified failed due to some errors.

Action: Check additional errors signalled to determine the problem.

ORA-25456: rule set was modified or evaluation terminated for iterator: *string*

Cause: An attempt to get rule hits was made, which failed because the underlying rule set was modified after the iterator was returned.

Action: Try again after re-evaluating the rule set.

ORA-25457: evaluation function *string* returns failure

Cause: The specified evaluation function returned a failure during evaluation, causing evaluation to terminate.

Action: Check arguments to evaluate and retry.

ORA-25461: rule set not specified

Cause: An attempt to evaluate was made, which failed because the ruleset name specified was null.

Action: Check the rule set name, and try again with a valid name.

ORA-25462: evaluation context not specified

Cause: An attempt to evaluate was made, which failed because the evaluation context specified was null.

Action: Check the evaluation context name, and try again with a valid name.

ORA-25463: table alias not specified

Cause: An attempt to evaluate was made, which failed because one of the table values specified had a NULL alias name.

Action: Check the list of table values, and try again with a valid alias name.

ORA-25464: ROWID not specified for table alias: *string*

Cause: An attempt to evaluate was made, which failed because the table value for the specified table alias had a NULL ROWID.

Action: Check the list of table values, and try again with a valid ROWID.

ORA-25465: variable name not specified

Cause: An attempt to evaluate was made, which failed because one of the variable values specified had a NULL variable name.

Action: Check the list of variable values, and try again with a valid variable name.

ORA-25466: data not specified for variable name: *string*

Cause: An attempt to evaluate was made, which failed because the variable value for the specified variable name had NULL data.

Action: Check the list of variable values, and try again with valid data.

ORA-25467: table alias not specified

Cause: An attempt to evaluate was made, which failed because one of the column values specified had a NULL alias name.

Action: Check the list of column values, and try again with a valid alias name.

ORA-25468: column name not specified for alias: *string*

Cause: An attempt to evaluate was made, which failed because one of the column values for the specified alias name had a NULL column name.

Action: Check the list of column values, and try again with a valid column name.

ORA-25469: data not specified for alias: *string* column name: *string*

Cause: An attempt to evaluate was made, which failed because the column value for the specified alias and column name had NULL data.

Action: Check the list of column values, and try again with valid data.

ORA-25470: duplicate attribute value for variable: *string*

Cause: An attempt to evaluate was made, which failed because one of the attribute values supplied a value for a variable, which already had a variable value supplied.

Action: Check the variable and attribute values specified, and try again with either a variable value or attribute values for each variable.

ORA-25471: attribute name not specified for variable: *string*

Cause: An attempt to evaluate was made, which failed because one of the attribute values for the specified variable had a NULL attribute name.

Action: Check the list of attribute values, and try again with a valid attribute name.

ORA-25472: maximum open iterators exceeded

Cause: The open rule hit iterators in the session exceeded 2 * OPEN_CURSORS.

Action: Close some rule hit iterators.

ORA-25473: cannot store *string* in rule action context

Cause: The user attempted to put unsupported data types, such as LOBs and evolved ADTs, into the rule action context.

Action: Use only supported data types in rule action context.

ORA-25500: database is not open

Cause: Database must be open to perform ALTER SYSTEM QUIESCE RESTRICTED command.

Action: Open the database and retry this command.

ORA-25501: ALTER SYSTEM QUIESCE RESTRICTED command failed

Cause: Database resource manager failed to change plan.

Action: Look at the alert logs to see detailed description of the error.

ORA-25502: concurrent ALTER SYSTEM QUIESCE/UNQUIESCE command is running

Cause: There is a concurrent ALTER SYSTEM QUIESCE RESTRICTED or ALTER SYSTEM UNQUIESCE command running in the system.

Action: Contact the database administrator who is responsible for the concurrent command.

ORA-25503: cannot open database because the database is being quiesced

Cause: Database cannot be opened because the system is being or has been quiesced.

Action: Open the database after the system has been quiesced.

ORA-25504: the system is already in quiesced state

Cause: Cannot quiesce the system because the system is already quiesced.

Action: None

ORA-25505: the system is not in quiesced state

Cause: Cannot unquiesce the system because the system is not in quiesced state.

Action: None

ORA-25506: resource manager has not been continuously on in some instances

Cause: Cannot quiesce the system because resource manager has not been continuously on since startup in this or some other instances.

Action: None

ORA-25507: resource manager has not been continuously on

Cause: Cannot quiesce the system because resource manager has not been continuously on since startup.

Action: None

ORA-25508: database is not mounted

Cause: Database must be mounted to perform ALTER SYSTEM UNQUIESCE command.

Action: Mount the database and retry this command.

ORA-25509: operation on "string"."string".string not allowed

Cause: A column has been added to a replicated table, but replication support processing has not completed.

Action: Wait until replication support processing has completed before updating the column

ORA-25526: bad format of _DB_MTTR_SIM_TARGET: string

Cause: One value in _DB_MTTR_SIM_TARGET is not a valid MTTR.

Action: Alter the value of _DB_MTTR_SIM_TARGET.

ORA-25527: bad format of _DB_MTTR_SIM_TARGET

Cause: One value in _DB_MTTR_SIM_TARGET is empty.

Action: Set the value of _DB_MTTR_SIM_TARGET properly.

ORA-25528: too many candidate MTTRs are specified in _DB_MTTR_SIM_TARGET

Cause: Too many candidate MTTRs are specified in _DB_MTTR_SIM_TARGET.

Action: Alter the value of _DB_MTTR_SIM_TARGET.

ORA-25530: FAST_START_MTTR_TARGET is not specified

Cause: An attempt to start MTTR advisory was made, which failed because FAST_START_MTTR_TARGET was not specified.

Action: Set FAST_START_MTTR_TARGET.

ORA-25531: MTTR specified is too small: string

Cause: The current FAST_START_MTTR_TARGET setting or a candidate MTTR setting is too small for MTTR advisory.

Action: Set a larger FAST_START_MTTR_TARGET or candidate MTTR.

ORA-25532: MTTR specified is too large: string

Cause: The current FAST_START_MTTR_TARGET setting or a candidate MTTR setting is too large for MTTR advisory.

Action: Set a smaller FAST_START_MTTR_TARGET or candidate MTTR.

ORA-25533: FAST_START_IO_TARGET or LOG_CHECKPOINT_INTERVAL is specified

Cause: An attempt to start MTTR advisory was made, which failed because either FAST_START_IO_TARGET or LOG_CHECKPOINT_INTERVAL was specified.

Action: Set FAST_START_IO_TARGET and LOG_CHECKPOINT_INTERVAL to 0.

ORA-25950: missing where clause in join index specification

Cause: An attempt to create a join index was made, which failed because no valid where clause was found.

Action: Ensure that a where clause with valid join conditions is specified in the create index statement.

ORA-25951: join index where clause cannot contain OR condition

Cause: An attempt to create a join index was made, which failed because there was an OR branch in the where clause.

Action: Reformulate the where clause without using ORs.

ORA-25952: join index must only contain inner equi-joins

Cause: An attempt to create a join index was made, which failed because it included a predicate which wasn't an equi-inner join.

Action: Remove the inappropriate predicate.

ORA-25953: join index cannot be a functional index

Cause: An attempt to create a join index was made, which failed because a functional index was requested or necessary (such as is the case for indexing columns using timezone).

Action: Remove any functional indexing columns.

ORA-25954: missing primary key or unique constraint on dimension

Cause: An attempt to create a join index was made, which failed because one or more dimensions did not have an appropriate constraint matching the join conditions.

Action: Ensure that the where clause is correct (contains all of the constraint columns) and that an enforced constraint is on each dimension table.

ORA-25955: all tables must be joined in the where clause

Cause: An attempt to create a join index was made, which failed because one of the tables in the from clause did not appear in the where clause.

Action: Ensure that the where clause contains all from clause tables.

ORA-25956: join index cannot be created on tables owned by SYS

Cause: An attempt to create a join index was made, which failed because one of the tables was owned by SYS.

Action: Ensure that no join index related table is owned by SYS.

ORA-25957: join index where clause cannot contain cycles

Cause: An attempt to create a join index was made, which failed because the where clause contains a cycle.

Action: Ensure that the where clause is in the form of a star or snowflake schema.

ORA-25958: join index where clause predicate may only contain column references

Cause: An attempt to create a join index was made, which failed because a predicate in the where clause contained something other than a simple column.

Action: Ensure that the where clause only contains columns.

ORA-25959: join index must be of the bitmap type

Cause: An attempt to create a join index was made, which failed because no bitmap keyword was used.

Action: Make the index a bitmap index.

ORA-25960: join index cannot be based on a temporary table

Cause: An attempt to create a join index was made, which failed because one of the tables was temporary.

Action: Ensure no underlying tables are temporary.

ORA-25961: join index prevents dml cascade constraint operation

Cause: An attempt to execute dml resulted in the need to perform dml on another table because of a cascade constraint. The join index only allows one of its underlying tables to be modified at a time.

Action: Drop the join index or remove the constraint.

ORA-25962: join index prevents multitable insert or merge

Cause: An attempt to execute an merge or multitable insert on a table that was used to create a bitmap join index was made. Merge and multitable inserts are not supported on tables that were used to create a bitmap join index.

Action: Drop the join index.

ORA-25963: join index must be created on tables

Cause: An attempt to create a join index was made, which failed because the from clause contains non table object.

Action: Ensure that the from clause only contains tables.

ORA-25964: column type incompatible with join column type

Cause: The datatype of the join column is incompatible with the datatype of the joined column.

Action: Select a compatible datatype for the join column.

ORA-25965: fact table must be included in the from clause

Cause: An attempt to create a join index was made, which failed because the from clause does not contain the fact table.

Action: Ensure that the from clause contains the fact table.

ORA-25966: join index cannot be based on an index organized table

Cause: An attempt to create a join index was made, which failed because one of the tables was an index organized table.

Action: Ensure no underlying tables are index organized.

ORA-26000: partition load specified but table *string* is not partitioned

Cause: The Loader control file contains a PARTITION clause but the table being loaded is not partitioned.

Action: Remove the partition specification from the SQL*Loader control file and retry the load.

ORA-26001: Index *string* specified in SORTED INDEXES does not exist on table *string*

Cause: A nonexistent index was specified in the SORTED INDEXES clause.

Action: Do not specify as a SORTED INDEX.

ORA-26002: Table *string* has index defined upon it.

Cause: Parallel load was specified into a table which has index defined upon it.

Action: Drop index(es) defined upon table, or don't use parallel load, or use SKIP_INDEX_MAINTENANCE option.

ORA-26003: parallel load not supported for index-organized table *string*.

Cause: Parallel load is not supported for index-organized tables.

Action: load the index-organized table without the PARALLEL option.

ORA-26004: Tables loaded through the direct path may not be clustered

Cause: User attempted to load a clustered table via the direct path.

Action: Use the conventional path.

ORA-26005: Invalid handle for direct path load

Cause: In direct path load, the handle passed in does not match the type listed.

Action: Verify the handle and type are correct.

ORA-26006: Incorrect bind variable in column *string*'s sql expression - *string*

Cause: In direct path load, the bind variables listed in the sql expression do not match the input argument column names.

Action: Verify all the input arguments are listed in the expression as bind variables, and all the bind variables are listed as input arguments to the expression. Or verify that there were no errors in executing the OCI statements when getting the bind variable list.

ORA-26007: invalid value for SETID or OID column

Cause: The value passed in a Direct Path API stream for a column containing a SETID or OID has an invalid value. SETIDs and Object IDs must be either 16 bytes of RAW data or 32 bytes of hexadecimal characters.

Action: Regenerate the Direct Path API stream with a valid value for the SETID column.

ORA-26008: Invalid syntax or bind variable in SQL string for column *string*. *string*

Cause: See following error message for more information. A SQL string cannot have quoted strings improperly terminated. A bind variable in a SQL string cannot have a length of 0, cannot exceed maximum length of 30 characters, and cannot be missing a double quote.

Action: Fix the SQL string. See following error for more information.

ORA-26009: stream verification error: *string*

Cause: An error has occurred in a Data Pump stream verification operation.

Action: Contact Oracle Support Services.

ORA-26010: Column *string* in table *string* is NOT NULL and is not being loaded

Cause: A column which is NOT NULL in the database is not being loaded and will cause every row to be rejected.

Action: Load the column by specifying the NOT NULL column in the INTO TABLE clause in the SQL*Loader control file.

ORA-26011: Cannot load type *string* into column *string* in table *string*

Cause: A column can only store data of type declared for that column. And a substitutable column can only store data of valid subtypes of the supertype declared for that column.

Action: Check that the type or subtype specified is valid for that column.

ORA-26012: header in file *string* has an incompatible version number

Cause: A dump file was specified for a load operation whose version number is incompatible with the dump file version currently produced by the Oracle server on the system. Usually this message indicates that the dump file was produced by a newer version of the Oracle server.

Action: Load this dump file using the same version of the Oracle server that created the file.

ORA-26013: List allocated may not be big enough

Cause: There seems to be a discrepancy between the size for a list or buffer allocated by direct path api and the size needed.

Action: Contact Oracle Customer Support.

ORA-26014: unexpected error on *string string* while retrieving *string string*

Cause: The SQL error was returned from an OCISmtExecute call.

Action: Correct the SQL error that was returned.

ORA-26015: Array column *string* in table *string* is not supported by direct path

Cause: User attempted to load an array column via the direct path.

Action: Use the conventional path.

ORA-26016: Virtual column *string* in table *string.string* cannot be loaded by direct path

Cause: You attempted to load an virtual column using the direct path.

Action: Virtual columns cannot be loaded using the direct path.

ORA-26017: global indexes not allowed for direct path load of table partition *string*

Cause: Global indexes are defined on a table when direct path loading a single partition of the table.

Action: None

ORA-26018: Column *string* in table *string* does not exist

Cause: Column specified in the loader control file does not exist.

Action: Make sure the column exists and that you have privileges on it. Correct the loader control file if it is wrong.

ORA-26019: Column *string* in table *string* of type *string* not supported by direct path

Cause: The Specified column of SQL column type %s is not supported by the direct path loader.

Action: If the column is NULLable, remove it from the control file description. Then it will be loaded as a NULL.

ORA-26020: index *string.string* loaded successfully with *string* keys

Cause: Non-partitioned index information put to loader log file.

Action: None. Informational only.

ORA-26021: index *string.string* partition *string* loaded successfully with *string* keys

Cause: Partitioned index information put to loader log file.

Action: None. Informational only.

ORA-26022: index *string.string* was made unusable due to:

Cause: A Non-partitioned index was made index unusable due to the error displayed below this error.

Action: Depending on the error, either rebuild the index, or drop and re-create it.

ORA-26023: index *string.string* partition *string* was made unusable due to:

Cause: A partition of a partitioned index was made index unusable due to error displayed below this error.

Action: Depending on the error, either rebuild the index partition, or drop and re-create the entire index.

ORA-26024: SKIP_UNUSABLE_INDEXES requested and index segment was initially unusable

Cause: User requested SKIP_UNUSABLE_INDEXES option, and the index segment

* was in unusable state prior to the beginning of the load.

Action: Informational only. User will need to either rebuild the index

* or index partition, or re-create the index.

ORA-26025: SKIP_INDEX_MAINTENANCE option requested

Cause: User requested that index maintenance be skipped on a direct path load.

Action: The listed index was put into Index Unusable state due to the user requesting that index maintenance be skipped. Either rebuild the index or index partitions, or drop and re-create the index.

ORA-26026: unique index *string.string* initially in unusable state

Cause: A unique index is in IU state (a unique index cannot have

* index maintenance skipped via SKIP_UNUSABLE_INDEXES).

Action: Either rebuild the index or index partition, or use

* SKIP_INDEX_MAINTENANCE if the client is SQL*Loader.

ORA-26027: unique index *string.string* partition *string* initially in unusable state

Cause: A partition of a unique index is in IU state (a unique index

* cannot have index maintenance skipped via SKIP_UNUSABLE_INDEXES).

Action: Either rebuild the index or index partition, or use

* SKIP_INDEX_MAINTENANCE if the client is SQL*Loader.

ORA-26028: index *string.string* initially in unusable state

Cause: An index is in IU state prior to the beginning of a direct

* path load, it cannot be maintained by the loader.

Action: Either rebuild the index, re-create the index, or use either

* SKIP_UNUSABLE_INDEXES or SKIP_INDEX_MAINTENANCE (Sql*Loader only).

ORA-26029: index *string.string* partition *string* initially in unusable state

Cause: A partition of an index is in IU state prior to the beginning
* of a direct path load, it cannot be maintained by the loader.

Action: Either rebuild index partition, re-create the index, or use either

* SKIP_UNUSABLE_INDEXES or SKIP_INDEX_MAINTENANCE (Sql*Loader only).

ORA-26030: index *string.string* had *string* partitions made unusable due to:

Cause: A logical index error occurred on a partitioned index which
* affected one or more index partitions, which are listed below
* this message.

Action: The affected index partitions will have to be re-built, or, the
* entire index dropped and re-created.

ORA-26031: index maintenance error, the load cannot continue

Cause: A index error occurred during the index maintenance phase of
* a direct path load. The load cannot continue. See error message
* below this message.

Action: See action for the error message which follows this one.

ORA-26032: index *string.string* loading aborted after *string* keys

Cause: An index error occurred during direct-load of an index-organized table.
* Loading had to be aborted. No rows were loaded.

Action: Check the key just following the number of keys mentioned above.

* This key caused the index problem mentioned in an earlier message. *

ORA-26033: column *string.string* encryption properties differ for source or target table

Cause: The source and destination columns did not have the same
* encryption properties.

Action: For security reasons, check that the source and target table have

* the same encryption properties. *

ORA-26034: Column *string* does not exist in stream

Cause: Column specified in the column list does not exist in the stream.

Action: Make sure the column exists or remove it from the list.

ORA-26035: Error attempting to encrypt or decrypt column

Cause: An error occurred while attempting to encrypt or decrypt
* a database column.

Action: Verify correct encryption key was specified. *

ORA-26036: subpartition load specified but table *string* is not subpartitioned

Cause: The Loader control file contains a PARTITION clause but the table being loaded is not subpartitioned.

Action: Remove the subpartition specification from the SQL*Loader control file and retry the load.

ORA-26037: must specify partition name(s) for system partitioned table *string*

Cause: An attempt was made to load a system partitioned table with no partition name(s) specified.

Action: Specify the partition name(s) explicitly.

ORA-26040: Data block was loaded using the NOLOGGING option

Cause: Trying to access data in block that was loaded without

* redo generation using the NOLOGGING/UNRECOVERABLE option

Action: Drop the object containing the block.

ORA-26041: DATETIME/INTERVAL datatype conversion error

Cause: The column could not be converted from DATETIME

* datatype to internal DATETIME/CHARACTER datatype.

Action: Contact Oracle Customer Support.

ORA-26045: REF column *string* expects *string* arguments; found *string*.

Cause: The number of arguments for the REF column is incorrect.

Action: Specify the correct number of input arguments for REFs.

1. Unscoped system-generated REFs can have exactly 1 or 2 input arguments. a) It has exactly 1 input argument (one for the OID value) if a fixed table name was specified through OCI_DIRPATH_EXPR_REF_TBLNAME. b) It has exactly 2 input arguments (one for the table name and one for the OID value) if a fixed table name was not specified through OCI_DIRPATH_EXPR_REF_TBLNAME.

2. Scoped system-generated REFs can have 1 or 2 input arguments. Because a table name argument is not needed for a scoped ref, only 1 argument (OID value) is expected. But if the table name argument is given, it's still accepted.

3. Scoped primary-key REFs with N columns in its primary-key OID can have N or N+1 input arguments. Because a table name argument is not needed for a scoped ref, only N arguments (making up the OID value) is expected. But if the table name argument is given, it's still accepted.

ORA-26046: REF column *string* expects scoped table name *string*; user passed in *string*.

Cause: The scoped table name passed in by the user does not match the name in the schema.

Action: Specify the correct table name for the scoped REF column.

ORA-26048: Scoped REF column has wrong table name.

Cause: The scoped table name passed in by the user does not match the name in the schema.

Action: Specify the correct table name for the scoped REF column.

ORA-26049: Unscoped REF column has non-existent table name.

Cause: The table name passed in by the user does not exist in the schema.

Action: Specify a valid table name for the unscoped REF column.

ORA-26050: Direct path load of domain index is not supported for this column type.

Cause: Direct path can not load a domain index of that column type.

Action: Drop the index and try again or load using conventional path.

ORA-26051: internal error parsing packed decimal format string

Cause: A packed decimal field with a non-zero scale factor is mapped to a character column. In order to perform the datatype conversion, a numeric format string must be created based on the input field's precision and scale specifications. Direct path loader encountered an error in creating this format string.

Action: Examine the packed decimal field's precision and scale specifications and make sure that they contain valid values.

ORA-26052: Unsupported type *number* for SQL expression on column *string*.

Cause: The direct path api does not support a SQL expression on a column of that type.

Action: Make sure the types are correct.

ORA-26053: Row was not loaded due to conversion error.

Cause: The current row was not loaded due to a conversion error.

Action: Continue with the load anyways. 260xx - 260xx Direct Path API

ORA-26054: Direct Path Context prepared for a different mode than operation requested.

Cause: The user prepared the direct path context for one operation (Load, Unload, Convert), but then tried to perform a different operation.

Action: Make sure the direct path context mode and operation matches.

ORA-26055: Invalid buffer specified for direct path unload

Cause: The user specified a zero length or null buffer to be used for the Direct Path Unload operation.

Action: Specify a valid buffer and length.

ORA-26056: Requested direct path operation on a view is not supported.

Cause: An attempt was made to load into a view using direct path that has user-defined types, XML data, object type table or SQL expressions.

Action: Do not attempt to use direct path when loading a view that has nonscalar columns or when using SQL expressions on input columns.

ORA-26057: Conversion is not necessary for this direct path stream.

Cause: User attempted to convert a direct path stream that does not require conversion.

Action: Load the stream without conversion it.

ORA-26058: unexpected error fetching metadata for column *string* in table *string*

Cause: The direct path API encountered an unexpected error while retrieving metadata for a column.

Action: Contact Oracle support.

ORA-26059: Data is too large for column *string*

Cause: The direct path API encountered a column that can not be loaded because the input data is too large for a column.

Action: Make the target column larger.

ORA-26060: Can not convert type identifier for column *string*

Cause: The direct path API encountered a type identifier for a column that can not be loaded because a mapping can not be found for the input value.

Action: Verify the input data.

ORA-26061: Concurrent direct unloads is not allowed.

Cause: User attempted a direct unload when another is still in progress.

Action: Complete the current direct unload before starting another.

ORA-26062: Can not continue from previous errors.

Cause: User attempted to continue a direct path load after receiving an error which indicates the load can not continue.

Action: Address the original error that was returned.

ORA-26063: Can not flashback to specified SCN value - Wrap: *string* Base: *string*.

Cause: User specified an SCN which occurs before the last time the table definition was modified.

Action: Specify a more recent SCN.

ORA-26064: Invalid SCN specified - Wrap: *string* Base: *string*.

Cause: User specified an invalid SCN.

Action: Specify a valid SCN.

ORA-26065: check constraint cannot reference column, *string*, in direct path load

Cause: An enabled check constraint was found on a column stored as a lob.

Action: Either disable the check constraint before loading the table data

* using the direct path mode, or use the conventional path mode

* instead.

ORA-26076: cannot set or reset value after direct path structure is allocated

Cause: Client attempted to set or reset the number of rows in a direct path

* structure after it has already been allocated and initialized.

* Attributes used is one of the following:

* - OCI_ATTR_NUM_ROWS: to set # of rows in a direct path column array

* - OCI_ATTR_DIRPATH_DCACHE_SIZE: to set size of a date cache

* (default is 0)

* - OCI_ATTR_DIRPATH_DCACHE_DISABLE: to set whether date cache will be

* disabled on overflow (default is FALSE)

Action: Set the following attributes before:

* - OCI_ATTR_NUM_ROWS: before calling OCIHandleAlloc for column array

* - OCI_ATTR_DIRPATH_DCACHE_SIZE: before calling OCIDirPathPrepare

* - OCI_ATTR_DIRPATH_DCACHE_DISABLE: before calling OCIDirPathPrepare

ORA-26077: direct path column array is not initialized

Cause: Client attempted to allocate a column array for a direct path

* function context before allocating a column array for the
* table-level direct path context.

Action: Allocate the table-level direct path context's column array

* via OCIHandleAlloc before allocating column arrays for
* direct path function contexts.

ORA-26078: file "*string*" is not part of database being loaded

Cause: A parallel load file was specified which is not part
* of the database.

Action: Check filename and pathname for correctness.

ORA-26079: file "*string*" is not part of table *string.string*

Cause: A parallel load file was specified which is not in the
* tablespace of the table being loaded.

Action: Check to make sure that the specified parallel load file

* is in the tablespace of the table being loaded.

ORA-26080: file "*string*" is not part of table *string.string* partition *string*

Cause: A parallel load file was specified which is not in the
* tablespace of the table (partition, subpartition) being loaded.

* When a partitioned table is being loaded, the file must be

* in the tablespace of every partition or subpartition

* (i.e. each (sub)partition must be in the same tablespace).

Action: Specify a different parallel load file, or no file at all.

ORA-26082: load of overlapping segments on table *string.string* is not allowed

Cause: Client application is attempting to do multiple direct path load

* operations on the same table, but the segments overlap.

Action: Check the partition names (subname attribute of the direct path

* context) being loaded. Make sure you are not loading a table,

* and a partition of the same table. Make sure you are not

* loading a partition, and a sub-partition within the same

* partition.

ORA-26083: unsupported direct path stream version *string*

Cause: The stream version requested is not supported by the server.

Action: Check to make sure that the VERSION attribute of the direct

* stream is not being set to an invalid value.

ORA-26084: direct path context already finished

Cause: An OCIDirPathLoadStream operation was attempted after

* OCIDirPathFinish was called. Once a direct path operaton

* has been finished, no more data can be loaded.

Action: Check program logic to make sure OCIDirPathLoadStream is

* not called after OCIDirPathFinish.

ORA-26085: direct path operation must start its own transaction

Cause: A direct path operation is being attempted within a transaction
* that has already been started.

Action: Commit the transaction and Prepare the direct path operation again.

ORA-26086: direct path does not support triggers

Cause: A direct path operation is being attempted on a table which
* has enabled triggers.

Action: Disable the triggers on the table and try again.

ORA-26088: scalar column "string" must be specified prior to LOB columns

Cause: All scalar columns (i.e. non-LOB and non-LONG columns) must be
* specified by the client of the direct path API prior to
* specifying any LOB columns.

Action: Specify all scalar columns prior to specifying any LOB columns.

ORA-26089: LONG column "string" must be specified last

Cause: A client of the direct path API specified a LONG column to be
* loaded, but the LONG column was not the last column to be
* specified.

Action: Specify the LONG column last.

ORA-26090: row is in partial state

Cause: A direct path operation is being finished or a data save request
* has been made, but the table for which the request is being made
* on has a row in partial state. The row must be completed before
* the segment high water marks can be moved.

Action: Either complete the row, or abort the direct path operation.

ORA-26091: requested direct path operation not supported

Cause: A direct path operation was requested that is not supported

Action: Do not use that operation. Currently, UNLOAD is not supported.

ORA-26092: only LONG or LOB types can be partial

Cause: A column which is not a LONG or LOB had the
* OCI_DIRPATH_COL_PARTIAL flag associated with it.

* Only LONG or LOB type columns can be loaded in pieces.

Action: Do not use the OCI_DIRPATH_COL_PARTIAL flag for the column.

ORA-26093: input data column size (*number*) exceeds the maximum input size (*number*)

Cause: The user attempted to specify a column size (%d) that exceeded
* the maximum allowable input size (%d)."

Action: Make sure the input column metadata matches the column definition.

ORA-26094: stream format error: input column overflow

Cause: An input stream contained data for more input columns
* than specified by the client of the direct path API.

Action: Make sure that the stream being loaded is for the
* correct table. Check initialization sequence.

ORA-26095: unprocessed stream data exists

Cause: Either a OCIDirPathLoadStream call was made which provided
* more stream data prior to the server being able to fully
* process the stream data that it already has, or a
* OCIDirPathFinish call was made when the server had
* unprocessed stream data.

Action: Most likely an application mis-use of the direct path API.
* Make sure that the stream is not being reset inadvertently
* prior to any previous stream data being processed, or, that
* OCIDirPathFinish is not being called prematurely (i.e. stream
* pushed, error encountered and LoadStream not called to process
* the remainder of the stream before Finish is called.)

ORA-26096: transfer size too small for row data (*number bytes required*)

Cause: Either the transfer buffer size specified, or the default
* transfer buffer size (if you did not specify a size), is
* too small to contain a single row of the converted row data.

Action: Set the transfer buffer size attribute of the direct path
* context to be larger.

ORA-26097: unsupported conversion for column *string* (from type *number* to type *number*)

Cause: The direct path api does not support the required conversion.

Action: Make sure the types are correct. *

ORA-26098: direct path context is not prepared

Cause: A direct path api function was called with a direct path
* context which has not been prepared.

Action: Make sure all necessary attributes in the direct path
* context have been set, and the context is prepared via
* OCIDirPathPrepare.

ORA-26099: direct path context is already prepared

Cause: OCIDirPathPrepare was called with a context that has already
* been prepared.

Action: Free the direct path context, set necessary attributes, and
* call OCIDirPathPrepare.

-
- ORA-26101: tablespace # in file header is *string* rather than *string* for file *string***
Cause: The tablespace number in the file header is inconsistent with that in the control file.
Action: Check if the control file has been migrated correctly. Retry with the correct control file and data file.
- ORA-26102: relative file # in file header is *string* rather than *string* for file *string***
Cause: The relative file number in the file header is inconsistent with that in the control file.
Action: Check if the control file has been migrated correctly. Retry with the correct control file and data file.
- ORA-26103: V6 or V7 data file used to create control file**
Cause: The file header of the referenced file is in V6 or V7 format.
Action: Either remove the file from the create control file command, or somehow migrate the file header to V8 format.
- ORA-26500: error on caching "*string*".*string*"**
Cause: Attempt to cache the replication information which is unavailable in the catalog for the object.
Action: Use `dbms_reutil.sync_up_rep` to validate the replication catalog, or use `dbms_reutil.make_internal_pkg` to validate internal package.
- ORA-26501: RepAPI operation failure**
Cause: An external RepAPI operation failed.
Action: consult detail error message.
- ORA-26502: error resignal**
Cause: An internal service failed and signalled an error"
Action: consult detail error message.
- ORA-26503: internal RepAPI operation failure on object *string.string***
Cause: An unexpected internal RepAPI failure was detected
Action: Contact Oracle support.
- ORA-26504: operation not implemented**
Cause: The caller requested a RepAPI operation that was not implemented
Action: Do not issue this call.
- ORA-26505: unexpected internal null**
Cause: An internal buffer control structure was NULL
Action: Verify that sufficient memory resources are available to RepAPI.
- ORA-26506: null global context**
Cause: An internal buffer control structure was NULL
Action: Verify that sufficient memory resources are available to RepAPI.
- ORA-26507: null master connection**
Cause: The master connection handle was or became invalid.
Action: Verify that the master connection is valid.
- ORA-26508: null materialized view connection**

Cause: The client connection handle was or became invalid.

Action: Verify that the client connection is valid.

ORA-26509: null materialized view control structure

Cause: An internal materialized view control structure could not be obtained.

Action: Check that the owner and users provided are correct.

ORA-26510: materialized view name: '*string*' is greater than max. allowed length of *string* bytes

Cause: The specified materialized view name was too long.

Action: Shorten the materialized view name.

ORA-26511: master table '*string.string*' not found

Cause: A RepAPI operation was attempted against a non-existent or invalid master table

Action: Verify that the master table object exists.

ORA-26512: error pushing transaction to def\$error

Cause: An unexpected error occurred while sending an def\$error rpc to the master site

Action: Verify that the DBMS_DEFER package is valid and executable by the RepAPI client. Contact the local or master site administrator, if necessary.

ORA-26513: push error: master proc. *string*\$RP.*string* failed for trans:*string* seq:*string*

Cause: A conflict/error occurred at the master site while executing a \$RP.rep_insert(), rep_update(), or rep_delete() function which was not handled by conflict resolution logic at the master.

Action: Notify master site system administrator or DBA.

ORA-26514: object '*string.string*' not found

Cause: The specified object was expected but not found.

Action: Verify that the specified object exists and is valid.

ORA-26515: no master log available for '*string.string*'

Cause: The specified master log was not found or available for the named table.

Action: Create the master log at the master site or correct any problems that may exist with the log.

ORA-26516: no push transaction acknowledgement

Cause: RepAPI was unable to confirm that the last pushed transaction was successfully committed by the master site.

Action: Verify that the communications link between the local site and the master site is still valid. If the transaction has not been committed at the master, repush the transaction.

ORA-26517: materialized view control entry for '*string.string*' was not found

Cause: The specified materialized view catalog control record was not found.

Action: Verify that the local materialized view catalog is valid and that the local materialized view is properly defined.

ORA-26518: push queue synchronization error detected

Cause: Client tried to repush a transaction has already been committed at the master site. A common cause of this problem is an error at the local site in initializing or updating the local site transaction sequence mechanism.

Action: Verify that transaction data that RepAPI was attempting to repushed to the master site exists at the master table and is valid and consistent with the local site. If this error occurs, redundantly identified transactions are ignored and then purged from the local updatable materialized view logs. Check that the local site is correctly assigning new transactionIDs and is not accidentally generating non-unique values.

ORA-26519: no memory available to allocate

Cause: There was no memory left for the RepAPI process. This error may occur when RepAPI is trying to allocate a new table buffer area.

Action: Shutdown one or more local applications to attempt to free heap memory and retry the RepAPI operation.

ORA-26520: internal memory failure

Cause: An internal memory error was detected.

Action: Check if other errors have occurred or determine if any local application may have corrupted the memory subsystem.

ORA-26521: rpc initialization error

Cause: An error occurred during the initialization of a PL/SQL rpc.

Action: Verify that the procedure to be invoked exists and is valid at the master site and is executable by the RepAPI user.

ORA-26522: rpc execution error

Cause: An error occurred during the execution of a PL/SQL rpc.

Action: Check the error messages from the remote procedure and fix any remote site problems that may be preventing the execution of the invoked rpc.

ORA-26523: rpc termination error

Cause: An error occurred during the termination of a PL/SQL rpc. This is usually caused by master site being unable to close an opened cursor or if RepAPI cannot deallocate internal memory.

Action: Fix any server side problems first, determine if the RepAPI memory subsystem has been corrupted.

ORA-26524: nls subsystem initialization failure for product=*string*, facility=*string*

Cause: The NLS product/facility error message file could not be located or properly initialized.

Action: Check that the error message directory and file(s) have been properly installed.

ORA-26525: session connection attempt failed for *string* (@*string*)

Cause: A connection could not be established to the specified database using the provided connection string.

Action: Check that the user, password, connect string, names services, network, and any remote site listener process are properly installed and working.

ORA-26526: materialized view sql ddl parse/expansion failed for *string.string*

Cause: The client sql materialized view definition query could not be properly parsed by the master Oracle site.

Action: Check that materialized view ddl sql is compatible with the currently connected version of Oracle and does not violate any of the RepAPI sql limitations or restrictions.

ORA-26527: local store callback init phase failed for 'string.string'

Cause: The client callback failed during its INIT phase for the named object.

Action: Verify that the objects referenced by the client callback exist and are valid. Refer to the vendor-specific callback error code reference to diagnose the local problem. Record all error state and notify Oracle support.

ORA-26528: local store callback proc phase failed for 'string.string'

Cause: The client callback failed during its PROC phase for the named object.

Action: Refer to the vendor-specific callback error code reference to diagnose the local problem. Record all error state and notify Oracle support.

ORA-26529: local store callback term phase failed for 'string.string'

Cause: The client callback failed during its TERM phase for the named object.

Action: Refer to the vendor-specific callback error code reference to diagnose the local problem. Record all error state and notify Oracle support.

ORA-26530: unable to build materialized view refresh control list

Cause: The materialized view control list could not be constructed. This is generally the result of an error while accessing the local materialized view catalog.

Action: Verify that the named materialized view(s) are properly defined and valid.

ORA-26532: replication parallel push simulated site failure

Cause: A parallel push executed with event 26531 enabled raises this error to simulation failure of network or destination site.

Action: Do not enable the event for normal operation.

ORA-26534: collision: tranID *number* ignored and purged

Cause: A transaction that was pushed had a transaction ID that collided with a transaction that was previously pushed and committed at the master site.

Action: See the action section for E_QUEUESYNC (26518).

ORA-26535: *number* byte row cache insufficient for table with rowsize=*number*

Cause: A transaction that was pushed had a transaction ID that collided with a transaction that was previously pushed and committed at the master site.

Action: Increase the RepAPI row buffer size or reduce the width of the replicated tables.

ORA-26536: refresh was aborted because of conflicts caused by deferred transactions

Cause: There are outstanding conflicts logged in the DEFERROR table at the materialized view's master site.

Action: Resolve the conflicts in the master DEFERROR table and refresh again after the table is empty. Alternatively, refresh with REFRESH_AFTER_ERRORS, even if there are conflicts in the master's DEFERROR table. Proceeding despite conflicts can result in an updatable materialized view's changes appearing to be temporarily lost, until a refresh succeeds after the conflicts are resolved.

ORA-26563: renaming this table is not allowed

Cause: Attempt to rename a replicated table, an updatable materialized view table or the master table of a materialized view for which a materialized view log has been created.

Action: If desired, unregister the replicated table with `dbms_repcat.drop_master_reobject`, or use the recommended procedure to rename the master table of a materialized view.

ORA-26564: *string* argument is not of specified type

Cause: User passed type of the given argument number doesn't match with the type of the argument in the stored arguments.

Action: Invoke correct type procedure (i.e. `get_XXX_arg`)

ORA-26565: Call to <type>_arg made before calling dbms_defer.call

Cause: User invoked <type>_arg procedure before starting a deferred call

Action: Invoke various procedures in the correct order.

ORA-26566: Couldn't open connect to *string*

Cause: Failed to open connection using given dblink

Action: Make sure that the dblink is valid and remote m/c is up.

ORA-26571: *string.string.string*: number of arguments (*string*) does not match replication catalog

Cause: number of arguments does not match replication catalog

Action: examine total number of arguments for the rpc call

ORA-26572: *string.string.string*: argument *string* does not match replication catalog

Cause: the (rpc) call is corrupted

Action: examine total number of arguments and each argument for the rpc call

ORA-26575: remote database does not support replication parallel propagation

Cause: The remote database has a version lower than Oracle 8.0 and hence does not understand replication parallel propagation.

Action: Use serial propagation or upgrade the remote database to Oracle 8.0 or above.

ORA-26576: cannot acquire SR enqueue

Cause: An attempt to acquire the SR enqueue in exclusive mode failed.

Action: None

ORA-26577: PRESERVE TABLE can not be used when dropping old style materialized view *string.string*

Cause: The materialized view consists of a view and a container table.

Action: Drop the materialized view without PRESERVE TABLE option.

ORA-26650: *string string* background process *string* might not be started successfully

Cause: An error occurred during creation of a capture or apply background process.

Action: Review `V$STREAMS_CAPTURE` and `V$STREAMS_APPLY_COORDINATOR` views for the status of these processes. Also check the trace file for more information.

ORA-26651: Unable to start or stop capture process *string*

Cause: An attempt was made to start or stop a capture process while another capture process was concurrently starting or stopping.

Action: You cannot concurrently start or stop capture processes. Wait before attempting to start or stop additional capture processes.

ORA-26652: Capture *string* did not start properly and is currently in state *string*

Cause: An attempt to restart a capture process failed.

Action: Review V\$STREAMS_CAPTURE view for the state of the capture process. Also check the trace files for more information.

ORA-26653: Apply *string* did not start properly and is currently in state *string*

Cause: An attempt to restart an apply process failed.

Action: Review V\$STREAMS_APPLY% views for the state of the apply process. Also check the trace files for more information.

ORA-26654: Capture *string* attempted to connect to apply *string* already configured for *string*

Cause: An attempt was made by a GoldenGate, XStream or Streams Capture or XStream In to connect to an Apply that is already connected in the other mode.

Action: You cannot connect a capture to an apply already configured for another apply mode. Create or connect to another apply.

ORA-26655: Invalid *string* specified for *string* procedure

Cause: An attempt was made to execute the specified procedure with an invalid SCN value.

Action: Resubmit procedure with a valid SCN value.

ORA-26660: Invalid action context value for *string*

Cause: The value specified in the action context is invalid for use in GoldenGate, XStream or Streams.

Action: Check that the type and value are correct.

ORA-26662: unable to process *string* Data Dictionary information for object

Cause: The database is unable to process GoldenGate, XStream or Streams Data Dictionary for this object.

Action: Check that the compatibility for the database supports the object, and check the trace file for information about the object.

ORA-26663: error queue for apply process *string* must be empty

Cause: The error queue for this apply process contains error entries.

Action: Execute or delete errors in the error queue.

ORA-26664: cannot create *string* process *string*

Cause: An attempt was made to create a GoldenGate, XStream or Streams process when another was being created concurrently.

Action: Wait for the creation of the other GoldenGate, XStream or Streams process to finish before attempting to create the process.

ORA-26665: *string* process *string* already exists

Cause: An attempt was made to create a GoldenGate, XStream or Streams process that already exists.

Action: Either specify another process or remove the existing GoldenGate, XStream or Streams process.

ORA-26666: cannot alter *string* process *string*

Cause: An attempt was made to alter a GoldenGate, XStream or Streams process that is currently running.

Action: Stop the GoldenGate, XStream or Streams process with FORCE parameter set to TRUE and reissue the command.

ORA-26667: invalid *string* parameter *string*

Cause: An attempt was made to specify an invalid parameter.

Action: Check the documentation for valid parameters.

ORA-26668: *string* process *string* exists

Cause: An attempt to remove the component failed because it is associated with the GoldenGate, XStream or Streams process.

Action: Either remove the process manually or specify the "cascade" option in dbms_streams_adm.remove_queue.

ORA-26669: parameter *string* inconsistent with parameter *string*

Cause: An attempt was made to specify a subprogram parameter value that is inconsistent with another parameter value.

Action: Check the documentation for valid parameter values.

ORA-26670: No capture is found for queue '*string*'

Cause: An attempt was made to add an XStream outbound server to a queue using uncommitted data mode when no co-located Streams capture was configured for that queue.

Action: Change to committed data mode or configure a local Streams capture for the specified queue then retry the operation.

ORA-26671: maximum number of *string* processes exceeded

Cause: Cannot create additional GoldenGate, XStream or Streams processes since the maximum number of processes has been reached.

Action: Remove existing GoldenGate, XStream or Streams processes and retry the operation.

ORA-26672: timeout occurred while stopping *string* process *string*

Cause: Timeout occurred while waiting for a GoldenGate, XStream or Streams process to shut down.

Action: Retry the operation. If the error persists, try stopping the process with the FORCE option, or contact Oracle Support Services.

ORA-26673: duplicate column name *string*

Cause: An attempt was made to specify a duplicate column name in an LCR.

Action: Remove the duplicate column and retry the operation.

ORA-26674: Column mismatch in '*string.string*' (LCR: *string* type=*string*; DB: *string* type=*string*)

Cause: The columns in the LCR were not the same or not found in the database table.

Action: Alter the database table.

ORA-26675: cannot create *string* capture process *string*

Cause: GoldenGate, XStream or Streams capture process could not be created because one or more parameters contain invalid value.

Action: Refer to trace file for more details.

ORA-26676: Table '*string.string*' has *string* columns in the LCR and *string* columns in the replicated site

Cause: The number of columns in the LCR was not the same as the the replicated site.

Action: Alter the table structure

ORA-26677: *string* downstream capture process *string* cannot proceed

Cause: Database global name has been set to a value which is same as the source database name of the downstream capture process.

Action: Change database global name to a value other than the source database name for the downstream capture.

ORA-26678: *string* downstream capture process for source database *string* must be created at database *string* first

Cause: A GoldenGate, XStream or Streams downstream capture process was nonexistent when this operation was attempted.

Action: Create a GoldenGate, XStream or Streams downstream capture process, then retry the operation.

ORA-26679: operation not allowed on LOB or LONG columns in LCR

Cause: Certain operations on LOB/LONG columns of the LCR through rule-based transformations, DML handlers, or error handlers were not allowed.

Action: Do not perform restricted operations on LOB or LONG columns in LCRs. See the documentation for operations that are restricted on LOB/LONG columns in LCRs.

ORA-26680: object type not supported

Cause: The specified object type is not supported.

Action: Retry with a supported object type.

ORA-26681: command type not supported

Cause: The specified command type is not supported.

Action: Retry with a supported command type.

ORA-26682: invalid value for *publication_on*

Cause: The *publication_on* parameter should be either 'Y' or 'N'

Action: Retry with a proper value for *publication_on*.

ORA-26683: invalid value for *value_type*

Cause: The *value_type* parameter should be either 'OLD' or 'NEW'

Action: Retry with proper *value_type*.

ORA-26684: invalid value for *value_type*

Cause: The *value_type* parameter should be one of 'OLD', 'NEW' or '*'

Action: Retry with proper *value_type*.

ORA-26685: cannot apply transactions from multiple sources

Cause: Transactions from multiple sources were sent to the same apply process.

Action: Create multiple apply processes and create appropriate rules so that transactions from only one source reach an apply process.

ORA-26686: cannot capture from specified SCN

Cause: An attempt was made to specify an invalid SCN.

Action: Retry with a valid SCN.

ORA-26687: no instantiation SCN provided for "*string*"."*string*" in source database "*string*"

Cause: Object SCN was not set. If the object is a table, then both fields will be filled, for example "SCOTT"."EMP". If the object is a schema, only one field will be set, for example "SCOTT"."". And if the object is the entire database, no fields will be set, for example ""."".

Action: Set the SCN by calling DBMS_APPLY_ADM.SET_%_INSTANTIATION_SCN

ORA-26688: missing key in LCR

Cause: Metadata mismatch, or not enough information in the user generated LCR.

Action: Alter the database object, or provide all defined keys in the LCR.

ORA-26689: column datatype mismatch in LCR

Cause: The datatypes of columns in the LCR are not the same as the datatypes in the database object.

Action: Alter the database object.

ORA-26690: datatype not supported at non-Oracle system

Cause: One of the columns of the LCR being applied was of a datatype not supported by either the target non-Oracle system or by the Oracle transparent gateway through which the apply is being done.

Action: Do not apply data of this type. If possible, filter out columns containing such datatypes before applying.

ORA-26691: operation not supported at non-Oracle system

Cause: The apply process attempted an operation that is either not supported by the non-Oracle system or by the Oracle transparent gateway through which the apply is being done. Some kinds of DML (like procedure and function calls) and all DDL will cause this error to be raised.

Action: Do not attempt to apply such LCRs to non-Oracle systems. If possible, filter out such LCRs before applying.

ORA-26692: invalid value *string*, *string* should be in *string* format

Cause: The parameter specified was not in the correct format.

Action: Specify the parameter value in the correct format.

ORA-26693: *string string* process dropped successfully, but error occurred while dropping rule set *string*

Cause: An attempt to drop an unused rule set failed after dropping the GoldenGate, XStream or Streams process successfully.

Action: Check existence of rule set and manually drop if necessary.

ORA-26694: error while enqueueing into queue *string.string*

Cause: An error occurred while enqueueing a message.

Action: If the situation described in the next error on the stack can be corrected, do so.

ORA-26695: error on call to *string*: return code *string*

Cause: A locking related call failed.

Action: Try the call again after fixing the condition indicated by the return code.

ORA-26696: no *string* data dictionary for object with number *string* and version number *string* from source database *string*

Cause: An attempt to access the database object failed because the data dictionary for the object was either never populated or it was purged.

Action: Make sure the GoldenGate, XStream or Streams data dictionary is created by calling DBMS_CAPTURE_ADM.PREPARE_%_INSTANTIATION.

ORA-26697: LCR contains extra column '*string*'

Cause: The LCR contained more columns than the replicated table.

Action: Alter the database object.

ORA-26698: *string* did not have a *string* rule set

Cause: The GoldenGate, XStream or Streams client does not have a rule set of the indicated type.

Action: Verify that the GoldenGate, XStream or Streams client has a rule set of the specified type, and retry the operation.

ORA-26699: *string* message consumer *string* already exists

Cause: An attempt was made to create a GoldenGate, XStream or Streams message consumer that already exists.

Action: Either specify another message consumer or remove the existing GoldenGate, XStream or Streams message consumer.

ORA-26701: *string* process *string* does not exist

Cause: An attempt was made to access a GoldenGate, XStream or Streams process which does not exist.

Action: Check with the relevant security views for the correct name of the object.

ORA-26705: cannot downgrade capture process after Streams data dictionary has been upgraded

Cause: An attempt was made to downgrade a capture process after it has upgraded the GoldenGate, XStream or Streams data dictionary.

Action: Drop the capture process before attempting the downgrade.

ORA-26706: cannot downgrade capture process

Cause: An attempt was made to downgrade a capture process that has a higher version than the downgrade release version.

Action: Drop the capture process after capture has finished consuming all the redo logs before attempting the downgrade.

ORA-26708: remote DDL not supported by STREAMS : dblink *string*

Cause: The apply process attempted to apply a DDL LCR via a dblink. This is not supported.

Action: Do not attempt to apply DDL LCRs via a dblink. If possible, filter out DDL LCRs before applying.

ORA-26709: Streams RFS restart

Cause: Remote file server (RFS) process was restarted to reflect a change in DOWNSTREAM_REAL_TIME_MINE option of the GoldenGate, XStream or Streams capture process.

Action: No action required. This is an informational message only.

ORA-26710: incompatible version marker encountered during Capture

Cause: Capture process cannot mine redo from a version higher than the current software release version.

Action: Drop and recreate the capture process.

ORA-26711: remote table does not contain a primary key constraint

Cause: The master table for remote apply does not contain a primary key constraint or the primary key constraint has been disabled.

Action: Create a primary key constraint on the master table or enable the existing constraint.

ORA-26712: remote object is "string"."string"\@"string"

Cause: See the preceding error message to identify the cause. This message names the remote object, usually a table or view, for which an error occurred when GoldenGate, XStream or Streams tried to access it for remote apply.

Action: See the preceding error message.

ORA-26713: remote object does not exist or is inaccessible

Cause: GoldenGate, XStream or Streams replication could not access the named table or view at a remote database to apply changes.

Action: Confirm that the given remote table or view exists and is accessible through the given database link. When using a Heterogeneous Services database link to access a non-Oracle system, it may be necessary to check administration details for network connections at the non-Oracle system.

ORA-26714: User Error *string* encountered during apply process

Cause: An error was encountered during an apply process.

Action: Query the DBA_APPLY_ERROR view to determine the error and take the appropriate action.

ORA-26715: time limit reached

Cause: The specified time limit was reached for the GoldenGate, XStream or Streams process.

Action: Restart the GoldenGate, XStream or Streams process, increasing the TIME_LIMIT parameter if necessary.

ORA-26716: message limit reached

Cause: The specified message limit was reached for the Capture process.

Action: Restart the Capture process, increasing the MESSAGE_LIMIT parameter if necessary.

ORA-26717: SCN limit reached

Cause: The specified SCN limit was reached for the GoldenGate, XStream or Streams process.

Action: Change the MAXIMUM_SCN parameter, then restart the GoldenGate, XStream or Streams process.

ORA-26718: transaction limit reached

Cause: The specified transaction limit was reached for the Apply process.

Action: Restart the Apply process, increasing the TRANSACTION_LIMIT parameter if necessary.

ORA-26721: enqueue of the LCR not allowed

Cause: An apply process attempted to enqueue an LCR with a LONG column. This is not supported.

Action: Modify rules or unset the enqueue destination to prevent LCRs with LONG columns from being enqueued by the apply process.

ORA-26723: user "*string*" requires the role "*string*"

Cause: The caller did not have the specified role or called the procedure from a definer's rights package or procedure.

Action: Grant the specified role to the caller. If the procedure is called from a definer's rights package or procedure, change the definer's rights package or procedure to an invoker's rights package or procedure. Or grant all the privileges for the specified role explicitly.

ORA-26724: only SYS is allowed to set the Capture or Apply user to SYS.

Cause: The Capture or Apply user was specified as SYS by a user other than SYS.

Action: Set SYS as the Capture or Apply user while logged in as SYS.

ORA-26725: cannot downgrade apply handlers

Cause: An attempt was made to downgrade apply handlers that are not associated with a local database object, or the apply handlers are associated with a specific apply process.

Action: Drop the associated apply handlers before attempting the downgrade.

ORA-26726: standby and DOWNSTREAM_REAL_TIME_MINE are incompatible

Cause: An attempt was made to set the standby database and DOWNSTREAM_REAL_TIME_MINE option of the Oracle GoldenGate, XStream or Oracle Streams capture process on the same database.

Action: Do not attempt to set the DOWNSTREAM_REAL_TIME_MINE option for a Oracle GoldenGate, XStream or Oracle Streams capture process on a standby database. Do not attempt to change a database role to standby if there exists a capture process with the DOWNSTREAM_REAL_TIME_MINE parameter set to Y.

ORA-26727: Cannot alter queue_to_queue property of existing propagation.

Cause: The queue_to_queue property was specified for an existing propagation.

Action: Pass NULL for the queue_to_queue argument.

ORA-26730: *string* '*string*' already exists

Cause: An attempt to use FILE GROUP, FILE GROUP VERSION, or FILE GROUP FILE failed because the item in question already exists.

Action: Remove the object if appropriate and re-attempt the operation.

ORA-26731: *string* '*string*' does not exist

Cause: A FILE GROUP, FILE GROUP VERSION, or FILE GROUP FILE was specified that does not exist.

Action: Make sure the object exists and re-attempt the operation.

ORA-26732: invalid file group *string* privilege

Cause: The specified privilege number that was specified is invalid.

Action: Check specification of `dbms_file_group` for valid privileges.

ORA-26733: timed-out waiting for file group lock

Cause: The procedure waited too long while getting a lock to perform a file group repository operation.

Action: Retry the operation.

ORA-26734: different datafiles_directory_object parameter must be specified

Cause: The attempted operation involved datafiles platform conversion which required the `datafiles_directory_object` parameter to be specified for placing the converted data files.

Action: Retry the operation after specifying a valid `datafiles_directory_object` parameter. This directory must be different from the directory objects for any of the datafiles for the specified file group version.

ORA-26735: operation not allowed on the specified file group version

Cause: One or more datafiles or export dump file(s) were missing from the specified file group version.

Action: Retry the operation after adding all the data files and Data Pump dump file(s) to the specified version.

ORA-26736: Data Pump error

Cause: A Data Pump error occurred when the procedure performed a File Group Repository operation.

Action: Check the error stack and trace file for error details.

ORA-26737: version *string* already has an export dump file

Cause: A Data Pump dump file was added to a file group version that already has a dump file.

Action: Remove the existing dump file if appropriate, and retry the operation.

ORA-26738: *string* '*string*' is not empty

Cause: The FILE GROUP or FILE GROUP VERSION being dropped contained objects.

Action: Remove the child objects, then retry the operation.

ORA-26740: cannot downgrade because there are file groups

Cause: An attempt was made to downgrade a database that has file groups.

Action: Drop all file groups before attempting the downgrade.

ORA-26741: cannot assemble lob

Cause: An attempt was made to assemble lob, but the compatibility of the source database for the LOB information is lower than 10.2.0.

Action: Set `ASSEMBLE_LOBS` to `FALSE` in the DML or error handler while this handler is processing LOB information from a source database with a compatibility level lower than 10.2.0.

ORA-26742: Maximum number of ignored transactions exceeded

Cause: An attempt was made to add more than the allowed number of ignored transactions.

Action: Please clear the current list of ignored transactions.

ORA-26744: *string* capture process "*string*" does not support "*string*".*string*" because of the following reason: *string*

Cause: GoldenGate, XStream or Streams capture encountered a table with an unsupported property. The most common reason is an unsupported column data type.

Action: Revise the Capture rules to skip over the table in question. One way might be to add a negative rule excluding changes from the unsupported table from being captured. Also query the DBA_STREAMS_UNSUPPORTED view to determine which tables are not supported by GoldenGate, XStream or Streams and for what reason. Consider adding negative rules for any tables that may be captured, but are present in this view. For potential workarounds to certain unsupported properties, see Metalink.

ORA-26745: cursors (*string*) are not sufficient

Cause: The maximum number of open cursors was too small for GoldenGate, XStream or Streams Apply.

Action: Increase the value of open_cursors.

ORA-26746: DDL rule "*string*".*string*" not allowed for this operation

Cause: A DDL rule was specified for this operation.

Action: Specify a non-DDL rule for this operation.

ORA-26747: The one-to-many transformation function *string* encountered the following error: *string*

Cause: The specified transformation function encountered an error.

Action: Ensure that the function does not process or return DDL LCRs. Also ensure that the function does not return NULL.

ORA-26748: The one-to-one transformation function *string* encountered the following error: *string*

Cause: The specified transformation function encountered an error.

Action: Ensure that the function does not return an LCR that has a different type from the LCR which was passed to the function. Also ensure that the function does not return NULL. For DDL transformation functions, creating and returning a new DDL LCR is not allowed.

ORA-26752: Unsupported LCR received for "*string*".*string*"

Cause: GoldenGate, XStream or Streams capture process received an LCR with unsupported operation from LogMiner.

Action: If this object is listed in DBA_STREAMS_UNSUPPORTED view, modify rules to prevent changes made to this object from getting captured.

ORA-26753: Mismatched columns found in '*string.string*'

Cause: The columns in the LCR were not the same as the table in the database.

Action: Alter the database table.

ORA-26754: cannot specify both one-to-one transformation function *string* and one-to-many transformation function *string*

Cause: Both a one-to-one transformation function and a one-to-many transformation function were specified for a rule.

Action: Remove either the one-to-one transformation function, or the one-to-many transformation function.

ORA-26760: Could not find message number *string* for transaction with id *string*

Cause: Error

Action: Contact Oracle support"

ORA-26761: Standby Redo Logs not available for real time mining

Cause: Standby Redo Logs required for real time mining by downstream capture process were not available.

Action: Check the configuration of Standby Redo Logs and retry the operation at a later time. To start the capture process without real time mining property, reset `DOWNSTREAM_REAL_TIME_MINE` parameter of the capture process and retry the operation.

ORA-26762: Cannot autogenerate name for parameter *string* because of the following reason: *string*

Cause: An error was encountered while attempting to generate a name for a parameter which was passed a NULL value.

Action: If possible, fix the error, otherwise specify the parameter name explicitly.

ORA-26763: invalid file type "*string*"

Cause: An invalid file type was specified for the ASM file.

Action: Check documentation for valid ASM file types.

ORA-26764: invalid parameter "*string*" for local capture "*string*"

Cause: An invalid parameter was specified for the local capture process.

Action: Check documentation for valid parameters.

ORA-26765: invalid parameter "*string*" for downstream capture "*string*"

Cause: An invalid parameter was specified for the downstream capture process.

Action: Check documentation for valid parameters.

ORA-26766: Unexpected redo pattern encountered by LogMiner

Cause: d by tables with unsupported data types or newer table features.

Action: Remove the capture rule for the table and restart capture.

ORA-26767: Not enough redo log information for LogMiner

Cause: Direct-path SQL with NOLOGGING option or a SQL*Loader operation with UNRECOVERABLE clause was specified for the table.

Action: Remove the capture rule for the table and restart capture.

ORA-26768: Maximum number of unsupported tables exceeded

Cause: An attempt was made to add more than the allowed number of unsupported tables.

Action: Clear the current list of unsupported tables.

ORA-26785: Object has a NULL value

Cause: A method was invoked on a NULL object.

Action: Initialize the object with a non-NULL value.

ORA-26786: A row with key *string* exists but has conflicting column(s) *string* in table *string*

Cause: The row to update or delete exists in the table but had conflicting value for some columns.

Action: For Streams, please define a conflict resolution, or resolve the conflict and execute the error transaction using DBMS_APPLY_ADM.EXECUTE_ERROR. For logical standby, please verify the status of the database guard to ensure local modifications are not allowed, then re-instantiate the table and contact support if the problem persists.

ORA-26787: The row with key *string* does not exist in table *string*

Cause: The row to update or delete does not exist in the table.

Action: For Streams, please define a conflict resolution, or resolve the conflict and execute the error transaction using DBMS_APPLY_ADM.EXECUTE_ERROR. For logical standby, please verify the status of the database guard to ensure local modifications are not allowed, then re-instantiate the table and contact support if the problem persists.

ORA-26788: The column *string* is not encrypted in the local database.

Cause: The column in the destination database is NOT encrypted while it is encrypted in the source database.

Action: Set the corresponding column property in the destination database to 'encrypted' or change the apply parameter, PRESERVE_ENCRYPTED_COLS, to 'N' to suppress the error.

ORA-26789: Cannot split propagation *string* because only one propagation originates from its source queue "*string*".*string*"

Cause: Only one propagation originated from the propagation source queue.

Action: Please do not split this propagation.

ORA-26790: Requesting a lock on *string* "*string*" timed out

Cause: Could not get a lock on the object because another process was holding the lock.

Action: Please try later.

ORA-26791: Cannot split or merge propagation "*string*"

Cause: A process tried to split or merge this propagation, but failed and left STREAMS in an inconsistent state.

Action: Query DBA_RECOVERABLE_SCRIPT_BLOCKS view, and roll back the script which tried to split or merge this propagation.

ORA-26792: Invalid source database name *string*

Cause: The value for the source database global name was not valid.

Action: Specify a valid database global name. If the source database is not the local database, check the listener is up and running.

ORA-26793: Number of capture processes that enqueued message to queue "*string*".*string*" not equal to one

Cause: Split-merge API requires only one capture process enqueued message to the queue where the propagation originated

Action: Please drop one capture, or split or merge another propagation.

ORA-26794: Hierarchically enabled tables not supported

Cause: Hierarchically enabled tables are not supported.

Action: Disable hierarchy for the table.

ORA-26795: Cannot modify an LCR received from an XStream outbound server

Cause: An attempt was made to modify an LCR generated by an XStream outbound server.

Action: Clone the LCR generated by the XStream outbound server by using the provided OCILCR* functions, such as OCILCRNew, OCILCRHeaderSet, and OCILCRRowColumnInfoSet. Then modify the cloned LCR.

ORA-26797: XStream Out feature unsupported below compatible 10.2.0

Cause: An attempt was made to create an XStream outbound server at compatibility below 10.2.0.

Action: Upgrade database compatibility to 10.2.0 or higher then retry.

ORA-26798: LOB logical change record (LCR) missing LOB column in table "string"."string"

Cause: The apply slave could not fill update LOB because of missing LOB column.

Action: Check that all LOB columns have been sent correctly.

ORA-26800: Apply not the only subscriber for "string"."string".

Cause: The combined capture and apply optimization could not be used since Apply was not the lone subscriber to the queue.

Action: Apply has to be the only subscriber to the queue.

ORA-26801: More than one subscriber for "string"."string".

Cause: Multiple subscribers were found when the combined capture and apply optimization was configured to only work for one subscriber.

Action: Configure a single subscriber, apply or propagation for the queue, or enable the optimization for multiple subscribers.

ORA-26802: Queue "string"."string" has messages.

Cause: The combined capture and apply optimization could not be used since the queue had messages.

Action: Make sure queue is empty before starting apply and capture.

ORA-26803: Subscribers have changed for queue "string"."string".

Cause: The combined capture and apply optimization could not be used since the subscribers had changed.

Action: Optimization can be used only if the queue has a single subscriber.

ORA-26804: Apply "string" is disabled.

Cause: The apply process was disabled or aborted.

Action: Start the apply process.

ORA-26805: Queue "string"."string" has rule based subscribers.

Cause: The combined capture and apply optimization could not be used since the queue had rule based subscribers.

Action: Make sure queue has no rule based subscribers before starting apply and capture.

ORA-26806: Remote database could not support combined capture and apply optimization.

Cause: The remote database has a version lower than Oracle 11.0 and hence does not understand combined capture and apply optimization.

Action: Upgrade the remote database to Oracle 11.0 or above in order to use the combined capture and apply optimization.

ORA-26807: Database link is not NULL for Apply with the name "*string*".

Cause: The combined capture and apply optimization could not be used since `apply_database_link` was not NULL.

Action: Drop and recreate the apply with NULL value for `apply_database_link`.

ORA-26808: Apply process *string* died unexpectedly.

Cause: Apply process died unexpectedly.

Action: Check your system for anomalies and restart apply. If this error persists, contact Oracle Support Services. See trace file for more details.

ORA-26809: Capture aborted: checkpoint-free mode requires combined capture and apply mode.

Cause: The requirements for combined capture and apply mode were broken.

Action: Restore the combined capture and apply mode and then restart the capture. If combined capture and apply mode is no longer desired, drop the existing checkpoint-free capture and create another one that will take checkpoints.

ORA-26810: Apply "*string*" on database "*string*" is in the mode of combined capture and apply.

Cause: The combined capture and apply optimization could not be used because Apply was already in the mode of combined capture and apply.

Action: Do not configure two captures for one apply.

ORA-26811: Client has already attached to *string* apply "*string*".

Cause: The client has already attached to the specified apply process.

Action: Detach apply process before reattach.

ORA-26812: An active session currently attached to XStream server "*string*".

Cause: An attempt was made to attach to the specified XStream server while another session was attached to it.

Action: Retry when there is no session attaching to the specified XStream server.

ORA-26813: The value for argument "ARRAY_SIZE" is too small

Cause: The value for argument "ARRAY_SIZE" was less than the number of columns in the requested column list.

Action: Check the return value for "NUM_COLUMNS" parameter then allocate all input arrays to at least that size and invoke the same OCI function again.

ORA-26814: The value for argument *string* exceeds maximum *string*

Cause: The value for specified value exceeded the maximum allowed.

Action: Correct the value of specified argument.

ORA-26815: Error from Apply Network Receiver for Apply "*string*" and Capture "*string*".

Cause: The Apply Network Receiver aborted due to an unexpected error.

Action: Query DBA_APPLY_ERROR to determine the error and then restart the Capture and Apply.

ORA-26816: *string* apply process "*string*" (OS id *string*) is exiting due to ORA-*string*.

Cause: An apply process encountered an unexpected error.

Action: Query DBA_APPLY to examine the status of Apply and restart Apply if needed.

ORA-26817: *string* capture process "*string*" is unable to communicate with capture server *string* during initialization.

Cause: Capture server might not be started properly

Action: Fix any errors during capture server creation and re-start capture process

ORA-26818: *string* capture process *string* receives an error from capture server.

Cause: Capture server received an error.

Action: Check log for error details.

ORA-26819: *string* capture server for apply "*string*" and capture "*string*" encounters disabled or aborted propagation "*string*".

Cause: Propagation was disabled or aborted.

Action: Start propagation.

ORA-26820: *string* capture server for apply "*string*" and propagation "*string*" becomes active and needs join capture process "*string*".

Cause: Capture server was waiting for propagation or apply to start

Action: Capture process needs restart (done automatically).

ORA-26821: No propagation process found between source queue "*string*".*string*" and destination queue "*string*".*string*".

Cause: Propagation has not been configured.

Action: Configure a propagation between specified queues and restart capture.

ORA-26822: Failure in creating capture servers (ksv error code *string*).

Cause: Failure in ksv slave creation.

Action: Identify the actual ksv error and act accordingly.

ORA-26823: *string* capture server *string* is unable to communicate with capture process "*string*".

Cause: Capture process was not started properly or was aborted.

Action: If Oracle GoldenGate, XStream or Streams capture process was stopped, then restart the capture process. Otherwise, fix any errors during the capture process creation and restart the capture process.

ORA-26824: user-defined XStream callback error

Cause: A value other than OCI_CONTINUE or OCI_SUCCESS was returned for the user-defined XStream callback function. Any returned value other than OCI_CONTINUE or OCI_SUCCESS is invalid.

Action: Verify that either OCI_CONTINUE or OCI_SUCCESS is returned from the user-defined XStream callback function.

ORA-26825: STREAMS process "*string*" is not configured as an XStream outbound server.

Cause: An attempt was made to attach to a STREAMS apply process, which was not configured as an XStream outbound server.

Action: Check the apply name or re-create the apply process as an XStream outbound server.

ORA-26826: *string* apply coordinator and apply slave are unable to communicate.

Cause: GoldenGate, XStream or Streams Apply process may have died unexpectedly.

Action: Check your system for anomalies and restart apply. If this error persists, contact Oracle Support Services. See trace file for more details.

ORA-26827: Insufficient privileges to attach to XStream outbound server "*string*".

Cause: Sufficient privileges were not granted to attach to the specified XStream outbound server.

Action: Query DBA_XSTREAM_OUTBOUND view to get the connect_user value for the specified outbound server. Then modify the application to connect to the outbound server's database using this value.

ORA-26828: XStream outbound server "*string*" requires combined capture and apply mode.

Cause: The specified XStream outbound server was not in combined capture and apply mode.

Action: Restore the combined capture and apply mode and then restart the capture.

ORA-26829: Cannot set "DISABLE_ON_ERROR" parameter to 'N'.

Cause: An attempt was made to change the "DISABLE_ON_ERROR" parameter for an XStream outbound server to 'N'.

Action: Remove invalid statement.

ORA-26830: Cannot define handler for an XStream outbound server.

Cause: An attempt was made to define a handler for an XStream outbound server.

Action: Remove invalid statement.

ORA-26831: Cannot delete or execute error transaction from XStream outbound server "*string*".

Cause: An attempt was made to delete or execute an error transaction from the specified XStream outbound server.

Action: Remove invalid statement.

ORA-26832: Unable to create XStream outbound server "*string*" due to existing handler.

Cause: An attempt was made to create the specified XStream outbound server while there was a handler defined for the specified server.

Action: Use DBMS_APPLY_ADM.SET_DML_HANDLER procedure to remove all handlers defined on the specified server then retry statement.

ORA-26833: *string* failed to update acknowledgment SCN for propagation "*string*" from capture "*string*" to apply "*string*".

Cause: propagation might have been modified after GoldenGate, XStream or Streams was started.

Action: Ensure propagation is configured properly and restart GoldenGate, XStream or Streams.

ORA-26834: Unable to alter parameter '*string*' because *string* capture process is not configured to run locally

Cause: An attempt was made to alter the specified capture parameter when the GoldenGate, XStream or Streams capture process was not configured to run on the local database.

Action: Remove the invalid parameter or use DBMS_CAPTURE_ADM.ALTER_CAPTURE procedure to alter the parameter.

ORA-26835: The source database for XStream outbound server "*string*" is invalid

Cause: An attempt was made to add an XStream outbound server with a source database that was different from the associated capture's source database.

Action: Correct the value for the 'source_database' parameter in the call.

ORA-26836: The specified rules must be created from the same subsetting condition

Cause: An attempt was made to remove an outbound server's subset rules when the specified INSERT, UPDATE, and DELETE rules were not created from the same subsetting condition.

Action: Correct the rules in the statement.

ORA-26837: Server "*string*" is not an XStream inbound server

Cause: An attempt was made to execute a procedure not appropriate on an XStream inbound server.

Action: Replace with a procedure appropriate for an XStream inbound server and resubmit.

ORA-26838: Setting apply parameter "*string*" is not permitted for XStream Outbound Server

Cause: An attempt was made to set an apply parameter that was not applicable for XStream Outbound Server.

Action: Configure XStream Outbound Server using valid parameters. Check the documentation for valid parameter values.

ORA-26839: Apply tag for apply "*string*" is not permitted for XStream Outbound Server

Cause: An attempt was made to set an apply tag that was not applicable for XStream Outbound Server.

Action: Do not set the apply tag when using XStream Outbound Server.

ORA-26840: Combined capture and apply optimization is disabled because *string* is unable to identify an apply for the source database "*string*".

Cause: There were multiple Streams apply processes using the same queue which made combined capture and apply (CCA) optimization not possible.

Action: If Streams performance is an issue, check the "Combined Capture and Apply Optimization" chapter in the "Oracle Streams Concepts and Administration" book. Then reconfigure the Streams processes to meet this optimization's requirements.

ORA-26841: No subscribers are found for queue "*string*"."*string*".

Cause: No propagation or apply was configured for the specified queue.

Action: Configure propagation or apply for the specified queue.

ORA-26842: Setting apply directive "*string*" is not permitted for XStream Outbound Server

Cause: An attempt was made to set an apply directive that was not applicable for XStream Outbound Server.

Action: Configure XStream Outbound Server using valid directives. Check the documentation for valid directives.

ORA-26843: Local propagation "*string*" found for capture queue "*string*"."*string*".

Cause: The combined capture and apply optimization could not be used because a local propagation was attached to the capture queue.

Action: Remove the local propagation and restart capture.

ORA-26844: Found "*string*" active automatic split jobs for *string* Capture "*string*" in DBA_STREAMS_SPLIT_MERGE

Cause: Only one active split job is allowed for each GoldenGate, XStream or Streams Capture, but multiple active automatic split jobs were found in DBA_STREAMS_SPLIT_MERGE.

Action: Check trace to see how the jobs were submitted and drop them.

ORA-26845: Found "*string*" active split rows with the same cloned *string* Capture "*string*" in DBA_STREAMS_SPLIT_MERGE

Cause: In DBA_STREAMS_SPLIT_MERGE, for active split rows, the column CLONED_CAPTURE_NAME should be unique. However, multiple rows were found whose ACTION_TYPE column is 'SPLIT', ACTIVE column is 'ACTIVE' and have the same CLONED_CAPTURE_NAME.

Action: Check trace to see how the rows were inserted and call DBMS_STREAMS_ADM.RECOVER_OPERATION() for error recovery.

ORA-26846: Found "*string*" active automatic merge jobs for cloned *string* Capture "*string*" in DBA_STREAMS_SPLIT_MERGE

Cause: Only one active merge job is allowed for each cloned GoldenGate, XStream or Streams Capture, but multiple active automatic merge jobs were found in DBA_STREAMS_SPLIT_MERGE.

Action: Check trace to see how the jobs were submitted and drop them.

ORA-26847: Found invalid *string* type: "*string*"

Cause: Invalid GoldenGate, XStream or Streams type to split off was found. Type should only be 'PROPAGATION'(1) or 'APPLY'(2).

Action: Check trace to see how the invalid GoldenGate, XStream or Streams type was created and correct it.

ORA-26848: Split a nonexistent Streams Capture process "*string*" in job "*string*"

Cause: The job attempted to split a non-existent original Streams Capture.

Action: Drop the split job, or wait until the Streams Capture comes to existence.

ORA-26849: Split a nonsplittable *string* Capture process "*string*" in job "*string*"

-
- Cause:** The job tried to split a GoldenGate, XStream or Streams Capture that was not splittable. That is, the Capture either had less than two subscribers, or it was not the only Capture of its queue.
- Action:** Drop the split job, or wait until the GoldenGate, XStream or Streams Capture becomes splittable.
- ORA-26850: Changes to queue subscribers were detected by *string* capture process.**
- Cause:** The subscribers for capture queue might have changed.
- Action:** Capture process will restart automatically.
- ORA-26851: Unable to connect to apply "*string*" because it has connected to another capture.**
- Cause:** Another capture process is already connected to apply.
- Action:** Wait for the connected capture process to terminate or abort the connected capture process.
- ORA-26852: Invalid NULL value for column_value parameter.**
- Cause:** NULL is not allowed to be passed as the column value.
- Action:** Replace NULL with a proper AnyData instance containing NULL, e.g., `sys.AnyData.ConvertVarchar2(NULL)`, as the column value if the column value is NULL.
- ORA-26853: invalid cca maximum percentage *string***
- Cause:** Specified percentage value was not in range 0 - 100.
- Action:** Specify a percentage value in the range 0 - 100.
- ORA-26854: STREAMS *string* has no enqueue or dequeue privileges to the queue.**
- Cause:** The GoldenGate, XStream or Streams user did not have enqueue or dequeue privilege to the queue.
- Action:** Grant GoldenGate, XStream or Streams user enqueue or dequeue privileges to the queue.
- ORA-26855: STREAMS *string* has insufficient database privilege to access the queue.**
- Cause:** The GoldenGate, XStream or Streams user did not have sufficient database privilege to access the queue.
- Action:** Grant GoldenGate, XStream or Streams user database privileges to access the queue.
- ORA-26856: STREAMS *string* has insufficient database privilege to access the queue.**
- Cause:** The GoldenGate, XStream or Streams user did not have sufficient database privilege to access the queue.
- Action:** Grant GoldenGate, XStream or Streams user database privileges to access the queue.
- ORA-26857: LCR position cannot be null (XID=*string*).**
- Cause:** The position of an LCR in the specified transaction was null.
- Action:** Use `OCILCRHeaderSet` to define the LCR position.
- ORA-26858: LCR position must be strictly increasing (XID='*string*', LCR position='*string*', previous position='*string*').**

Cause: The position of an LCR in the specified transaction was less than or equal to the previous LCR in transaction.

Action: Use OCILCRHeaderSet to correct the LCR position.

ORA-26859: Server "*string*" is not an XStream outbound server

Cause: An attempt was made to execute a procedure not appropriate on an XStream outbound server.

Action: Replace with a procedure appropriate for an XStream outbound server and resubmit.

ORA-26860: Different transactions must have different transaction IDs

(XID='*string*', LCR position='*string*', previous commit position='*string*').

Cause: The position of an LCR in the specified transaction was greater than the position of the previous commit LCR in transaction with same transaction ID.

Action: Use different transaction IDs for different transactions.

ORA-26862: LCR position must be greater than the processed low position of the XStream inbound server (XID='*string*', LCR position='*string*').

Cause: The position of an LCR in the specified transaction was less than or equal to the processed low position of the XStream inbound server.

Action: Use OCILCRHeaderSet to correct the LCR position.

ORA-26863: Job "*string*" showing as an active job in DBA_STREAMS_SPLIT_MERGE does not exist in DBA_SCHEDULER_JOBS.

Cause: An active job showing in DBA_STREAMS_SPLIT_MERGE did not exist. It may have been dropped accidentally or something was wrong with it.

Action: Check trace to identify the problem and call DBMS_STREAMS_ADM.RECOVER_OPERATION() for error recovery.

ORA-26864: Error occurred in *string* automatic job: "*string*"

Cause: An error has happened inside GoldenGate, XStream or Streams automatic job.

Action: Check trace for more detail.

ORA-26865: must send a COMMIT LCR to end transaction '*string*' before sending another transaction

Cause: An attempt was made by a client application to send LCRs for a new transaction before sending a COMMIT LCR for the specified transaction.

Action: Modify the client application to send a COMMIT LCR at the end of the specified transaction.

ORA-26866: The Queue of *string* Apply process "*string*" is not changeable.

Cause: Not all of the conditions for the Queue of a GoldenGate, XStream or Streams Apply process to be changeable were met. Conditions are: -The Apply process is not running. -The Apply process has no error. -The Apply process has no spilling. -The Apply process is not used for XStream Outbound or Inbound Servers. -The Apply process is a local Apply process. -The corresponding GoldenGate, XStream or Streams Capture process should be stopped.

Action: Make sure all of the conditions are met.

ORA-26867: *string* must be called during OCIXStreamOutLCRReceive execution

Cause: An attempt was made to execute the specified function while OCIXStreamOutLCRReceive call was not in progress.

Action: Check your program and make sure the specified call is invoked during OCIXStreamOutLCRReceive callback function.

ORA-26868: *string* must be called during OCIXStreamInLCRSend execution

Cause: An attempt was made to execute the specified function while OCIXStreamInLCRSend call was not in progress.

Action: Check your program and make sure the specified call is invoked during OCIXStreamInLCRSend callback function.

ORA-26869: must attach to an XStream inbound server before executing *string* function

Cause: An attempt was made to invoke the specified function before executing OCIXStreamInAttach call.

Action: Add OCIXStreamInAttach call before the specified function.

ORA-26870: cannot call *string* while OCIXStreamInLCRCallbackSend call is still executing.

Cause: An attempt was made to invoke the specified call while OCIXStreamInLCRCallbackSend call was executing.

Action: Check your program and remove the specified call when there is an OCIXStreamInLCRCallbackSend call in progress.

ORA-26871: unexpected *string* call (expecting *string*)

Cause: Could be one of the following reasons: 1) An attempt was made to invoke OCIXStreamInChunkSend when the most recent LCR or chunk sent did not have the OCI_XSTREAM_MORE_ROW_DATA flag set; 2) An attempt was made to invoke OCIXStreamInLCRSend when the most recent LCR or chunk sent had OCI_XSTREAM_MORE_ROW_DATA flag set.

Action: None

ORA-26872: must attach to an XStream outbound server before executing *string* function

Cause: An attempt was made to invoke the specified function before executing OCIXStreamOutAttach call.

Action: Add OCIXStreamOutAttach call before the specified function.

ORA-26873: cannot call *string* while OCIXStreamOutLCRCallbackReceive call is still executing.

Cause: An attempt was made to invoke the specified call while OCIXStreamOutLCRCallbackReceive call was executing.

Action: Check your program and remove the specified call when there is an OCIXStreamOutLCRCallbackReceive call in progress.

ORA-26874: *string* Capture process "*string*" cannot be split.

Cause: An attempt was made to split a GoldenGate, XStream or Streams Capture process that could not be split. That is, the Capture process either had less than two subscribers, or it was not the only Capture process of its queue.

Action: Wait until the GoldenGate, XStream or Streams Capture process can be split.

ORA-26875: Timeout while *string* automatic split job "*string*" waits for the subscriber "*string*" of Capture process "*string*" to acknowledge split

Cause: To split a subscriber of a GoldenGate, XStream or Streams Capture process, an automatic split job needs to wait until the subscriber acknowledges the split. The wait timed out.

Action: None

ORA-26876: invalid processed low-watermark (current position=*string*; new position=*string*)

Cause: An attempt was made to set the processed low-watermark to a value that was less than the current processed low-watermark.

Action: Correct the processed low-watermark in OCIXStreamOutProcessedLWMSet call.

ORA-26877: must reattach after an OCIXStreamOut call was interrupted

Cause: An attempt was made to execute another OCIXStreamOut API when an earlier call was interrupted because the XStream outbound server was disabled or the client requested cancellation of the operation.

Action: Execute OCIXStreamOutAttach call to reattach to the same XStream outbound server.

ORA-26878: inconsistent input LCR (LCR is '*string*' type, expecting '*string*')

Cause: An attempt was made to send an LCR that was not consistent with the specified LCR type.

Action: Correct your application to specify an LCR type that agrees with the LCR to be sent.

ORA-26879: "SET_ENQUEUE_DESTINATION" directive is not permitted on rules used by XStream outbound server "*string*"

Cause: One or more rules, used by the specified XStream outbound server, had SET_ENQUEUE_DESTINATION directive defined.

Action: Execute the following: 1) Execute query SELECT xr.rule_owner, xr.rule_name, xr.rule_set_owner, xr.rule_set_name FROM dba_apply_enqueue e, dba_xstream_rules xr WHERE e.rule_owner = xr.rule_owner AND e.rule_name = xr.rule_name AND xr.streams_name = <specified outbound server>; 2) For each rule returned, execute DBMS_APPLY_ADM.SET_ENQUEUE_DESTINATION procedure to set the destination queue to null, or execute DBMS_RULE_ADM.REMOVE_RULE to remove that rule from its associated rule set.

ORA-26880: "SET_EXECUTE" directive is not permitted on rules used by XStream outbound server "*string*"

Cause: One or more rules, used by the specified XStream outbound server, had SET_EXECUTE directive defined.

Action: Execute the following: 1) Execute query SELECT xr.rule_owner, xr.rule_name, xr.rule_set_owner, xr.rule_set_name FROM dba_apply_execute e, dba_xstream_rules xr WHERE e.rule_owner = xr.rule_owner AND e.rule_name = xr.rule_name AND xr.streams_name = <specified outbound server>; 2) For each rule returned, use DBMS_APPLY_ADM.SET_EXECUTE procedure to set the EXECUTE parameter to TRUE, or use DBMS_RULE_ADM.REMOVE_RULE to remove that rule from its associated rule set.

ORA-26881: ORA-*string*: *string* raised in *string* automatic *string* job:"*string*"."*string*" for Capture process "*string*" and cloned Capture process "*string*".

Cause: An error was raised in a GoldenGate, XStream or Streams automatic split/merge job for the given original and cloned Capture processes.

Action: Check the corresponding split/merge row in DBA_STREAMS_SPLIT_MERGE view, alert log and trace file for details.

ORA-26882: Timeout while *string* automatic split/merge job:"string"."string" tried to lock Capture process "string".

Cause: The GoldenGate, XStream or Streams Capture process could be locked by other automatic split/merge jobs.

Action: No action required. The GoldenGate, XStream or Streams automatic split/merge job will retry automatically.

ORA-26883: Timeout due to *string* Apply process "string" while merge original Capture process "string" and cloned Capture process "string".

Cause: When merging two GoldenGate, XStream or Streams Capture processes, the merge needs to wait until the Apply process of the cloned Capture process goes ahead of the slowest subscriber of the original Capture process. This wait timed out.

Action: Make sure the GoldenGate, XStream or Streams Apply process still works properly.

ORA-26884: Not allowed to specify OCI_LCR_ROW_COLVAL_OLD with OCILCR_NEW_ONLY_MODE.

Cause: An attempt was made to call OCILCRRowColumnInfoGet function with OCI_LCR_ROW_COLVAL_OLD and OCILCR_NEW_ONLY_MODE.

Action: Change OCI_LCR_ROW_COLVAL_OLD to OCI_LCR_ROW_COLVAL_NEW or remove OCILCR_NEW_ONLY_MODE argument.

ORA-26885: OCIXStreamInCommit called before OCIXStreamInFlush

Cause: An attempt was made to call OCIXStreamInCommit before calling OCIXStreamInFlush.

Action: Call OCIXStreamInFlush prior to calling OCIXStreamInCommit.

ORA-26886: LCR commit position ('string') must be greater than the applied high position of the XStream inbound server (position='string').

Cause: The position of the commit LCR was less than or equal to the applied high position of the XStream inbound server.

Action: Set the commit position higher than the applied high position.

ORA-26887: Insufficient privileges to attach to XStream inbound server "string".

Cause: Sufficient privileges were not granted to attach to the specified XStream inbound server.

Action: Query DBA_XSTREAM_INBOUND view to get the apply_user value for the specified XStream outbound server. Then, modify the application to connect to the inbound server's database using this value.

ORA-26888: Redo compatilby must be 10.2 or greater

Cause: XStream Out requires redo comptibility to be 10.2 or greater.

Action: Drop the outbound server.

ORA-26889: LOB assembly not supported for PDML parent transaction *string*, child transaction *string*.

Cause: LOB assembly is not supported for PDML transactions.

Action: Disable LOB assembly, or filter out the PDML transaction.

ORA-26890: Invalid update LCR on Oracle Sequence "*string*".*string*"

Cause: The new value column list of an update LCR on an Oracle Sequence did not have non-null columns "CYCLE#", "INCREMENT\$", "CACHE" and "HIGHWATER".

Action: Make sure the new value column list has all the required columns. This might be a user error if the LCR is from an XStream In client.

ORA-26891: Target Oracle Sequence "*string*".*string*" has inconsistent parameters with the source.

Cause: The source and target Oracle Sequences did not have the identical cache size, increment value, and cycle flag needed for replication purposes.

Action: Make sure the source and target Oracle Sequences have identical parameters. This might be a user error if the LCR is from an XStream In client.

ORA-26892: XStream feature not supported

Cause: The XStream feature was not supported.

Action: No action necessary.

ORA-26893: Input LCR must be a commit LCR

Cause: The input LCR was not a commit LCR.

Action: Make sure the input LCR is a commit LCR.

ORA-26894: Invalid "*string*" in Apply Progress redo

Cause: The value of the field reported was possibly corrupted.

Action: Contact Oracle Support Services.

ORA-26895: Setting parameter "*string*" of Streams process "*string*" is only permitted for Oracle GoldenGate or XStream.

Cause: An attempt was made to set a parameter that is only allowed for XStream.

Action: Oracle GoldenGate license is needed to use this parameter.

ORA-26896: Attempted to connect multiple Oracle GoldenGate Capture processes, including "*string*", with XStream outbound server "*string*" through queue "*string*".*string*"

Cause: An attempt was made to connect multiple Oracle GoldenGate Capture processes through a queue with the XStream outbound server.

Action: Each XStream outbound server can only connect with one co-located Capture process. Remove extra Capture processes.

ORA-26898: Unable to create "*string*" because there is an Oracle Capture process using the same queue "*string*".*string*".

Cause: An attempt was made to create an inbound server using the same queue that was used by an Oracle Capture process.

Action: Resubmit the statement using another queue name.

ORA-26899: internal *string* error

Cause: An internal Streams, XStream or GoldenGate error has occurred.

Action: Please contact Oracle customer support.

ORA-26900: Streams failed to update data dictionary table for propagation "*string*" from capture "*string*" to apply "*string*".

Cause: The data dictionary table was corrupted.

Action: Validate the data dictionary table to restart GoldenGate, XStream or Streams capture process.

ORA-26901: *string* propagation sender in the combined capture and apply mode is to be suspended while apply is disabled.

Cause: The corresponding subscriber was dropped or split.

Action: No action necessary.

ORA-26902: *string* propagation sender in the combined capture and apply mode is to be suspended while apply is enabled.

Cause: The corresponding subscriber was dropped or split.

Action: No action necessary.

ORA-26903: Invalid edition name "*string*"

Cause: The edition associated with the LCR did not exist in the destination database.

Action: Check if the edition needs to be created manually on the destination database or if the CREATE EDITION statement for this edition has been applied properly on the destination database.

ORA-26904: Invalid bind variable "*string*" in LCR field expression.

Cause: In the statement handler, the bind variables listed in the SQL expression did not match the allowed Logical Change Record field names.

Action: Verify that all the bind variables listed in the expression are legal Logical Change Record fields.

ORA-26905: Invalid LCR method expression "*string*" in statement handler.

Cause: The Logical Change Record method listed was not allowed in the statement handler.

Action: Verify that the Logical Change Record method listed in the expression is a legal DBMS_LCR method.

ORA-26906: No change handler exists.

Cause: There was no change handler for the specified apply, operation, source table, change table, and capture values.

Action: Query DBA_APPLY_CHANGE_HANDLERS view to find the correct change handler.

ORA-26907: Insufficient privileges to set converge tag

Cause: Privileges were insufficient to set converge tag.

Action: The invoker needs EXECUTE_CATALOG_ROLE or execute privilege on DBMS_STREAMS_ADM to set converge tag. Grant appropriate privileges to the invoker.

ORA-26908: XStream API must be executed using a dedicated server process.

Cause: An attempt was made to execute XStream API using a shared server process.

Action: Replace the connect string in the client application to use a dedicated server process.

ORA-26909: cannot reexecute an eager error

Cause: An attempt was made to reexecute an eager error transaction. An eager transaction is applied before the apply process sees the commit or rollback for the transaction.

Action: Fix the cause of the eager error and restart the apply process. When apply is restarted, capture will automatically resend the transaction, and the transaction will be applied by the apply process.

ORA-26910: user error *string* encountered in eager mode

Cause: An error was encountered during eager apply. An eager transaction is applied before the apply process sees the commit or rollback for the transaction. If an error occurs during an eager transaction, the transaction will be rolled back.

Action: Query the DBA_APPLY_ERROR view to determine the error and take the appropriate action. The apply process will need to be restarted to apply the transaction that had the error. When apply is restarted, capture will automatically resend the transaction, and the transaction will be applied by the apply process.

ORA-26911: invalid oldest position (current position=*string*; new position=*string*)

Cause: An attempt was made to set the oldest position to a value that was less than the current value.

Action: Correct the oldest_position argument in OCIXStreamOutProcessedLWMSet2 call.

ORA-26912: not allowed to invoke '*string*' while in committed data-only mode

Cause: An attempt was made to call the specified API while the attached XStream server was in committed data-only mode.

Action: Perform one of the following: 1) If the invalid call is OCIXStreamOutProcessedLWMSet2, then change it to OCIXStreamOutProcessedLWMSet or pass a null oldest_position to OCIXStreamOutProcessedLWMSet2 call. 2) If the invalid call is OCIXStreamInProcessedLWMGet2, then change it to OCIXStreamInProcessedLWMGet or pass a null oldest_position to OCIXStreamInProcessedLWMGet2 call.

ORA-26913: must connect to instance *string* where *string string* server "*string*" is running

Cause: The client application was not connected to the same Oracle RAC instance as the specified Oracle GoldenGate or XStream server.

Action: Connect to the specified instance using the network service name obtained from the following query: SELECT network_name FROM all_queues q, all_xstream_outbound ob WHERE q.owner = ob.queue_owner AND q.name = ob.queue_name AND server_name = '<server_name>';

ORA-26914: Unable to communicate with *string* capture process "*string*" from outbound server "*string*".

Cause: Capture process might not have been started properly or was aborted.

Action: . If the error is ORA-4031, either increase the initialization parameter STREAMS_POOL_SIZE or increase the capture parameter MAX_SGA_SIZE or increase both. Refer to the XStream documentation for additional information on these parameters.

ORA-26915: Unable to return Logical Change Record (LCR) information due to missing data dictionary.

Cause: The current session was unable to return the requested information on the given LCR due to missing dictionary data on that LCR.

Action: Detach and reattach the XStream outbound server. Then retry the current call.

ORA-26916: Must call OCIPOGGRedoLogOpen function before OCIPOGGRedoLogRead

Cause: An attempt was made to call OCIPOGGRedoLogRead before calling OCIPOGGRedoLogOpen.

Action: Add OCIPOGGRedoLogOpen call before OCIPOGGRedoLogRead.

ORA-26917: OCIPOGG API must be executed using a dedicated server process.

Cause: An attempt was made to execute OCIPOGG API using a shared server process.

Action: Replace the connect string in the client application to use a dedicated server process.

ORA-26918: Must use 'string' procedure for outbound server "string".

Cause: An attempt was made to execute START_APPLY on an outbound server that uses uncommitted data mode.

Action: Use the specified procedure instead.

ORA-26919: Capture "string" is not associated with queue "string"."string".

Cause: The capture specified in the ADD_OUTBOUND procedure was not associated with the specified queue.

Action: Resubmit the ADD_OUTBOUND procedure after removing either the capture_name or the queue_name argument.

ORA-26920: string outbound server "string" has been stopped.

Cause: The specified outbound server was stopped.

Action: Execute START_OUTBOUND procedure to restart the outbound server or execute OCIXStreamOutAttach function to reattach to the outbound server.

ORA-26921: Cannot alter the start SCN or time of string Capture "string".

Cause: An attempt was made to alter the start SCN or time for a capture while other outbound servers were still attached to it.

Action: Execute the following: 1) Get the names of other outbound servers currently attached to the specified Capture using the query: SELECT server_name FROM dba_xstream_outbound WHERE (status = 'ATTACHED') AND (server_name <> '<altered_server>') AND (capture_name = '<specified_capture_name>'); 2) Detach the client application from each server_name returned. 3) Retry the operation.

ORA-26922: user string does not have SELECT ANY TRANSACTION privilege

Cause: An attempt was made to start the capture process or attach to an outbound server when the specified user did not have SELECT ANY TRANSACTION privilege.

Action: Grant SELECT ANY TRANSACTION privilege to the specified user and resubmit the failed operation.

ORA-26923: cannot configure string outbound server "string" with string capture "string" due to different purpose

Cause: An attempt was made to configure an outbound server with a capture used for different purpose.

Action: Execute the following: 1) Get the purpose of each capture and its associated queue: SELECT capture_name, queue_owner, queue_name, purpose FROM dba_capture; 2) Resubmit the statement using a queue or capture with the same purpose.

ORA-26924: cannot configure *string* using "*string*".*string*" queue because it is used by "*string*" for *string* purpose

Cause: An attempt was made to configure the specified process using a queue already used by another process for different purpose.

Action: Resubmit the statement using another queue of the same purpose.

ORA-26925: cannot configure outbound server "*string*" with capture "*string*" because it is not using apply-state checkpoint

Cause: An attempt was made to configure an outbound server with a capture not using apply-state checkpoint.

Action: Specify a different capture in the ADD_OUTBOUND procedure or re-create the capture and resubmit the statement.

ORA-26926: Unable to attach because capture "*string*" is missing dictionary redo logs

Cause: The specified capture was unable to locate the dictionary redo log.

Action: Check the state of the specified capture from GV\$STREAMS_CAPTURE to determine the SCN or file name of the missing log file. Confirm that the file name exists and is accessible online and also in the DBA_REGISTERED_ARCHIVED_LOG view. In addition, for local capture, confirm that an entry exists for the file in the V\$ARCHIVED_LOG view. If an entry is missing, it can be added using the ALTER DATABASE REGISTER LOGFILE command, specifying the keyword LOGICAL LOGFILE or PHYSICAL LOGFILE as appropriate.

ORA-26927: altering an outbound server with a remote capture is not allowed

Cause: An attempt was made to alter an outbound server with a remote capture.

Action: None

ORA-26928: Unable to communicate with *string* apply coordinator process "*string*" from outbound server "*string*".

Cause: A timeout occurred while waiting for apply coordinator to respond.

Action: Check the state of the specified apply coordinator from GV\$STREAMS_APPLY_COORDINATOR view. Determine the reason for apply coordinator's unresponsiveness. If streams_pool_size is not set or set with an inadequate value, consider setting or increasing the value of this parameter.

ORA-26929: altering an outbound server with a remote capture is not allowed

Cause: An attempt was made to alter an outbound server with a remote capture.

Action: None

ORA-26930: User "*string*" does not have privileges to perform this operation

Cause: An attempt was made to create, alter, or drop a process that has a different user (such as capture user or apply user) than the invoking user.

Action: Use the DBMS_XSTREAM_AUTH.GRANT_ADMIN_PRIVILEGE or DBMS_GOLDENGATE_AUTH.GRANT_ADMIN_PRIVILEGE procedures to grant the invoking user proper privileges.

-
- ORA-26936: must execute OCIPOGGCaptureAttach before invoking *string* function**
Cause: An attempt was made to invoke the specified function before executing OCIPOGGCaptureAttach call.
Action: Add OCIPOGGCaptureAttach call before the specified function.
- ORA-26937: client has already attached to *string* capture "*string*".**
Cause: The client was already attached to the specified capture.
Action: Detach from the specified capture before reattaching.
- ORA-26938: cannot pack LCR into LCR buffer (buffer size is *string*, LCR size is *string*)**
Cause: The logical change record (LCR) buffer was not large enough to store the current LCR.
Action: Increase the buffer size in the OCIPOGGCaptureAttach call.
- ORA-26939: The *string* capture "*string*" is disabled.**
Cause: The capture process was disabled or aborted.
Action: Start the capture process.
- ORA-26940: OCIPOGGCapture API must be executed using a dedicated server process.**
Cause: An attempt was made to execute OCIPOGGCapture API using a shared server process.
Action: Replace the connect string in the client application to use a dedicated server process.
- ORA-26942: LCR should not contain old value for column *string* in table *string.string***
Cause: The LCR contained old values for LOB, XMLType and object columns.
Action: Remove old values for any LOB, XMLType and object columns in the LCR.
- ORA-26944: User "*string*" attempted to invoke a procedure without proper permissions.**
Cause: An attempt was made to invoke a procedure without proper permissions.
Action: Use the DBMS_GOLDENGATE_AUTH.GRANT_ADMIN_PRIVILEGE to grant the invoking user proper privileges.
- ORA-27000: skgfsbi: failed to initialize storage subsystem (SBT) layer**
Cause: sbtinit returned an error, additional information indicates error
Action: verify that vendor's storage subsystem product is operating correctly
- ORA-27001: unsupported device type**
Cause: the specified device type is supported on this platform
Action: check V\$BACKUP_DEVICE for supported device types
- ORA-27002: function called with invalid device structure**
Cause: internal error, additional information indicates which function encountered error
Action: check for trace file and contact Oracle Support
- ORA-27003: cannot open file on device allocated with NOIO option**

Cause: internal error, a file is being created/retrieved on a device allocated with NOIO option, additional information indicates which function encountered error

Action: check for trace file and contact Oracle Support

ORA-27004: invalid blocksize specified

Cause: internal error, blocksize specified is incorrect for the device on which file is being created, additional information indicates blocksize specified, and the function that encountered the error

Action: check for trace file and contact Oracle Support

ORA-27005: cannot open file for async I/O on device not supporting async

Cause: internal error, a file is being opened for async I/O on a device that does not support async I/O, additional information indicates which function encountered error

Action: check for trace file and contact Oracle Support

ORA-27006: sbtremove returned error

Cause: additional information indicates error returned by sbtremove, and the function that encountered the error

Action: verify that vendor's storage subsystem product is operating correctly

ORA-27007: failed to open file

Cause: sbtopen returned error, additional information indicates error returned from sbtopen, and the function that encountered the error

Action: verify that vendor's storage subsystem product is operating correctly

ORA-27008: function called with invalid file structure

Cause: internal error, additional information indicates which function encountered error

Action: check for trace file and contact Oracle Support

ORA-27009: skgfwrt: cannot write to file opened for read

Cause: internal error

Action: check for trace file and contact Oracle Support

ORA-27010: skgfwrt: write to file failed

Cause: sbtwrite returned error, additional information indicates error returned from sbtwrite

Action: verify that vendor's storage subsystem product is operating correctly

ORA-27011: skgfrd: cannot read from file opened for write

Cause: internal error

Action: check for trace file and contact Oracle Support

ORA-27012: skgfrd: read from file failed

Cause: sbtread returned error, additional information indicates error returned from sbtread

Action: verify that vendor's storage subsystem product is operating correctly

ORA-27013: skgfdel: cannot delete an open file

Cause: internal error

Action: check for trace file and contact Oracle Support

ORA-27014: skgfpini: translation error while expanding SS_UDMPDIR

Cause: Failure of sltln in skgfpini

Action: Check additional return error for more information.

ORA-27015: skgfcls: failed to close the file

Cause: sbtclose returned error, additional information indicates error returned from sbtclose

Action: verify that vendor's storage subsystem product is operating correctly

ORA-27016: skgfcls: sbtinfo returned error

Cause: additional information indicates error returned from sbtinfo

Action: verify that vendor's storage subsystem product is operating correctly

ORA-27017: skgfcls: media handle returned by sbtinfo exceeds max length(SSTMXQMH)

Cause: media handle string length exceeds SSTMXQMH

Action: verify that vendor's storage subsystem product is operating correctly, and that the platform limit (SSTMXQMH) is atleast 64 (the limit specified for sbtinfo). additional information indicates the media handle string length returned by sbtinfo, and the limit (SSTMXQMH)

ORA-27018: BLKSIZE is not a multiple of the minimum physical block size

Cause: User-specified BLKSIZE (blocking factor) is not a multiple of the minimum block size that is permitted on this platform.

Action: Two ADDITIONAL INFORMATION messages are displayed which show the blocking factor provided by the user and the minimum physical block size. Specify a BLKSIZE that is an integral multiple of the minimum block size.

ORA-27019: tape filename length exceeds limit (SBTOPMXF)

Cause: length of tape filename provided to sequential I/O OSD functions is too long

Action: additional information indicates in which function this error is encountered, the length of filename provided, and the limit on filename

ORA-27020: named devices not supported

Cause: the platform or the specified device type does not support named devices

Action: do not specify device name or use a device type that supports named devices. Use V\$BACKUP_DEVICE view to see what device types and names (if any) are available.

ORA-27021: sequential file handle must be specified

Cause: The filename which will be passed to sbtopen was not specified.

Action: Specify a filename and continue. If this is a backup set being created via Recovery Manager, use the 'format' option to specify the backup piece handle name.

ORA-27022: skgfsbi: could not allocate memory for media manager

Cause: Oracle could not allocate memory required by the media management software which is linked with Oracle to provide backup/restore services.

Action: Increase the amount of memory available to the Oracle process and retry the backup/restore.

ORA-27023: skgfsbi: media manager protocol error

Cause: The media management software which is linked with Oracle to provide backup/restore services did not provide its function pointer structure to Oracle.

Action: This is an internal error in the media management product. Contact the media management vendor.

ORA-27024: skgfsbi: sbtinit2 returned error

Cause: sbtinit2 returned an error. This happens during a backup or restore operation.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27025: skgfsbi: invalid media manager context area size

Cause: The media management software requested a context area size which is greater than the maximum allowable size.

Action: This is an internal error in the media management product. Contact the media management vendor.

ORA-27026: skgfrls: sbtend returned error

Cause: sbtend returned an error. This happens during a backup or restore operation.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27027: sbtremove2 returned error

Cause: sbtremove2 returned an error. This happens when deleting a backup file.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27028: skgfcrc: sbtbackup returned error

Cause: sbtbackup returned an error. This happens when creating a backup file during a backup operation.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27029: skgfrtrv: sbtrestore returned error

Cause: sbtrestore returned an error. This happens when retrieving a backup file during a restore operation.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27030: skgfwrt: sbtwrite2 returned error

Cause: sbtwrite2 returned an error. This happens while writing a backup file during a backup operation.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27031: mirror resilvering functions not supported

Cause: internal error

Action: check for trace file and contact Oracle Support

ORA-27032: failed to obtain file size limit

Cause: getrlimit system call returned an error

Action: check errno

ORA-27033: failed to obtain file size limit

Cause: ulimit system call returned an error

Action: check errno

ORA-27034: maximum length of ORACLE_SID exceeded

Cause: too many characters in the ORACLE_SID string

Action: rename the ORACLE_SID to a string of up to the maximum number of characters specified for your system

ORA-27035: logical block size is invalid

Cause: logical block size for oracle files must be a multiple of the physical block size, and less than the maximum

Action: block size specified is returned as additional information, check init.ora parameters, additional information also indicates which function encountered the error

ORA-27036: translation error, unable to expand file name

Cause: additional information indicates sltln/slnrm error, and also indicates which function encountered the error

Action: check additional information

ORA-27037: unable to obtain file status

Cause: stat system call returned an error, additional information indicates which function encountered the error

Action: check errno

ORA-27038: created file already exists

Cause: trying to create a database file, but file by that name already exists

Action: verify that name is correct, specify reuse if necessary

ORA-27039: create file failed, file size limit reached

Cause: an attempt was made to create a file that exceeds the process's file size limit, additional information indicates which function encountered the error

Action: raise the file size limit

ORA-27040: file create error, unable to create file

Cause: create system call returned an error, unable to create file

Action: verify filename, and permissions

ORA-27041: unable to open file

Cause: open system call returned an error, additional information indicates which function encountered the error

Action: check errno

ORA-27042: not enough space on raw partition to fulfill request

Cause: internal error, file too large for raw partition, additional information indicates which function encountered the error

Action: check for trace file and contact Oracle Support

ORA-27043: unable to seek to beginning of file

Cause: seek system call failed, additional information indicates which function encountered the error

Action: check errno

ORA-27044: unable to write the header block of file

Cause: write system call failed, additional information indicates which function encountered the error

Action: check errno

ORA-27045: unable to close the file

Cause: close system call failed, additional information indicates which function encountered the error

Action: check errno

ORA-27046: file size is not a multiple of logical block size

Cause: file size as indicated by stat is not correct, additional information indicates which function encountered the error

Action: verify that the file has not been overwritten or truncated

ORA-27047: unable to read the header block of file

Cause: read system call failed, additional information indicates which function encountered the error

Action: check errno

ORA-27048: skgfifi: file header information is invalid

Cause: possibly trying to use a non-database file as a database file

Action: verify that file is a database file

ORA-27049: unable to seek to and read the last block

Cause: an attempt was made to seek to and read the last block in file, additional information indicates which function encountered error

Action: check errno

ORA-27050: function called with invalid FIB/IOV structure

Cause: internal error, additional information indicates which function encountered error

Action: check for trace file and contact Oracle Support

ORA-27052: unable to flush file data

Cause: fsync system call returned error, additional information indicates which function encountered the error

Action: check errno

ORA-27053: blocksize in file header not a multiple of logical block size

Cause: the logical block size is invalid, additional information indicates the logical block size and the blocksize in the file header

Action: use a different logical block size, or do not reuse file

ORA-27054: NFS file system where the file is created or resides is not mounted with correct options

Cause: The file was on an NFS partition and either reading the mount tab file failed or the partition was not mounted with the correct mount option.

Action: Make sure mount tab file has read access for Oracle user and the NFS partition where the file resides is mounted correctly. For the list of mount options to use refer to your platform specific documentation.

ORA-27056: could not delete file

Cause: unlink system call returned error

Action: check errno

ORA-27057: cannot perform async I/O to file

Cause: internal error, query is being asked about async vector I/O when the file does not support async I/O

Action: check for trace file and contact Oracle Support

ORA-27058: file I/O question parameter is invalid

Cause: internal error, invalid query is being asked

Action: check for trace file and contact Oracle Support

ORA-27059: could not reduce file size

Cause: ftruncate system call returned error

Action: check errno

ORA-27060: could not set close-on-exec bit on file

Cause: fcntl system call returned error

Action: check errno

ORA-27061: waiting for async I/Os failed

Cause: aiowait function returned error

Action: check errno

ORA-27062: could not find pending async I/Os

Cause: There should have been some async I/Os in the system but a blocking aiowait indicates that there are no more I/Os. It could be either because of an Oracle bug or the vendor OS bug or due to a NFS server not responding

Action: check Oracle trace file, OS message files and contact Oracle Support

ORA-27063: number of bytes read/written is incorrect

Cause: the number of bytes read/written as returned by aiowait does not match the original number, additional information indicates both these numbers

Action: check errno

ORA-27064: cannot perform async I/O to file

Cause: internal error, asked to perform async I/O when IOV indicates that it cannot be performed on the file

Action: check for trace file and contact Oracle Support

ORA-27065: cannot perform async vector I/O to file

Cause: internal error, asked to perform async vector I/O when it cannot be performed on the file

Action: check for trace file and contact Oracle Support

ORA-27066: number of buffers in vector I/O exceeds maximum

Cause: internal error, number of buffers in vector I/O exceeds maximum allowed by the OSD, additional information indicates both these numbers

Action: check for trace file and contact Oracle Support

ORA-27067: size of I/O buffer is invalid

Cause: internal error, buffer size is either 0, or greater than SSTIOMAX or not a multiple of logical block size, additional information indicates where in function the error was encountered and the buffer size

Action: check for trace file and contact Oracle Support

ORA-27068: I/O buffer is not aligned properly

Cause: internal error, buffer is not aligned to SSIOALIGN boundary, additional information indicates where in function the error was encountered and the buffer pointer

Action: check for trace file and contact Oracle Support

ORA-27069: attempt to do I/O beyond the range of the file

Cause: internal error, the range of blocks being read or written is outside the range of the file, additional information indicates the starting block number, number of blocks in I/O, and the last valid block in the file

Action: check for trace file and contact Oracle Support

ORA-27070: async read/write failed

Cause: aioread/aiowrite system call returned error, additional information indicates starting block number of I/O

Action: check errno

ORA-27071: unable to seek to desired position in file

Cause: lseek system call returned error, additional information indicates block number in file to which seek was attempted

Action: check errno

ORA-27072: File I/O error

Cause: read/write/readv/writev system call returned error, additional information indicates starting block number of I/O

Action: check errno

ORA-27073: Trying to close a file which has async I/Os pending to be dequeued

Cause: internal error, the file is being closed but not all async I/Os to the file have been dequeued, additional information indicates number of I/Os pending on the file

Action: check for trace file and contact Oracle Support

ORA-27074: unable to determine limit for open files

Cause: The getrlimit() system call returned an error.

Action: Check errno.

ORA-27075: SSTMOFRC constant too large

Cause: internal error

Action: check for trace file and contact Oracle Support

ORA-27076: unable to set limit for open files

Cause: The setrlimit() system call returned an error.

Action: Check errno.

ORA-27077: too many files open

Cause: internal error, the number of files opened through skgfofi has reached the limit

Action: Check for trace file and contact Oracle Support.

ORA-27078: unable to determine limit for open files

Cause: The getrlimit() system call returned an error.

Action: Check errno.

ORA-27079: unable to set async IO limit

Cause: The setting of the limit for async I/O has failed.

Action: Check errno.

ORA-27080: too many files open

Cause: The number of files opened has reached the system limit.

Action: Check the error, and set system configuration values.

ORA-27081: unable to close the file

Cause: The close() system call failed.

Action: Check errno.

ORA-27083: waiting for async I/Os failed

Cause: The aio_waitn() library call returned an error.

Action: Check errno.

ORA-27084: unable to get/set file status flags

Cause: The fcntl() system call with F_GETFL/F_SETFL flag returned an error.

Action: Check errno.

ORA-27086: unable to lock file - already in use

Cause: the file is locked by another process, indicating that it is currently in use by a database instance.

Action: determine which database instance legitimately owns this file.

ORA-27087: unable to get share lock - file not readable

Cause: share lock request was made on a file not open for read access.

Action: file must be open read-only or read-write to get a share lock.

ORA-27088: unable to get file status

Cause: file not open or file descriptor is invalid.

Action: None

ORA-27089: unable to release advisory lock

Cause: release of file lock failed

Action: see errno

ORA-27090: Unable to reserve kernel resources for asynchronous disk I/O

Cause: The system call to reserve kernel resources for asynchronous I/O has failed.

Action: Check errno

ORA-27091: unable to queue I/O

Cause: read/write/readv/writev system call returned error, additional information indicates starting block number of I/O

Action: check errno

ORA-27092: size of file exceeds file size limit of the process

Cause: an attempt was made to open a file that exceeds the process's file size limit (ulimit), additional information shows the current limit (logical blocks) and the size of the file (logical blocks)

Action: increase the processes file size limit (ulimit) and retry

ORA-27093: could not delete directory

Cause: rmdir system call returned error

Action: check errno

ORA-27094: raw volume used can damage partition table

Cause: A raw device with VTOC information was provided as a database file.

Action: Make sure the disk partition that is provided to Oracle does not start at sector 0

ORA-27095: fail to get the disk sector size

Cause: The system call to get the sector size failed. Additional information indicates which function encountered the error.

Action: Check error number.

ORA-27096: fail to get file size

Cause: The system call to get file size failed. Additional information indicates which function encountered the error.

Action: Check error number.

ORA-27099: failed to create file

Cause: The system call to create this file type in this file system failed. Check if the creation of this file type is supported in this file system. Additional information indicates which function encountered the error.

Action: Refer to Oracle documentation for additional details.

ORA-27100: shared memory realm already exists

Cause: Tried to start duplicate instances, or tried to restart an instance that had not been properly shutdown

Action: Use a different instance name, or cleanup the failed instance's SGA

ORA-27101: shared memory realm does not exist

Cause: Unable to locate shared memory realm

Action: Verify that the realm is accessible

-
- ORA-27102: out of memory**
Cause: Out of memory
Action: Consult the trace file for details
- ORA-27103: internal error**
Cause: internal error
Action: contact Oracle support
- ORA-27120: unable to remove shared memory segment**
Cause: shmctl() call failed
Action: check permissions on segment, contact Oracle support
- ORA-27121: unable to determine size of shared memory segment**
Cause: shmctl() call failed
Action: check permissions on segment, contact Oracle support
- ORA-27122: unable to protect memory**
Cause: mprotect() call failed
Action: contact Oracle support
- ORA-27123: unable to attach to shared memory segment**
Cause: shmat() call failed
Action: check permissions on segment, contact Oracle support
- ORA-27124: unable to detach from shared memory segment**
Cause: shmdt() call failed
Action: contact Oracle support
- ORA-27125: unable to create shared memory segment**
Cause: shmget() call failed
Action: contact Oracle support
- ORA-27126: unable to lock shared memory segment in core**
Cause: insufficient privileges to lock shared memory segment in core
Action: make sure process is running with necessary privileges.
- ORA-27127: unable to unlock shared memory segment**
Cause: insufficient privileges to unlock shared memory segment
Action: make sure process is running with necessary privileges.
- ORA-27128: unable to determine pagesize**
Cause: sysconf() call failed
Action: contact Oracle support
- ORA-27133: unable to determine stacksize**
Cause: getrlimit() call failed
Action: Contact Oracle Support Services.
- ORA-27134: unable to set stacksize**
Cause: setrlimit() call failed
Action: Contact Oracle Support Services.

ORA-27135: Operating System hard stack limit is set too low

Cause: Operating System hard stack limit was set too low.

Action: Check additional information for current and minimum limit. Increase the Operating System hard stack limit and retry.

ORA-27136: MPMT and VLM are both enabled

Cause: When the `_mpmt_enabled` parameter is set to TRUE, none of the following parameters should be set to TRUE:

* `use_indirect_buffers`

* `_db_block_cache_protect`

* `_db_block_cache_clone`

Action: Either turn off Multi Process Multi Threads (MPMT) or turn off all the other parameters.

ORA-27137: unable to allocate large pages to create a shared memory segment

Cause: Parameter `USE_LARGE_PAGES` set to only, but large pages were not configured properly

Action: Check alert file for more information

ORA-27139: unable to reserve Oracle VM mapping in process address space

Cause: The address space region was already mapped.

Action: Contact Oracle Support Services.

ORA-27140: attach to post/wait facility failed

Cause: The program attempted to initialize the post/wait facility, but the facility could not be attached.

Action: Check for additional errors and contact Oracle Support.

ORA-27141: invalid process ID

Cause: process operation attempted using invalid process ID

Action: contact Oracle Support

ORA-27142: could not create new process

Cause: OS system call

Action: check `errno` and if possible increase the number of processes

ORA-27143: OS system call failure

Cause: OS system call failed

Action: check `errno` and contact Oracle support

ORA-27144: attempt to kill process failed

Cause: OS system call error

Action: check `errno` and contact Oracle Support

ORA-27145: insufficient resources for requested number of processes

Cause: OS system call error

Action: check `errno` and contact Oracle Support

ORA-27146: post/wait initialization failed

Cause: OS system call failed

-
- Action:** check errno and contact Oracle Support
- ORA-27147: post/wait reset failed**
Cause: OS system call failed
Action: check errno and contact Oracle Support
- ORA-27148: spawn wait error**
Cause: OS system call failed
Action: check errno and contact Oracle Support
- ORA-27149: assignment out of range**
Cause: internal error, requested conversion too large for type
Action: contact Oracle Support
- ORA-27150: attempt to notify process of pending oradebug call failed**
Cause: OS system call
Action: check errno contact Oracle Support
- ORA-27151: buffer not large enough to hold process ID string**
Cause: internal error
Action: contact Oracle Support
- ORA-27152: attempt to post process failed**
Cause: OS system call failed
Action: check errno and contact Oracle Support
- ORA-27153: wait operation failed**
Cause: OS system called failed
Action: check errno contact Oracle Support
- ORA-27154: post/wait create failed**
Cause: internal error, multiple post/wait creates attempted simultaneously
Action: check errno and contact Oracle Support
- ORA-27155: could not execute file**
Cause: OS system call failed
Action: check errno and contact Oracle Support
- ORA-27156: request for process information failed**
Cause: internal error
Action: contact Oracle Support
- ORA-27157: OS post/wait facility removed**
Cause: the post/wait facility for which the calling process is awaiting
Action: check errno and contact Oracle Support
- ORA-27158: process control failure**
Cause: Oracle was unable to set the specified process control.
Action: Consult the Oracle Administrator's Guide.
- ORA-27159: failure setting process scheduling priority**

Cause: Oracle was unable to set the scheduling priority desired.

Action: Consult the Oracle Administrator's Guide.

ORA-27160: process requested to perform operation

Cause: The current process was requested to perform an operation by another process.

Action: This is used internally; no action is required.

ORA-27161: request for Oracle binary information failed

Cause: The program was unable to get information about the Oracle binary.

Action: Check for additional errors and contact Oracle support.

ORA-27162: thread creation failed

Cause: The program was unable to create a thread.

Action: Check errno and contact Oracle support.

ORA-27163: out of memory

Cause: The program ran out of memory when allocating a temporary data structure.

Action: Increase the amount of memory on the system.

ORA-27164: tried to join detached thread

Cause: The program tried to join a detached thread.

Action: This is an internal error; contact Oracle support.

ORA-27165: tried to join thread that does not exist

Cause: The program tried to join a thread that does not exist.

Action: This is an internal error; contact Oracle support.

ORA-27166: tried to join current thread

Cause: A thread in the program tried to join itself.

Action: This is an internal error; contact Oracle support.

ORA-27167: Attempt to determine if Oracle binary image is stored on remote server failed

Cause: OS dependent operation failed

Action: None

ORA-27168: Translation from hostname to network address failed

Cause: Internal error

Action: Contact Oracle Support Services.

ORA-27190: skgfrd: sbtread2 returned error

Cause: sbtread returned an error. This happens while reading a backup file during a restore operation.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27191: sbtinfo2 returned error

Cause: sbtinfo2 returned an error. This happens while retrieving backup file information from the media manager's catalog.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27192: skgfcls: sbtclose2 returned error - failed to close file

Cause: sbtclose2 returned an error. This happens while closing a backup file during a backup or restore operation.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27193: sbtinfo2 did not return volume label

Cause: sbtinfo2 did not return the volume label information for the backup file that was just created.

Action: This is an internal error in the media management product. Contact the media management vendor.

ORA-27194: skgfdvcmd: sbtcommand returned error

Cause: sbtcommand returned an error. This happens when an rman SEND command is issued.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27195: proxy copy not supported

Cause: An attempt was made to do a proxy backup or restore, but the media management software installed with Oracle does not support proxy copy.

Action: Re-run the backup in non-proxy mode, or contact the media management vendor if the software is supposed to support proxy copy.

ORA-27196: skgfpbk: sbtpcbbackup returned error

Cause: sbtpcbbackup returned an error. This happens when a proxy backup is begun.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27197: skgfprs: sbtpcrestore returned error

Cause: sbtpcrestore returned an error. This happens when a proxy restore is begun.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27198: skgfpvl: sbtpcvalidate returned error

Cause: sbtpcvalidate returned an error. This happens during a proxy backup or restore.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27199: skgfpst: sbtpcstatus returned error

Cause: sbtpcstatus returned an error. This happens during a proxy backup or restore.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27200: skgfpgo: sbtpcstart returned error

Cause: sbtpcstart returned an error. This happens during a proxy backup or restore.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27201: skgfpcm: sbtpccommit returned error

Cause: sbtpccommit returned an error. This happens during a proxy backup or restore.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27202: skgfpem: sbtpcend returned error

Cause: sbtpcend returned an error. This happens during a proxy backup or restore.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27203: skgfpqb: sbtpcquerybackup returned error

Cause: sbtpcquerybackup returned an error. This happens during a proxy backup.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27204: skgfpqr: sbtpcqueryrestore returned error

Cause: sbtpcqueryrestore returned an error. This happens during a proxy restore.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27205: skgfpnc: sbtpccancel returned error

Cause: sbtpccancel returned an error. This happens during a proxy restore.

Action: This error is returned from the media management software which is linked with Oracle. There should be additional messages which explain the cause of the error. This error usually requires contacting the media management vendor.

ORA-27206: requested file not found in media management catalog

Cause: A backup file used in a recovery manager catalog maintenance command was not found in the media management catalog.

Action: Retry the command with a different file.

ORA-27207: syntax error in device PARMS - parentheses mismatch or missing

Cause: User-supplied PARMS value has incorrect syntax.

-
- Action:** Retry the command with correct syntax: ENV=(..) BLKSIZE=nnnn
- ORA-27208: syntax error in device PARMS - environment variable value missing**
Cause: User-supplied PARMS value has incorrect syntax.
Action: Retry the command with correct syntax: ENV=(var1=val1,var2=val2,..)
- ORA-27209: syntax error in device PARMS - unknown keyword or missing =**
Cause: User-supplied PARMS value has incorrect syntax. The server expected to find ENV or BLKSIZE, but found an unknown keyword.
Action: Retry the command with correct syntax: ENV=(..) BLKSIZE=nnnn
- ORA-27210: syntax error in device PARMS**
Cause: User-supplied PARMS value has incorrect syntax.
Action: Retry the command with correct syntax: ENV=(..) BLKSIZE=nnnn
- ORA-27211: Failed to load Media Management Library**
Cause: User-supplied SBT_LIBRARY or libobk.so could not be loaded. Call to dlopen for media library returned error. See Additional information for error code.
Action: Retry the command with proper media library. Or re-install Media management module for Oracle.
- ORA-27212: some entrypoints in Media Management Library are missing**
Cause: media library does not have one of the following entrypoints : sbtinfo, sbtread, sbtwrite, sbtremove, sbtopen, sbtclose, sbtinit
Action: Retry the command with proper media library.
- ORA-27213: failed to unload Media Management Library**
Cause: dlclose for media library returned error. See Additional Additional information for error code.
Action: contact Oracle Support.
- ORA-27214: skgfrsf: file search failed**
Cause: The FindNextFile function returned unexpected error.
Action: Check errors on the error stack for an explanation why the search for files could not be successfully executed.
- ORA-27215: skgfgsmcs: sbtinfo2 returned unknown file**
Cause: During an sbtinfo2() call, the media management software returned information about an unknown backup file.
Action: Contact the media management vendor.
- ORA-27216: skgfgsmcs: sbtinfo2 returned a malformed response**
Cause: The media management software returned a malformed response during an sbtinfo2() call.
Action: Contact the media management vendor.
- ORA-27217: failed to load Media Management Library from secure location**
Cause: SBT libraries were not installed in a secure location.
Action: Remove SBT_SECURE parameter or Request third party vendors to provide patch that installs SBT libraries in secured locations as mandated by Oracle.

ORA-27218: failed to read ACFS mirror

Cause: An attempt to communicate with the Oracle Automatic Storage Management Cluster File System (Oracle ACFS) kernel driver failed.

Action: Check errors on the error stack for an explanation of why communication with ACFS was not successful.

ORA-27230: OS system call failure

Cause: OS system call failed

Action: check errno and contact Oracle support

ORA-27231: unable to close file

Cause: A file could not be closed.

Action: See accompanying errors.

ORA-27232: unable to get file information

Cause: Information about the file could not be obtained.

Action: See accompanying errors.

ORA-27233: file is not an ELF file

Cause: A file was not an ELF file.

Action: Check for file corruption and contact Oracle Support Services.

ORA-27234: unable to read file

Cause: A file could not be read.

Action: See accompanying errors.

ORA-27235: unable to map file region into memory

Cause: A file region could not be mapped into memory.

Action: See accompanying errors.

ORA-27236: unable to unmap file from memory

Cause: A file region could not be unmapped from memory.

Action: See accompanying errors.

ORA-27237: ELF file is not a relocatable object file

Cause: An ELF file was not the expected type.

Action: Supply the expected type of file.

ORA-27238: ELF file is not an executable

Cause: An ELF file was not the expected type.

Action: Supply the expected type of file.

ORA-27239: ELF file is not a shared object file

Cause: An ELF file was not the expected type.

Action: Supply the expected type of file.

ORA-27240: ELF file does not have a required section

Cause: An ELF file did not have a required section.

Action: Contact Oracle Support Services.

ORA-27241: ELF-shared library has multiple sections of the same type

-
- Cause:** An ELF-shared library had multiple sections of the same type.
Action: Contact Oracle Support Services.
- ORA-27242: ELF file has invalid hash table entry size**
Cause: An ELF file had an invalid hash table entry size.
Action: Contact Oracle Support Services.
- ORA-27243: ELF file has too many relocation sections**
Cause: An ELF file had too many relocation sections.
Action: Contact Oracle Support Services.
- ORA-27244: unable to determine base value for data relocation from ELF file**
Cause: An ELF file was missing important information.
Action: Contact Oracle Support Services.
- ORA-27245: unable to dlopen() binary image**
Cause: A file could not be accessed via dlopen().
Action: See accompanying errors and make file available.
- ORA-27246: unable to open file**
Cause: A file could not be opened.
Action: See accompanying errors and make file available.
- ORA-27250: OS system call failure**
Cause: OS system call failed
Action: check errno and contact Oracle support
- ORA-27270: szingroup: malloc failed**
Cause: The malloc library call failed to allocate space for a group list.
Action: This is possibly an operating system error. Contact Oracle Support Services.
- ORA-27271: szingroup: group lookup failure**
Cause: The 'getgrnam_r' library call failed to determine the members of a UNIX group.
Action: This is an internal error. Contact Oracle Support Services.
- ORA-27300: OS system dependent operation: *string* failed with status: *string***
Cause: OS system call error
Action: contact Oracle Support
- ORA-27301: OS failure message: *string***
Cause: OS system call error
Action: contact Oracle Support
- ORA-27302: failure occurred at: *string***
Cause: OS system call error
Action: contact Oracle Support
- ORA-27303: additional information: *string***
Cause: OS system call error

Action: contact Oracle Support

ORA-27351: conflicting values of job attributes *string* and *string*

Cause: The values of two attributes passed in to the CREATE_JOBS call or the JOB object constructor conflicted with each other. This is usually because both attributes cannot be non-NULL at the same time.

Action: Resolve the conflict by changing the value of one of the attributes and issue the call again.

ORA-27353: job attribute *string* is missing

Cause: An attribute needed to fully specify a job was not passed in to a call to CREATE_JOBS or the JOB object constructor.

Action: Issue the call again with the required attribute set.

ORA-27354: attribute *string* cannot be set for lightweight jobs

Cause: The CREATE_JOBS call or the JOB object constructor was called with an argument that is illegal in the case of lightweight jobs.

Action: Set the argument to the default value and issue the call again.

ORA-27356: invalid job argument

Cause: An invalid job argument was passed into either the CREATE_JOBS call or the JOB object constructor.

Action: Correct the argument value and issue the call again.

ORA-27357: duplicate reference to job object *string*

Cause: The scheduler CREATE_JOBS call had two or more references to the same job.

Action: Eliminate the duplicate references and issue the call again.

ORA-27359: duplicate reference to attribute *string* of job *string*

Cause: The scheduler SET_JOB_ATTRIBUTES call had two or more references to a specific attribute of a job.

Action: Eliminate the duplicate references and issue the call again.

ORA-27361: scheduler API invoked with illegal or inconsistent arguments

Cause: A DBMS_SCHEDULER API call was invoked with either illegal or inconsistent arguments.

Action: Refer to scheduler documentation for the call, make the necessary changes and issue the call again.

ORA-27362: batch API call completed with errors

Cause: Some of the commands submitted to a scheduler batch API call could not be successfully carried out because of errors. Other commands in the batch may have completed successfully.

Action: Check the view SCHEDULER_JOB_ERRORS to see which commands failed and why. Make the appropriate corrections and submit the failed commands again.

ORA-27363: invalid program for lightweight job

Cause: You tried to create a lightweight job using an invalid program. A program used in a lightweight job has to be enabled, has to be in the same schema as the job, and the program action has to be either a PL/SQL block or a stored procedure.

Action: Use a valid program for the lightweight job.

ORA-27364: remote database *string* already registered as *string*

Cause: The user attempted to register a remote database that was already registered.

Action: To update the registration information, the REPLACE argument of the REGISTER_REMOTE_DATABASE procedure should be set to TRUE. If the registration information is already current, no further action is needed.

ORA-27365: job has been notified to stop, but failed to do so immediately

Cause: The job specified in the stop_job command cannot be stopped immediately (because it is rolling back or blocked on a network operation), but it has been notified to stop. This means it will be stopped as soon as possible after its current uninterruptable operation is done.

Action: No action is required for the job to be stopped, but calling stop_job with force (if you have the privilege) may cause the job to be stopped sooner.

ORA-27366: job "*string.string*" is not running

Cause: An attempt was made to stop a job that was not running.

Action: Verify the status of the job. If the job is running but this message is still being returned, contact Oracle support.

ORA-27367: program "*string.string*" associated with this job is disabled

Cause: An attempt was made to run a job whose program has been disabled.

Action: Reenable the program before running the job.

ORA-27369: job of type EXECUTABLE failed with exit code: *string*

Cause: A problem was encountered while running a job of type EXECUTABLE. The cause of the actual problem is identified by the exit code.

Action: Correct the cause of the exit code and reschedule the job.

ORA-27370: job slave failed to launch a job of type EXECUTABLE

Cause: The scheduler ran into an error when the job slave tried to start a job of type EXECUTABLE. The rest of the error stack will provide more detailed information on what the exact problem was.

Action: Correct the problem specified in the error stack and reschedule the job.

ORA-27371: jobs of type EXECUTABLE are not supported on this platform

Cause: The user tried to create a job or program of type EXECUTABLE on a platform where such jobs are not supported.

Action: Switch to a different platform or create a different type of job or program.

ORA-27372: length of action and arguments exceeds platform limit *string*

Cause: The total length of the job or program action and the arguments exceeds the platform limit specified.

Action: Reduce the total length by specifying fewer and/or shorter arguments

ORA-27373: unknown or illegal event source queue

Cause: The source queue specified for the event based job or event based schedule was either not found or was of the wrong type.

Action: Check if the queue exists. If it does make sure it is a multiple consumer queue and it is a post 8.1 compatible queue. Single consumer queues and old-style queues cannot be used as event source queues.

ORA-27374: insufficient privileges on event source queue

Cause: The job owner had insufficient privileges on the event source queue that was specified for the job.

Action: The job owner has to have dequeue privileges on event source queue or he has to have manage queue or dequeue any queue system privileges. Make sure one of these privileges is granted.

ORA-27375: valid agent name must be specified for secure queues

Cause: The queue specified for the event based job or schedule was a secure queue and either no agent name was specified or an invalid agent name was specified.

Action: If no agent name was specified, retry the call with a valid agent name. If the agent name was valid, check if the agent is currently subscribed to the queue and, in the case of jobs, check if the agent has been authorized to act as the job owner.

ORA-27376: event condition cannot be NULL

Cause: A null event condition was passed in for an event based job or schedule. This is not allowed.

Action: Pass in a legal event condition.

ORA-27377: windows cannot have event based schedules

Cause: Event based schedules for windows are currently not supported.

Action: Use a time-based schedule instead.

ORA-27378: cannot stop jobs of type EXECUTABLE on this platform

Cause: An attempt was made to stop a job of type EXECUTABLE on a platform where the stop operation was not supported.

Action: If the attempt to stop the job was made with the FORCE option set to FALSE, try again but change the FORCE option to TRUE.

ORA-27379: INSTANCE_ID attribute conflicts with job class settings

Cause: The value of the INSTANCE_ID attribute of the job conflicted with the value of the SERVICE attribute of its job class.

Action: Change the value of the INSTANCE_ID attribute or place the job in a job class whose settings do not conflict with the INSTANCE_ID attribute. Then re-enable the job.

ORA-27399: job type EXECUTABLE requires the CREATE EXTERNAL JOB privilege

Cause: The owner of a job of type EXECUTABLE does not have the CREATE EXTERNAL JOB system privilege.

Action: Grant the CREATE EXTERNAL JOB system privilege to the job owner or create another job in a schema which does have the CREATE EXTERNAL JOB system privilege.

ORA-27411: empty string is not a valid repeat interval.

Cause: An empty string "" was provided as a repeat interval for a window or a schedule.

Action: Specify a valid repeat interval, e.g., 'FREQ=DAILY;BYHOUR=8;BYMINUTE=0;BYSECOND=0' for a job that executes daily at 8am.

ORA-27412: repeat interval or calendar contains invalid identifier: *string*

Cause: The calendar string or calendar definition for the repeat interval of a job, schedule or window contained an unsupported keyword or reference to an undefined calendar.

Action: Correct the repeat interval such that it no longer contains the invalid keyword.

ORA-27413: repeat interval is too long

Cause: The repeat interval consisted of a calendar string larger than the maximum size allowed.

Action: Use a shorter calendar string for the repeat interval.

ORA-27414: Invalid *string* clause value

Cause: The BY clause value was not recognized or was out-of-range for the frequency specified.

Action: Specify a valid BY clause value.

ORA-27415: repeat interval or calendar must start with a frequency clause

Cause: The specified calendar string for the repeat interval did not start with a frequency clause.

Action: Create a repeat interval that starts with a frequency clause, for example 'FREQ=YEARLY;BYMONTH=FEB'

ORA-27416: BYDAY clause in repeat interval or calendar contains an invalid weekday

Cause: The BYDAY clause of the repeat interval contained a value that did not represent a weekday.

Action: Use the correct three letter abbreviations for weekdays, for example MON for Monday and FRI for Friday.

ORA-27417: BYWEEKNO clause requires YEARLY clause

Cause: A repeat interval or calendar contained a BYWEEKNO clause with a frequency other than yearly.

Action: Remove the BYWEEKNO clause or change the frequency to YEARLY.

ORA-27418: syntax error in repeat interval or calendar

Cause: The repeat interval or calendar definition was not recognized as valid syntax.

Action: Specify a valid repeat interval.

ORA-27419: unable to determine valid execution date from repeat interval

Cause: The specified repeat interval contained conflicting clauses that made it impossible to ever find a matching date, e.g., 'FREQ=YEARLY;BYMONTH=FEB;BYMONTHDAY=31'. Alternatively, the scheduler reached its maximum number of attempts to try to find a valid execution date. This occurs when theoretically there is a valid execution date far in the future, but the scheduler took too many attempts to determine this date.

Action: Remove the conflicting clauses, or simplify the repeat interval so that it is easier to determine the next execution date.

ORA-27420: Following message from *string* interval interpreter

Cause: The repeat interval or calendar definition was not recognized as valid syntax.

Action: Specify a valid repeat interval.

ORA-27421: calendar expression restriction *string* encountered

Cause: The calendar expression was not valid because a limit test failed. For example, the maximum value of the interval that can be specified in the INTERVAL clause is limited to a value derived from the frequency clause.

Action: Specify a valid calendar definition.

ORA-27422: usage of *string* not supported in embedded calendar application "*string*".*string*"

Cause: The main calendar definition used an embedded calendar in an INCLUDE, EXCLUDE, INTERSECT, or FREQ clause for which extra limitations apply.

Action: Remove the specific clause from the calendar definition.

ORA-27423: calendar clause *string* specified more than once

Cause: The calendar definition contained a clause that was specified twice or more times.

Action: Append the values in the second clause to the first clause and remove the second clause.

ORA-27424: calendar clauses *string* and *string* are incompatible

Cause: The calendar definition contained clauses that were incompatible.

Action: Change or remove either clause.

ORA-27431: chain *string.string* has a user-managed rule set

Cause: An attempt was made to modify a rule set that is not managed by the Scheduler.

Action: Modify the rule set directly using the dbms_rule_adm package or create another chain without specifying a rule set.

ORA-27432: step *string* does not exist for chain *string.string*

Cause: The step specified does not exist for the given chain.

Action: Reissue the command using a step that exists for this chain.

ORA-27433: cannot alter state of step *string* for job *string.string* to *string*

Cause: The step cannot be changed to the requested state. The state of a running step cannot be changed. A step which is running or has already run cannot be run again.

Action: Wait until the step has finished running.

ORA-27434: cannot alter chain step job *string.string.string*

Cause: A step job of a running chain cannot be altered, only stopped or dropped.

Action: Stop or drop the chain step job or alter the running chain step instead.

ORA-27435: chain job terminated abnormally

Cause: A chain job has ended abnormally. The error code for the running chain could not be retrieved.

Action: No action necessary. The job will run again when it is scheduled to.

ORA-27451: *string* cannot be NULL

Cause: An attempt was made to set a NOT NULL scheduler attribute to NULL.

Action: Reissue the command using a non-NULL value for the specified attribute.

ORA-27452: *string* is an invalid name for a database object.

Cause: An invalid name was used to identify a database object.

Action: Reissue the command using a valid name.

ORA-27453: *string* is an invalid job or program argument name.

Cause: An invalid job or program argument name was specified.

Action: Reissue the command using a valid name for this argument.

ORA-27454: argument name and position cannot be NULL

Cause: The name or position of a program or job argument was defined as NULL.

Action: Reissue the command providing either a valid argument name or valid argument position.

ORA-27455: Only "SYS" is a valid schema for a *string*.

Cause: A non-SYS schema was specified for an object that must be in the SYS schema.

Action: Reissue the command, leaving out the schema name or using the schema name of SYS.

ORA-27456: not all arguments of program "*string.string*" have been defined

Cause: The `number_of_arguments` attribute of the named program did not match the actual number of arguments that have been defined.

Action: Define as many arguments as the number of arguments, or change the number of arguments.

ORA-27457: argument *string* of job "*string.string*" has no value

Cause: No value was provided for the job argument with the specified position.

Action: Provide a value for the job argument using any of the `set_job_xxxx_value()` routines. Or, when using a named program, specify a default value for the corresponding argument of the program.

ORA-27458: A program of type PLSQL_BLOCK cannot have any arguments.

Cause: An attempt was made to create or enable a program of type PLSQL_BLOCK with arguments. This is not allowed.

Action: Change the number of arguments to zero, or change the type of the program.

ORA-27459: A program of type EXECUTABLE must have character-only arguments.

Cause: A program of type EXECUTABLE was created or enabled with one or more arguments of non-character datatypes.

Action: Change the arguments to be of character-only datatypes.

ORA-27460: cannot execute disabled job "*string.string*"

Cause: An attempt was made to run a job that is disabled.

Action: Enable the job and then reschedule the job.

ORA-27461: The value for attribute *string* is too large.

Cause: The value that was provided for the specified attribute was too large.

Action: Reissue the command using a smaller or shorter value.

ORA-27463: invalid program type *string*

Cause: An invalid program type was specified.

Action: Reissue the command using a valid program type.

ORA-27464: invalid schedule type *string*

Cause: An invalid schedule type was specified.

Action: Reissue the command using a valid schedule type.

ORA-27465: invalid value *string* for attribute *string*

Cause: An invalid value was provided for the specified attribute.

Action: Reissue the command using a valid value for this attribute.

ORA-27467: invalid datatype for *string* value

Cause: The value provided for the named scheduler attribute was of an invalid datatype.

Action: Reissue the command using a value of the correct datatype.

ORA-27468: "*string.string*" is locked by another process

Cause: An attempt was made to read or modify the state of the named scheduler object when another process was also updating the same object and held the lock.

Action: Retry the operation. Scheduler locks are held for a very short duration. If the error persists, contact Oracle Support.

ORA-27469: *string* is not a valid *string* attribute

Cause: A non-existent attribute was specified.

Action: Reissue the command using a valid attribute for that specific scheduler object.

ORA-27470: failed to re-enable "*string.string*" after making requested change

Cause: A change was made to an enabled scheduler object that caused it to become disabled.

Action: Alter the object so that it becomes valid and then enable it.

ORA-27471: window "*string.string*" is already closed

Cause: An attempt was made to close a window that was not open.

Action: No action required.

ORA-27472: invalid metadata attribute *string*

Cause: An invalid metadata attribute was specified.

Action: Reissue the command using a valid metadata attribute.

ORA-27473: argument *string* does not exist

Cause: An argument which was specified does not exist.

Action: Reissue the command using an argument name defined by the program or using a valid argument position.

ORA-27474: cannot give both an argument name and an argument position

Cause: An argument was specified using both a name and a position.

Action: Reissue the command using either the argument name or the argument position but not both.

ORA-27475: "*string.string*" must be a *string*

Cause: An object of the wrong type was specified. For example, a table could have been passed to the drop_job() procedure.

Action: Reissue a different command applicable to this object type or reissue the same command using an object of the valid type.

ORA-27476: "*string.string*" does not exist

Cause: A database object was specified that does not exist.

Action: Reissue the command using an object that exists or create a new object and then reissue this command.

ORA-27477: "*string.string*" already exists

Cause: An attempt was made to create an object with a name that has already been used by another object in the same schema.

Action: Reissue the command using a different name or schema.

ORA-27478: job "*string.string*" is running

Cause: An attempt was made to drop a job that is currently running.

Action: Stop the job and then reissue the command, or reissue the command specifying the force option to stop the job first.

ORA-27479: Cannot *string* "*string.string*" because other objects depend on it

Cause: An attempt was made to drop or disable a scheduler object that has jobs associated with it without specifying the force option.

Action: Alter the associated jobs so they do not point to the scheduler object being dropped or disabled and then reissue the command. Alternatively reissue the command specifying the force option. If the force option is specified and a scheduler object is being dropped, all associated jobs will be disabled.

ORA-27480: window "*string*" is currently open

Cause: An attempt was made to drop a window that is currently open, or to manually open a window while another window is already open.

Action: Close the window that is open and then reissue the command, or reissue the command while setting the force option to TRUE.

ORA-27481: "*string.string*" has an invalid schedule

Cause: An attempt was made to enable a job or window that has an invalid schedule.

Action: Alter the schedule of the job or window so that it is valid and then reissue the enable command.

ORA-27483: "*string.string*" has an invalid END_DATE

Cause: An attempt was made to enable a job or window that has an invalid end_date. Either the end_date is before the start_date or the end_date is in the past.

Action: Alter the job or window so that the end date becomes valid (possibly null) and then reissue the command.

ORA-27484: Argument names are not supported for jobs without a program.

Cause: An attempt was made to set or reset a job argument by using the name of the argument. Identifying job arguments by their name is only supported in combination with jobs that are based on programs. Jobs that are not using a program cannot have named arguments.

Action: Use argument position instead of name and then issue the command again.

ORA-27485: argument *string* already exists at a different position

Cause: An attempt was made to create or replace an argument with a name that is already used by an argument at a different position.

Action: Use a different name for the argument or drop or alter the argument which already exists with this name and then reissue the command.

ORA-27486: insufficient privileges

Cause: An attempt was made to perform a scheduler operation without the required privileges.

Action: Ask a sufficiently privileged user to perform the requested operation, or grant the required privileges to the proper user(s).

ORA-27487: invalid object privilege for a *string*

Cause: The granted object privilege is not valid for the specified scheduler object.

Action: Check the scheduler documentation to verify which object privileges can be granted on which scheduler objects.

ORA-27488: unable to set *string* because *string* was/were already set

Cause: An attempt was made to set an object's attribute even though one or more conflicting attributes of the same object had already been set.

Action: Set the other conflicting attributes to NULL and then reissue the command.

ORA-27489: unable to process job "*string.string*" from job class "*string*"

Cause: An error was encountered while processing the named job from the specified job class.

Action: Resolve the error for this job and then reissue the command. See the next error message on the stack to find out what the error for the job is.

ORA-27490: cannot open disabled window "*string.string*"

Cause: The user tried to open a disabled window.

Action: Enable the window and then try to open it again.

ORA-27491: repeat_interval and start_date cannot both be NULL

Cause: An attempt was made to set both repeat_interval and start_date to equal NULL for a Scheduler window or schedule.

Action: If either repeat_interval or start_date is set to equal NULL, the other should be set to a non-NULL value.

ORA-27492: unable to run job "*string.string*": scheduler unavailable

Cause: A job run with current_session set to false can not be issued if the scheduler is not active. Check value of job_queue_processes parameter, issue dbms_ijob.set_enabled(true), database is in upgrade/migrate mode, database is in data guard mode, or scheduler attribute SCHEDULER_DISABLED is set to TRUE

Action: Run the job in the current session or activate the scheduler

ORA-27500: inter-instance IPC error

Cause: This is an operating system/cluster interconnect error.

Action: Check the extra information and contact Oracle Support Services.

-
- ORA-27501: IPC error creating a port**
Cause: This is an operating system/cluster interconnect error.
Action: Check the value of errno and contact Oracle Support Services.
- ORA-27502: IPC error deleting OSD context**
Cause: This is an operating system/cluster interconnect error.
Action: Check the value of errno and contact Oracle Support Services.
- ORA-27503: IPC error attempting to cancel request**
Cause: This is an operating system/cluster interconnect error.
Action: Check the value of errno and contact Oracle Support Services.
- ORA-27504: IPC error creating OSD context**
Cause: This is an operating system/cluster interconnect error.
Action: Check the value of errno and contact Oracle Support Services.
- ORA-27505: IPC error destroying a port**
Cause: This is an operating system/cluster interconnect error.
Action: Check the value of errno and contact Oracle Support Services.
- ORA-27506: IPC error connecting to a port**
Cause: This is an operating system/cluster interconnect error.
Action: Check the value of errno and contact Oracle Support Services.
- ORA-27507: IPC error disconnecting from a port**
Cause: This is an operating system/cluster interconnect error.
Action: Check the value of errno and contact Oracle Support Services.
- ORA-27508: IPC error sending a message**
Cause: This is an operating system/cluster interconnect error.
Action: Check the value of errno and contact Oracle Support Services.
- ORA-27509: IPC error receiving a message**
Cause: This is an operating system/cluster interconnect error.
Action: Check the value of errno and contact Oracle Support Services.
- ORA-27510: IPC error waiting for a request to complete**
Cause: This is an operating system/cluster interconnect error.
Action: Check the value of errno and contact Oracle Support Services.
- ORA-27512: IPC error posting a process**
Cause: This is an operating system/cluster interconnect error.
Action: Check the value of errno and contact Oracle Support Services.
- ORA-27513: parameter *string* contains invalid value *string***
Cause: The program could not identify the value as an IP address.
Action: Change the value to be a valid IP address.
- ORA-27542: Failed to unprepare a buffer prepared for remote update**
Cause: This is an operating system/cluster interconnect error.
Action: Check the value of errno and contact Oracle Support Services.

ORA-27543: Failed to cancel outstanding IPC request

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27544: Failed to map memory region for export

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27545: Fail to prepare buffer for remote update

Cause: This is an operating system/cluster interconnect error.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27546: Oracle compiled against IPC interface version *string.string* found version *string.string*

Cause: A misconfiguration or installation error occurred.

Action: Install the IPC library for this release of Oracle.

ORA-27547: Unable to query IPC OSD attribute *string*

Cause: This is an operating system-dependent IPC error.

Action: Contact Oracle support Services.

ORA-27548: Unable to unprepare IPC buffer

Cause: This is an operating system-dependent IPC error.

Action: Contact Oracle support Services.

ORA-27550: Target ID protocol check failed. tid vers=*string*, type=*string*, remote instance number=*string*, local instance number=*string*

Cause: The local Oracle Real Application Cluster instance and remote instance are running with incompatible implementation of the inter-instance IPC protocol library. A misconfiguration or installation error occurred.

Action: Check additional error messages in the alert log and the process trace file.

ORA-27601: Cell storage initialization failed, cell library error code [*string*]

Cause: Cell storage client did not succeed in initializing.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27602: Failure to publish network status information, cell library error code [*string*]

Cause: Network status information publishing failed.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27603: Cell storage I/O error, I/O failed on disk *string* at offset *string* for data length *string*

Cause: Cell storage I/O read or write failed, possibly due to a configuration problem or a hardware failure.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27604: Cell storage ioctl error, ioctl failed on disk *string*

Cause: Ioctl operation on a cell storage disk failed.

Action: Check the value of errno and contact Oracle Support Services.

ORA-27605: Smart I/O failed as a handle could not be obtained to the cell "*string*" as the cell is not accessible.

Cause: The cell could have been unavailable.

Action: Ensure the cell is available. Check the network connectivity.

ORA-27606: Smart I/O failed because the diskgroup was found to be unmounted. tablespace number: "*string*", file number: "*string*"

Cause: The diskgroup to which the specified file belongs was found to be unmounted.

Action: Ensure that the diskgroup to which the specified file belongs is mounted.

ORA-27607: Smart I/O failed because there were no online disks. tablespace number: "*string*", file number: "*string*"

Cause: There were no online disks found for the specified file.

Action: Ensure the diskgroup to which the specified file belongs to is mounted. Ensure that the disks are online. Check the availability of cells and check the network.

ORA-27608: Smart I/O failed because the disk "*string*" on the cell "*string*" was not open. error code: "*string*", "*string*"

Cause: The specified disk on the specified cell could not be opened.

Action: Ensure the cell is available. Check the network.

ORA-27609: Smart I/O failed due to a network error to the cell "*string*". error code "*string*", "*string*"

Cause: The specified cell could not be connected to.

Action: Ensure that the cell is available. Check the network.

ORA-27610: Smart I/O failed due to shortage of memory on the cell "*string*"

Cause: The specified cell had a shortage of memory to perform smart I/O.

Action: Reduce the parallel degree or number of Oracle sessions executing smart I/O.

ORA-27611: Smart I/O failed due to a block corruption detected on the host. The block was received from cell "*string*". disk: "*string*", block: "*string*", disk offset: "*string*"

Cause: The data block indicated was corrupted on the host, but a corruption was not found on the cell.

Action: This may be due to a transient network error or a real block corruption. Check your network for any errors. Analyze the segment to which the file belongs. If there is indeed a corruption, try to restore the block using RMAN block recovery. If there is a trace file, report the errors in it to Oracle Support Services. If analyze did not report an error and network did not have any error, report the problem to Oracle Support Services as this appears to be a software error.

ORA-27612: Smart I/O failed due to a block corruption detected on the cell "*string*". disk: "*string*", block: "*string*", disk offset: "*string*"

Cause: The data block indicated was found to be corrupted on the cell.

Action: This may be due to a software error or a real data corruption. Analyze the segment. If there is indeed a block corruption, try to restore the block using RMAN block level recovery. If there is a trace file, report the errors in it to Oracle

Support Services. If analyze did not report an error, report the problem to Oracle Support Services as this appears to be a software error.

ORA-27613: Smart I/O failed due to an I/O error on the cell "*string*". disk: "*string*", block: "*string*", disk offset: "*string*" I/O size: "*string*"

Cause: An I/O request failed on the specified cell and disk.

Action: Check the specified disk on the cell.

ORA-27614: Smart I/O failed due to an error "*string, string*" from the cell "*string*". disk: "*string*", block: "*string*", disk offset: "*string*" I/O size: "*string*"

Cause: An I/O request failed, due to an internal error on the specified cell and disk.

Action: Report the problem to Oracle Support Services along with the process trace file and alert log.

ORA-27615: Smart I/O file to ASM disk translation failed with error: *string*.

Cause: An internal error caused a smart I/O operation to fail.

Action: Report the problem to Oracle Support Services along with the process trace file and alert log.

ORA-27616: ASM Allocation Unit: *string*

Cause: This error message is usually accompanied by another message, indicating the real problem. This message exists to provide additional information to Oracle Support Services.

Action: Check the next error message.

ORA-27617: Smart I/O failed because of an internal error. Cell "*string*", disk "*string*", cell library error code "*string, string*", error information "*string*"

Cause: An internal error caused a smart I/O operation to fail.

Action: Report the problem to Oracle Support Services along with the process trace file and alert log.

ORA-27618: Smart I/O failed because of an internal error. Cell "*string*", cell library error code "*string, string*", error information "*string*"

Cause: An internal error caused a smart I/O operation to fail.

Action: Report the problem to Oracle Support Services along with the process trace file and alert log.

ORA-27619: Smart I/O failed because of an internal error when determining the time zone file version. Error code "*string*"

Cause: An internal error caused a smart I/O operation to fail.

Action: Report the problem to Oracle Support Services along with the process trace file and alert log.

ORA-27621: The value of *string* is not valid for parameter *string*

Cause: Incorrect value is specified for an internal parameter.

Action: This parameter should only be set by Oracle Support Services. Check the additional diagnostic information in the trace file and contact Oracle Support Services for recommendations on setting this parameter.

ORA-27623: Cell automation SQL action failed

Cause: Cell automation manager or worker process failed to execute SQL action through OCI recursive call.

Action: Check the alert log and process trace file for additional information. Contact Oracle Support Services if the errors specified in the trace file cannot be corrected.

ORA-27624: Smart I/O failed because the number of reconnects to the cell "*string*" exceeded the maximum allowed "*string*".

Cause: The number of reconnects to a cell exceeded the maximum allowed. This problem indicates a possible network problem or a software problem on the cell.

Action: If the cellsrv is being restarted repeatedly, in a short interval, check the system load. The problem may be corrected by rebooting the cell. If the system is not overloaded, the repeated restarts are likely due to software problem. Report the problem to Oracle Support Services along with alert log and trace files. If the cellsrv is not restarting, the problem may be in the IB network. Check the network between the host and all the cells.

ORA-27625: Exadata configuration failed.

Cause: One or both of the files, cellinit.ora and cellip.ora, were either invalid or missing.

Action: Check if the files, cellinit.ora and cellip.ora, are both present. They can be found in the \$OSSCONF directory. If both are present, check if their contents are valid and correct. If the files are invalid or missing, produce files with valid information in the \$OSSCONF directory. For information on how to set up these files, see the Exadata Users Guide.

ORA-27626: Exadata error: *string* (*string*)

Cause: The cause of this error is dependent on the context in which this error is reported.

Action: See the primary error reported with this error.

ORA-27628: An invalid value was specified for the parameter *string*.

Cause: An invalid value was specified for a parameter.

Action: Check the additional diagnostic information in the trace file and contact Oracle Support Services if further help is required.

ORA-28000: the account is locked

Cause: The user has entered wrong password consequently for maximum number of times specified by the user's profile parameter FAILED_LOGIN_ATTEMPTS, or the DBA has locked the account

Action: Wait for PASSWORD_LOCK_TIME or contact DBA

ORA-28001: the password has expired

Cause: The user's account has expired and the password needs to be changed

Action: change the password or contact the DBA

ORA-28002: the password will expire within *string* days

Cause: The user's account is about to expire and the password needs to be changed

Action: change the password or contact the DBA

ORA-28003: password verification for the specified password failed

Cause: The new password did not meet the necessary complexity specifications and the password_verify_function failed

Action: Enter a different password. Contact the DBA to know the rules for choosing the new password

ORA-28004: invalid argument for function specified in PASSWORD_VERIFY_FUNCTION *string*

Cause: The password verification function does not have the required number and type of input/output arguments and/or the return argument

Action: Check the manual to find out the format of the password verification function

ORA-28005: invalid logon flags

Cause: The flags are not properly set or conflicting flags are set in making calls

Action: Call the function with appropriate flags set.

ORA-28006: conflicting values for parameters *string* and *string*

Cause: The parameters PASSWORD_REUSE_TIME and PASSWORD_REUSE_MAX cannot both be set. One parameter should be unlimited while other is set

Action: Set one value to UNLIMITED explicitly

ORA-28007: the password cannot be reused

Cause: The password cannot be reused for the specified number of days or for the specified number of password changes

Action: Try the password that you have not used for the specified number of days or the specified number of password changes Refer to the password parameters in the CREATE PROFILE statement

ORA-28008: invalid old password

Cause: old password supplied is wrong; Hence user cannot be authenticated using old password

Action: Supply the correct old password for authentication

ORA-28009: connection as SYS should be as SYSDBA or SYSOPER

Cause: connect SYS/<password> is no longer a valid syntax

Action: Try connect SYS/<password> as SYSDBA or connect SYS/<password> as SYSOPER

ORA-28010: cannot expire external or global accounts

Cause: If a user account is created as IDENTIFIED EXTERNALLY, or IDENTIFIED GLOBALLY, this account cannot be expired

Action: Try to expire the password of the user that has database password

ORA-28011: the account will expire soon; change your password now

Cause: The user's account is marked for expiry; the expiry period is unlimited.

Action: Change the password or contact the DBA.

ORA-28013: the password has expired

Cause: The password of the proxy user expired.

Action: Connect directly as proxy user to change the password or contact the DBA.

ORA-28015: Account unlock attempted on read-only database but a conflicting account lockout on the primary exists

Cause: An attempt to unlock an account on a read-only database was prevented, because the account was previously marked as locked on the primary database. All attempts to unlock the account on the read-only database will be prevented as long as the overriding "account locked" condition exists at the primary database.

Action: If this database is part of a Data Guard configuration, perform the account unlock action on the primary database. If this database is read-only, then set the database to read/write and perform the account unlock action.

ORA-28020: IDENTIFIED GLOBALLY already specified

Cause: The IDENTIFIED GLOBALLY clause was specified twice.

Action: Use only one IDENTIFIED GLOBALLY clause.

ORA-28021: cannot grant global roles

Cause: The role granted was IDENTIFIED GLOBALLY. Global roles can only be granted via a central authority for the domain.

Action: Use ALTER ROLE to change the type of role (from IDENTIFIED GLOBALLY to other, such as IDENTIFIED BY password), or allocate it to a global user via the central authority.

ORA-28022: cannot grant external roles to global user or role

Cause: The role granted was IDENTIFIED EXTERNALLY. External roles cannot be granted to global users, to global roles or to any other roles.

Action: Use ALTER ROLE to change the type of the role being granted (from IDENTIFIED EXTERNALLY to other, such as NOT IDENTIFIED) or use ALTER USER to change the type of the user that is the grantee.

ORA-28023: must revoke grants of this role to other user(s) first

Cause: The role altered to IDENTIFIED GLOBALLY was granted to one or more other users and/or roles. Global roles cannot be granted to any user or role.

Action: Use REVOKE to revoke the role from other users or roles first.

ORA-28024: must revoke grants of external roles to this role/user

Cause: The user or role altered to IDENTIFIED GLOBALLY has external roles directly granted - these must be revoked, since external roles cannot be granted to global users or roles.

Action: Use REVOKE to revoke the external roles from the user or role to be ALTERed.

ORA-28025: missing or null external name

Cause: The IDENTIFIED EXTERNALLY AS or IDENTIFIED GLOBALLY AS clause was specified with a valid external name.

Action: Provide a valid external name.

ORA-28026: user with same external name already exists

Cause: The external name specified for the user being created or altered already exists for another user.

Action: External names must be unique among users. Specify another.

ORA-28027: privileged database links may be used by global users

Cause: Only users IDENTIFIED GLOBALLY may use a privileged database link.

Action: Either change the user to a global user or try to use a different database link.

ORA-28028: could not authenticate remote server

Cause: During the course of opening a privileged database link, the remote server was not securely identified using the network security service. Additional errors should follow.

Action: Consult the network security service documentation on how to properly configure the remote server.

ORA-28029: could not authorize remote server for user *string*

Cause: During the course of opening a privileged database link, the remote server was found to lack the necessary authorizations to connect as the current global user. This may be because the server was not authorized by the network security service. Or it may be because the local server is restricting access by the remote server using the DBMS_SECURITY_DOMAINS_ADMIN package.

Action: Grant the remote server the proper authorization to connect as the given global user, and check that the local server is not restricting access.

ORA-28030: Server encountered problems accessing LDAP directory service

Cause: Unable to access LDAP directory service

Action: Please contact your system administrator

ORA-28031: maximum of *string* enabled roles exceeded

Cause: The user attempted to enable too many roles.

Action: Enable fewer roles.

ORA-28032: Your password has expired and the database is set to read-only

Cause: Your password expired and needs to be changed before your login request can be processed. Because the database is currently open in read-only mode, the password change operation cannot be performed on this database.

Action: Log in to the primary database to change your password, then retry your login request at the standby database.

ORA-28035: Cannot Get Session Key for Authentication

Cause: Client and server cannot negotiate shared secret during logon

Action: User should not see this error. Please contact your system administrator

ORA-28037: Cannot Get Session Key for RACF Authentication

Cause: Client and server cannot negotiate shared secret during logon

Action: User should not see this error. Please contact your system administrator

ORA-28038: disallow O2LOGON

Cause: turn off O2LOGON

Action: None

ORA-28039: cannot validate Kerberos service ticket

Cause: The Kerberos service ticket provided was invalid or expired

Action: Provide a valid, unexpired service ticket.

ORA-28040: No matching authentication protocol

Cause: No acceptable authentication protocol for both client and server

Action: Administrator should set SQLNET_ALLOWED_LOGON_VERSION parameter on both client and servers to values that matches the minimum version supported in the system.

ORA-28041: Authentication protocol internal error

Cause: Authentication protocol failed with an internal error

Action: None

ORA-28042: Server authentication failed

Cause: Server failed to authenticate itself to the client

Action: Confirm that the server is a valid database server.

ORA-28043: invalid bind credentials for DB-OID connection

Cause: The Database password stored in the wallet did not match the one in OID .

Action: Use DBCA to reset the database password so that it is the same in database wallet and in OID.

ORA-28044: unsupported directory type

Cause: The database tried to work with a directory which is not OID.

Action: Enterprise User Security works only with Oracle Internet Directory. Update the ldap.ora file to reflect an appropriate OID.

ORA-28045: SSL authentication between database and OID failed

Cause: Server failed to authenticate itself to the Directory.

Action: Make sure the sqlnet.ora used is pointing to the wallet with the right certificate.

ORA-28046: Password change for SYS disallowed

Cause: REMOTE_LOGIN_PASSWORDFILE is set to SHARED, prohibiting SYS password changes.

Action: Change setting of REMOTE_LOGIN_PASSWORDFILE to EXCLUSIVE or NONE.

ORA-28047: database is not a member of any enterprise domain in OID

Cause: An enterprise user login was attempted on a database that is not a member of any enterprise domain in OID.

Action: An administrator should put the database into an enterprise domain in OID, and then the user should reconnect.

ORA-28048: database is a member of multiple enterprise domains in OID

Cause: An enterprise user login was attempted on a database that is a member of multiple enterprise domains in OID.

Action: An administrator should put the database into only one enterprise domain in OID, and then the user should reconnect.

ORA-28049: the password has expired

Cause: The enterprise user's password has expired and the password needs to be changed.

Action: change the password in the directory or contact the directory administrator.

ORA-28050: specified user or role cannot be dropped

Cause: The specified user or role was reserved and cannot be dropped.

Action: None

ORA-28051: the account is locked

Cause: The enterprise user has consecutively entered the wrong password for maximum number of times specified in the realm's password policy profile.

Action: Contact the directory administrator.

ORA-28052: the account is disabled

Cause: The enterprise user's account in the directory has been disabled.

Action: Contact the directory administrator.

ORA-28053: the account is inactive

Cause: The enterprise user's account in the directory is currently not active.

Action: Contact the directory administrator.

ORA-28054: the password has expired. *string* Grace logins are left

Cause: The enterprise user's password has expired. The user is able to login because he has gracelogins left.

Action: change the password in the directory or contact the directory administrator.

ORA-28055: the password will expire within *string* days

Cause: The enterprise user's password is about to expire.

Action: Change the password in the directory or contact the directory administrator.

ORA-28056: Writing audit records to Windows Event Log failed

Cause: Unable to write an audit entry to the Windows event log used as the audit trail.

Action: Check the error number for a possible operating system error. If there is no error, contact Oracle Support Services.

ORA-28057: name of the password file could not be constructed

Cause: Possibly environment variable ORACLE_SID was not set.

Action: Set value for the ORACLE_SID environment variable.

ORA-28059: Cross-instance call failed

Cause: An attempt to inform other Oracle RAC instances of a security event failed.

Action: .

ORA-28060: A data redaction policy already exists on this column.

Cause: A data redaction policy was already in existence on this column.

Action: Specify a column which does not already have a redaction policy defined on it, or use DBMS_REDACT.ALTER_POLICY to alter the existing redaction policy for this column.

ORA-28061: This object cannot have a data redaction policy defined on it.

Cause: An attempt was made to define a data redaction policy on an object other than a table or view. Note that a data redaction policy cannot be defined on an editioned view, or on specialized tables created internally by the server in conjunction with various features such as materialized view.

Action: Specify the name of a table or view.

ORA-28062: The policy expression is too long.

Cause: The policy expression was longer than 4000 characters.

Action: Specify a policy expression of at most 4000 characters.

ORA-28063: The policy expression is empty.

Cause: The EXPRESSION parameter to DBMS_REDACT.ADD_POLICY was empty.

Action: A nonempty policy expression must be specified in the EXPRESSION parameter to DBMS_REDACT.ADD_POLICY.

ORA-28064: The redaction function is not valid.

Cause: The FUNCTION_TYPE parameter to DBMS_REDACT.ADD_POLICY was invalid.

Action: Specify the FUNCTION_TYPE parameter to DBMS_REDACT.ADD_POLICY as one of the following: DBMS_REDACT.NONE, DBMS_REDACT.FULL, DBMS_REDACT.RANDOM, DBMS_REDACT.PARTIAL, DBMS_REDACT.REGEXP, or NULL. Note that only full redaction may be applied to columns of type BLOB, CLOB, or NCLOB.

ORA-28066: invalid column "string"

Cause: An invalid column was specified in the COLUMN_NAME parameter.

Action: Check the columns in the object and specify the right column name.

ORA-28067: missing or invalid column name

Cause: A valid column name was not specified in the COLUMN_NAME parameter when a column name was required. Note that when using DBMS_REDACT.ALTER_POLICY, the default action is DBMS_REDACT.ADD_COLUMN

Action: Specify the name of a column.

ORA-28068: The object "string" does not have a data redaction policy.

Cause: The specified object did not have a data redaction policy defined on it.

Action: Specify the name of an object which has a data redaction policy, or use DBMS_REDACT.ADD_POLICY to add a data redaction policy.

ORA-28069: A data redaction policy already exists on this object.

Cause: A data redaction policy was already in existence on this object.

Action: Specify a table or view which does not already have a redaction policy defined on it, or use DBMS_REDACT.ALTER_POLICY to alter the existing redaction policy for this object.

ORA-28070: The column "string" does not have a data redaction policy.

Cause: The specified column did not have a data redaction policy defined on it.

Action: Specify the name of a column which has a data redaction policy.

ORA-28071: The action is not valid.

Cause: The ACTION parameter to DBMS_REDACT.ALTER_POLICY was invalid.

Action: Specify the ACTION parameter to DBMS_REDACT.ALTER_POLICY as one of the following values: DBMS_REDACT.MODIFY_EXPRESSION, DBMS_REDACT.MODIFY_COLUMN, DBMS_REDACT.ADD_COLUMN, or DBMS_REDACT.DROP_COLUMN.

ORA-28072: The specified policy name is incorrect.

Cause: The POLICY_NAME parameter was incorrect.

Action: Specify the POLICY_NAME parameter with the name of the redaction policy currently defined on the object.

ORA-28073: The column "*string*" has an unsupported data type.

Cause: The column had a data type which is not supported by data redaction. The supported data types are CHAR, NCHAR, VARCHAR2, NVARCHAR2, NUMBER types, BINARY_FLOAT, BINARY_DOUBLE, DATE, and TIMESTAMP. For regular expression-based redaction, with FUNCTION_TYPE of DBMS_REDACT.REGEXP, only the string data types (VARCHAR2, NVARCHAR2, CHAR, and NCHAR) are supported by data redaction. Virtual columns are not supported by data redaction.

Action: Specify the name of a column which has a supported data type.

ORA-28074: The "*string*" field of the redaction parameters is not valid.

Cause: The redaction parameters specified had one or more fields that were invalid.

Action: Specify the redaction parameters according to Oracle documentation.

ORA-28075: The policy expression has unsupported functions.

Cause: The EXPRESSION parameter had unsupported functions.

Action: Specify only valid functions for the EXPRESSION parameter.

ORA-28076: An attribute was not specified for SYS_SESSION_ROLES.

Cause: An attribute was not specified for the SYS_SESSION_ROLES namespace in the policy expression.

Action: Specify an attribute for SYS_SESSION_ROLES in the policy expression.

ORA-28077: The attribute specified (*string*) exceeds the maximum length.

Cause: The attribute specified in the policy expression for the SYS_SESSION_ROLES namespace exceeded the maximum length.

Action: Change the policy expression to use a valid attribute for SYS_SESSION_ROLES namespace.

ORA-28078: A regular expression parameter is missing or invalid.

Cause: The FUNCTION_TYPE was DBMS_REDACT.REGEXP, but one or more of the regular expression parameters were missing or invalid, the REGEXP_PATTERN failed to compile properly, or the regular expression replacement operation failed.

Action: Specify the regular expression parameters according to Oracle documentation. At a minimum, the REGEXP_PATTERN and the REGEXP_REPLACE_STRING must be specified. Ensure that the REGEXP_PATTERN can compile properly as a regular expression, for example by testing it with REGEXP_REPLACE in a SQL query against a column containing some of the data to be redacted.

ORA-28079: The policy was already enabled.

Cause: The redaction policy specified has already been enabled.

Action: Only disabled redaction policies can be enabled.

ORA-28080: The policy was already disabled.

Cause: The redaction policy specified has already been disabled.

Action: Only enabled redaction policies can be disabled.

ORA-28081: Insufficient privileges - the command references a redacted object.

Cause: The command referenced a redacted column in an object protected by a data redaction policy.

Action: If possible, modify the command to avoid referencing any redacted columns. Otherwise, drop the data redaction policies that protect the referenced tables and views, or ensure that the user issuing the command has the EXEMPT REDACTION POLICY system privilege, then retry the operation. The EXEMPT REDACTION POLICY system privilege is required for creating or refreshing a materialized view when the materialized view is based on an object protected by a data redaction policy. The EXEMPT REDACTION POLICY system privilege is required for performing a data pump schema-level export including any object protected by a data redaction policy. All data redaction policies are listed in the REDACTION_COLUMNS catalog view.

ORA-28082: The parameter *string* is invalid.

Cause: The specified parameter was either empty or too long.

Action: Specify a parameter of correct length. See the documentation for length requirements.

ORA-28083: A redacted column was referenced in a virtual column expression.

Cause: This redacted column was referenced in a virtual column expression.

Action: Ensure the column expression definition for any virtual column does not refer to any redacted columns. To check for columns with redaction policies, use the REDACTION_COLUMNS catalog view which lists all data redaction policies.

ORA-28085: The input and output lengths of the redaction do not match.

Cause: As specified, the redaction parameters produced an output with a length different to that of the input.

Action: Use regular expression redaction instead of partial redaction.

ORA-28086: The evaluation of the policy expression failed. *string*

Cause: The evaluation of the policy expression failed.

Action: Specify a valid policy expression.

ORA-28100: policy function schema *string* is invalid

Cause: The schema was dropped after the policy associated with the function had been added to the object.

Action: Drop the policy and re-create it with a policy function owned by a valid user. Or re-create the user and the policy function under the new user.

ORA-28101: policy already exists

Cause: A policy with the same name for the same object already exists.

Action: Check if the policy has already been added or use a different policy name.

ORA-28102: policy does not exist

Cause: Try to drop/enable/refresh a non-existent policy.

Action: Correct the policy name argument.

ORA-28103: adding a policy to an object owned by SYS is not allowed

Cause: Try to add a policy to a table or a view owned by SYS.

Action: You can not perform this operation.

ORA-28104: input value for *string* is not valid

Cause: Input value for the argument is not valid

Action: specify a valid argument value.

ORA-28105: cannot create security relevant column policy in an object view

Cause: Security relevant column argument is not null in policy creation for an object view

Action: None

ORA-28106: input value for argument #string is not valid

Cause: Input values for the argument is missing or invalid.

Action: Correct the input values.

ORA-28107: policy was disabled

Cause: Try to flush a disabled policy.

Action: If the policy is supposed to be enforced, it must be enabled.

ORA-28108: circular security policies detected

Cause: Policies for the same object reference each other.

Action: Drop the policies

ORA-28109: the number of related policies has exceeded the limit of 16

Cause: Too many policies are involved in the same objects.

Action: Drop one or more policies. Or combine a few of them into one.

ORA-28110: policy function or package *string.string* has error

Cause: The policy function may have been dropped, or is no longer valid.

Action: Check the status of the function and correct the problem. Or re-create the policy with a valid function.

ORA-28111: insufficient privilege to evaluate policy predicate

Cause: Predicate has a subquery which contains objects that the owner of policy function does not have privilege to access.

Action: Grant appropriate privileges to the policy function owner.

ORA-28112: failed to execute policy function

Cause: The policy function has one or more error during execution.

Action: Check the trace file and correct the errors.

ORA-28113: policy predicate has error

Cause: Policy function generates invalid predicate.

Action: Review the trace file for detailed error information.

ORA-28115: policy with check option violation

Cause: Policy predicate was evaluated to FALSE with the updated values.

Action: None

ORA-28116: insufficient privileges to do direct path access

Cause: Users with insufficient privileges attempting to do direct path access of tables with fine grain access control policies.

Action: Ask the database administrator to do the operation. Note that users can work with security administrator to temporarily drop/disable the policies at time

of export, import, or load, but this has security implication, and thus access of the database must be controlled carefully.

ORA-28117: integrity constraint violated - parent record not found

Cause: try to update/insert a child record with new foreign key values, but the corresponding parent row is not visible because of fine-grained security in the parent.

Action: make sure that the updated foreign key values must also visible in the parent

ORA-28118: policy group already exists

Cause: try to create a policy group that already exists

Action: None

ORA-28119: policy group does not exist

Cause: try to drop a policy group that does not exist

Action: None

ORA-28120: driving context already exists

Cause: try to create a driving context that already exists

Action: None

ORA-28121: driving context does not exist

Cause: try to drop a driving context that does not exist

Action: None

ORA-28122: can not update SYS_DEFAULT policy group

Cause: An attempt was made to execute either DBMS_RLS.CREATE_POLICY_GROUP or DBMS_RLS.DELETE_POLICY_GROUP using SYS_DEFAULT as the policy group name.

Action: Do not attempt to CREATE or DELETE the SYS_DEFAULT policy group. This action is not permitted.

ORA-28123: Driving context '*string,string*' contains invalid group '*string*'

Cause: A previous call to DBMS_SESSION.SET_CONTEXT specified an invalid policy group.

Action: Ensure that a valid policy group is passed to DBMS_SESSION.SET_CONTEXT when initializing a policy driving context.

ORA-28124: Column *string* in sec_relevant_cols cannot be of an object data type

Cause: A column specified in sec_relevant_cols was of an object data type.

Action: Ensure that none of the columns specified in sec_relevant_cols is of an object data type or XMLType.

ORA-28132: The MERGE INTO syntax does not support the security policy.

Cause: The MERGE INTO syntax did not support a security policy on the destination table, because the policy's statement_types did not include each of INSERT, UPDATE and DELETE.

Action: If you do not have the privilege to modify the security policy, then instead of MERGE INTO, use the INSERT, UPDATE and DELETE DML statements on the table that has a security policy defined on it. If you have the privilege to modify

the security policy, then redefine it in such a way that `statement_types` includes all of the DML statement types (INSERT, UPDATE and DELETE).

ORA-28134: object cannot have fine-grained access control policy

Cause: Only tables, views, or synonyms of tables or views may have VPD policies

Action: None

ORA-28137: Invalid FGA audit Handler

Cause: An invalid audit handler was specified.

Action: Specify a valid audit handler.

ORA-28138: Error in Policy Predicate

Cause: An invalid policy predicate was specified.

Action: Please specify a valide policy Predicate for the FGA policy

ORA-28139: Maximum allowed Fine Grain Audit Policies Exceeded

Cause: A maximum of 256 policies can be enabled on an object

Action: Drop or disable an existing policy before creating more

ORA-28140: Invalid column specified

Cause: Column name specified during policy creation is invalid

Action: Please specify a valid column name. Object columns are not supported

ORA-28141: error in creating audit index file

Cause: ORACLE was not able to create the file being used to hold audit file names.

Action: Examine the directory pointed to by the initialization parameter "audit_file_dest." Make sure that all of the following is true:

1. The directory exists.
2. The name indeed points to a directory and not a file.
3. The directory is accessible and writable to the ORACLE user.

ORA-28142: error in accessing audit index file

Cause: ORACLE was not able to access the file being used to hold audit file names.

Action: Make sure the file exists in the directory pointed to by the initialization parameter "audit_file_dest" and is readable by the ORACLE user.

ORA-28143: Invalid argument passed to FGA ADD_POLICY procedure

Cause: Invalid input argument was specified for FGA ADD_POLICY procedure.

Action: Specify correct type and number of arguments to FGA ADD_POLICY procedure.

ORA-28144: Failed to execute fine-grained audit handler

Cause: An error was encountered while executing fine-grained audit handler.

Action: Refer to the trace file for details.

ORA-28150: proxy not authorized to connect as client

Cause: A proxy user attempted to connect as a client, but the proxy was not authorized to act on behalf of the client.

Action: Grant the proxy user permission to perform actions on behalf of the client by using the ALTER USER ... GRANT CONNECT command.

ORA-28151: more than one user name specified for command

Cause: More than one user name was specified for an ALTER USER command.

Action: Try the command again with only one user name.

ORA-28152: proxy user '*string*' may not specify initial role '*string*' on behalf of client '*string*'

Cause: A proxy user attempted to specify an initial role for a client, but the client does not possess the role.

Action: Change the proxy user so that it does not specify the role or grant the role to the client.

ORA-28153: Invalid client initial role specified: '*string*'

Cause: A role specified by a proxy user as an initial role to be activated upon connecting on behalf of a client is invalid.

Action: Connect again as the client specifying a valid role.

ORA-28154: Proxy user may not act as client '*string*'

Cause: A proxy user may not assume the identity of a privileged user in order to limit the privileges that a proxy may possess.

Action: Execute the statement again specify a client other than a privileged user.

ORA-28155: user '*string*' specified as a proxy is actually a role

Cause: A user specified in an AUDIT <operation> BY <proxy> ON BEHALF OF <client> is actually a role.

Action: Execute the statement again with a valid proxy user.

ORA-28156: Proxy user '*string*' not authorized to set role '*string*' for client '*string*'

Cause: A proxy user has not been granted the right to use a role on behalf of a client.

Action: Execute the command ALTER USER <client> GRANT CONNECT THROUGH PROXY <proxy> to grant the needed role.

ORA-28157: Proxy user '*string*' forbidden to set role '*string*' for client '*string*'

Cause: A proxy user was forbidden to use a role on behalf of a client through the command ALTER USER <client> GRANT CONNECT THROUGH <proxy> WITH ALL ROLES EXCEPT <role>

Action: Execute the command ALTER USER <client> GRANT CONNECT THROUGH PROXY <proxy> to grant the needed role.

ORA-28163: GRANT already specified

Cause: The GRANT clause was specified twice.

Action: Use only one GRANT clause.

ORA-28164: REVOKE already specified

Cause: The REVOKE clause was specified twice.

Action: Use only one REVOKE clause.

ORA-28165: proxy '*string*' may not specify password-protected role '*string*' for client '*string*'

Cause: A proxy user attempted to activate a role on behalf of a client which has a password associated with it. Since the proxy does not have a password, this activation cannot be allowed.

Action: Attempt to activate a different role or change the role administratively so that there is no password.

ORA-28166: duplicate rolename in list

Cause: The name of a role was specified more than once in a list.

Action: Repeat the command specifying the role once.

ORA-28168: attempted to grant password-protected role

Cause: An ALTER USER ... GRANT CONNECT command was attempted specifying a role that is protected by a password as a role which the proxy may execute on behalf of a client.

Action: Either specify a role that does not have a password or alter the role so that a password is not required.

ORA-28169: unsupported certificate type

Cause: The type of certificate from which the server is to extract the credentials of the client is not supported.

Action: Specify a supported type.

ORA-28170: unsupported certificate version

Cause: The version of the certificate from which the server is to extract the credentials of the client is not supported.

Action: Specify a supported version.

ORA-28171: unsupported Kerberos version

Cause: the version the Kerberos ticket which the server is to use to validate the identity of the client is not supported.

Action: Specify a supported version.

ORA-28172: distinguished name not provided by proxy

Cause: A client user is to be identified using a distinguished name, but none was provided by the proxy user.

Action: Provide a distinguished name.

ORA-28173: certificate not provided by proxy

Cause: A client user is to be identified using a certificate but none was provided by the proxy user.

Action: Provide a certificate.

ORA-28174: Kerberos ticket not provided by proxy

Cause: A client user is to be authenticated using a Kerberos ticket but none was provided by the proxy user.

Action: Provide a Kerberos ticket.

ORA-28175: incorrect certificate type

Cause: the type of certificate provided by the proxy user to identify a client user does not match the type that is required.

Action: Provide a certificate of the correct type.

ORA-28176: incorrect certificate version

Cause: the version of certificate provided by the proxy user to identify a client user does not match the version that is required.

Action: Provide a certificate of the correct version.

ORA-28177: incorrect Kerberos ticket version

Cause: the version of Kerberos ticket provided by the proxy user to authenticate a client user does not match the version that is required.

Action: Provide a Kerberos ticket of the correct version.

ORA-28178: password not provided by proxy

Cause: A client user is to be authenticated using a database password but none was provided by the proxy user.

Action: Provide a password.

ORA-28179: client user name not provided by proxy

Cause: No user name was provided by the proxy user for the client user.

Action: Either specify a client database user name, a distinguished name or an X.509 certificate.

ORA-28180: multiple authentication methods provided by proxy

Cause: More than one authentication method was specified by the proxy user for the client user.

Action: Specify only one of the following: a client database user name, a distinguished name or an X.509 certificate.

ORA-28181: proxy '*string*' failed to enable one or more of the specified initial roles for client '*string*'

Cause: Attempt to enable specified initial roles after logon resulted in failure.

Action: Check that the initial roles are valid, granted to client, and not password protected.

ORA-28182: cannot acquire Kerberos service ticket for client

Cause: An attempt to use a Kerberos forwardable ticket granting ticket to obtain a Kerberos service ticket failed.

Action: Check that the Kerberos forwardable ticket granting ticket belongs to the client, is valid, and that the key distribution center is available.

ORA-28183: proper authentication not provided by proxy

Cause: A client user must be authenticated but no authentication credentials were provided by the proxy user.

Action: Provide some form of authentication credentials.

ORA-28184: global user cannot have proxy permissions managed in the directory

Cause: The client name specified was a global user.

Action: Use ALTER USER to change the type of user (from IDENTIFIED GLOBALLY to something else, such as IDENTIFIED BY password or IDENTIFIED EXTERNALLY).

ORA-28200: IDENTIFIED USING already specified

Cause: The IDENTIFIED USING clause was specified twice.

Action: Use only one IDENTIFIED USING clause.

ORA-28221: REPLACE not specified

Cause: User is changing password but password verification function is turned on and the original password is not specified and the user does not have the alter user system privilege.

Action: Supply the original password.

ORA-28223: first login requires password change

Cause: This user was globally authenticated. Password policy settings in Oracle Internet Directory (OID) requires the password to be changed for the first connection. Further connections to the database will be denied if the password in OID is not changed.

Action: Connect to the OID to change the password.

ORA-28231: no data passed to obfuscation toolkit

Cause: A NULL value was passed to a function or procedure.

Action: Make sure that the data passed is not empty.

ORA-28232: invalid input length for obfuscation toolkit

Cause: Length of data submitted for encryption or decryption is not a multiple of 8 bytes.

Action: Make sure that the length of the data to be encrypted or decrypted is a multiple of 8 bytes.

ORA-28233: double encryption not supported

Cause: The obfuscation toolkit does not support the encryption of already-encrypted data.

Action: Do not attempt to encrypt already-encrypted data.

ORA-28234: key length too short

Cause: The key specified is too short for the algorithm. DES requires a key of at least 8 bytes. Triple DES requires a key of least 16 bytes in two-key mode and 24 bytes in three-key mode.

Action: Specify a longer key.

ORA-28235: algorithm not available

Cause: The encryption algorithm desired is not available.

Action: Run the installer to install the needed algorithm in Oracle Advanced Security.

ORA-28236: invalid Triple DES mode

Cause: An unknown value was specified for the mode in which triple DES encryption is to run.

Action: Specify a valid value. See the package declaration for a list of valid values.

ORA-28237: seed length too short

Cause: The seed specified for the key generation routine must be at least 80 characters.

Action: Specify a longer seed.

ORA-28238: no seed provided

Cause: A NULL value was passed in as the seed to be used in generating a key.

Action: Provide a non-NULL value for the seed.

ORA-28239: no key provided

Cause: A NULL value was passed in as an encryption or decryption key.

Action: Provide a non-NULL value for the key.

ORA-28261: CURRENT_USER can not be used in PLSQL Definer's Right procedure.

Cause: An attempt to retrieve CURRENT_USER using SYS_CONTEXT PLSQL interface.

Action: Use a SQL statement to query CURRENT_USER inside a DR procedure.

ORA-28262: global_context_pool_size has invalid value.

Cause: Parameter global_context_pool_size has a value less than the minimum required value (10K).

Action: Please specify a value for the init.ora parameter global_context_pool_size which is atleast 10k.

ORA-28263: Insufficient memory in global context pool

Cause: Allocations for the global context heap exceeded the value set in init.ora.

Action: Increase the value of global_context_pool_size parameter in init.ora or clear unused global context.

ORA-28264: Client identifier is too long

Cause: The length of the client identifier is longer than 64

Action: Set a client identifier whose length is less than 64.

ORA-28265: NameSpace beginning with 'sys_' is not allowed

Cause: Namespace beginning with 'sys_' is not allowed.

Action: Use a namespace that does not begin with 'sys_'.

ORA-28267: Invalid NameSpace Value

Cause: Context NameSpace conflicts with reserved key words or a secure Namespace is not allowed for this type of Application Context.

Action: Use a valid namespace.

ORA-28268: Exceeded the maximum allowed size for Context information in a session

Cause: The maximum size specified by the _session_context_size init.ora parameter was exceeded.

Action: Please change the value for _session_context_size in the init.ora file.

ORA-28270: Malformed user nickname for password authenticated global user.

Cause: An attempt to login as password-authenticated global user with a malformed user nickname.

Action: Make sure the nickname is valid and re-login.

ORA-28271: No permission to read user entry in LDAP directory service.

Cause: ORACLE server does not have read permission on user nickname's X.500 user entry.

Action: Make sure ORACLE server is using right SSL credentials to connect to LDAP directory services. Make sure permissions for LDAP user entries are right.

ORA-28272: Domain policy restricts password based GLOBAL user authentication.

Cause: Domain policy does not allow password-authenticated GLOBAL users.

Action: Make sure ORACLE server is using right SSL credentials to connect to LDAP directory services. Make sure orclDBAuthTypes attributes within Oracle enterprise domain object is either set to PWD or ALL.

ORA-28273: No mapping for user nickname to LDAP distinguished name exists.

Cause: ORACLE server cannot map the given user nickname to LDAP distinguished name.

Action: Make sure user entries in LDAP are correctly provisioned with correct user nickname attribute values.

ORA-28274: No ORACLE password attribute corresponding to user nickname exists.

Cause: LDAP user entry corresponding to user nickname does not have a ORACLE password attribute or the attribute is not initialized.

Action: Make sure user entries in LDAP are correctly provisioned with correct ORACLE password attribute values.

ORA-28275: Multiple mappings for user nickname to LDAP distinguished name exist.

Cause: The given user nickname maps to more than one LDAP distinguished name.

Action: Make sure user nickname is unique within the enterprise.

ORA-28276: Invalid ORACLE password attribute.

Cause: The ORACLE password attribute of a user entry has an invalid format.

Action: Make sure ORACLE password attribute value is RFC-2307 compliant.

ORA-28277: LDAP search, while authenticating global user with passwords, failed.

Cause: The LDAP search for finding the appropriate user entry and ORACLE password failed.

Action: Make sure LDAP directory service is up and running.

ORA-28278: No domain policy registered for password based GLOBAL users.

Cause: No policy about password authenticated GLOBAL users has been registered.

Action: Add attribute orclDBAuthTypes to the database server's Enterprise domain.

ORA-28279: Error reading ldap_directory_access init parameter.

Cause: ldap_directory_access parameter is not specified correctly.

Action: Make sure spfile.ora has ldap_directory_access set correctly. Possible correct values are PASSWORD, SSL and NONE.

ORA-28280: Multiple entries for ORACLE database password exist.

Cause: The ORACLE password attribute of a user entry has multiple entries of ORACLE database password.

Action: Make sure ORACLE password attribute has one entry for ORACLE Database password.

ORA-28281: Global application context is not updated on one or more Oracle RAC instances

Cause: While updating global application context across Oracle RAC instances, the background process errored out or the timeout expired due to some failure.

Action: Ensure every instance in Oracle RAC is operational and retry the operation.

ORA-28290: Multiple entries found for the same Kerberos Principal Name

Cause: Multiple user entries has been configured with the same krbPrincipalName

Action: Modify enterprise user's entry to assign its Kerberos principal name Make sure the user entries in LDAP are provisioned correctly.

ORA-28291: No Kerberos Principal Value found.

Cause: Oracle server fails to get value of krbPrincipalName attribute

Action: Make sure user entries are correctly provisioned with correct Kerberos principal value

ORA-28292: No Domain Policy registered for Kerberos based authentication

Cause: The enterprise domain entry is not configured for Kerberos based global authentication.

Action: Modify orclDBAuthType of the database server's enterprise domain entry and assign it "ALL" or "KRB5"

ORA-28293: No matched Kerberos Principal found in any user entry

Cause: Oracle server fails to find the principal in the user search base

Action: Make sure the user search base is correct. Use ESM to configure the enterprise user its Kerberos principal name

ORA-28300: No permission to read user entry in LDAP directory service.

Cause: ORACLE server does not have read permission on user entries.

Action: Make sure ORACLE server is using right credentials to connect to LDAP directory services. Make sure permissions for LDAP user entries are configured correctly.

ORA-28301: Domain Policy hasn't been registered for SSL authentication.

Cause: An attempt was made to authenticate with SSL, but the database enterprise domain was not configured for SSL authentication.

Action: Modify orclDBAuthType of the server's enterprise domain entry and assign it "ALL" or "SSL".

ORA-28302: User does not exist in the LDAP directory service.

Cause: An attempt was made to authenticate with SSL using the user's certificate, but there was no user entry in the LDAP server that matched the user's Distinguished Name.

Action: Add an user entry whose DN matches the user's PKI DN in the LDAP directory.

ORA-28303: Distinguished name for user exceeds maximum supported length

Cause: The user's distinguished name (DN) exceeded the maximum supported length.

Action: Shorten the user's distinguished name (DN) and retry.

ORA-28330: encryption is not allowed for this data type

Cause: Data type was not supported for column encryption.

Action: None

ORA-28331: encrypted column size too long for its data type

Cause: column was encrypted and for VARCHAR2, the length specified was > 3932; for CHAR, the length specified was > 1932; for NVARCHAR2, the length specified was > 1966; for NCHAR, the length specified was > 966;

Action: Reduce the column size.

ORA-28332: cannot have more than one password for the encryption key

Cause: More than one password was specified in the user command.

Action: None

ORA-28333: column is not encrypted

Cause: An attempt was made to rekey or decrypt an unencrypted column.

Action: None

ORA-28334: column is already encrypted

Cause: An attempt was made to encrypt an encrypted column.

Action: None

ORA-28335: referenced or referencing FK constraint column cannot be encrypted

Cause: encrypted columns were involved in the referential constraint

Action: None

ORA-28336: cannot encrypt SYS owned objects

Cause: An attempt was made to encrypt columns in a table owned by SYS.

Action: None

ORA-28337: the specified index may not be defined on an encrypted column

Cause: Index column was either a functional, domain, or join index.

Action: None

ORA-28338: Column(s) cannot be both indexed and encrypted with salt

Cause: An attempt was made to encrypt index column with salt or an attempt was made to create an index on encrypted column with salt.

Action: Alter the table and specify column encrypting without salt.

ORA-28339: missing or invalid encryption algorithm

Cause: Encryption algorithm was missing or invalid in the user command.

Action: Must specify a valid algorithm.

ORA-28340: a different encryption algorithm has been chosen for the table

Cause: Existing encrypted columns were associated with a different algorithm.

Action: No need to specify an algorithm, or specify the same one for the existing encrypted columns.

ORA-28341: cannot encrypt constraint column(s) with salt

Cause: An attempt was made to encrypt constraint columns with salt.

Action: Encrypt the constraint columns without salt.

ORA-28342: integrity check fails on column key

Cause: Encryption metadata may have been improperly altered.

Action: None

ORA-28343: fails to encrypt data

Cause: data or encryption metadata may have been improperly altered or the security module may not have been properly setup

Action: None

ORA-28344: fails to decrypt data

Cause: data or encryption metadata may have been improperly altered or the security module may not have been properly setup

Action: None

ORA-28345: cannot downgrade because there exists encrypted column

Cause: An attempt was made to downgrade when there was an encrypted column in the system.

Action: Decrypt these columns before attempting to downgrade.

ORA-28346: an encrypted column cannot serve as a partitioning column

Cause: An attempt was made to encrypt a partitioning key column or create partitioning index with encrypted columns.

Action: The column must be decrypted.

ORA-28347: encryption properties mismatch

Cause: An attempt was made to issue an ALTER TABLE EXCHANGE PARTITION | SUBPARTITION command, but encryption properties were mismatched.

Action: Make sure encryption algorithms and columns keys are identical. The corresponding columns must be encrypted on both tables with the same salt and non-salt flavor.

ORA-28348: index defined on the specified column cannot be encrypted

Cause: An attempt was made to encrypt a column which is in a functional index, domain index, or join index.

Action: drop the index

ORA-28349: cannot encrypt the specified column recorded in the materialized view log

Cause: An attempt was made to encrypt a column which is already recorded in the materialized view log.

Action: drop the materialized view log

ORA-28350: cannot encrypt the specified column recorded in CDC synchronized change table

Cause: An attempt was made to encrypt a column which is already recorded in CDC synchronized change table.

Action: drop the synchronized change table

ORA-28351: cannot encrypt the column of a cluster key

Cause: An attempt was made to encrypt a column of the cluster key. A column of the cluster key in a clustered table cannot be encrypted.

Action: None

ORA-28353: failed to open wallet

Cause: The database was unable to open the security module wallet due to an incorrect wallet path or password. It is also possible that a wallet has not been created. Type `mkwallet` from command line for instructions.

Action: Execute the command again using the correct wallet password or verifying a wallet exists in the specified directory. If necessary, create a new wallet and initialize it.

ORA-28354: Encryption wallet, auto login wallet, or HSM is already open

Cause: Encryption wallet, auto login wallet, or HSM was already opened.

Action: None

ORA-28356: invalid open wallet syntax

Cause: The command to open the wallet contained improper spelling or syntax.

Action: If attempting to open the wallet, verify the spelling and syntax and execute the command again.

ORA-28357: password required to open the wallet

Cause: A password was not provided when executing the open wallet command.

Action: Retry the command with a valid password.

ORA-28358: improper set key syntax

Cause: The command to set the master key contained improper spelling or syntax.

Action: If attempting to set the master key for Transparent Database Encryption, verify the spelling and syntax and execute the command again.

ORA-28359: invalid certificate identifier

Cause: The certificate specified did not exist in the wallet.

Action: Query the `V$WALLET` fixed view to find the proper certificate identifier for certificate to be used.

ORA-28361: master key not yet set

Cause: The master key for the instance was not set.

Action: Execute the `ALTER SYSTEM SET KEY` command to set a master key for the database instance.

ORA-28362: master key not found

Cause: The required master key required could not be located. This may be caused by the use of an invalid or incorrect wallet.

Action: Check wallet location parameters to see if they specify the correct wallet. Also, verify that an SSO wallet is not being used when an encrypted wallet is intended.

ORA-28363: buffer provided not large enough for output

Cause: A provided output buffer is too small to contain the output.

Action: Check the size of the output buffer to make sure it is initialized to the proper size.

ORA-28364: invalid wallet operation

Cause: The command to operate the wallet contained improper spelling or syntax.

Action: Verify the spelling and syntax and execute the command again.

ORA-28365: wallet is not open

Cause: The security module wallet has not been opened.

Action: Open the wallet.

ORA-28366: invalid database encryption operation

Cause: The command for database encryption contained improper spelling or syntax.

Action: Verify the spelling and syntax and execute the command again.

ORA-28367: wallet does not exist

Cause: The Oracle wallet has not been created or the wallet location parameters in sqlnet.ora specifies an invalid wallet path.

Action: Verify that the WALLET_LOCATION or the ENCRYPTION_WALLET_LOCATION parameter is correct and that a valid wallet exists in the path specified.

ORA-28368: cannot auto-create wallet

Cause: The database failed to auto create an Oracle wallet. The Oracle process may not have proper file permissions or a wallet may already exist.

Action: Confirm that proper directory permissions are granted to the Oracle user and that neither an encrypted or obfuscated wallet exists in the specified wallet location and try again.

ORA-28369: cannot add files to encryption-ready tablespace when offline

Cause: You attempted to add files to an encryption-ready tablespace when all the files in the tablespace were offline.

Action: Bring the tablespace online and try again

ORA-28370: ENCRYPT storage option not allowed

Cause: You attempted to specify the ENCRYPT storage option. This option may only be specified during CREATE TABLESPACE.

Action: Remove this option and retry the statement.

ORA-28371: ENCRYPTION clause and/or ENCRYPT storage option not allowed

Cause: You attempted to specify the ENCRYPTION clause or ENCRYPT storage option for creating TEMP or UNDO tablespaces.

Action: Remove these options and retry the statement.

ORA-28372: missing ENCRYPT storage option for encrypted tablespace

Cause: You attempted to specify ENCRYPTION property for CREATE TABLESPACE without specifying ENCRYPT storage option to encrypt the tablespace.

Action: Add ENCRYPT storage option and retry the statement.

ORA-28373: missing ENCRYPTION clause for encrypted tablespace

Cause: You attempted to specify storage option ENCRYPT in CREATE TABLESPACE without specifying ENCRYPTION property to encrypt the tablespace.

Action: Add ENCRYPTION clause and retry the statement.

ORA-28374: typed master key not found in wallet

Cause: You attempted to access encrypted tablespace or redo logs with a typed master key not existing in the wallet.

Action: Copy the correct Oracle Wallet from the instance where the tablespace was created.

ORA-28375: cannot perform cross-endianism conversion on encrypted tablespace

Cause: You attempted to perform cross-endianism conversion on encrypted tablespace.

Action: Cross-endianism conversion on encrypted tablespace is not supported.

ORA-28376: cannot find PKCS11 library

Cause: The HSM vendor's library cannot be found.

Action: Place the HSM vendor's library in the following directory structure: For Unix like system:

/opt/oracle/extapi/[32,64]/hsm/{VENDOR}/{VERSION}/lib<apiname>.<ext>

For Windows systems: %SYSTEM_

DRIVE%\oracle\extapi\[32,64]\hsm\{VENDOR}\{VERSION}\lib<apin//

ame>.<ext> [32, 64] - refers to 32bit or 64bit binary. {VENDOR} - The name of the vendor supplying the library. {VERSION} - Version of the library, preferably in num#.num#.num# for// mat.

ORA-28377: No need to migrate from wallet to HSM

Cause: There are either no encrypted columns or all column keys are already encrypted with the HSM master key.

Action: No action required.

ORA-28378: Wallet not open after setting the Master Key

Cause: The Master Key has been set or reset. However, wallet could not be reopened successfully.

Action: Reopen the wallet.

ORA-28379: a different integrity algorithm has been chosen for the table

Cause: Encrypted columns were associated with a different algorithm.

Action: You do not need to specify an algorithm, or specify the same one for the existing encrypted columns.

ORA-28382: Global wallet operation in RAC failed

Cause: Wallet operation in RAC failed.

Action: Check V\$WALLET_ENCRYPTION table to verify if the wallet operation succeeded on any instance. Retry the operation.

ORA-28383: cannot do a PKI certificate-based Master Key migration

Cause: A PKI certificate-based Master Key migration was not allowed.

Action: Execute a symmetric Master Key migration.

ORA-28384: cannot perform Tablespace Encryption

Cause: Tablespace Encryption was attempted when PKI certificate-based Master Key was in use.

Action: Perform a symmetric Master Key Rekey.

ORA-28385: cannot perform a PKI certificate-based migration

Cause: A PKI certificate-based migration to HSM was attempted.

Action: Perform a symmetric Master Key migration.

ORA-28386: cannot perform a PKI certificate-based Master Key Rekey

Cause: A PKI certificate-based Master Key Rekey was attempted when Tablespace Encryption or HSM was in use.

Action: Perform a symmetric Master Key Rekey or disable Tablespace Encryption for all tablespaces.

ORA-28387: Could not acquire an enqueue for wallet operation in Oracle RAC

Cause: Enqueue to block TDE operations in Oracle RAC database could not be obtained.

Action: Retry the wallet operation.

ORA-28388: database is not open in read/write mode

Cause: Database was not open in read/write mode and could not perform these wallet operations.

Action: Open the database in read/write mode and retry this command.

ORA-28389: cannot close auto login wallet

Cause: Auto login wallet could not be closed because it was opened with another wallet or HSM requiring a password.

Action: Close the wallet or HSM with a password.

ORA-28390: auto login wallet not open but encryption wallet may be open

Cause: Auto login wallet was not open. But, the encryption wallet may still be open and subsequent TDE operations might succeed.

Action: If auto login wallet is closed but TDE operations succeed, check the status of the encryption wallet and close that if required.

ORA-28391: cannot close wallet or HSM, password mismatch

Cause: Password provided did not match the password of the open wallet or HSM.

Action: Provide the correct password for wallet or HSM to close the wallet or HSM.

ORA-28392: invalid close wallet syntax

Cause: The command to close the wallet contained improper spelling or syntax.

Action: If attempting to close the wallet, verify the spelling and syntax and execute the command again.

ORA-28393: password required to close the wallet

Cause: A password was not provided when executing the close wallet command.

Action: Retry the command with a valid password.

ORA-28394: decryption of data of length *string* failed

Cause: Decryption of data failed. Error may be due to plain text data in an external file being submitted for decryption, data encrypted with a different key or a utility being submitted for decryption, or TDE encrypted data in data files being corrupted.

Action: Verify that the correct external file is being specified or contact Oracle Support Services.

ORA-28395: could not write the new master key to the wallet

Cause: An attempt was made to write the new master key to the wallet. The wallet or the parent directory may not have the proper file permissions to write the master key in the wallet.

Action: Check the password-based wallet, auto login wallet, the parent directory permissions and disk space availability on the file system. Make sure that the Oracle processes have read/write permissions on the password-based and auto login wallets. Retry the command.

ORA-28396: rekey of enc\$ dictionary table failed

Cause: One or more master keys required for the rekey operation could not be found in the wallet. Either incorrect master key identifiers were inserted into the enc\$ dictionary table or the wallet containing the referenced master keys were improperly modified or deleted.

Action: Restore the most recent copy of the wallet and try again.

ORA-28397: cannot online file *string* since it has a passphrase-wrapped key

Cause: The encrypted tablespace file was rewrapped using passphrase through the DBMS_TTS.PASSPHRASE_REWRAP_KEY procedure. Therefore it cannot be part of the database until it is converted by RMAN.

Action: Do not attempt to online files with passphrase-wrapped keys.

ORA-28398: cannot rewrap encryption key for this file

Cause: Cannot rewrap encryption key for this file because it was not from an encrypted tablespace, or it had already been rewrapped.

Action: Verify that the file is a copy of a file from an encrypted tablespace.

ORA-28403: file *string* cannot be modified because it is an online data file

Cause: An attempt was made to modify an online data file when the file was not expected to be part of the database.

Action: Check the status of the file and its tablespace and make sure it is offline or is a copy of a data file

ORA-28404: role cannot be altered

Cause: An attempt was made to alter the role to become a global, external, password protected, or secure application role. The role could not be altered because it was already granted to one or more other roles.

Action: Use REVOKE to revoke the role from other roles first.

ORA-28405: cannot grant secure role to a role

Cause: Role granted was a password protected or secure application role. This role can only be granted directly to a user.

Action: Grant the role directly to a user.

ORA-28407: Hardware Security Module error detected

Cause: Hardware Security Module (HSM) connection may have been lost or another internal HSM error was reached.

Action: Check the trace files for error details and try the following: 1) Retry the command. If the error repeats, go to step 2. 2) Verify that the HSM is configured correctly and connected. Retry the command. If the error repeats, go to step 3. 3) Ask your Security Officer to close and open the security module. Retry the command. If the error repeats, go to step 4. 4) Bounce the database if possible.

Retry the command. If the error repeats, contact Oracle Support Services or your HSM vendor's support.

ORA-28408: encryption using passphrase failed

Cause: Encryption with the passphrase failed which was likely due to an invalid or missing passphrase or due to an internal error.

Action: Verify that the passphrase is provided and try the operation again. If the problem persists contact Oracle Support Services.

ORA-28409: decryption using passphrase failed

Cause: Decryption with the passphrase failed which was likely due to an invalid or missing passphrase or due to an internal error.

Action: Verify that the passphrase is provided and try the operation again. If the problem persists contact Oracle Support Services.

ORA-28500: connection from ORACLE to a non-Oracle system returned this message:

Cause: The cause is explained in the forwarded message.

Action: See the non-Oracle system's documentation of the forwarded message.

ORA-28501: communication error on heterogeneous database link

Cause: An unexpected communication failure occurred on a heterogeneous database link to a non-Oracle system. The message above will be followed by a second message generated by the connected non-Oracle system.

Action: See the documentation for the non-Oracle system for an explanation of the second error message.

ORA-28502: internal communication error on heterogeneous database link

Cause: A communication error internal to ORACLE's heterogeneous services has occurred.

Action: Contact Oracle customer support.

ORA-28503: bind value cannot be translated into SQL text for non-Oracle system

Cause: A SQL statement used bind variables on a Heterogenous Services database link to a non-Oracle system, but the non-Oracle system does not support bind variables.

Action: Change your SQL statement so that it does not use bind variables.

ORA-28504: ROWID not found in ROWID cache for heterogeneous database link

Cause: The ROWID cache for Heterogeneous Services held no entry that corresponds to the specified ROWID. The ROWID entry may have been overwritten in the ROWID cache.

Action: Enlarge the Heterogeneous Services ROWID cache size by increasing the value of the Heterogenous Services initialization parameter `HS_ROWID_CACHE_SIZE`.

ORA-28505: cannot get non-Oracle system capabilities from *string*

Cause: ORACLE was unable to retrieve capability information for the non-Oracle system connected through a heterogeneous database link. This capability information should be stored in data dictionary tables viewable with the `HS_CLASS_CAPS` or `HS_INST_CAPS` data dictionary views.

Action: Contact the DBA to check the server data dictionary table named in the error message. If table contents are incorrect, the DBA should restore all data

dictionary content for this FDS_CLASS_NAME and/or FDS_INST_NAME. It usually is sufficient to delete all current data dictionary content for this class and/or instance and initiate a new connection to let the connected agent upload new data dictionary content to the server.

ORA-28506: parse error in data dictionary translation for *string* stored in *string*

Cause: A reference to an ORACLE data dictionary table or view name on a heterogeneous database link to a non-Oracle system could not be translated. The ORACLE data dictionary tables shown with view HS_CLASS_DD contain invalid SQL for the data dictionary translation.

Action: Contact customer support of the agent vendor.

ORA-28507: error in data dictionary view *string*

Cause: The initialization parameter table for the Heterogeneous Services was not available, or its structure (number of columns or column types) was incorrect.

Action: Verify correct installation of the following Heterogeneous Services' initialization parameter views: HS_CLASS_INIT and HS_INST_INIT. If these views are not available, make sure you ran the script CATHS.SQL in the \$ORACLE_HOME/rdbms/admin directory.

ORA-28508: invalid value *string* for Heterogeneous Services initialization parameter *string*

Cause: The specified Heterogeneous Services initialization parameter had an invalid value when attempting to connect to a non-Oracle system.

Action: Check the Heterogeneous Services and agent documentation to determine acceptable values

ORA-28509: unable to establish a connection to non-Oracle system

Cause: Initialization of a database link to a non-Oracle system failed to connect to the Heterogeneous Services agent process for this non-Oracle system.

Action: Check the Net8 service name definition in the following places: -- the USING clause of the CREATE DATABASE LINK statement -- the TNSNAMES.ORA file -- the Oracle Names Server The following are possible reasons for name mismatches: -- The USING clause in the CREATE DATABASE LINK statement has to match the service name defined in the TNSNAMES.ORA file or in the Oracle Names Server. -- The protocol-specific information in the service name definition must match the protocol-specific definition of the responding listener. -- The SID=<name> in the service name definition (in the TNSNAMES.ORA file or in Oracle Names Server) must match the value in the LISTENER.ORA file for the responding listener.

ORA-28510: heterogeneous database link initialization failed

Cause: Initialization of a heterogeneous database link to a non-Oracle system failed due to an error identified by the agent for this non-Oracle system.

Action: Make sure the non-Oracle system is up and running and that all of the environment and initialization values for the agent are set correctly.

ORA-28511: lost RPC connection to heterogeneous remote agent using SID=*string*

Cause: A fatal error occurred in one of the following places: -- the connection between the ORACLE server and the agent -- the heterogeneous services remote agent itself -- the connection to the non-Oracle system This error occurred after communication had been established successfully.

Action: Check for network problems and remote host crashes. The problem is probably in the agent software. If so, contact a customer support representative of the agent vendor.

ORA-28512: cannot get data dictionary translations from *string*

Cause: ORACLE was unable to retrieve data dictionary translation information for the non-Oracle system connected through a heterogeneous database link. This data dictionary translation information should be stored in data dictionary tables viewable with the HS_CLASS_DD or HS_INST_DD data dictionary views.

Action: Ask your DBA to check the server data dictionary table named in the error message. If table contents are incorrect, the DBA should restore all data dictionary content for this FDS_CLASS_NAME and/or FDS_INST_NAME. It usually is sufficient to delete all current data dictionary content for this class and/or instance and initiate a new connection to let the connected agent upload new data dictionary content to the server.

ORA-28513: internal error in heterogeneous remote agent

Cause: An internal error has occurred in the Oracle remote agent supporting a heterogeneous database link.

Action: Make a note of how the error was produced and contact the customer support representative of the agent vendor.

ORA-28514: heterogeneous database link initialization could not convert system date

Cause: The system date was not retrievable.

Action: Verify that the ORACLE server's host machine and operating system are operational. This error should not occur unless low level system functions are failing.

ORA-28515: cannot get external object definitions from *string*

Cause: ORACLE was unable to retrieve definitions of distributed external procedures or remote libraries registered for the non-Oracle system instance, probably because the underlying data dictionary table does not exist or is malformed.

Action: Verify that the ORACLE server's Heterogeneous Services data dictionary was installed correctly. If the Heterogeneous Services data dictionary is not installed, execute the CATHS.SQL script in the \$ORACLE_HOME/rdbms/admin directory.

ORA-28518: data dictionary translation has illegal translation type

Cause: A data dictionary translation definition, either in the ORACLE server data dictionary or in data dictionary content uploaded from a Heterogeneous Services agent, specified an illegal translation type code. Legal values are 'T' or 't' for 'translate', 'M' or 'm' for 'mimic'. Information on the exact data dictionary translation causing the error is written to a trace (*.TRC) file for the ORACLE instance and to the ORACLE instance's alert log. This error occurs when a Heterogeneous Services agent uploads data dictionary content to an ORACLE server on the first connection from the server to the agent.

Action: Contact the customer support of the agent vendor.

ORA-28519: no heterogeneous data dictionary translations available

Cause: The ORACLE server's data dictionary did not define data dictionary translations for the connected non-Oracle system, and automatic self-registration (data dictionary upload) was disabled.

Action: Ask a DBA to resolve this problem. The easiest solution is to enable automatic self-registration by setting the ORACLE server's HS_AUTO_REGISTER initialization parameter to TRUE. An alternative is to load the Heterogeneous Services data dictionary with information specific for the non-Oracle system by executing a SQL script supplied by the agent vendor. If the script is run and the error persists, contact the customer support representative of the agent vendor.

ORA-28520: error initializing heterogeneous data dictionary translations

Cause: ORACLE was unable to retrieve data dictionary translations for the non-Oracle system instance, probably because the underlying data dictionary table does not exist or is formed incorrectly.

Action: Verify that the ORACLE server's Heterogeneous Services data dictionary was installed correctly. If the Heterogeneous Services data dictionary is not installed, execute the CATHS.SQL script in the \$ORACLE_HOME/rdbms/admin directory. If the connected agent, identified by FDS_CLASS_NAME, requires a custom installation script for the ORACLE server, verify that the script has been run. If both scripts were executed and the error persists, contact the customer support representative of the agent vendor.

ORA-28521: no heterogeneous capability information available

Cause: The ORACLE server's data dictionary did not contain capability definitions for the connected non-Oracle system, and automatic self-registration (data dictionary upload) was disabled.

Action: Ask a DBA to resolve this problem. The easiest resolution is to enable automatic self-registration by setting the ORACLE server's HS_AUTO_REGISTER initialization parameter to TRUE. An alternative is to load the Heterogeneous Services data dictionary with information specific for the non-Oracle system by executing a SQL script supplied by the agent vendor. If the script is run and the error persists, contact the customer support representative of the agent vendor.

ORA-28522: error initializing heterogeneous capabilities

Cause: ORACLE was unable to retrieve capability definitions for the non-Oracle system instance, probably because the underlying data dictionary table does not exist or is formed incorrectly.

Action: Verify that the ORACLE server's Heterogeneous Services data dictionary was installed correctly. If the Heterogeneous Services data dictionary is not installed, execute the CATHS.SQL script in the \$ORACLE_HOME/rdbms/admin directory. If the connected agent, identified by FDS_CLASS_NAME, requires a custom installation script for the ORACLE server, verify that the script has been run. If both scripts were executed and the error persists, contact the customer support representative of the agent vendor.

ORA-28523: ORACLE and heterogeneous agent are incompatible versions

Cause: An operation on a database link attempted to connect to a non-Oracle system, but the ORACLE instance and the agent process for the non-Oracle system are incompatible.

Action: Ask your DBA to confirm configuration of both the ORACLE instance and the agent. Additional information on the version incompatibility is logged in trace (*.TRC) files, the ORACLE instance and the agent, and in the ORACLE instance's alert log. Check the documentation for your agent to find out which releases of the Oracle Server are supported.

ORA-28525: unable to create Heterogeneous Services error message text

Cause: Incorrect arguments were passed into the error message creation routine.

Action: Contact Oracle customer support.

ORA-28526: invalid describe information returned to Heterogeneous Services

Cause: The Heterogeneous Services received invalid describe information for a select list, bind list, or stored procedure from the Heterogeneous Services agent. This indicates a problem with the Heterogeneous Services' non-Oracle system agent.

Action: Contact customer support of the agent vendor.

ORA-28527: Heterogeneous Services datatype mapping error

Cause: Either an Oracle datatype could not be mapped to a non-Oracle datatype, or a non-Oracle datatype could not be mapped to an Oracle datatype. These mappings are defined as capability definitions in the ORACLE server's data dictionary.

Action: Verify that the ORACLE server's data dictionary has been initialized with correct capability definitions for the connected FDS_CLASS_NAME and FDS_INST_NAME. If table contents are incorrect, a DBA should restore all data dictionary content for this FDS_CLASS_NAME and/or FDS_INST_NAME. It usually is sufficient to delete all current data dictionary content for this class and/or instance and initiate a new connection to let the connected agent upload new data dictionary content to the server. If the error persists contact the customer support representative of the agent vendor.

ORA-28528: Heterogeneous Services datatype conversion error

Cause: Either an Oracle datatype could not be converted to a non-Oracle datatype, or a non-Oracle datatype could not be converted to an Oracle datatype. The following are possible reasons for for the conversion failure: -- overflow problems (in the case of numbers) -- length limitations (in the case of character strings) -- invalid values passed into the conversion routines

Action: Contact customer support of the agent vendor. If the problem is due to size discrepancies between Oracle and the non-Oracle system, it may not be possible to convert the value.

ORA-28529: invalid or missing parameter in Net8 service name definition

Cause: There was an invalid or missing Heterogeneous Services parameter in the Net8 service name definition stored in either the TNSNAMES.ORA file or in the Oracle Names Server.

Action: Ask your DBA to make sure the information in the Net8 service definition is correct and complete. The correct information that should be included in the Net8 service definition can be found in the agent's documentation.

ORA-28530: Heterogeneous Services initialization error in NLS language ID

Cause: Heterogeneous Services was unable to initialize an NLS language ID. Both the ORACLE server and the Heterogeneous Services agent for the connected non-Oracle system must have language IDs.

Action: Contact Oracle customer support.

ORA-28533: Heterogeneous Services coercion handling error

Cause: The Heterogeneous Services encountered an error in coercion handling. The HS can, if the agent vendor so chooses, perform extra processing on SQL statements that contain implicit coercions or that contain coercion functions such as TO_CHAR, TO_NUMBER or TO_DATE. This functionality is controlled by coercion-related capabilities. HS logic reports this error when it encounters an error in one of these capability definitions.

Action: The capability table settings are controlled by the agent vendor and can be modified by the DBA. Contact your DBA and agent vendor and get the correct set of capabilities installed.

ORA-28534: Heterogeneous Services preprocessing error

Cause: One of the things that the Heterogeneous Services can do is to preprocess parts of SQL statements that contain implicit coercions or calls to explicit coercion functions like TO_CHAR TO_NUMBER or TO_DATE. For example, it could convert a call to TO_DATE to a bind variable, pre-evaluate the TO_DATE function call and pass the resulting value to the non-Oracle system as the bind value. This behavior is controlled by some coercion related capabilities. If the capabilities are set incorrectly, the HS could encounter errors when it attempts to do the preprocessing. If it does then this error will be signaled.

Action: The capability table settings are controlled by the agent vendor and can be modified by the DBA. Contact your DBA and agent vendor and get the correct set of capabilities installed.

ORA-28535: invalid Heterogeneous Services context

Cause: A Heterogeneous Services agent's driver module called an HS service routine with an invalid HS context value. This probably is a logic error in the driver.

Action: Contact Oracle customer support or your agent vendor.

ORA-28536: error in processing Heterogeneous Services initialization parameters

Cause: An error described by a subsequent error message prevented successful processing of Heterogeneous Services initialization parameters from the ORACLE server data dictionary.

Action: Check server data dictionary views HS_CLASS_INIT, HS_INST_INIT, and HS_ALL_INITS. Look for conditions which could produce the error identified in the error message immediately following this one.

ORA-28537: no more result sets

Cause: This error code was used internally within Oracle Database Gateway and Heterogeneous Services code and should not be reported to a client program.

Action: Contact Oracle customer support.

ORA-28538: result set not found

Cause: The client program tried fetching from a result set that is not open anymore. Many gateways will, on execution of a stored procedure, automatically close all result sets that were returned by any previously executed stored procedure.

Action: Check the documentation for the gateway that you are using and see if it will automatically close currently open result sets each time a stored procedure is executed. Then check if your client program is doing anything that violates this rule. If it is, fix your program. If it is not then contact Oracle customer support.

ORA-28539: gateway does not support result sets

Cause: The client program tried executing a stored procedure that returns one or more result sets through a gateway that does not have result set support.

Action: Check the documentation for the gateway that you are using and see if it supports result sets returned from stored procedures. If it does not, then the only way of accessing such stored procedures is to upgrade to a version of the gateway that does support result sets (if such a version exists). If the gateway does have

result set support and you are still seeing this error then contact Oracle customer support.

ORA-28540: internal result set error

Cause: A protocol error internal to Heterogeneous Services or Oracle Database Gateway code has occurred.

Action: Contact Oracle customer support.

ORA-28541: Error in HS init file on line *number*.

Cause: A syntax error occurred in the gateway initialization file.

Action: Check gateway init file to correct the syntax error. For further information, check the error message in the gateway trace file.

ORA-28542: Error in reading HS init file

Cause: Reading the gateway init file generated an error.

Action: Check the gateway initialization file name to see that the gateway initialization file actually exists. Check the ifile parameter to see that it points to the correct location.

ORA-28543: Error initializing apply connection to non-Oracle system

Cause: Attempt to initialize connection to non-Oracle for heterogeneous replication failed.

Action: Check if the listener used to connect to the gateway is up and is correctly configured. Make sure that the database link used has been configured correctly and, if a tnsnames alias has been used in the database link definition, make sure that the configuration of the entry in tnsnames.ora has been done correctly.

ORA-28544: connect to agent failed, probable Net8 administration error

Cause: Net8 reported a failure to make a RSLV connection or a protocol mode error when the Oracle server attempted to establish communication with a Heterogeneous Services agent or an external procedure agent. This usually is due to an administration error in setting up Net8 service definitions in TNSNAMES.ORA or LISTENER.ORA: A basic network connection is opened, but it connects to a program which does not use the appropriate protocol. This often is a sign that the connection goes to the wrong program.

Action: Check Net8 administration in the following ways: -- When using TNSNAMES.ORA or an Oracle Names server, make sure that the connection from the ORACLE server uses the correct service name or SID. -- Check LISTENER.ORA on the agent's host machine to assure that the service name or SID refers to the correct agent executable in its (PROGRAM=...) clause. -- Confirm in TNSNAMES.ORA or the equivalent service definition that service 'extproc_connection_data' does NOT contain (HS=), or that the service definition used by a Heterogeneous Services database link DOES contain (HS=).

ORA-28545: error diagnosed by Net8 when connecting to an agent

Cause: An attempt to call an external procedure or to issue SQL to a non-Oracle system on a Heterogeneous Services database link failed at connection initialization. The error diagnosed by Net8 NCR software is reported separately.

Action: Refer to the Net8 NCRO error message. If this isn't clear, check connection administrative setup in tnsnames.ora and listener.ora for the service associated with the Heterogeneous Services database link being used, or with 'extproc_connection_data' for an external procedure call.

ORA-28546: connection initialization failed, probable Net8 admin error

Cause: A failure occurred during initialization of a network connection from the Oracle server to a second process: The connection was completed but a disconnect occurred while trying to perform protocol-specific initialization, usually due to use of different network protocols by opposite sides of the connection. This usually is caused by incorrect Net8 administrative setup for database links or external procedure calls. The most frequent specific causes are: -- Database link setup for an Oracle-to-Oracle connection instead connects to a Heterogeneous Services agent or an external procedure agent. -- Database link setup for a Heterogeneous Services connection instead connects directly to an Oracle server. -- The `extproc_connection_data` definition in `tnsnames.ora` connects to an Oracle instance instead of an external procedure agent. -- Connect data for a Heterogeneous Services database link, usually defined in `tnsnames.ora`, does not specify `(HS=)`. -- Connect data for an Oracle-to-Oracle database link, usually defined in `tnsnames.ora`, specifies `(HS=)`.

Action: Check Net8 administration in the following ways: -- When using `TNSNAMES.ORA` or an Oracle Names server, make sure that the connection from the ORACLE server uses the correct service name or SID. -- Check `LISTENER.ORA` on the connection end point's host machine to assure that this service name or SID connects to the correct program. -- Confirm in `TNSNAMES.ORA` or the equivalent service definition that service '`extproc_connection_data`' does NOT contain `(HS=)`, or that the service definition used by a Heterogeneous Services database link DOES contain `(HS=)`.

ORA-28547: connection to server failed, probable Oracle Net admin error

Cause: A failure occurred during initialization of a network connection from a client process to the Oracle server. The connection was completed but a disconnect occurred while trying to perform protocol-specific initialization, usually due to use of different network protocols by opposite sides of the connection. This usually is caused by incorrect Oracle Net administrative setup for database links or external procedure calls. The most frequent specific causes are: -- The connection uses a connect string which refers to a Heterogeneous Services agent instead of an Oracle server. -- The connection uses a connect string which includes an `(HS=)` specification. -- Hitting Ctrl+C before connection initialization is complete. -- Using DRCP on Windows with `SQLNET.AUTHENTICATION_SERVICES` set to `NTS`. -- Connection timeout due to `SQLNET.INBOUND_CONNECT_TIMEOUT` parameter when all shared servers are busy in shared server configuration.

Action: Check Oracle Net administration in the following ways: -- When using `TNSNAMES.ORA` or an Oracle Names server, make sure that the client connection to the Oracle server uses the correct service name or SID. -- Check `LISTENER.ORA` on the connection end point's host machine to assure that this service name or SID refers to the correct server. -- Confirm in `TNSNAMES.ORA` or the equivalent service definition that the connect string does not contain `(HS=)`. -- Set `SQLNET.AUTHENTICATION_SERVICES` to `NONE` when using DRCP on Windows.

ORA-28550: pass-through SQL: cursor not found

Cause: A value passed to a pass-through SQL function or procedure call as a cursor does not identify a currently open cursor.

Action: Use a cursor number returned by the pass-through SQL `OPEN_CURSOR` call.

ORA-28551: pass-through SQL: SQL parse error

Cause: A non-Oracle system rejected text supplied as a pass-through SQL statement.

Action: Ensure that the SQL supplied to the pass-through SQL PARSE call is legal for the non-Oracle system.

ORA-28552: pass-through SQL: call flow error

Cause: A pass-through SQL function was called in an invalid order.

Action: Correct program flow by changing the order of API calls to match the flow described in the manual.

ORA-28553: pass-through SQL: invalid bind-variable position

Cause: A pass-through SQL function referring to the position of a bind variable in the currently-parsed SQL statement supplied an invalid bind-variable position. Valid values are 1 through n, where n is the number of bind-variable place-holders in the SQL text.

Action: Verify that the bind-variable position parameter is in the correct range to represent a place-holder in the SQL text. Confirm that the SQL text uses the correct syntax for a bind-variable place-holder, as required by the non-Oracle system.

ORA-28554: pass-through SQL: out of cursors

Cause: The maximum number of open cursors has been exceeded.

Action: Close open cursors by using the pass-through SQL CLOSE_CURSOR function.

ORA-28555: pass-through SQL: required parameter missing or NULL

Cause: An attempt was made to pass a NULL value to a non-NULL parameter.

Action: Use a non-NULL value for the parameter.

ORA-28556: authorization insufficient to access table

Cause: A query attempted to access a table in the non-Oracle system that is either privileged or has privileged columns.

Action: Contact the DBA for the non-Oracle system. The DBA can grant permission to access the privileged table or columns.

ORA-28557: unknown *string* for database link to non-Oracle system

Cause: When attempting to connect to a non-Oracle system through a Heterogeneous Services database link, the agent supporting this non-Oracle system failed to return FDS_CLASS_NAME and/or FDS_INST_NAME. ORACLE requires these names to configure the heterogeneous database link.

Action: Contact the DBA to check setup of the connection and the Heterogeneous Services agent.

ORA-28558: HS_FDS_CONNECT_STRING undefined for non-Oracle system

Cause: A database link to a non-Oracle system had no HS_FDS_CONNECT_STRING initialization parameter in the ORACLE server's data dictionary for Heterogeneous Services. Without this parameter, the connection could not be completed.

Action: Contact your DBA to verify correct setup of an HS_FDS_CONNECT_STRING entry in the ORACLE Heterogeneous Services data dictionary.

ORA-28559: FDS_CLASS_NAME is *string*, FDS_INST_NAME is *string*

Cause: An associated error was reported in another message, and this message supplies supplementary information to assist diagnosis of that error. FDS_CLASS_

NAME and FDS_INST_NAME are used to access information in tables and views of the ORACLE data dictionary that direct operation of Heterogeneous Services on a database link to a non-Oracle data store.

Action: Use the FDS_CLASS_NAME and FDS_INST_NAME values to check ORACLE data dictionary contents when necessary to diagnose the cause of the associated error.

ORA-28560: error in configuration of agent process

Cause: An ORACLE server invoked a function not supported by the connected agent (Heterogeneous Services or external procedures). The most probable cause is incorrect Net8 setup, resulting in use of the wrong agent executable.

Action: Check Net8 administration in the following ways: -- When using TNSNAMES.ORA or an Oracle Names server, make sure that the connection from the ORACLE server uses the correct SID. -- Check LISTENER.ORA on the agent's host machine to assure that this SID refers to the correct agent executable in its (PROGRAM=...) clause.

ORA-28561: unable to set date format on non-Oracle system

Cause: Initialization of a Heterogeneous Services connection to set the date format to be used on the connected non-Oracle system.

Action: If the Oracle data dictionary supplies a value for the HS_NLS_DATE_FORMAT parameter, confirm that this value is formatted correctly by the rules of the non-Oracle system. Also check for additional information in log and trace files generated by the Heterogeneous Services agent.

ORA-28562: Heterogeneous Services data truncation error

Cause: A select operation was attempted with an insufficient data buffer to satisfy the request.

Action: Contact your DBA to verify whether your gateway initialization parameter HS_KEEP_REMOTE_COLUMN_SIZE is set appropriately based on your requirement. If it is, make sure the sizes of bind parameters are sufficient. If the problem persists, contact Oracle Support Services.

ORA-28575: unable to open RPC connection to external procedure agent

Cause: Initialization of a network connection to the extproc agent did not succeed. This problem can be caused by network problems, incorrect listener configuration, or incorrect transfer code.

Action: Check listener configuration in LISTENER.ORA and TNSNAMES.ORA, or check Oracle Names Server.

ORA-28576: lost RPC connection to external procedure agent

Cause: of this error is abnormal termination of the invoked "C" routine. If this is not the case, check for network problems. Correct the problem if you find it. If all components appear to be normal but the problem persists, the problem could be an internal logic error in the RPC transfer code. Contact your customer support representative.

Action: First check the 3GL code you are invoking; the most likely

ORA-28577: argument *string* of external procedure *string* has unsupported datatype *string*

Cause: While transferring external procedure arguments to the agent, an unsupported datatype was detected.

Action: Check your documentation for the supported datatypes of external procedure arguments.

ORA-28578: protocol error during callback from an external procedure

Cause: An internal protocol error occurred while trying to execute a callback to the Oracle server from the user's 3GL routine.

Action: Contact Oracle customer support.

ORA-28579: network error during callback from external procedure agent

Cause: An internal network error occurred while trying to execute a callback to the Oracle server from the user's 3GL routine.

Action: Contact Oracle customer support.

ORA-28580: recursive external procedures are not supported

Cause: A callback from within a user's 3GL routine resulted in the invocation of another external procedure.

Action: Make sure that the SQL code executed in a callback does not directly call another external procedure, or indirectly results in another external procedure, such as triggers calling external procedures, PL/SQL procedures calling external procedures, etc.

ORA-28581: protocol error while executing recursive external procedure

Cause: An internal protocol error occurred while trying to execute an external procedure resulting from a callback in another external procedure.

Action: Contact Oracle customer support.

ORA-28582: a direct connection to this agent is not allowed

Cause: A user or a tool tried to establish a direct connection to either an external procedure agent or a Heterogeneous Services agent, for example: "SVRMGR> CONNECT SCOTT/TIGER@NETWORK_ALIAS". This type of connection is not allowed.

Action: When executing the CONNECT statement, make sure your database link or network alias is not pointing to a Heterogeneous Option agent or an external procedure agent.

ORA-28583: remote references are not permitted during agent callbacks

Cause: A Heterogeneous Services agent issued a callback to the Oracle server which attempted to access a remote system. This is not supported.

Action: Make sure that SQL code issued by Heterogeneous Services agents does not reference a database link.

ORA-28584: heterogeneous apply internal error

Cause: The apply slave process encountered an error while trying to apply changes through a gateway to a non-Oracle system.

Action: Make sure that the apply database link is correctly configured and that the gateway listener and the non-Oracle system are correctly set up and are up and running. If everything is configured correctly and the problem still occurs, contact Oracle customer support. errors 28590 - 28599 are reserved for the HS agent control utility

ORA-28590: agent control utility: illegal or badly formed command

Cause: The user has issued an unrecognized or syntactically incorrect command.

Action: Refer to documentation and correct the syntax of the command.

ORA-28591: agent control utility: unable to access parameter file

Cause: The agent control utility was unable to access its parameter file. This could be because it could not find its admin directory or because permissions on directory were not correctly set.

Action: The agent control utility puts its parameter file in either the directory pointed to by the environment variable AGTCTL_ADMIN or in the directory pointed to by the environment variable TNS_ADMIN. Make sure that at least one of these environment variables is set and that it points to a directory that the agent has access to.

ORA-28592: agent control utility: agent SID not set

Cause: The agent needs to know the value of the AGENT_SID parameter before it can process any commands. If it does not have a value for AGENT_SID then all commands will fail.

Action: Issue the command SET AGENT_SID <value> and then retry the command that failed.

ORA-28593: agent control utility: command terminated with error

Cause: An error occurred during the processing of the command. There could be several causes. A SET or an UNSET command could have been issued after the agent was started. This is illegal. The user may have attempted to start two agents with the same SID value or the user could have attempted to shutdown an agent that is no longer running.

Action: If the user wishes to issue a SET or an UNSET command, he should make sure the agent is shutdown first by issuing the SHUTDOWN command.

ORA-28594: agent control utility: invalid parameter name

Cause: The user tried to set or unset an invalid agent parameter.

Action: Refer to documentation and correct the parameter name.

ORA-28595: Extproc agent : Invalid DLL Path

Cause: The path of DLL supplied for the extproc execution is invalid.

Action: Check if the DLL path is set properly using the EXTPROC_DLLS environment variable. errors 28600 - 28620 are reserved for bitmap indexes

ORA-28601: invalid [no]MINIMIZE option

Cause: user didn't type this alter table <table_name> MINIMIZE RECORDS_PER_BLOCK or alter table <table_name> NOMINIMIZE RECORDS_PER_BLOCK

Action: reenter correct sql command

ORA-28602: statement not permitted on tables containing bitmap indexes

Cause: table has bitmap indexes and user is minimizing or nominimizing records_per_block

Action: drop all bitmap indexes before changing records_per_block

ORA-28603: statement not permitted on empty tables

Cause: table is empty and statement does not work on empty tables

Action: try statement after loading your data

ORA-28604: table too fragmented to build bitmap index (string,string,string)

Cause: The table has one or more blocks that exceed the maximum number of rows expected when creating a bitmap index. This is probably due to deleted

rows. The values in the message are: (data block address, slot number found, maximum slot allowed)

Action: Defragment the table or block(s). Use the values in the message to determine the FIRST block affected. (There may be others).

ORA-28605: bitmap indexes cannot be reversed

Cause: user tried to create reverse bitmap index

Action: don't do this; it is not supported

ORA-28606: block too fragmented to build bitmap index (*string,string*)

Cause: The block(s) exceed the maximum number of rows expected when creating a bitmap index. This is probably due to maximum slot allowed set too low. The values in the message are: (slot number found, maximum slot allowed)

Action: alter system flush shared_pool; update tab\$ set spare1 = 8192 where obj# = (select obj# from obj\$ where NAME=<table_name> AND owner# = <table_owner>); commit;

ORA-28611: bitmap index is corrupted - see trace file for diagnostics

Cause: Validate Index detected bitmap corruption in its argument index

Action: Drop this bitmap index and create a new one.

ORA-28650: Primary index on an IOT cannot be rebuilt

Cause: An attempt is made to issue alter index rebuild on IOT-TOP

Action: Use Alter table MOVE to reorganize the table(IOT)

ORA-28651: Primary index on IOTs can not be marked unusable

Cause: An attempt is made to mark IOT-TOP unusable thru ALTER INDEX

Action: Remove the option UNUSABLE

ORA-28652: overflow segment attributes cannot be specified

Cause: During ALTER MOVE ONLINE of a index-organized table, the user attempted to enter one or more of the following options: OVERFLOW, PCTTHRESHOLD,INCLUDING.

Action: Remove the illegal option(s).

ORA-28653: tables must both be index-organized

Cause: Attempt to exchange a non IOT table/partition with a partition/table respectively

Action: Ensure that non-partitioned and partitioned tables are both index-organized.

ORA-28654: table and partition not overflow compatible

Cause: If one of the tables (partitioned/non-partitioned) has overflow data segment and the other one doesn't.

Action: Ensure that non-partitioned and partitioned tables both have overflow data segment or neither one does.

ORA-28655: Alter table add overflow syntax error

Cause: Syntax error

Action: Check the syntax.

ORA-28656: incomplete attribute specification

-
- Cause:** The attribute specification is not done for all partitions"
- Action:** Specify the storage attributes either for ALL partitions or NONE
- ORA-28658: This operation is supported only for Index-Organized tables**
- Cause:** Attempt to perform some IOT specific operation on a non-IOT
- Action:** don't do this. This is not supported
- ORA-28659: COMPRESS must be specified at object level first**
- Cause:** Attempt to specify COMPRESS at partition level without first specifying at the table level
- Action:** Specify COMPRESS at table level. Use ALTER TABLE xxx MODIFY DEFAULT ATTRIBUTES COMPRESS ...
- ORA-28660: Partitioned Index-Organized table may not be MOVED as a whole**
- Cause:** Attempt to MOVE partitioned IOT as a whole
- Action:** don't do this. This is not supported
- ORA-28661: Object already has COMPRESS clause specified**
- Cause:** Attempt to specify compress for iot/index which already has a compression clause.
- Action:** This is a 'create time only' attribute
- ORA-28662: IOT index and overflow segments must share the same LOGGING attribute**
- Cause:** Attempt to specify LOGGING for one segment and NOLOGGING for the other segment.
- Action:** don't do that
- ORA-28663: Logging/Nologging attribute can not be specified in the statement ALTER TABLE ADD OVERFLOW**
- Cause:** Attempt to specify LOGGING for a Alter Table Add Overflow.
- Action:** don't do that
- ORA-28664: a partitioned table may not be coalesced as a whole**
- Cause:** User attempted to coalesce a partitioned IOT using ALTER TABLE COALESCE statement, which is illegal
- Action:** Coalesce the table a partition at a time (using ALTER TABLE MODIFY PARTITION COALESCE)
- ORA-28665: table and partition must have same compression attribute**
- Cause:** User attempted to EXCHANGE a compression enabled partition with a compression disabled table or vice versa OR the # of columns compressed is different for table and partition
- Action:** Make sure the compression attributes match If they don't, fix it using ALTER TABLE MOVE [PARTITION] COMPRESS
- ORA-28666: option not allowed for an index on UROWID column(s)**
- Cause:** User attempted to build a REVERSE or COMPRESSED or GLOBAL partitioned index on UROWID column(s)
- Action:** Build the index without these options
- ORA-28667: USING INDEX option not allowed for the primary key of an IOT**

Cause: User attempted to define storage attributes for the primary key index of an Index-Organized table with USING INDEX clause. All the storage attribute defined for the (IOT)table applies to the primary key index and a separate USING INDEX clause is not required.

Action: Remove the USING INDEX clause and specify all attributes directly for the table

ORA-28668: cannot reference mapping table of an index-organized table

Cause: An attempt to directly access the mapping table of an index-organized table

Action: Issue the statement against the parent index-organized table containing the specified mapping table.

ORA-28669: bitmap index can not be created on an IOT with no mapping table

Cause: User attempted to create a bitmap index on an index-organized table without a mapping table.

Action: Enable bitmap indexes on the Index-organized table by creating a mapping table using 'ALTER TABLE .. MOVE MAPPING TABLE'.

ORA-28670: mapping table cannot be dropped due to an existing bitmap index

Cause: User attempted to drop the mapping table with NOMAPPING option when the IOT has one or more bitmap indexed.

Action: Drop the bitmap index(es) before dropping the mapping table.

ORA-28671: UPDATE BLOCK REFERENCES may not be used on a partitioned index as a whole

Cause: User attempted to UPDATE BLOCK REFERENCES on a partitioned index using ALTER INDEX UPDATE BLOCK REFERENCES statement, which is illegal.

Action: Issue a partition level operation with ALTER INDEX .. PARTITION .. UPDATE BLOCK REFERENCES

ORA-28672: UPDATE BLOCK REFERENCES may not be used on a global index

Cause: User attempted to UPDATE BLOCK REFERENCES on a global partitioned or non-partitioned index. This feature is not supported for non-partitioned or global partitioned index on a partitioned IOT and a global partitioned index on a non-partitioned IOT.

Action: Use online index [partition] rebuild to fix the block references

ORA-28673: Merge operation not allowed on an index-organized table

Cause: User attempted merge operation on an index-organized table. Merge is not supported on a IOT .

Action: Use updates and inserts on index-organized table .

ORA-28674: cannot reference transient index-organized table

Cause: An attempt was made to directly access a transient table created created on behalf of a index-organized table partition maintenance operation.

Action: Issue the statement against the associated permanent index-organized table.

NZE-28750 to NZE-29249

NZE-28750: unknown error

Cause: An Oracle Security Server error of an unspecified type occurred.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28751: memory allocation failure

Cause: The allocation of memory failed due to insufficient system memory.

Action: Terminate other processes to free up memory or add memory to the system.

NZE-28752: data source initialization failure

Cause: A data source failed to initialize. Frequently, this error is caused by insufficient system resources.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28753: failure to terminate use of data source

Cause: The system failed to terminate its use of a data source. This error may have been caused by memory or disk corruption, among other things.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28754: object storage failure

Cause: Error not user-visible.

Action: None

NZE-28755: object retrieval failure

Cause: The system failed to retrieve information from a file or a database.

Action: Check if the data source exists, or check to ensure that the correct information exists.

NZE-28756: callback failure to allocate memory

Cause: A function supplied by the caller failed to allocate memory. This error could have been caused by system memory exhaustion.

Action: Terminate other processes to free up memory or add memory to the system.

NZE-28757: system attempt to allocate 0 bytes of memory

Cause: The system attempted to allocate 0 bytes of memory because there was no available memory left to allocate. This error could have been caused by insufficient system memory.

Action: Terminate other processes to free up memory or add memory to the system.

NZE-28758: memory release failure

Cause: The release of a memory fragment failed. This may be due to memory corruption either within the application or in the Oracle Security Server library.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28759: failure to open file

Cause: The system could not open the specified file.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28760: list creation failure

Cause: Error not user-visible.

Action: None

NZE-28761: element creation failure

Cause: Error not user-visible.

Action: None

NZE-28762: failure to add element

Cause: Error not user-visible.

Action: None

NZE-28763: Invalid parameter type found in configuration file.

Cause: A parameter in the sqlnet.ora file may have been specified incorrectly.

Action: Check the sqlnet.ora file for this parameter value.

NZE-28764: failure to retrieve a configuration parameter

Cause: The system failed to retrieve a configuration parameter from the sqlnet.ora file. This error may have occurred because a necessary configuration parameter was not specified in the sqlnet.ora file.

Action: Supply the needed configuration parameter in the sqlnet.ora file.

NZE-28765: Data method list does not exist.

Cause: Error not user-visible.

Action: None

NZE-28766: failure to terminate use of data source

Cause: The system failed to terminate its use of a data source. This error may have been caused by memory or disk corruption, or a system error.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28767: invalid version number

Cause: Version number of the wallet was incorrect. A corrupt wallet or an incompatible wallet was provided.

Action: Ensure that proper wallet is being used.

NZE-28768: bad magic number

Cause: d by a corrupted disk or by some other process overwriting the file.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28769: Specified method does not exist.

Cause: The data access method that was specified in the configuration file is not supported.

Action: Specify a supported method. Consult the Oracle Security Server documentation to determine the supported types.

NZE-28770: Data source is already initialized.

Cause: The caller attempted to initialize a data source which was already initialized.

Action: This is a programming error. An application should not attempt to initialize a data source more than once.

NZE-28771: Data source is not yet initialized.

Cause: The caller attempted to use a data source which had not yet been initialized.

Action: This is a programming error. The application must always initialize the data source before it can be used.

NZE-28772: invalid file ID

Cause: Error not user-visible.

Action: None

NZE-28773: failure to write magic and version numbers

Cause: Both the magic and version numbers failed to write. This usually occurs because of insufficient disk space.

Action: Delete unnecessary files to free up disk space or add disk space to the system.

NZE-28774: file cannot write to disk

Cause: The output of a file failed. This error usually occurs because of insufficient disk space.

Action: Delete unnecessary files to free up disk space or add disk space to the system.

NZE-28775: file cannot close

Cause: Failed to close a file which is used by a data access method. This error usually indicates memory corruption or a system error.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28776: Output buffer supplied is too small.

Cause: The data returned by a function was too large for the supplied buffer.

Action: Call the routine again with a larger buffer.

NZE-28777: binding creation failure

Cause: Failed to create a binding for use in the parsing of a parameter value. This error can be caused by the parameter value being in an incorrect format, such as a right parenthesis was not supplied where expected, or due to insufficient system memory.

Action: Make sure that the parameter is specified in the correct format. If the format is correct, free up system memory by terminating processes or adding more memory.

NZE-28778: Configuration parameter is not specified in the proper format.

Cause: The configuration parameter was not specified in the proper format.

Action: Consult the Oracle Security Server documentation for a description of the proper format for this parameter.

NZE-28779: no data access method specified in parameter

Cause: No method for data access was specified in the parameter value.

Action: Specify a method for data access in the parameter. Consult the Oracle Security Server documentation for the supported data access methods for this data type.

NZE-28780: invalid data access method specified by the parameter

Cause: The data access method specified by the parameter value is not supported.

Action: Specify a supported data access method. Consult the Oracle Security Server documentation for the supported data access methods for this data type.

NZE-28781: No data for the access method is specified in the parameter.

Cause: No data was specified in the parameter for use with the specified access method.

Action: Consult the Oracle Security Server documentation for the data that must be specified for the access method.

NZE-28782: data source is not allocated

Cause: No memory was allocated for a data source.

Action: Ensure that the application calls in the data source initialization function.

NZE-28783: invalid parameter

Cause: There was no match for the parameter name that was used in the configuration file.

Action: Check your sqlnet.ora file for the correct parameter name.

NZE-28784: file name translation failure

Cause: The translation of a file name from Oracle format to native format has failed.

Action: Specify a correct file name. Consult your Oracle documentation for the correct file name format.

NZE-28785: parameter does not exist

Cause: A necessary configuration parameter was not found in the parameter file.

Action: Supply the required parameter.

NZE-28786: decryption of encrypted private key failure

Cause: An incorrect password was used to decrypt an encrypted private key.

Action: Enter the correct password.

NZE-28787: private key encryption failure

Cause: This may have been caused by an error in the mkwallet parameter of the sqlnet.ora file.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28788: user provided invalid information, or an unknown error

Cause: User may have responded to a prompt with unexpected input, or an unknown error occurred.

Action: Enter correct input, or enable tracing to check the trace file for errors.

NZE-28789: name type not found

Cause: Error not user-visible.

Action: None

NZE-28790: NLS string open failure

Cause: The opening of a string for use by the NLS subsystem failed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28791: certificate verification failure

Cause: Verification of the certificate, which the user supplied, failed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28792: PL/SQL operation failure

Cause: A PL/SQL operation attempted by the Oracle Security Server failed.

Action: This is an internal error. Enable tracing and try the operation again. Contact Oracle customer support for assistance.

NZE-28793: variable bind failure

Cause: Error not user-visible.

Action: None

NZE-28794: data type attribute did not initialize

Cause: The initialization of the attribute data type failed. This error may be due to insufficient system resources.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28795: data type attribute did not terminate

Cause: The termination of the use of the attribute data type subsystem failed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28796: access method is not supported

Cause: The method specified to access data is not supported.

Action: Use a supported access method. Consult your Oracle documentation to determine which access methods are supported.

NZE-28797: invalid key data type

Cause: The type specified for a key is not supported.

Action: Correct the key type. Consult your Oracle documentation to determine which key types are supported.

NZE-28798: Number of sub-keys application passes to bind does not match that in the key.

Cause: The number of keys passed by the application to bind does not match the number used to create the key.

Action: This is an internal programming exception. Contact Oracle customer support.

NZE-28799: failure to allocate shared memory

Cause: The allocation of shared memory for use in operations involving the shared server failed. This error was probably due to insufficient memory heap supplied by the Oracle server.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28800: data source failed to open

Cause: A data source (a file or a database) failed to open.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28801: invalid object type

Cause: Error not user-visible.

Action: None

NZE-28802: invalid mode or data source in configuration file

Cause: An invalid mode or data source has been specified in the configuration file (sqlnet.ora).

Action: Check the method parameter in the sqlnet.ora file. If the parameter value is correct, then enable tracing to determine the exact error.

NZE-28803: I/O operation failure

Cause: The system or application failed to access a data source (file or database).

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28804: Data source cannot close.

Cause: The data source, which could be either a file or a database), failed to close.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28805: Cannot retrieve information from the data source.

Cause: The system or application failed to retrieve information from the data source (file or database).

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28806: Cannot write to the data source.

Cause: The system or application failed to write to the data source (file or database).

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28807: Cannot update the data source.

Cause: The system or application failed to update the data source (file or database).

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28808: Cannot retrieve method information from the configuration file.

Cause: The system or application failed to retrieve method information from the sqlnet.ora configuration file.

Action: Check the method configuration parameters in the sqlnet.ora file. If the method configuration parameters are correct, then enable tracing to determine the exact error.

NZE-28809: Cannot delete information from the data source.

Cause: The system or application failed to delete information from the data source (file or database).

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28810: Cannot create key descriptor.

Cause: The system failed to create a key descriptor.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28811: invalid access descriptor

Cause: Error not user-visible.

Action: None

NZE-28812: record operation failure

Cause: Error not user-visible.

Action: None

NZE-28813: invalid record type

Cause: Error not user-visible.

Action: None

NZE-28814: Cannot convert a number in Oracle format to native format.

Cause: Failed to convert a number from Oracle format to native format.

Action: This is an internal programming exception. Enable tracing to try and reproduce the problem. Contact Oracle customer support and supply the trace file.

NZE-28815: Cannot convert a number in native format to Oracle format.

Cause: Failed to convert a number from native format to Oracle portable format failed.

Action: This is an internal programming exception. Enable tracing to try and reproduce the problem. Contact Oracle customer support and supply the trace file.

NZE-28816: No password provided for a PL/SQL function.

Cause: A required password was not passed to a PL/SQL function.

Action: This is an internal error. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-28817: PL/SQL function returned an error.

Cause: A PL/SQL function returned an error unexpectedly.

Action: This is an internal error. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-28818: No package context provided.

Cause: The context that holds the state of the security package was not passed to a function or procedure that was expecting it.

Action: This is an internal error. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-28819: No distinguished name provided.

Cause: The user's distinguished name was not provided to a PL/SQL function or procedure.

Action: This is an internal error. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-28820: Signature or decryption/encryption state is not provided.

Cause: The state of either a signature or decryption/encryption was not passed to a PL/SQL function or procedure.

Action: This is an internal error. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-28821: No input buffer provided.

Cause: A PL/SQL function or procedure was not passed an expected buffer.

Action: This is an internal error. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-28822: Required seed is not specified.

Cause: No seed was specified to the PL/SQL seed initialization function.

Action: This is an internal error. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-28823: Number of random bytes to generate is not specified.

Cause: The number of random bytes to generate was not specified to the PL/SQL random number generator.

Action: This is an internal error. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-28824: invalid encryption/decryption/signature state passed

Cause: An invalid state was passed to a PL/SQL encryption, decryption, or signature procedure or function.

Action: Specify a correct state value.

NZE-28825: No cryptographic engine function specified.

Cause: No function was specified for the cryptographic engine.

Action: This is an internal error. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-28826: invalid cryptographic engine function passed

Cause: An incorrect cryptographic engine function was passed to a PL/SQL function or procedure.

Action: Specify a correct engine function.

NZE-28827: invalid cipher type passed

Cause: An incorrect cipher type was passed to a PL/SQL function or procedure.

Action: Specify a correct cipher type.

NZE-28828: invalid identity type passed

Cause: An incorrect identity type was passed to a PL/SQL function or procedure.

Action: Specify a correct identity type.

NZE-28829: no cipher type specified

Cause: No cipher type was passed to a PL/SQL function or procedure.

Action: This is an internal error. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-28830: no identity type specified

Cause: No identity type was passed to a PL/SQL function or procedure.

Action: This is an internal error. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-28831: no data unit format

Cause: No data unit format was passed to a PL/SQL function or procedure.

Action: This is an internal error. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-28832: invalid data unit format

Cause: An incorrect data unit format was passed to a PL/SQL function or procedure.

Action: Specify a data unit format.

NZE-28833: inadequate information provided

Cause: Inadequate information, which usually is in the form of parameters, has been provided to a PL/SQL function.

Action: This is an internal error. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-28834: Buffer is too small.

Cause: The buffer provided by PL/SQL to an Oracle Security Server toolkit function is too small for the data to be returned.

Action: This is an internal error. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-28835: Identity descriptor is not present or is too small.

Cause: An identity descriptor, which is passed to a PL/SQL function or descriptor, was not provided or was not the correct size.

Action: This is an internal error. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-28836: Wallet is not open.

Cause: The wallet to be used has not yet been opened.

Action: Call the function that opens the wallet.

NZE-28837: no wallet descriptor

Cause: No wallet descriptor was specified to a PL/SQL function or procedure.

Action: This is an internal error. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-28838: no identity descriptor

Cause: No identity descriptor was specified to a PL/SQL function or procedure.

Action: This is an internal error. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-28839: no persona descriptor

Cause: No persona descriptor was specified to a PL/SQL function or procedure.

Action: This is an internal error. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-28840: Wallet is already open.

Cause: An attempt was made to open a wallet that was already open.

Action: This is a programming error. A wallet should only be opened once.

NZE-28841: Operation is not supported.

Cause: An attempt was made to perform an operation that is not supported.

Action: This is a programming error. Please refer to Oracle documentation to determine which operations are supported.

NZE-28842: Incorrect file permissions

Cause: The subject file did not have the correct permissions for the operation.

Action: Ensure that the file permissions allow the current operation.

NZE-28843: Operating system error while creating/opening file

Cause: An operating system dependent error occurred while trying to create/open the file or while trying to set the appropriate permissions on the file.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28844: No wallet present

Cause: There was no wallet in the location specified.

Action: Check to ensure that the wallet is in the correct directory location.

NZE-28845: No certificate

Cause: Either there is no certificate or the system cannot find it.

Action: Check to ensure that the certificate is in the specified wallet.

NZE-28846: No private key

Cause: Either there is no private key or the system cannot find it.

Action: Check to ensure that the private key is in the specified wallet.

NZE-28847: No clear private key file

Cause: Failed to retrieve private key from SSO wallet

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28848: No encrypted private key file

Cause: Failed to retrieve private key from the wallet

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28849: No Trustpoints

Cause: The wallet does not have any trusted certificates

Action: Ensure that the wallet/keystore has trusted certificates.

NZE-28852: Bad password

Cause: The password created for an obfuscated wallet exceeds the maximum password length limit.

Action: None

NZE-28853: Initialization failure

Cause: Either initialization or module loading has failed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28854: Memory allocation failure

Cause: The allocation of memory failed due to insufficient system memory.

Action: Terminate other processes to free up memory or add memory to the system.

NZE-28855: Unsupported SSL operation

Cause: An unsupported operation was attempted, for example, an attempt was made to select a mode of operation that is not allowed.

Action: Refer to the SSL chapter in the product's documentation.

NZE-28856: Buffer overflow error

Cause: A buffer overflow error occurred during SSL handshake.

Action: This error is not normally visible to the user. Enable tracing and attempt the connection again. Then contact Oracle customer support with the trace output.

NZE-28857: Unknown SSL error

Cause: An unknown SSL error occurred.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28858: SSL protocol error

Cause: An error occurred while negotiating the SSL handshake between two processes.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28859: SSL negotiation failure

Cause: An error occurred during negotiation between two processes as part of the SSL protocol. This error will occur if the two sides to the connection do not support a common cipher suite.

Action: Configure each process so they support a common cipher suite. Then attempt the connection again. If error occurs again, enable tracing and retry the connection. Then contact Oracle customer support with the trace output.

NZE-28860: Fatal SSL error

Cause: An error occurred during the SSL connection to the peer. It is likely that this side sent data which the peer rejected.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-28861: SSL connection would block

Cause: of the error. Contact Oracle customer support if needed.

Action: Enable tracing and retry the connection to determine the exact

NZE-28862: SSL connection failed

Cause: This error occurred because the peer closed the connection.

Action: Enable tracing on both sides and examine the trace output. Contact Oracle Customer support with the trace output.

NZE-28863: SSL session not found

Cause: This error is informational. It indicates that a specified session does not exist.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-28864: SSL connection closed gracefully

Cause: This error is informational. It indicates that the connection closed without error.

Action: This error is not normally visible to the user. Enable tracing and retry the connection. If the error persists, contact Oracle customer support.

NZE-28865: SSL connection closed

Cause: The SSL connection closed because of an error in the underlying transport or because the peer process quit unexpectedly.

Action: Enable tracing and retry the connection. The trace output should indicate how the failure occurred.

NZE-28866: Invalid peer certificate encoding

Cause: A field from a certificate in the peer's certificate chain could not be recognized.

Action: Refer to Oracle Wallet Manager documentation to find out how to obtain the peer's certificate. Then contact Oracle customer support with the peer's certificate chain.

NZE-28867: Integer value is too big.

Cause: The certificate presented had an integer field whose value was too large.

Action: Refer to Oracle Wallet Manager documentation to find out how to obtain the peer's certificate. Then contact Oracle customer support with the peer's certificate chain.

NZE-28868: Peer certificate chain check failed.

Cause: The check of the certificate list presented by the peer failed. Possible causes include:

1. the expiration of one of the certificates;
2. a certificate authority in a certificate was not recognized as a trust point;
3. the signature in a certificate could not be verified.

Action: Refer to Oracle Wallet Manager documentation to find out how to open your wallet and ensure that:

1. all of the certificates installed in your wallet are current
2. a certificate authority's certificate from your peer's certificate chain is added as a trusted certificate in your wallet

NZE-28869: Peer's certificate is expired.

Cause: The certificate being used to authenticate a client or server has expired.

Action: Obtain a new certificate, which is unexpired, and attempt the connection again.

NZE-28870: Name comparison failure

Cause: A comparison of the names contained in two certificates failed.

Action: This error is not normally visible to the user. Enable tracing and retry the connection. If the error persists, contact Oracle customer support.

NZE-28871: Peer certificate chain is incomplete.

Cause: The peer certificate chain presented was incomplete because it did not end with a self-signed root certificate.

Action: Refer to Oracle Wallet Manager documentation to find out how to open your wallet and ensure that:

1. the certificate authority's root certificate is self-signed.
2. a certificate authority's certificate from your peer's certificate chain is added as a trusted certificate in your wallet

NZE-28872: Invalid peer certificate format

Cause: The peer certificate does not conform to the X.509v3 standard.

Action: Refer to Oracle Wallet Manager documentation to find out how to get the peer certificate. Then contact Oracle customer support with the peer's certificate.

NZE-28873: Invalid parameter

Cause: A function was presented with a null parameter.

Action: This error is not normally visible to the user. Enable tracing and retry the connection. If the error persists, contact Oracle customer support.

NZE-28874: SSL: I/O closed - override goodbye kiss

Cause: This error is informational. It indicates that the connection closed without error.

Action: This error is not normally visible to the user. Enable tracing and retry the connection. If the error persists, contact Oracle customer support.

NZE-28875: SSL: use server-gated cryptographic suites

Cause: This is used as an internal status indicator and not really an error.

Action: This message is not normally visible to the user. Enable tracing and retry the connection. If the error persists, contact Oracle customer support.

NZE-28884: invalid cipher suite

Cause: An invalid cipher suite string has been specified in the product's configuration file.

Action: Refer to the product documentation for information about supported cipher suites.

NZE-28885: No certificate with the required key usage found.

Cause: Certificate not created with the appropriate X509v3 key usage extension.

Action: Refer to Oracle Wallet Manager documentation to find out the supported key usages.

NZE-28890: Entrust Login Failed

Cause: An application failed to log in to an Entrust Profile. Possible causes include:

1. Entrust Admin/ Authority was not online.
2. Invalid password for Entrust profile was specified.
3. Invalid path to Entrust profile was specified
4. Invalid Entrust initialization file was specified.
5. Entrust Server Login program was not executed (server-side only).

Action: Make sure that:

1. Entrust Authority is online;
2. Password for Entrust profile is specified correctly;
3. Path to Entrust profile is specified correctly;
4. A valid Entrust initialization file is provided;
5. Entrust Server Login program is run before the database startup. For more information, enable tracing and examine the trace output to get exact the Entrust failure codes.

NZE-29000: Certificate not installed

Cause: Trying to delete a certificate which has not been installed.

Action: Refer to the Oracle Wallet Manager documentation for information about delete option.

NZE-29002: SSL transport detected invalid or obsolete server certificate.

Cause: The client detected a mismatch between the server's distinguished name specified on the server's certificate and the server's SID or service name.

Action: Refer to the SSL chapter in Oracle Advanced Security Administrator's Guide for information about enabling server distinguished name matching. Contact your administrator to perform the appropriate action.

NZE-29003: SSL transport detected mismatched server certificate.

Cause: The client detected a mismatch between the server's distinguished name specified on the server's certificate and the server's SID or service name.

Action: Refer to the SSL chapter in Oracle Advanced Security Administrator's Guide for information about enabling server distinguished name matching. Contact your administrator to perform the appropriate action.

NZE-29004: Callback Failure

Cause: The alert callback returns this error; it is not fatal.

Action: None

NZE-29005: The certificate is invalid.

Cause: The peer certificate encoding is invalid when using SSL 2.0.

Action: Refer to Oracle Wallet Manager documentation to find out how to obtain the peer's certificate. Then contact Oracle customer support with the peer's certificate chain.

NZE-29006: The certificate request message is invalid when using SSL 2.0.

Cause: There is an error processing the SSL 2.0 REQUEST-CERTIFICATE message.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29007: Bad Clear Key Length when using SSL 2.0

Cause: The clear key length of an SSL 2.0 Client Master key handshake message is invalid.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29008: Bad DH Param key length

Cause: The length of the Diffie-Hellman params exceeds export restrictions.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29009: Bad encrypted key length when using SSL 2.0

Cause: The encrypted key length of an SSL 2.0 Client Master key handshake message is invalid.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29010: Export key length does not meet export restrictions.

Cause: The server sent a ServerKeyExchange message with an export key which does not meet export restrictions. For RSA, the export key must be exactly 512 bits.

Action: Obtain a certificate with the appropriate key length.

NZE-29011: Finished message is incorrect.

Cause: The FINISHED message data verification failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29012: Bad key argument length when using SSL 2.0

Cause: The key argument length of an SSL 2.0 Client Master Key handshake message is invalid.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29013: SSL MAC verification failure

Cause: Verification of SSL Record MAC failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29014: Maximum fragment length extension is incorrect.

Cause: The maximum fragment length extension specified is incorrect.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29015: incorrect message length

Cause: The message length is not correct.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29016: inadequate PKCS1 message padding

Cause: The message was not properly padded before encryption.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29017: The premaster secret length is incorrect.

Cause: The premaster secret sent by the peer has an incorrect length.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29018: The premaster secret contains an incorrect version number.

Cause: The premaster secret must contain the same version number as the ClientHello. The version sent by the client was incorrect.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29019: The protocol version is incorrect.

Cause: There is a protocol version mismatch between the two peers.

Action: Specify the correct protocol version in the product's configuration file.

NZE-29020: The handshake record length is too long.

Cause: The handshake record length exceeds the maximum that is allowed by the SSL specification.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29021: Secret key length is incorrect when using SSL 2.0.

Cause: The length of the decrypted ENCRYPTED-KEY is incorrect.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29022: Operation is being attempted on the wrong side of the client/server connection.

Cause: The SSL network layer has detected that the operation has been attempted on the wrong side of the client/server connection.

Action: Select the protocol side (of this protocol) to be the same as the one selected with a previous protocol.

NZE-29023: The buffers are not empty.

Cause: Trying to free buffers that are not empty.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29024: Certificate validation failure

Cause: The certificate sent by the other side could not be validated. This may occur if the certificate has expired, has been revoked, or is invalid for another reason.

Action: Check the certificate to determine whether it is valid. Obtain a new certificate, alert the sender that the certificate has failed, or resend.

NZE-29025: Error found in certificate check callback.

Cause: The application callback failed during additional certificate validation. Additional checks include CRL validation and extension checking.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29026: Decryption failure

Cause: SSL record decryption failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29027: Error in entropy collection

Cause: The internal entropy collection failed to generate enough seed data.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29028: Server verification failure when using SSL 2.0

Cause: Processing of an SSL 2.0 SERVER-VERIFY message failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29029: SSL handshake already completed

Cause: The system is trying to initiate a handshake when it has already been completed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29030: SSL handshake is requested.

Cause: The peer sends this message if it wishes to renegotiate. The application can either proceed with the renegotiation or reject the request.

Action: This is not an error. To find out more details enable tracing and retry the connection. Contact Oracle customer support with the trace output.

NZE-29031: SSL handshake is required.

Cause: Renegotiation cannot proceed before the SSL handshake is completed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29032: The given identity is not complete.

Cause: The certificate list does not contain both private key and certificate.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29033: Invalid PFX

Cause: The PFX is invalid for this operation containing either no certificates and private key or multiple private keys. However, the API which returns this error is not used in our code.

Action: None

NZE-29034: Correct cipher suite or client authentication is needed.

Cause: Before installing a private key, a cipher suite or client authentication suite using the same key exchange algorithm must be installed first. This has not been done.

Action: Install a cipher suite or client authentication suite that uses the same key exchange algorithm as the private key before re-installing the private key.

NZE-29035: Pseudo Random Number Generator is needed

Cause: PRNG not set yet. A PRNG must be installed first.

Action: None

NZE-29036: This feature is not supported

Cause: Operation is not supported by the current connection parameters.

Action: Check the Oracle documentation to determine the appropriate connection parameters required for this operation.

NZE-29037: No certificate is present

Cause: The other client or server sent a certificate message that contained no certificates.

Action: Check the other side (client or server) to ensure they have appropriate credentials.

NZE-29038: There are no matching certificates.

Cause: The other client or server sent a certificate message that contained a certificate which was not signed by a trusted certificate authority (CA).

Action: Check to ensure that the other client or server sends a certificate which is signed by a CA that is in your trusted list. Or, include the CA certificate for the other client or server's certificate as a trustpoint in your wallet.

NZE-29039: There are no matching cipher suites.

Cause: Neither end of the handshake can agree on a cipher suite.

Action: Check to ensure that both sides of the handshake select cipher suites that are supported.

NZE-29040: There are no supported cipher suites.

Cause: This end of the handshake cannot support any cipher suites. This connection and the peer have some matching cipher suites, however, these cipher suites cannot be negotiated because they cannot be supported by the connection.

Action: Check to ensure that both sides of the handshake select cipher suites that are supported by the connection. Refer to Oracle documentation for supported cipher suites.

NZE-29041: The callback is NULL.

Cause: A NULL callback was passed.

Action: None

NZE-29042: Read buffer is not empty.

Cause: There is an attempt to free a read buffer that is not empty.

Action: None

NZE-29043: Read is required.

Cause: Renegotiation with the peer has not yet started. There is application data which must be processed before the handshake can proceed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29044: Renegotiation has already been requested.

Cause: Renegotiation has already been requested.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29045: Renegotiation request has been refused.

Cause: A renegotiated handshake has been refused by the peer.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29046: Session is resumable.

Cause: Server is trying to resume a session with different session parameters.

Action: Server should resume the session with the correct session parameters.

NZE-29047: Mismatch in Transport Layer Security extension

Cause: Neither side can agree on a TLS extension.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29048: Unexpected message received.

Cause: An unexpected message has been received.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29049: Unknown record

Cause: The record type is unknown.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29050: Installed client authentication mode is not supported.

Cause: The enabled client authentication mode(s) cannot be used within the selected cipher suite.

Action: Enable a client authentication mode that can be used within the selected cipher suite.

NZE-29051: The given public key type is not supported.

Cause: The public key in the first certificate is not supported.

Action: Check to ensure that the certificate complies with the X.509v3 standard.

NZE-29052: Write buffer is not empty.

Cause: There is an attempt to free a write buffer that is not empty.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29084: The parameter specified is illegal.

Cause: The parameter is not correct. For example, it could be bad input, or an invalid message.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29095: Index is not correct.

Cause: The instance identified by the index parameter doesn't exist.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29096: The given length is incorrect.

Cause: The specified length is too small or is invalid.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29100: Cannot create local key ID.

Cause: Creation of local key identifier for the certificate or the private key failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29101: Cannot add private key bag.

Cause: The private key could not be added to the PKCS#12 object. Possible reasons are: (i) A required parameter is NULL (ii) The PKCS#12 construct is not supported (iii) An ASN.1 encoding error occurred in the certificate.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29102: Cannot add certificate bag.

Cause: Creation of certificate bag failed. The application could have run out of memory.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29103: Cannot create PKCS #12 wallet.

Cause: Creation of PKCS#12 wallet failed possibly due to memory allocation failure.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29104: Cannot add certificate request.

Cause: Adding certificate request to the PKCS#12 wallet failed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29105: Cannot export PKCS #12 wallet.

Cause: A required parameter is NULL or the PKCS#12 construct is not supported.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29106: Cannot import PKCS #12 wallet.

Cause: A required parameter is NULL or the BER-encoding is malformed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29107: Cannot create PKCS #12 wallet.

Cause: PKCS#12 wallet creation failed. The application may have run out of memory.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29108: Cannot initialize random object.

Cause: The random object could not be initialized or seeded. Either memory allocation has failed or the pseudo random number generator module has not been installed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29109: Cannot create private key object.

Cause: The private key object could not be created. Memory allocation may have failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29110: Invalid PKCS #12 bag type

Cause: The PKCS #12 bag type is invalid. Either one of the required parameters is NULL or the requested OID is not in the list.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29111: Invalid index

Cause: The index passed for getting the bag type is less than 1.

Action: Check to ensure that the index is greater than 1.

NZE-29112: Cannot access attributes from a PKCS #12 certificate bag.

Cause: The certificate cannot be accessed. One of the required parameters is probably NULL, or the index specified by the application does not contain a certbag, or the certificate could be malformed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29113: Cannot access attributes from a PKCS #12 key bag.

Cause: Retrieval of the private key failed. One of the required parameters is probably NULL or the index specified by the application does not contain a key bag.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29114: Cannot import private key.

Cause: The private key could not be imported. One of the required parameters could be NULL or the encoded private key could be malformed.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29115: Cannot export private key.

Cause: The private key could not be exported. Either the application ran out of memory or the key type is not valid.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29116: Cannot get PKCS #12 attributes.

Cause: Retrieval of an attribute failed. One of the required parameters could be NULL.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29117: Cannot add PKCS #12 attributes.

Cause: Could not add an attribute. The attribute parameter could be NULL.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29118: Cannot create PKCS #12 attributes.

Cause: Creation of the attributes failed, possibly due to a memory allocation error.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29119: Cannot import certificate.

Cause: The certificate cannot be imported. One of the required parameters could be NULL or the certificate has an invalid X.509 BER or DER encoding.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29120: Cannot export certificate.

Cause: The certificate cannot be exported. One of the required parameters could be NULL.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29122: could not add pkcs11 info to the pkcs12 wallet

Cause: Failed while adding pkcs11 information into a pkcs12 wallet.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29123: could not get pkcs11 info from the pkcs12 wallet

Cause: An error was encountered while retrieving pkcs11 information from the wallet.

Action: Enable tracing to determine the exact cause of this error. Contact Oracle customer support if needed.

NZE-29124: pkcs11 library name already set

Cause: pkcs11 library information was already set in the wallet.

Action: Use a different wallet that does not have this information. If issue persists, enable tracing to determine the exact cause of the error. Contact Oracle customer support if needed.

NZE-29125: pkcs11 token label already set

Cause: pkcs11 token label information was already set in the wallet.

Action: Use a different wallet that does not have this information. If issue persists, enable tracing to determine the exact cause of the error. Contact Oracle customer support if needed.

NZE-29126: pkcs11 token passphrase already set

Cause: The pkcs11 token passphrase can be set only once in the wallet.

Action: Use a different wallet that does not have this information. If issue persists, enable tracing to determine the exact cause of the error. Contact Oracle customer support if needed.

NZE-29127: unknown pkcs11 information

Cause: An unknown pkcs11 information type was encountered. The wallet may have been corrupted due to a system error or memory corruption.

Action: Enable tracing and retry the failed operation. Contact Oracle customer support with the trace output.

NZE-29128: pkcs11 library name not set

Cause: The wallet does not have pkcs11 library information.

Action: Ensure that the wallet was created with valid library location or update the wallet with this information.

NZE-29129: pkcs11 token label not set

Cause: The wallet does not have pkcs11 token label information.

Action: Ensure that the wallet was created with valid token label information or update the wallet with this information.

NZE-29130: pkcs11 token passphrase not set

Cause: The wallet does not have pkcs11 token passphrase.

Action: Ensure that the wallet was created with valid token passphrase information or update the wallet with this information.

NZE-29131: pkcs11 certificate label already set in wallet

Cause: The pkcs11 certificate label was already set in the wallet.

Action: Use an empty wallet (created with orapki).

NZE-29135: Seed generation for Random Number Generator failed.

Cause: Generation of seed for random number generator failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29136: The allocated buffer is too small.

Cause: The output buffer is too small.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29137: The global context is incorrect.

Cause: The global context is incorrectly configured or invalid.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29140: Cannot create certificate object.

Cause: Creation of the certificate object failed. The application could have run out of memory.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29141: Cannot import in the der format.

Cause: Cannot import the certificate into the certificate object. The reason could be a malformed certificate.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29150: DES self-test failure

Cause: DES power up self-test has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29151: 3DES self-test failure

Cause: 3DES power up self-test has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29152: SHA-1 self-test failure

Cause: The SHA-1 power up self-test has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29153: RSA self-test failure

Cause: The RSA power up self-test has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29154: deterministic RNG self-test failure

Cause: The deterministic Random Number Generator power up self-test has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29155: continuous key pair consistency check self-test failure

Cause: The public-private key pair check test failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29156: conditional RNG self-test failure

Cause: Continuous Random Number Generator test, which is needed in FIPS mode, has failed.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29157: Unable to build an absolute path to the library.

Cause: Not able to construct an absolute path to the location of the library.

Action: Enable tracing and attempt the connection again. Contact Oracle customer support with the trace output.

NZE-29158: Unable to open library.

Cause: Opening of the library failed.

Action: Check to ensure that the library is present in the location specified, and that it has the appropriate file permissions.

NZE-29159: Unable to read library.

Cause: Not able to read the library on which the DAC check has to be performed. Read call failed.

Action: Check if the library has the appropriate file permissions.

NZE-29160: NZ library being used is different.

Cause: The NZ library being used at runtime is not the same one on which the digest was computed for the software integrity check.

Action: Check to ensure that the library being used is the same as the one on which the digest was pre-computed.

NZE-29161: software integrity self-test failure

Cause: The software integrity check test on the NZ shared library has failed.

Action: Check to ensure that the library being used is the same as the one on which the digest was pre-computed.

NZE-29162: Non-FIPS cipher suites being used in FIPS mode.

Cause: The cipher suite being used does not contain FIPS-approved algorithms.

Action: Use cipher suites that contain FIPS-approved algorithms.

NZE-29163: Third party PKI vendor is not supported in FIPS mode.

Cause: Third party PKI vendors like Entrust and MCS are not supported in FIPS mode.

Action: Use only Oracle PKI when running in FIPS mode.

NZE-29164: External PKCS #12 wallet is not supported in FIPS mode.

Cause: PKCS #12 wallets created using third party software cannot be used in FIPS mode.

Action: Use only PKCS #12 wallets created by Oracle Wallet Manager when running in FIPS mode.

NZE-29176: CRL signature verification failed

Cause: A CRL is verified before being used. CRL signature cannot be verified.

Action: Get a new CRL from CA

NZE-29177: certificate serial number is not in CRL

Cause: Cert is not revoked

Action: None

NZE-29178: certificate serial number is in CRL

Cause: Cert has been revoked

Action: Reject the certificate

NZE-29179: certificate validation check failed

Cause: Could not complete checking certificate status with a CRL.

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

NZE-29180: Unsupported validation protocol

Cause: The certificate validation protocol is not supported

Action: Make sure a supported certificate validation protocol is specified

NZE-29181: ldap_open failed

Cause: Could not connect to the LDAP server

Action: Ensure that correct LDAP information was provided. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-29182: ldap_bind failed

Cause: Could not log in to the LDAP server

Action: Ensure that correct LDAP credentials were provided. Enable tracing to find more information. Contact Oracle customer support if needed.

NZE-29183: ldap_search failed

Cause: Failed to complete search operation in LDAP server

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

NZE-29184: ldap_result failed

Cause: Failed to retrieve results from LDAP operation

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

NZE-29185: ldap_first_attribute failed

Cause: Could not get the first attribute from LDAP entry.

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

NZE-29186: ldap_get_values_len failed

Cause: Failed to retrieve attribute values from LDAP entry

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

NZE-29187: unsupported validation mechanism

Cause: The validation mechanism specified in OID is not supported

Action: Make sure a supported validation mechanism is set in OID

NZE-29188: ldap_count_entries failed

Cause: Failed to get count of entries from a search result chain.

Action: Enable tracing to find more information on this error. Contact Oracle customer support if needed.

NZE-29189: No entry found in OID

Cause: CRL not found in OID

Action: Upload the CRL to OID

NZE-29190: Multiple entries in OID

Cause: For a given issuer name there should be only one CRL in OID

Action: Make sure there is only one CRL for a given issuer name in OID

NZE-29191: OID connection information not set

Cause: To connect to OID the connection information must be available

Action: Set the OID connection information.

NZE-29192: Validation mechanism not set in OID

Cause: The validation mechanism to be used is not set in OID

Action: Set validation mechanism to be used in OID at cn=ValidationMechanism, cn=Validation, cn=PKI, cn=Products, cn=OracleContext

NZE-29193: no CRL found using CRLDP mechanism

Cause: A CRL could not fetched using CRL Distribution point (CRLDP)

Action: Contact the CA

NZE-29194: no CRL found in cache

Cause: CRL not in cache

Action: None

NZE-29195: CRL is expired

Cause: CRL nextUpdate time is in the past

Action: Get a new CRL from the CA

NZE-29222: Distinguished name does not match.

Cause: Distinguished name (DN) on certificate doesn't match user.

Action: Create the global user in the database with the DN that matches with the one in the user certificate on the client side.

NZE-29223: Cannot create certificate chain.

Cause: Unable to create a certificate chain with the existing trust points for the certificate that is to be installed.

Action: Install the trust point that signed the certificate.

NZE-29224: Cannot locate matching certificate request.

Cause: No matching certificate request for the certificate was found.

Action: Install the correct certificate.

NZE-29225: Certificate already installed.

Cause: Attempting to install a certificate into a persona which already has it.

Action: Do not install the certificate.

NZE-29226: No matching private key found.

Cause: Could not locate a matching private key in the persona for the given certificate (public key).

Action: None

NZE-29227: Certificate is expired.

Cause: Certificate is no longer valid..

Action: Obtain another certificate or renew this certificate.

NZE-29228: Cannot calculate the number of bytes for output.

Cause: The cryptographic engine is confused about the algorithm.

Action: Check the parameters being used with the cryptographic functions.

NZE-29229: the magic number found in the header does not match expected

Cause: The input TDU has either been corrupted or is not being used correctly.

Action: Check that the TDU is being used from the beginning. If possible, compare the size of the TDU upon generation to the size being used.

NZE-29230: the header length is not sufficient for message header

Cause: The input TDU has either been corrupted or it is not being used correctly.

Action: Check that the TDU is being used from the beginning. If possible, compare the size of the TDU upon generation to the size being used.

NZE-29231: the cryptographic engine failed to initialize

Cause: During initialization of the cryptographic engine, some failure occurred. Possible causes include running out of memory and trying to seed the random number generator.

Action: Make sure the executable has been linked with compatible library versions, and that you are not running out of swap space.

NZE-29232: the cryptographic engine key initialization failed

Cause: During initialization of a key for cryptography, some failure occurred. This includes running out of memory and passing illegal arguments.

Action: Make sure the executable has been linked with compatible library versions, and that the correct parameters are being used for the cryptographic functions.

NZE-29233: the key object could not be encoded

Cause: The key object may be corrupted or may be an unsupported type.

Action: Check the key object being passed to the encoding routine.

NZE-29234: a key object was not extracted from encoding

Cause: The encoding may be corrupted or may not be a key object at all.

Action: Check the encoding and parameters passed to decoding routine.

NZE-29235: the key information could not be retrieved

Cause: The key may be corrupted or may be an unsupported type.

Action: Check the parameters being used with the cryptographic functions.

NZE-29236: the random number generator will not accept seed

Cause: The cryptographic engine may have run out of memory.

Action: Make sure the executable has been linked with compatible library versions.

NZE-29237: the cryptographic engine could not finish the algorithm

Cause: The cryptographic engine does not have enough information to correctly finish applying the algorithm.

Action: Check the parameters being used with the cryptographic functions.

NZE-29238: the cryptographic engine could not apply the algorithm

Cause: The cryptographic engine does not have enough information to correctly apply the algorithm.

Action: Check the parameters being used with the cryptographic functions.

NZE-29239: the cryptographic engine could not initialize the algorithm

Cause: The cryptographic engine does not have enough information to correctly initialize the algorithm.

Action: Check the parameters being used with the cryptographic functions.

NZE-29240: the cryptographic engine does not recognize the algorithm

Cause: The application may be passing wrong parameters.

Action: Check the parameters being used with the cryptographic functions.

NZE-29241: a buffer block needs more space but its length is fixed

Cause: The application has preallocated an output buffer that is too short for the operation and has specified that the buffer should not grow as needed.

Action: Either preallocate a larger buffer or allow the toolkit to grow the output buffer as needed.

NZE-29242: the asymmetric key is too short to be used with the data.

Cause: An asymmetric key must be at least 11 bytes longer than the data it is being used to encrypt.

Action: Use an asymmetric key with more bits or break the data into smaller pieces.

NZE-29243: the toolkit does not recognize the type of key being used

Cause: The application may be passing wrong parameters.

Action: Check the parameters being used with the toolkit functions.

NZE-29245: the toolkit does not recognize the function being used

Cause: The application is probably passing the wrong parameters.

Action: Check the parameters being used with the toolkit functions.

NZE-29246: the toolkit could not parse the tdu

Cause: The TDU could be corrupted.

Action: Check the parameters being used with the toolkit functions.

NZE-29247: an unopen toolkit object was used before it was opened

Cause: Some toolkit objects must be opened before they can be used.

Action: Check the parameters being used with the toolkit functions.

NZE-29248: an unrecognized WRL was used to open a wallet

Cause: WRL's have a specific set of types and must be formatted correctly.

Action: Check the parameters being used with the toolkit functions.

NZE-29249: an unrecognized state was passed to a cryptographic function

Cause: The application is probably passing the wrong parameters.

Action: Check the parameters being used with the toolkit functions.

ORA-29250 to ORA-32790

ORA-29250: Invalid index specified in call to dbms_sql.bind_array

Cause: An invalid index was specified in a call to bind_array of dbms_sql. The index may have been null or of an improper value.

Action: Correct the index value by modifying your PL/SQL program and try the bind_array call again.

ORA-29251: Index1 is greater than Index2 in call to dbms_sql.bind_array

Cause: The value of index1 was greater than the value for index2 in the call to bind_array. This is illegal since the elements of the table that will be bound are those with indexes greater than or equal to index1 and less than or equal to index2.

Action: Correct the value of the two indexes and try the call to again bind_array.

ORA-29252: collection does not contain elements at index locations in call to dbms_sql.bind_array

Cause: The bound table does not contain elements at both index locations in call to bind_array of dbms_sql. This is illegal. Both index locations must contain elements. In other words tab.exists(index1) and tab.exists(index2) must both return true.

Action: Either modify the two indexes or the contents of the table and try the call again.

ORA-29253: Invalid count argument passed to procedure dbms_sql.define_array

Cause: The count argument specified in the call to procedure define_array of package dbms_sql had an invalid value. Invalid values are negative numbers and nulls. The argument must be a positive integer.

Action: Correct your PL/SQL program so that only valid arguments are passed to define_array and try again.

ORA-29254: Invalid lower_bound argument passed to procedure dbms_sql.define_array

Cause: The lower_bound argument specified in the call to procedure define_array had an invalid value. Legal values are all integers (both positive and negative) including zero. The null value is illegal.

Action: Correct your PL/SQL program so that only valid arguments are passed to define_array and try again.

ORA-29255: Cursor contains both bind and define arrays which is not permissible

Cause: Both define_array and bind_array have been called on this cursor. This is illegal. It is not possible for a cursor to both contain array binds and array defines.

The semantics of this setting are nonsensical. Array defines are used to move data from select queries into PL/SQL tables and array binds to bind PL/SQL tables to non-select queries.

Action: Modify your PL/SQL program to only perform calls to one of the two functions depending on the kind of cursor at hand.

ORA-29256: Cursor contains both regular and array defines which is illegal

Cause: Both `define_array` and `define_column` have been called on this cursor. This is illegal. It is not possible for a cursor to both contain regular and array defines. The semantics of this setting are nonsensical. Array defines are used to move data from select queries into PL/SQL tables and regular defines to move data from select queries into PL/SQL variables.

Action: Modify your PL/SQL program to only perform calls to one of the two functions depending on the situation at hand.

ORA-29257: host *string* unknown

Cause: The specified host was unknown.

Action: Check the spelling of the host name or the IP address. Make sure that the host name or the IP address is valid.

ORA-29258: buffer too small

Cause: The input or output buffer was too small for the operation.

Action: Increase the size of the buffer and retry the operation.

ORA-29259: end-of-input reached

Cause: The end of the input was reached.

Action: If the end of the input is reached prematurely, check if the input source terminates prematurely. Otherwise, close the connection to the input.

ORA-29260: network error: *string*

Cause: A network error occurred.

Action: Fix the network error and retry the operation.

ORA-29261: bad argument

Cause: A bad argument was passed to the PL/SQL API.

Action: Check the arguments passed to the PL/SQL API and retry the call.

ORA-29262: bad URL

Cause: An improperly formed URL was passed to the PL/SQL API.

Action: Check the URL and retry the call.

ORA-29263: HTTP protocol error

Cause: A HTTP protocol error occurred during the HTTP operation.

Action: Check the HTTP server that the HTTP operation was performed to make sure that it follows the HTTP protocol standard.

ORA-29264: unknown or unsupported URL scheme

Cause: The URL scheme was unknown or unsupported.

Action: Check the URL to make sure that the scheme is valid and supported.

ORA-29265: HTTP header not found

Cause: The requested HTTP header was not found.

Action: Check to make sure that the requested HTTP header is present.

ORA-29266: end-of-body reached

Cause: The end of the HTTP response body was reached.

Action: If the end of the HTTP response is reached prematurely, check if the HTTP response terminates prematurely. Otherwise, end the HTTP response.

ORA-29267: illegal call

Cause: The call to the PL/SQL API was illegal at the current stage of the operation.

Action: Retry the call at a different stage of the operation.

ORA-29268: HTTP client error *string*

Cause: The HTTP response indicated that the HTTP client error occurred.

Action: Fix the HTTP client error and retry the HTTP request.

ORA-29269: HTTP server error *string*

Cause: The HTTP response indicated that the HTTP server error occurred.

Action: Fix the HTTP server error and retry the HTTP request. Contact the administrator of the HTTP server when necessary.

ORA-29270: too many open HTTP requests

Cause: Too many HTTP requests were opened.

Action: End some HTTP requests and retry the HTTP request.

ORA-29271: not connected

Cause: The network connection was not made while the network operation was attempted.

Action: Retry the network operation after the network connection is made successfully.

ORA-29272: initialization failed

Cause: The UTL_HTTP package failed to initialize.

Action: Free up some memory or other system resources and retry the operation.

ORA-29273: HTTP request failed

Cause: The UTL_HTTP package failed to execute the HTTP request.

Action: Use `get_detailed_sqlerrm` to check the detailed error message. Fix the error and retry the HTTP request.

ORA-29274: fixed-width multibyte character set not allowed for a URL

Cause: The character set used as an encoding of the URL is a fixed-width multibyte character set and is not allowed for a URL.

Action: Use the corresponding variable-width multibyte character set for the URL instead.

ORA-29275: partial multibyte character

Cause: The requested read operation could not complete because a partial multibyte character was found at the end of the input.

Action: Ensure that the complete multibyte character is sent from the remote server and retry the operation. Or read the partial multibyte character as RAW.

ORA-29276: transfer timeout

Cause: Timeout occurred while reading from or writing to a network connection.

Action: Check the remote server or the network to ensure that it responds within the timeout limit. Or increase the timeout value.

ORA-29277: invalid SMTP operation

Cause: The SMTP operation was invalid at the current stage of the SMTP transaction.

Action: Retry the SMTP operation at the appropriate stage of the SMTP transaction.

ORA-29278: SMTP transient error: *string*

Cause: A SMTP transient error occurred.

Action: Correct the error and retry the SMTP operation.

ORA-29279: SMTP permanent error: *string*

Cause: A SMTP permanent error occurred.

Action: Correct the error and retry the SMTP operation.

ORA-29280: invalid directory path

Cause: A corresponding directory object does not exist.

Action: Correct the directory object parameter, or create a corresponding directory object with the CREATE DIRECTORY command.

ORA-29281: invalid mode

Cause: An invalid value was specified for file open mode.

Action: Correct the mode to be one of the values: 'r','a', or 'w'.

ORA-29282: invalid file ID

Cause: A file ID handle was specified for which no corresponding open file exists.

Action: Verify that the file ID handle is a value returned from a call to UTL_FILE.FOPEN.

ORA-29283: invalid file operation

Cause: An attempt was made to read from a file or directory that does not exist, or file or directory access was denied by the operating system.

Action: Verify file and directory access privileges on the file system, and if reading, verify that the file exists.

ORA-29284: file read error

Cause: An attempt to read from a file failed.

Action: Verify that the file exists, and that it is accessible, and that it is open in read mode.

ORA-29285: file write error

Cause: Failed to write to, flush, or close a file.

Action: Verify that the file exists, that it is accessible, and that it is open in write or append mode.

ORA-29286: internal error

Cause: A fatal error occurred while allocating PL/SQL session memory.

-
- Cause:** An error occurred while decoding the input string
Action: Verify that source data is a valid encoded string.
- ORA-29297: The compressed representation is too big**
Cause: The compressed output is too big to return.
Action: Do not attempt to compress source data.
- ORA-29298: Character set mismatch**
Cause: The character set mode in which the file was opened did not match the character set of the read or write operation.
Action: Use the correct UTL_FILE read and write procedures which correspond to the character set mode in which the file was opened.
- ORA-29299: Invalid handle for piecewise compress or uncompress**
Cause: The process program opened too many handles, and the specified handle was either uninitialized or outside a valid range.
Action: Close some handles and verify that the specified handle is opened or within a valid range.
- ORA-29300: ORACLE error, tablespace point-in-time recovery**
Cause: Another ORACLE error occurred in the DBMS_PITR package.
Action: See the text of the error message for a description of the error.
- ORA-29301: wrong DBMS_PITR package function/procedure order**
Cause: The DBMS_PITR package function/procedure was called in an incorrect order.
Action: Restart tablespace point-in-time recovery with a correct procedure.
- ORA-29302: database is not open clone**
Cause: The database was not opened as a clone database.
Action: Mount the database clone and open the database.
- ORA-29303: user does not login as SYS**
Cause: The user did not log in as SYS to perform tablespace point-in-time recovery in a clone database.
Action: Log in as SYS and restart tablespace point-in-time recovery.
- ORA-29304: tablespace '*string*' does not exist**
Cause: The selected tablespace does not exist in the database.
Action: Check the list of tablespaces in V\$TABLESPACE and select a valid tablespace.
- ORA-29305: cannot point-in-time recover tablespace '*string*'**
Cause: An attempt was made to ALTER the tablespace to be read only.
Action: Check if the tablespace is SYSTEM or with online rollback segment.
- ORA-29306: datafile *string* is not online**
Cause: The selected datafile was not online.
Action: Bring the the datafile online and rename it if necessary.
- ORA-29307: datafile *string* error, *string***
Cause: The datafile is not ready for tablespace point-in-time recovery.

Action: Check the correct tablespace point-in-time recovery procedure.

ORA-29308: view TS_PITR_CHECK failure

Cause: Some objects which crossed the boundary of the recovery set were not allowed in the tablespace point-in-time recovery.

Action: Query TS_PITR_CHECK and resolve the boundary crossing objects.

ORA-29309: export dump file was generated by different version of DBMS_PITR package

Cause: The version of DBMS_PITR is different from the version of the cloned database.

Action: Load the version of DBMS_PITR which matches the version of the cloned database.

ORA-29310: database is not open, or opened as a clone

Cause: Either the database was not open, or an attempt was made to open it as a cloned database.

Action: Open the production database instead.

ORA-29311: export dump file was not generated by this database, *string* does not match

Cause: The export dump files were imported to an incorrect database.

Action: Open the correct production database and try the import again.

ORA-29313: tablespace '*string*' cannot be imported twice

Cause: This is an internal error.

Action: Contact your database administrator.

ORA-29314: tablespace '*string*' is not OFFLINE FOR RECOVER nor READ ONLY

Cause: Tablespace clean SCN is either 0 or invalid.

Action: ALTER the tablespace OFFLINE FOR RECOVER.

ORA-29315: tablespace '*string*' has been recreated

Cause: An attempt was made to recover a tablespace to a point-in-time before it was recreated.

Action: Choose a different point in time for recovery.

ORA-29316: datafile *string* been imported twice

Cause: This is an internal error.

Action: Contact your database administrator.

ORA-29317: datafile *string* does not exist

Cause: The specified datafile could not be found in the production database.

Action: Copy the datafile from the clone database.

ORA-29318: datafile *string* is online

Cause: The datafile is online.

Action: Take the datafile offline.

ORA-29319: datafile *string* is not correct

Cause: An incorrect datafile was copied to the production database. The datafile information in the export dump file differs with the information in the datafile in the production database.

Action: Copy the datafile from the clone database to the production database.

ORA-29320: datafile header error

Cause: An error occurred during reading datafile header.

Action: Copy the correct datafile from the clone database to the production database, then retry the operation.

ORA-29321: too many datafiles added since the point-in-time

Cause: Too many datafiles were added to the recovery set since the point-in-time recovery.

Action: Divide the recovery set into smaller subsets and retry.

ORA-29322: SCN string size too long -- maximum size 58 bytes/characters

Cause: Too many characters in specifying the SCN string

Action: Remove all unnecessary characters. Only 15 characters are required for both the hex and decimal representation of the 48 bit SCN.

ORA-29323: ALTER DATABASE SET COMPATIBILITY command not supported by *string*

Cause: The ALTER DATABASE SET COMPATIBILITY command failed because one or more instances do not support dynamic compatible setting change.

Action: No action required.

ORA-29324: SET COMPATIBILITY release string format is wrong

Cause: It should be of the form x.x.x

Action: Use the correct format.

ORA-29325: SET COMPATIBILITY release number lower than *string*

Cause: The SET COMPATIBILITY release compatibility release number was lower than the current compatible setting.

Action: Specify a higher release number.

ORA-29326: SET COMPATIBILITY release number higher than *string*

Cause: The ALTER DATABASE SET COMPATIBILITY command failed because one or more instances had a lower release number.

Action: Specify a lower release number.

ORA-29327: unsupported client compatibility mode used when talking to the server

Cause: The client compatibility mode is higher than the version of the server.

Action: Using SET COMPATIBILITY command, specify the same release number as the server.

ORA-29328: too many datafiles in this tablespace '*string*'

Cause: Too many datafiles in this bitmap tablespace. ORACLE does not support at this moment.

Action: Call Oracle Support.

ORA-29329: Table not of type XMLType

-
- Cause:** Table is not XMLType table
Action: Ensure table is a XMLType table
- ORA-29330: Source script length too big**
Cause: Source script length exceeded the maximum size of 4 Gigabytes.
Action: Make sure source script length is not greater than 4 Gigabytes.
- ORA-29335: tablespace '*string*' is not read only**
Cause: The tablespace is not read only.
Action: Make the tablespace read only and retry the operation.
- ORA-29336: Internal error [*string*] [*string*] from DBMS_PLUGTS**
Cause: Internal error from package DBMS_PLUGTS.
Action: Call Oracle Support.
- ORA-29337: tablespace '*string*' has a non-standard block size (*string*)**
Cause: The tablespace has a non-standard block size and making such a tablespace read-write is not permitted.
Action: Use some other mechanism to import the data
- ORA-29338: datafile *string* is in an undesired state (*string*, *string*)**
Cause: The referred datafile is not in a state ready for tablespace copy operation. For example, the datafile may be offline. The datafile needs to be ONLINE, and either READ ONLY or READ WRITE.
Action: Put the datafile into the desired state.
- ORA-29339: tablespace block size *string* does not match configured block sizes**
Cause: The block size of the tablespace to be plugged in or created does not match the block sizes configured in the database.
Action: Configure the appropriate cache for the block size of this tablespace using one of the various (db_2k_cache_size, db_4k_cache_size, db_8k_cache_size, db_16k_cache_size, db_32K_cache_size) parameters.
- ORA-29340: export file appears to be corrupted: [*string*] [*string*] [*string*]**
Cause: This is caused either by a corrupted export file or by an Oracle internal error.
Action: Make sure the export file used for transportable tablespace is not corrupted. If the error still occurs, call Oracle support.
- ORA-29341: The transportable set is not self-contained**
Cause: The set of objects in the set of tablespaces selected are not self-contained.
Action: Consider using different export options, or removing some of the pointers that caused the violation, or selecting a different set of tablespaces.
- ORA-29342: user *string* does not exist in the database**
Cause: The referred user is one of the owners of data in the pluggable set. This user does not exist in the database.
Action: Consider either creating the user in the database or map the user to a different user via FROM_USER and TO_USER import options.
- ORA-29343: user *string* (mapped from user *string*) does not exist in the database**

Cause: The referred user is one of the owners of data in the pluggable set. This user does not exist in the database.

Action: Consider either creating the user or map the original user to a different user.

ORA-29344: Owner validation failed - failed to match owner '*string*'

Cause: The system failed to match the referred owner. There are two cases that this may occur. (1) This user owns data in the transportable set, but this user is not specified in the TTS_OWNERS list of the import command line option, assuming that TTS_OWNERS is specified. (2) This user is specified in the TTS_OWNER list, but this user does not own any data in the transportable set.

Action: Retry import with a different OWNER list.

ORA-29345: cannot plug a tablespace into a database using an incompatible character set

Cause: Oracle does not support plugging a tablespace into a database using an incompatible character set.

Action: Use import/export or unload/load to move data instead.

ORA-29346: invalid tablespace list

Cause: the tablespace list supplied to dbms_tts.transport_set_check PL/SQL routine is in an incorrect format.

Action: Check the manual and use the correct format.

ORA-29347: Tablespace name validation failed - failed to match tablespace '*string*'

Cause: The system failed to match the referred tablespace. There are 2 cases that this may happen. (1) This tablespace is in the transportable set, but it is not specified in the TABLESPACES list of the import command line option, assuming that TABLESPACES is specified. (2) This tablespace is in the TABLESPACES list, but it is not in the transportable set.

Action: Retry the operation with the correct TABLESPACES list.

ORA-29348: You must specify the datafiles to be plugged in

Cause: The datafiles to be plugged in are not specified.

Action: Specify the datafiles via the import DATAFILES command line option.

ORA-29349: tablespace '*string*' already exists

Cause: Tried to plug-in a tablespace which already exists.

Action: Drop the offending tablespace if possible. Otherwise use a different method (e.g., import/export) to move data.

ORA-29351: can not transport system, sysaux, or temporary tablespace '*string*'

Cause: The referred tablespace is either the system tablespace, the sysaux tablespace, or a temporary tablespace.

Action: Do not include this tablespace in the transportable set.

ORA-29352: event '*string*' is not an internal event

Cause: The DBMS_SYSTEM.WAIT_FOR_EVENT procedure was called with an event name that is not an internal event.

Action: Check the list of events from X\$KSLED and verify the event name parameter passed to the WAIT_FOR_EVENT procedure.

ORA-29353: The transportable list is too long.

Cause: The transportable list exceeds the buffer size of 32767.

Action: Reduce the list of tablespaces to transport.

ORA-29355: NULL or invalid *string* argument specified

Cause: The named argument was either invalid or specified as a NULL

Action: Specify non-null, valid arguments.

ORA-29356: These parameters can be specified only for directives that refer to consumer groups

Cause: The below parameters were specified as an argument to procedure CREATE_PLAN_DIRECTIVE or UPDATE_PLAN_DIRECTIVE of package DBMS_RESOURCE_MANAGER, where the GROUP_OR_SUBPLAN argument is a resource plan. "ACTIVE_SESS_POOL_P1", "QUEUEING_P1", "PARALLEL_DEGREE_LIMIT_P1", "SWITCH_P1", "SWITCH_P2", "SWITCH_P3", "MAX_EST_EXEC_TIME", "UNDO_POOL"

Action: Specify these parameters only for consumer group directives.

ORA-29357: object *string* already exists

Cause: The name specified as argument to procedure CREATE_PLAN, CREATE_CONSUMER_GROUP, or CREATE_CATEGORY of package DBMS_RESOURCE_MANAGER is already in use.

Action: Specify an unused name.

ORA-29358: resource plan *string* does not exist

Cause: An invalid plan name was specified as an argument to procedure UPDATE_PLAN of package DBMS_RESOURCE_MANAGER.

Action: Specify an existing plan name.

ORA-29359: invalid method name *string* specified for resource plan *string*

Cause: An invalid method was specified as an argument to procedure CREATE_PLAN or UPDATE_PLAN of package DBMS_RESOURCE_MANAGER.

Action: Specify a valid method name.

ORA-29360: resource plan *string* contains multiple directives for subplan *string*

Cause: A resource plan and its subplans had more than one directive for a particular subplan.

Action: Modify the resource plan or its subplans so that there is at most one directive for this subplan.

ORA-29361: value *string* is outside valid range of 0 to 100

Cause: An invalid value was specified for a plan directive parameter.

Action: Specify a value between 0 and 100 inclusive.

ORA-29362: plan directive *string*, *string* does not exist

Cause: A non-existent plan directive was specified for procedure UPDATE_PLAN_DIRECTIVE of package DBMS_RESOURCE_MANAGER.

Action: Specify an existing plan directive for update.

ORA-29363: plan directive *string*, *string* is mandatory and cannot be modified or deleted

Cause: An attempt was made to modify a mandatory plan directive.

Action: Do not attempt to modify mandatory plan directives because they are required by the Resource Manager and cannot be modified.

ORA-29364: plan directive *string*, *string* already exists

Cause: An attempt was made to create a plan directive that already exists.

Action: Retry the create operation using different values.

ORA-29365: parameters *string* and *string* cannot both be set

Cause: An attempt was made to set both parameters.

Action: Only set one of parameters or neither of them.

ORA-29366: invalid CONSUMER_GROUP argument specified

Cause: An invalid consumer group name was specified.

Action: Specify a non-NULL, valid consumer group name.

ORA-29367: object *string* does not exist

Cause: A non-existent object name was specified as an argument to procedure CREATE_PLAN_DIRECTIVE of package DBMS_RESOURCE_MANAGER.

Action: Specify a valid plan or consumer group name.

ORA-29368: consumer group *string* does not exist

Cause: A non-existent consumer group was specified.

Action: Specify an existing consumer group.

ORA-29369: invalid method name *string* specified for consumer group *string*

Cause: An invalid method name was specified as an argument to procedure CREATE_CONSUMER_GROUP or UPDATE_CONSUMER_GROUP of package DBMS_RESOURCE_MANAGER.

Action: Specify a valid method name.

ORA-29370: pending area is already active

Cause: An attempt was made to activate a pending area that is already active.

Action: Wait until the pending area is no longer active; then, retry the operation.

ORA-29371: pending area is not active

Cause: An attempt was made to make changes without creating a pending area.

Action: Invoke procedure CREATE_PENDING_AREA before making any changes.

ORA-29372: identifier *string* is too long; it must be less than *string* characters

Cause: An attempt was made to specify an identifier that is more than 30 characters long.

Action: Use an identifier that is 30 characters or less in length.

ORA-29373: resource manager is not on

Cause: An attempt was made to execute an operation that cannot be executed with the resource manager being off

Action: Turn on the resource manager and try again.

ORA-29374: resource plan *string* in top-plan *string* has no plan directives

Cause: A plan was created in the pending area that is an orphan or stand-alone.

Action: Create plan directives if needed. Otherwise, delete the plan.

ORA-29375: sum of values *string* for level *string*, plan *string* exceeds *string*

Cause: The sum of plan directive parameter values for the specified plan level exceeded 100.

Action: Alter the values for the level so that they sum to 100.

ORA-29376: number of consumer groups *string* in plan *string* exceeds *string*

Cause: The number of consumer groups in the specified plan was more than 28.

Action: Change the plan to have no more than 28 consumer groups.

ORA-29377: consumer group *string* is not part of top-plan *string*

Cause: OTHER_GROUPS was not included as part of the specified top-plan. Each top plan must include the built-in consumer group OTHER_GROUPS.

Action: Create a plan directive with the argument GROUP_OR_SUBPLAN being OTHER_GROUPS somewhere in the top-plan.

ORA-29378: invalid consumer group mapping priorities

Cause: The mapping priorities were not unique integers within the valid range.

Action: Set the mapping priorities to unique integers within the documented range.

ORA-29379: resource plan *string* is involved in a loop in top-plan *string*

Cause: A loop was discovered while validating a top-plan.

Action: Check the plans that have the specified plan as a GROUP_OR_SUBPLAN, and remove the plan directive that causes the loop.

ORA-29380: resource plan *string* is currently active and cannot be deleted

Cause: An attempt was made to delete an active plan in the pending area. No changes can be made to active plans.

Action: Delete the plan when it is not in use.

ORA-29381: plan/consumer_group *string* referred to by another plan and cannot be deleted

Cause: An attempt was made to delete a plan or consumer group that is referred to by another plan.

Action: Remove all plan directives that have the plan or consumer group as GROUP_OR_SUBPLAN; then delete the plan or consumer group.

ORA-29382: validation of pending area failed

Cause: Invalid changes were attempted in the pending area.

Action: See documentation and the error messages that follow this one.

ORA-29383: all leaves of top-plan *string* must be consumer groups

Cause: An attempt was made to create or modify the specified top-plan but it has some plans as leaves.

Action: To identify which plans and/or plan directives need to be modified, look at all plans that have no plan directives. Then, alter the top-plan so that all its leaves are consumer groups.

ORA-29384: number of consumer groups and subplans for plan *string* exceeds *string*

Cause: An attempt was made to create or modify the specified plan, but the plan has more than 28 consumer groups or subplans.

Action: Make sure the specified plan points to no more than 28 distinct consumer groups or subplans.

ORA-29385: cannot create plan directive from *string* to *string*

Cause: An attempt was made to create a plan directive from a plan to itself.

Action: Make sure the arguments PLAN and GROUP_OR_SUBPLAN to procedure CREATE_PLAN_DIRECTIVE of package DBMS_RESOURCE_MANAGER are different.

ORA-29386: plan or consumer group *string* is mandatory and cannot be deleted or modified

Cause: An attempt was made to delete or modify the specified mandatory plan or consumer group.

Action: Do not attempt to delete or modify mandatory plans and consumer groups.

ORA-29387: no top-plans found in the pending area

Cause: The VALIDATE_PENDING_AREA procedure found that either the intended top-plan(s) are involved in a loop or there are no top-plans.

Action: Check all edges going from a subplan to the intended top-plan. Make sure the top plan does not have any plan referring to it.

ORA-29388: plan/consumer_group *string* is part of more than one top-plan

Cause: An attempt was made to delete a subtree that includes a plan or consumer group that is part of more than one top-plan as part of procedure DELETE_PLAN_CASCADE or package DBMS_RESOURCE_MANAGER. Such a plan or consumer group cannot be deleted.

Action: Check the ancestors of the plan or consumer group and make sure it is only part of the top-plan that includes the subtree being deleted.

ORA-29389: too many errors during validation

Cause: The number of errors detected during validation is too high.

Action: Perform the necessary actions to remove some errors, and retry validation.

ORA-29390: some resource plans are not part of any top-plan

Cause: An attempt was made to create or modify some plans in the pending area that are not part of any top-plan

Action: Remove these plans and try validation again.

ORA-29391: *string* and *string* must be mandatory to create a mandatory plan directive

Cause: An attempt was made to create a mandatory plan directive where either PLAN or GROUP_OR_SUBPLAN or both were not mandatory

Action: Recreate these objects as mandatory and then create the plan directive.

ORA-29392: cpu parameters for level *string* for plan *string* must be zero

Cause: The cpu parameters for the specified level had a non-zero value, which is not a valid value for the plan's current cpu policy.

Action: Change the cpu level parameters for the specified level to zero or change the plan cpu policy.

ORA-29393: user *string* does not exist or is not logged on

Cause: An invalid user name was specified as argument to procedure SET_INITIAL_CONSUMER_GROUP of package DBMS_RESOURCE_MANAGER or SWITCH_CONSUMER_GROUP_FOR_USER of package DBMS_SYSTEM or the specified user was not logged on.

Action: Specify a valid user name.

ORA-29394: session id *string* and serial# *string* do not exist

Cause: Invalid session id and serial# were specified as arguments to procedure SWITCH_CONSUMER_GROUP_FOR_SESS of package DBMS_SYSTEM.

Action: Specify valid values from the view V\$SESSION.

ORA-29395: cannot set the initial consumer group to *string*

Cause: An attempt was made to set the initial consumer group of a user to OTHER_GROUPS or an INTERNAL_USE group.

Action: Certain groups are only for the resource manager's internal use. Specify another consumer group.

ORA-29396: cannot switch group to *string*

Cause: An attempt was made to switch the consumer group of a user or a session to OTHER_GROUPS or an INTERNAL_USE group.

Action: Certain groups are only for the resource manager's internal use. Specify another consumer group.

ORA-29397: cannot grant/revoke switch privilege for *string*

Cause: An attempt was made to grant or revoke the privilege to switch to OTHER_GROUPS or an INTERNAL_USE group.

Action: Certain groups are only for the resource manager's internal use. Specify another consumer group.

ORA-29398: invalid privilege name specified

Cause: An invalid privilege name was specified as an argument to procedure GRANT_SYSTEM_PRIVILEGE or REVOKE_SYSTEM_PRIVILEGE of package DBMS_RESOURCE_MANAGER_PRIVS.

Action: Specify a valid privilege name.

ORA-29399: user *string* does not have privilege to switch to consumer group *string*

Cause: An attempt was made to set the initial consumer group of the specified user but the user does not have the privilege to switch to that group.

Action: Grant the privilege to switch to the consumer group to the user and then set the initial group.

ORA-29400: data cartridge error *string*

Cause: An error has occurred in a data cartridge external procedure. This message will be followed by a second message giving more details about the data cartridge error.

Action: See the data cartridge documentation for an explanation of the second error message.

ORA-29470: Effective userid or roles are not the same as when cursor was parsed

Cause: The effective userid or roles on this call to DBMS_SQL are not the same as those at the time the cursor was parsed.

Action: Make sure the effective userid and roles are the same as when cursor was pared.

ORA-29471: DBMS_SQL access denied

Cause: DBMS_SQL access was denied due to security concerns.

Action: Check the alert log and trace file for more information.

ORA-29472: DBMS_SQL.OPEN_CURSOR failed. security_level is outside the valid range of 0 to 2

Cause: An invalid security_level value was specified.

Action: Specify a valid range of 0 to 2.

ORA-29473: privilege checking level specified for 'string' must be between 0 and 2

Cause: Invalid privilege checking level specified.

Action: Correct the privilege checking level specified.

ORA-29474: DBMS_SQL.OPEN_CURSOR failed. security_level of 0 is not allowed

Cause: Security level of 0 is specified with DBMS_SQL.OPEN_CURSOR.

Action: Specify a valid security level.

ORA-29475: useLogonRoles=>TRUE not permitted with userid=>NULL

Cause: An unsupported combination of argument values was present in a call to DBMS_SYS_SQL.PARSE_AS_USER.

Action: Specify a valid combination of argument values.

ORA-29476: DBMS_SQL.CLOSE_CURSOR failed

Cause: An attempt was made to close a DBMS_SQL cursor while it was executing under its own context.

Action: Rewrite the program so that it does not attempt to close a DBMS_SQL cursor while it is executing under its own context.

ORA-29477: SQL statement size in bytes is too big

Cause: The size of the SQL statement exceeded 4 gigabytes -1.

Action: Reduce the size of the SQL statement.

ORA-29490: insufficient privilege

Cause: The ADM_PARALLEL_EXECUTE role needed to execute the subprogram was not granted.

Action: Obtain ADM_PARALLEL_EXECUTE role and try again.

ORA-29491: invalid table for chunking

Cause: An attempt was made to chunk a table by ROWID, but the table was not a physical table or the table was an IOT. physical table or the table is an IOT.

Action: Use a table which has physical ROWID.

ORA-29492: invalid state for create chunk

Cause: An attempt was made to create chunks on a task which was not in the CREATED state.

Action: Make sure that the task is in the CREATED state.

ORA-29493: invalid status

Cause: An attempt was made to set an invalid value to the chunk status.

Action: Make sure that the status value is valid.

ORA-29494: invalid state for run task

Cause: An attempt was made to execute the task which was not in the CHUNKED state.

Action: Make sure that the task is in the CHUNKED state.

ORA-29495: invalid state for resume task

Cause: An attempt was made to resume execution but the task was not the FINISHED_WITH_ERROR or CRASHED state.

Action: Make sure that the task is in the FINISHED_WITH_ERROR or CRASHED state.

ORA-29496: Parameter [*string*] is null or its value length exceeds the maximum limit [*string*]

Cause: The input argument was null, or it exceeded the maximum length limit.

Action: Make sure that the argument is not null, and its length is within the limit.

ORA-29497: duplicate task name

Cause: A task with the same name was already in existence.

Action: Use another name.

ORA-29498: task not found

Cause: The task did not exist.

Action: Use an existing task.

ORA-29499: chunk not found

Cause: The specified chunk did not exist.

Action: Specify an existing chunk.

ORA-29500: NAMED keyword is invalid in CREATE JAVA CLASS

Cause: A NAMED keyword was specified in the CREATE JAVA CLASS statement. NAMED keywords are valid only in CREATE JAVA SOURCE or RESOURCE statements.

Action: Remove the NAMED keyword from the CREATE JAVA CLASS statement.

ORA-29501: invalid or missing Java source, class, or resource name

Cause: The required name for a Java source, class, or resource was invalid or missing.

Action: Specify a valid name.

ORA-29502: NAMED keyword required in CREATE JAVA RESOURCE

Cause: The name for a Java resource was not specified. The name must be specified with the NAMED keyword.

Action: Specify a valid name with the NAMED keyword.

ORA-29503: SCHEMA keyword not valid with NAMED keyword

Cause: SCHEMA and NAMED keywords were used together in the same CREATE JAVA command, but only one may be used in a CREATE JAVA command.

Action: Remove either the NAMED or the SCHEMA keyword.

ORA-29504: invalid or missing schema name

Cause: The required schema name was invalid or missing.

Action: Specify a valid schema name.

ORA-29505: AS keyword is invalid in CREATE JAVA CLASS or RESOURCE

Cause: The AS keyword was used in CREATE JAVA CLASS or RESOURCE. The AS keyword is valid only in CREATE JAVA SOURCE.

Action: Use the USING keyword in CREATE JAVA CLASS or RESOURCE.

ORA-29506: invalid query derived from USING clause

Cause: The USING clause did not form a valid query.

Action: Correct the USING clause.

ORA-29507: query derived from USING clause found zero or many rows

Cause: The USING clause defined a query that either did not return any values, or returned more than one value.

Action: Correct the USING clause.

ORA-29508: query derived from USING clause did not select a value of type *string*

Cause: The USING clause did not form a query that selects a value of the type specified by the term following the USING keyword.

Action: Correct the USING clause.

ORA-29509: incorrectly formed Java binary class definition

Cause: An attempt was made to create a Java class using data expected to be in binary (Java .class) format. The data was found not to be in this format, or to be incorrectly formed.

Action: Correct the definition data.

ORA-29510: name, *string.string*, already used by an existing object

Cause: A CREATE JAVA command attempted to create a source, class, or resource object with a name that is already in use.

Action: Drop the existing object that is using the desired name, or use a different name for the new object.

ORA-29511: could not resolve Java class

Cause: A CREATE AND RESOLVE NOFORCE JAVA CLASS command specified definition data that could not be resolved, or resolution failed for some referenced class.

Action: Remove the NOFORCE option or remove impediments to resolution.

ORA-29512: incorrectly formed name resolver specification

Cause: A name resolver was not specified in the required form: ((<name pattern> , <schema name>) ...)

Action: Correct the specification.

ORA-29513: referenced class name too long

Cause: An attempt was made to import a .class file containing a class name of length greater than %d. The .class file could not be imported because the referenced class name was too long.

Action: Shorten the referenced class name in the .class file.

ORA-29514: class name contains illegal character

Cause: An attempt was made to import a .class file containing a character that cannot be converted to the server character set. The .class file could not be imported because of the illegal character.

Action: Correct the illegal character in the .class file.

ORA-29515: exit called from Java code with status *string*

Cause: Java code included a call to java.lang.Runtime.exitInternal.

Action: Do not include this call unless non-local exit is desired.

ORA-29516: Aurora assertion failure: *string*

Cause: An internal error occurred in the Aurora module.

Action: Contact Oracle Worldwide Support.

ORA-29517: recursive resolution failed for a referenced class

Cause: An attempt to resolve a referenced class failed.

Action: Review the errors for referenced classes and complete the necessary actions to correct them.

ORA-29518: name *string* resolved to an object in schema *string* that is not a Java class

Cause: A referenced name was resolved to an object that is not a Java class.

Action: Adjust name resolver or add missing Java class.

ORA-29519: name *string* resolved via a synonym in schema *string* to a class with a different name

Cause: A referenced name was resolved to a synonym, which translated to a class whose name does not match the referenced name.

Action: Adjust name resolver or add missing Java class.

ORA-29520: name *string* resolved to a class in schema *string* that could not be accessed

Cause: An attempt to access a referenced class failed.

Action: Adjust authorizations or name resolution.

ORA-29521: referenced name *string* could not be found

Cause: Name resolution failed to find an object with the indicated name.

Action: Adjust name resolver or add missing Java class.

ORA-29522: authorization error for referenced name *string.string*

Cause: An attempt was made to resolve a class that is not authorized to use the indicated referenced class.

Action: Adjust authorizations or name resolution.

ORA-29523: authorization error for unknown referenced name

Cause: An attempt was made to resolve a class that is not authorized to use a referenced class. The name of the referenced class could not be determined.

Action: Adjust authorizations or name resolution.

ORA-29524: wrong types of arguments in call to '*string*'

Cause: A method was called with argument(s) of incompatible type(s).

Action: Adjust caller.

ORA-29525: referenced name is too long: 'string'

Cause: An attempt was made to create a class that references a name longer than 4000 characters. The class could not be created because the name is too long.

Action: Adjust the definition.

ORA-29526: created Java class *string*"string"

Cause: An informational message, not an error.

Action: None

ORA-29527: created Java source *string*"string"

Cause: An informational message, not an error.

Action: None

ORA-29528: invalid Java call in trigger *string*

Cause: The Java method specified in trigger does not exist or cannot be called as used.

Action: Adjust trigger definition.

ORA-29529: invalid function or method call *string* in trigger *string*

Cause: The function or method specified in Java trigger call expression could not be resolved.

Action: Adjust trigger definition.

ORA-29530: could not create shortened name for *string*

Cause: Insert into shortened name translation table failed.

Action: Retry the insert.

ORA-29531: no method *string* in class *string*

Cause: An attempt was made to execute a non-existent method in a Java class.

Action: Adjust the call or create the specified method.

ORA-29532: Java call terminated by uncaught Java exception: *string*

Cause: A Java exception or error was signaled and could not be resolved by the Java code.

Action: Modify Java code, if this behavior is not intended.

ORA-29533: attempt to overwrite class or resource *string* while defining or compiling *string.string*

Cause: A class or resource defined by a SQLJ source conflicted with an existing object.

Action: Remove existing object, or modify SQLJ source.

ORA-29534: referenced object *string.string* could not be resolved

Cause: Name resolution determined that the indicated object is referenced but could not be resolved.

Action: Correct name resolver or address resolution problems in the referenced class, or correct compilation problems in its source.

ORA-29535: source requires recompilation

Cause: The reason the current class object was invalid is recorded with the source object from which it was compiled.

Action: Inspect errors in the source object and take the necessary corrective actions.

ORA-29536: badly formed source: *string*

Cause: An attempt was made to create a Java source object with text that could not be parsed adequately to determine the class(es) defined by it.

Action: Correct errors in source.

ORA-29537: class or resource cannot be created or dropped directly

Cause: An attempt was made to create or drop a Java class or resource that is known to result from compilation of an existing Java source object.

Action: Act on the class or resource by acting on the source, or change the source so that it no longer defines the class or resource.

ORA-29538: Java not installed

Cause: An attempt was made to use a Java command when Java is not installed.

Action: Install Java, or do not use the command.

ORA-29539: Java system classes already installed

Cause: An attempt was made to use the CREATE JAVA SYSTEM command in a database where the Java system classes already are installed.

Action: Use CREATE OR REPLACE JAVA SYSTEM.

ORA-29540: class *string* does not exist

Cause: Java method execution failed to find a class with the indicated name.

Action: Correct the name or add the missing Java class.

ORA-29541: class *string.string* could not be resolved

Cause: An attempt was made to execute a method in a Java class that had not been previously and cannot now be compiled or resolved successfully.

Action: Adjust the call or make the class resolvable.

ORA-29542: class *string* already defined by source *string*

Cause: An attempt was made to create a Java source object that would define a class that is already defined by a different Java source object.

Action: Either drop the old source or modify the new source.

ORA-29543: Java command *string* not yet implemented

Cause: An attempt was made to use a Java command that is not yet implemented.

Action: Do not use the command.

ORA-29544: invalid type

Cause: The type argument in a call to a Java export or import command did not have a recognized value.

Action: Correct the value.

ORA-29545: badly formed class: *string*

Cause: An attempt was made to create a Java class object with bytecodes that were rejected by the Java verifier.

Action: It is possible that an attempt was made to create the Java class from a damaged class file, in which case the CREATE should be reattempted with a correct class file. It is also possible that the message is the result of using "-" in the resolver so that the verifier could not check the correctness of some code. In that case, the class needs to be created with a resolver.

ORA-29546: badly formed resource: *string*

Cause: An attempt was made to create a Java resource object with data that was rejected by the Java verifier.

Action: Correct the data.

ORA-29547: Java system class not available: *string*

Cause: An attempt was made to use a command that requires a Java system class that was not yet present or was invalid.

Action: Load the system classes, or do not use the command.

ORA-29548: Java system class reported: *string*

Cause: A command that uses a Java system class was aborted due to an error reported by the Java system class.

Action: Correct the error that was reported.

ORA-29549: class *string.string* has changed, Java session state cleared

Cause: A class in use by the current session was redefined or dropped, invalidating the current Java session state and requiring that it be cleared.

Action: No action required.

ORA-29550: Java session state cleared

Cause: The Java state in the current session became inconsistent and was cleared.

Action: No action required.

ORA-29551: could not convert *string* to Unicode

Cause: A string in the database character set could not be converted to Unicode, as required for use by Java.

Action: Correct the string.

ORA-29552: verification warning: *string*

Cause: An attempt was made to create a Java class object with bytecodes that caused the Java verifier to issue a warning.

Action: It is possible that the Java class was created from a damaged class file, in which case the CREATE should be reattempted with a correct class file. It is also possible that the message is the result of using "-" in the resolver so that the verifier could not check the correctness of some code. In that case, the class needs to be created with a resolver.

ORA-29553: class in use: *string.string*

Cause: An attempt was made to modify a Java class that is in use in the current call.

Action: Correct the code in use in this call.

ORA-29554: unhandled Java out of memory condition

Cause: The session encountered an out of memory condition in Java from which it could not recover. Java session state was cleared.

Action: No action required.

ORA-29555: Java source, class or resource is not allowed here

Cause: A Java source, class, or resource was specified in an inappropriate place in a statement.

Action: Make sure the name is correct or remove it.

ORA-29556: object type has changed

Cause: A database object name that named a Java source, class, or resource now names an object of a different type.

Action: No action required.

ORA-29557: Java system class *string* cannot be modified

Cause: A command was attempted that would have modified a Java system class.

Action: No action required.

ORA-29558: JAccelerator (NCOMP) not installed. Refer to Install Guide for instructions.

Cause: JAccelerator (NCOMP) is not installed.

Action: Please refer to the Post-installation Tasks section in the Database Install Guide for instructions on how to install JAccelerator (NCOMP).

ORA-29561: Java VM JIT not supported on this platform.

Cause: Java VM JIT is not supported on this platform.

Action: No action required.

ORA-29655: USING clause is incompatible with its supertype

Cause: The USING clause of a type has to be the same as its supertype or compatible with it.

Action: Make sure the USING clause is compatible with its supertype.

ORA-29656: Invalid option for USING

Cause: The class has to implement the required interface for the value of the option for USING.

Action: Make sure the USING clause is supported.

ORA-29657: class defined in EXTERNAL NAME clause is used in another subtype

Cause: The supertype has an existing type that has the same value for the EXTERNAL NAME.

Action: Make sure the EXTERNAL NAME clause is unique among subtypes.

ORA-29658: EXTERNAL NAME clause is not compatible with its supertype

Cause: The EXTERNAL NAME clause of the type is not a subclass of the supertype EXTERNAL NAME.

Action: Make sure the EXTERNAL NAME clause of the type is a subclass of the EXTERNAL NAME of its supertype.

ORA-29659: SQLJ Object Type validation failed to get default connection

Cause: Unable to connect using the JDBC default connection.

Action: No action required.

ORA-29660: Unable to find the class defined in the EXTERNAL NAME clause

Cause: The class is not loaded in the database.

Action: Make sure the EXTERNAL NAME corresponds to a loaded class in the the database.

ORA-29661: Unable to find the superclass of the defined in the EXTERNAL NAME

Cause: The class is not loaded in the database.

Action: Make sure the superclass of the EXTERNAL NAME is loaded in the the database.

ORA-29662: Unable to find a field that matches one or more of the attributes

Cause: The EXTERNAL NAME option of one or more attributes do not match any fields in the defined class.

Action: Make sure the EXTERNAL NAME option of each attribute matches a field in the defined in the defined class.

ORA-29663: Unable to find a method that matches one or more of the functions

Cause: The EXTERNAL NAME option of one or more functions do not match any method in the defined class.

Action: Make sure the EXTERNAL NAME option of each function matches a method in the defined in the defined class.

ORA-29664: Unable to generate the helper class for the defined type

Cause: The helper class used for supporting SQLJ Object Type is not generated.

Action: No Action is required.

ORA-29665: Java thread deadlock detected

Cause: The Java VM has detected a thread deadlock.

Action: Modify the Java program to avoid the deadlock condition.

ORA-29701: unable to connect to Cluster Synchronization Service

Cause: Connect to CSS failed or timed out.

Action: Verify the state of the CSS. If the CSS was not started, start it and then retry the database startup. If the CSS died or is not responding, check the Oracle and CSS trace files for errors and contact Oracle Support Services.

ORA-29702: error occurred in Cluster Group Service operation

Cause: An unexpected error occurred while performing a CGS operation.

Action: Verify that the LMON process is still active. Check the Oracle LMON trace files for errors. Also, check the related CSS trace file for errors.

ORA-29703: error occurred in global enqueue service operation

Cause: An unexpected error occurred while performing a global enqueue service operation.

Action: Check oracle trace files for errors.

ORA-29704: cannot specify ACTIVE_INSTANCE_COUNT in 8.1.5 or earlier release

Cause: The ACTIVE_INSTANCE_COUNT parameter was specified when one of the instances in the cluster was running Oracle 8.1.5 or an earlier release.

Action: Restart the instance without specifying the ACTIVE_INSTANCE_COUNT parameter. Or, upgrade all instances to Oracle 8.1.6 or later release and then specify the parameter.

ORA-29705: ACTIVE_INSTANCE_COUNT is *string* which is incompatible with the value in other instances

Cause: The value of the ACTIVE_INSTANCE_COUNT parameter must be the same in all Oracle cluster database instances.

Action: Check your initialization parameter files in all instances and ensure that the ACTIVE_INSTANCE_COUNT parameter has the same value. Then restart the instance.

ORA-29706: incorrect value *string* for parameter ACTIVE_INSTANCE_COUNT

Cause: The ACTIVE_INSTANCE_COUNT parameter must be set to 1 in a two node cluster database configuration or unspecified if a secondary instance is not needed.

Action: Check your initialization parameter files and correct the value of the ACTIVE_INSTANCE_COUNT parameter. If you are configuring a two node primary/secondary cluster database, set this value to 1. Otherwise, do not specify any value for the parameter.

ORA-29707: inconsistent value *string* for initialization parameter *string* with other instances

Cause: The value of the initialization parameter in error must be identical on all Oracle cluster database instances and was not.

Action: Check your INIT.ORA files on all instances and ensure that the initialization parameters in error have the same value.

ORA-29708: error occurred in Cluster Synchronization Services

Cause: An unexpected error occurred while performing a CSS operation.

Action: Verify the state of the CSS. If the CSS died or is not responding, check the ORACLE and CSS trace files for errors and contact Oracle Support Services.

ORA-29709: Communication failure with Cluster Synchronization Services

Cause: Could not communicate with CSS to complete the operation.

Action: Verify the state of the CSS. If the CSS died or is not responding, check the ORACLE and CSS trace files for errors and contact Oracle Support Services.

ORA-29710: Current operation aborted by Cluster Synchronization Services

Cause: The operation could not be performed or CSS was shutting down.

Action: Check the log file of Cluster Synchronization Services daemon to verify the state of the service. Start the service if needed; otherwise, contact Oracle Support Services.

ORA-29711: error occurred during registration of Oracle process with CSS

Cause: this error and it is an expected result. Otherwise, contact Oracle Support Services.

Action: Confirm that the database, and any ASM instances on which it depends, is operating normally. An outage in one of these can

ORA-29735: instance specified no longer exists

Cause: A client of the global enqueue service specified an instance that no longer existed.

Action: Process aborts current operation due to termination of an instance

ORA-29740: evicted by instance number *string*, group incarnation *string*

Cause: This instance was evicted from the group by another instance of the cluster database group for one of several reasons, which may include a communications error in the cluster and failure to issue a heartbeat to the control file.

Action: Check the trace files of other active instances in the cluster group for indications of errors that caused a reconfiguration.

ORA-29741: IMR active for some, but not all members of cluster

Cause: The IMR feature is not active for this instance, but is active for another instance in the cluster database.

Action: Ensure that all instances have the same value for the `_imr_active` init.ora parameter

ORA-29742: incompatible Instance Membership Recovery protocol among instances

Cause: The selected Instance Membership Recovery protocol was not compatible with other running instances in the cluster database.

Action: Check the Instance Membership Recovery initialization parameters of all instances to ensure their consistency.

ORA-29746: Cluster Synchronization Service is being shut down.

Cause: The administrator has shut down the Cluster Synchronization Service daemon. This error message is intended to be informative to users on the status of the service.

Action: Check the log file of the Cluster Synchronization Service daemon to verify the state of the service.

ORA-29760: instance_number parameter not specified

Cause: The init.ora file did not contain a value for the `instance_number` which is required to identify this instance to other instances of the database running on the same cluster

Action: Assign a value to the `instance_number` parameter in the init.ora parameter file

ORA-29770: global enqueue process *string* (OSID *string*) is hung for more than *string* seconds

Cause: The specified process makes no progress within the maximum allowed time.

Action: Check the alert file and relevant trace files and contact Oracle Support Services with the incident information.

ORA-29771: process *string* (OSID *string*) blocks *string* (OSID *string*) for more than *string* seconds

Cause: The specified process blocked a global enqueue process for the maximum allowed time.

Action: Check the alert file and relevant trace files and contact Oracle Support Services with the incident information.

ORA-29780: unable to connect to GPnP daemon [*string*]

Cause: Attempt to connect to the GPnP daemon failed with the error reported.

Action: Take the corrective action to resolve the error reported. Refer to GPnP logs and documentation to figure out why the call failed.

ORA-29783: GPnP attribute SET failed with error [*string*]

Cause: Attempt to set the GPnP attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

ORA-29784: Attribute update operation not permitted

Cause: The update operation for attributes was not permitted because Cluster Synchronization Services (CSS) was not running on the host.

Action: Start Cluster Synchronization Services (CSS) and retry the operation.

ORA-29785: GPnP attribute GET failed with error [string]

Cause: Attempt to get the GPnP attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

ORA-29786: SIHA attribute GET failed with error [string]

Cause: Attempt to get the SIHA attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

ORA-29787: SIHA attribute SET failed with error [string]

Cause: Attempt to set the SIHA attribute failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

ORA-29788: Network interface query failed with error [string]

Cause: Attempt to get the network information failed. See the brackets for the reason.

Action: Resolve the problem in the included message and retry the request.

ORA-29790: Cannot change user session parameters for a non-user session

Cause: An attempt was made to change user session parameters for a non-user session.

Action: Execute the operation when connected with a user session

ORA-29791: Transactions cannot be replayed

Cause: The user attempted to replay a transaction.

Action: Reconnect and re-execute the transaction.

ORA-29800: invalid name for operator

Cause: The name specified for the operator is incorrect.

Action: Specify a correct name for the operator.

ORA-29801: missing RETURN keyword

Cause: The RETURN keyword has not been specified.

Action: Specify the RETURN keyword or check the SQL statement.

ORA-29802: missing CONTEXT keyword

Cause: The CONTEXT keyword has not been specified.

Action: Specify the CONTEXT keyword or check the SQL statement.

ORA-29803: missing ANCILLARY keyword

Cause: The ANCILLARY keyword has not been specified.

Action: Specify the ANCILLARY keyword or check the SQL statement.

ORA-29804: missing DATA keyword

-
- Cause:** The DATA keyword has not been specified.
Action: Specify the DATA keyword or check the SQL statement.
- ORA-29805: missing COLUMN keyword**
Cause: Keyword COLUMN is expected .
Action: Either specify the COLUMN keyword or specify another option.
- ORA-29806: specified binding does not exist**
Cause: The operator binding which has been specified does not exist.
Action: Ensure that the operator binding that has been specified does exist.
- ORA-29807: specified operator does not exist**
Cause: The operator which has been specified does not exist.
Action: Ensure that the operator that has been specified does exist.
- ORA-29808: specified primary operator binding does not exist**
Cause: The specified binding for the primary operator does not exist.
Action: Ensure that the specified binding for the primary operator exists.
- ORA-29809: cannot drop an operator with dependent objects**
Cause: The operator which is being dropped has some dependent objects.
Action: Either drop the dependent objects first and then issue the DROP OPERATOR command or specify the FORCE option with DROP OPERATOR.
- ORA-29810: inadequate operator privileges**
Cause: The user does not have the appropriate privileges to perform the specified operation on the operator.
Action: Grant the appropriate privileges to the user and then reissue the statement.
- ORA-29811: missing STATISTICS keyword**
Cause: This is not a valid option with the ASSOCIATE command.
Action: Specify STATISTICS keyword after the ASSOCIATE command.
- ORA-29812: incorrect object name specified**
Cause: The specified name is not a valid name.
Action: Specify the correct name of the object with for which an association needs to be defined.
- ORA-29813: non-supported object type with associate statement**
Cause: The type of object specified is not supported with the associate statistics statement.
Action: Use a valid object type with the associate command.
- ORA-29814: expecting USING or DEFAULT keyword**
Cause: Expecting the USING or DEFAULT keyword after the names of object(s).
Action: Provide the USING or DEFAULT keyword.
- ORA-29815: object being associated is not present**
Cause: The object for which the association is being defined is not present.

Action: Ensure that all the objects for which the association is being defined are present.

ORA-29816: object being disassociated is not present

Cause: Object which is being disassociated is not present.

Action: Ensure that the object which needs to be disassociated is present.

ORA-29817: non-supported option with disassociate statement

Cause: The type of object specified is not supported with the disassociate statistics statement.

Action: Use a object type which is supported with the disassociate command.

ORA-29818: column name not properly specified

Cause: Name of the column should contain the table and the column name.

Action: Specify a valid column name.

ORA-29819: cannot associate default values with columns

Cause: User tried to associate DEFAULT values with columns which is not a valid option .

Action: Specify a valid option.

ORA-29820: the statistics type is not present

Cause: The statistics type which is being associated with object(s) is not present.

Action: Ensure that the type which contains the statistics functions is present.

ORA-29821: specified primary operator does not exist

Cause: The specified primary operator does not exist.

Action: Check the primary operator and the signature specified.

ORA-29822: selectivity cannot be specified for the type of object

Cause: User tried to associate selectivity with index or indextypes which is not allowed .

Action: Specify a valid option.

ORA-29823: object being analyzed is not a table

Cause: The object being analyzed is not a table and is not supported

Action: Specify only a supported option.

ORA-29824: operator is invalid

Cause: The operator is invalid.

Action: Drop and recreate the operator.

ORA-29825: invalid name for indextype

Cause: Indextype name or Indextype schema name has invalid characters.

Action: Verify that the name has valid characters and it is not a reserved word.

ORA-29826: keyword FOR is missing

Cause: FOR keyword must be provided with Create Indextype statement.

Action: Use FOR keyword and provide relevant operator information.

ORA-29827: keyword USING is missing

Cause: USING keyword and corresponding implementation details must be provided.

Action: Provide USING keyword and relevant implementation details with Create Indextype statement.

ORA-29828: invalid name for implementation type

Cause: Implementation type or Implementation schema name is invalid.

Action: Verify that the name has valid characters and it is not a reserved word.

ORA-29829: implementation type does not exist

Cause: The implementation type specified with USING clause could not be found.

Action: Check to see if the type exists and the user has EXECUTE privilege on this type.

ORA-29830: operator does not exist

Cause: The operator could not be found.

Action: Verify that the operator exists and the user has EXECUTE privilege for this operator.

ORA-29831: operator binding not found

Cause: The specified binding for the operator is not available from the operator schema object.

Action: Verify that the operator with the specified binding exists.

ORA-29832: cannot drop or replace an indextype with dependent indexes

Cause: One or more indexes are dependent upon the indextype.

Action: Drop all the indexes which are dependent upon the indextype before dropping the indextype itself.

ORA-29833: indextype does not exist

Cause: There is no indextype by the specified name.

Action: Use public views for the indextypes to see if an indextype by the specified name has been created.

ORA-29834: REF datatype not supported with operators

Cause: The user specified a REF datatype which is not supported in CREATE OPERATOR.

Action: Reissue the CREATE OPERATOR statement without the REF datatype.

ORA-29835: ODCIGETINTERFACES routine does not return required interface(s)

Cause: The ODCIObjectList returned by the ODCIGetInterfaces routine does not contain the interface(s) required by the current usage.

Action: Ensure that the ODCIGetInterfaces routine returns the name(s) of the required interface(s).

ORA-29836: failed to validate referenced operators

Cause: One of the operators referenced cannot be compiled.

Action: Try to recompile the operators which are referenced by this indextype. Use USER_INDEXTYPE_OPERATORS view to find out the referenced operators.

ORA-29837: insufficient privileges to execute implementation type

Cause: User does not have privileges to execute the implementation type.

Action: The owner of the implementation type must grant appropriate privileges to the user.

ORA-29838: insufficient privileges to execute the operator(s)

Cause: User does not have privileges to execute one of the operators.

Action: The owner of the operators must grant appropriate privileges to the user .

ORA-29839: failed to validate implementation type

Cause: Implementation type cannot be compiled.

Action: Try to compile the implementation type.

ORA-29840: indextype and implementation type are not in same schema

Cause: Indextype and implementation type are in different schema.

Action: Put the indextype and implementation type in the same schema.

ORA-29841: invalid option for ALTER INDEXTYPE

Cause: The user specified an invalid option with the ALTER INDEXTYPE command

Action: Choose a valid option with the ALTER INDEXTYPE command

ORA-29842: option not supported with the version *string* of the indextype interface

Cause: User specified an option which is not supported with the version of the indextype interface provided

Action: User should either not request for this option or should provide an implementation type that implements the correct version of the indextype interface.

ORA-29843: indextype should support atleast one operator

Cause: User attempted to drop all the operators from the indextype

Action: Do not drop all the operators from the indextype

ORA-29844: duplicate operator name specified

Cause: User attempted to add an operator name to an indextype which is already supported by the indextype

Action: Remove the duplicate operator and retry the command

ORA-29845: indextype does not support local domain index on *string* partitioned table

Cause: User specified a create local domain index statement using an indextype that does not support local domain indexes on tables partitioned with the given method

Action: Use a different indextype or build a global domain index

ORA-29846: cannot create a local domain index on a *string* partitioned table

Cause: User specified a create local domain index statement on a table partitioned using a method not supported by domain indexes

Action: Build a global domain index on the partitioned table

ORA-29847: cannot create a local domain index on a partitioned index-organized table

Cause: User specified a create local domain index statement on a partitioned index-organized table

-
- Action:** Build a global domain index on the partitioned index-organized table
- ORA-29848: error occurred in the execution of ODCIINDEXMERGEPARTITION routine**
Cause: Failed to successfully execute the ODCIIndexMergePartition routine.
Action: Check to see if the routine has been coded correctly.
- ORA-29849: error occurred in the execution of ODCIINDEXSPLITPARTITION routine**
Cause: Failed to successfully execute the ODCIIndexSplitPartition routine.
Action: Check to see if the routine has been coded correctly.
- ORA-29850: invalid option for creation of domain indexes**
Cause: The user specified an invalid option like ASC, DESC, SORT or a parallel clause, partitioning clause or physical attributes clause.
Action: Choose one of the valid clauses for creation of domain indexes.
- ORA-29851: cannot build a domain index on more than one column**
Cause: User attempted to build a domain index on more than one column.
Action: Build the domain index only on a single column.
- ORA-29852: keyword IS is missing**
Cause: IS keyword must be specified with Create Index statement for domain indexes.
Action: Use IS keyword and then specify the indextype name.
- ORA-29853: keyword UNIQUE may not be used in creating domain indexes**
Cause: An attempt was made to create a domain index with the UNIQUE attribute.
Action: Remove UNIQUE from the CREATE INDEX statement.
- ORA-29854: keyword BITMAP may not be used in creating domain indexes**
Cause: An attempt was made to create a domain index with the BITMAP attribute.
Action: Remove BITMAP from the CREATE INDEX statement.
- ORA-29855: error occurred in the execution of ODCIINDEXCREATE routine**
Cause: Failed to successfully execute the ODCIIndexCreate routine.
Action: Check to see if the routine has been coded correctly.
- ORA-29856: error occurred in the execution of ODCIINDEXDROP routine**
Cause: Failed to successfully execute the ODCIIndexDrop routine.
Action: Check to see if the routine has been coded correctly.
- ORA-29857: domain indexes and/or secondary objects exist in the tablespace**
Cause: An attempt was made to drop a tablespace which contains secondary objects and/or domain indexes.
Action: Drop the domain indexes in his tablespace. Also, find the domain indexes which created secondary objects in this tablespace and drop them. Then try dropping the tablespace.
- ORA-29858: error occurred in the execution of ODCIINDEXALTER routine**

-
- Cause:** Failed to successfully execute the ODCIIndexAlter routine.
Action: Check to see if the routine has been coded correctly.
- ORA-29859: error occurred in the execution of ODCIINDEXTRUNCATE routine**
Cause: Failed to successfully execute the ODCIIndexTruncate routine.
Action: Check to see if the routine has been coded correctly.
- ORA-29860: cannot truncate a table with domain indexes marked LOADING**
Cause: The table has domain indexes defined on it that are marked LOADING.
Action: Wait to see if the ongoing index DDL ends and the index state changes from LOADING state. Else ,drop the domain indexes marked as LOADING with the FORCE option.
- ORA-29861: domain index is marked LOADING/FAILED/UNUSABLE**
Cause: An attempt has been made to access a domain index that is being built or is marked failed by an unsuccessful DDL or is marked unusable by a DDL operation.
Action: Wait if the specified index is marked LOADING Drop the specified index if it is marked FAILED Drop or rebuild the specified index if it is marked UNUSABLE.
- ORA-29862: cannot specify FORCE option for dropping non-domain index**
Cause: A DROP INDEX FORCE was issued for a non-domain index.
Action: Reissue the command without the FORCE option.
- ORA-29863: warning in the execution of ODCIINDEXCREATE routine**
Cause: A warning was returned from the ODCIIndexCreate routine.
Action: Check to see if the routine has been coded correctly Check user specified log tables for greater detail.
- ORA-29864: analyzing domain indexes marked LOADING/FAILED not supported**
Cause: Tried to analyze a domain index which was marked as LOADING or FAILED.
Action: If the index was marked LOADING, wait till it is marked valid before retrying the analyze. If index was marked FAILED, drop it OR rebuild it and retry the analyze.
- ORA-29865: indextype is invalid**
Cause: The indextype is invalid.
Action: Drop and recreate the indextype.
- ORA-29866: cannot create domain index on a column of index-organized table**
Cause: Tried to create a domain index on a column of an index-organized table.
Action: Do not attempt to create a domain index on columns of an index-organized table.
- ORA-29867: cannot create a domain index on a LONG column**
Cause: The user attempted to create a domain index on a column of LONG datatype.
Action: Do not create a domain index on a LONG column.
- ORA-29868: cannot issue DDL on a domain index marked as LOADING**

Cause: Tried to issue a DROP/ALTER/TRUNCATE on a domain index in a LOADING state.

Action: Wait till the index operation completes OR issue a DROP INDEX FORCE to drop the index.

ORA-29869: cannot issue ALTER without REBUILD on a domain index marked FAILED

Cause: Tried to issue a DROP/ALTER on a domain index in a FAILED state.

Action: Truncate the table to mark the index as valid OR do ALTER INDEX REBUILD to rebuild the index.

ORA-29870: specified options are only valid for altering a domain index

Cause: Specified the ONLINE or PARAMETERS clause with a non-domain index.

Action: Reissue the statement with the correct syntax for alter.

ORA-29871: invalid alter option for a domain index

Cause: The user specified an invalid option for altering a domain index.

Action: Reissue the alter statement with a valid option.

ORA-29872: parameters clause cannot be combined with the specified options

Cause: The user combined PARAMETERS clause with other alter index options.

Action: Reissue the statement with the correct syntax for alter.

ORA-29873: warning in the execution of ODCIINDEXDROP routine

Cause: A warning was returned from the ODCIIndexDrop routine.

Action: Check to see if the routine has been coded correctly Check the user defined warning log tables for greater details.

ORA-29874: warning in the execution of ODCIINDEXALTER routine

Cause: A warning was returned from the ODCIIndexAlter routine.

Action: Check to see if the routine has been coded correctly Check the user defined warning log tables for greater details.

ORA-29875: failed in the execution of the ODCIINDEXINSERT routine

Cause: Failed to successfully execute the ODCIIndexInsert routine.

Action: Check to see if the routine has been coded correctly.

ORA-29876: failed in the execution of the ODCIINDEXDELETE routine

Cause: Failed to successfully execute the ODCIIndexDelete routine.

Action: Check to see if the routine has been coded correctly.

ORA-29877: failed in the execution of the ODCIINDEXUPDATE routine

Cause: Failed to successfully execute the ODCIIndexUpdate routine.

Action: Check to see if the routine has been coded correctly.

ORA-29878: warning in the execution of ODCIINDEXTRUNCATE routine

Cause: A warning was returned from the ODCIIndexTruncate routine.

Action: Check to see if the routine has been coded correctly Check the user defined warning log tables for greater details.

ORA-29879: cannot create multiple domain indexes on a column list using same indextype

Cause: An attempt was made to define multiple domain indexes on the same column list using identical indextypes.

Action: Check to see if a different indextype can be used or if the index can be defined on another column list.

ORA-29880: such column list already indexed using another domain index and indextype

Cause: An attempt was made to create multiple domain indexes on a column list using indextypes which do not have disjoint operators.

Action: Check to see if the operator sets for the indextypes can be made disjoint.

ORA-29881: failed to validate indextype

Cause: Indextype cannot be compiled.

Action: Try to compile the indextype which is referenced by the domain index.

ORA-29882: insufficient privileges to execute indextype

Cause: User does not have privileges to execute the indextype.

Action: The owner of the indextype must grant appropriate privileges to the user.

ORA-29883: cannot create a domain index on column expressions

Cause: User specified an expression in the column list.

Action: Specify only simple columns in the column list for domain index.

ORA-29884: domain index is defined on the column to be dropped

Cause: An ALTER TABLE DROP COLUMN was issued on a column on which a domain index exists.

Action: Drop the domain index before attempting to drop the column.

ORA-29885: domain index is defined on the column to be modified

Cause: An ALTER TABLE MODIFY COLUMN was issued on a column on which a domain index exists.

Action: Drop the domain index before attempting to modify the column.

ORA-29886: feature not supported for domain indexes

Cause: Feature is not supported for domain indexes.

Action: No action required.

ORA-29887: cannot support row movement if domain index defined on table

Cause: An ALTER TABLE ENABLE ROW MOVEMENT was issued on a table which has a domain index defined on it.

Action: Drop the domain index if you want to enable row movement and then reissue the command.

ORA-29888: cannot create domain index on a table with row movement enabled

Cause: A create domain index statement was issued on a table that has row movement enabled.

Action: Disable the row movement in the table and then reissue the create domain index statement.

ORA-29890: specified primary operator does not have an index context

Cause: The primary operator does not have an index and scan contexts.

Action: Create the primary operator with a context clause.

ORA-29892: indextypes with array DML do not support the given data type

Cause: The user specified a REF or a LONG datatype which is not supported in CREATE/ALTER INDEXTYPE WITH ARRAY DML (DATA_TYPE, VARRAY_TYPE).

Action: Reissue the CREATE/ALTER INDEXTYPE statement without the REF or LONG datatype.

ORA-29893: indextypes without column data do not need the given data type

Cause: WITH ARRAY DML (DATA_TYPE, VARRAY_TYPE) option and WITHOUT COLUMN DATA option conflicted in an alter indextype statement

Action: Reissue the ALTER INDEXTYPE statement without the conflict.

ORA-29894: base or varray datatype does not exist

Cause: One of the base and varray datatypes specified in WITH ARRAY DML (DATA_TYPE, VARRAY_TYPE) clause could not be found.

Action: Check to see if the datatype exists and the user has EXECUTE privilege on this datatype.

ORA-29895: duplicate base datatype specified

Cause: User attempted to add a base datatype to an indextype with ARRAY DML which is already supported by the indextype

Action: Remove the duplicate base datatype and retry the command

ORA-29896: Length of PARAMETER string longer than *string* characters

Cause: An attempt was made to specify a parameter value that is longer than the allowed maximum.

Action: Reduce the parameter value length.

ORA-29900: operator binding does not exist

Cause: There is no binding for the current usage of the operator.

Action: Change the operator arguments to match any of the existing bindings or add a new binding to the operator.

ORA-29901: function underlying operator binding does not exist

Cause: The function underlying the operator binding does not exist.

Action: Ensure that the function corresponding to the operator invocation exists.

ORA-29902: error in executing ODCIIndexStart() routine

Cause: The execution of ODCIIndexStart routine caused an error.

Action: Examine the error messages produced by the indextype code and take appropriate action.

ORA-29903: error in executing ODCIIndexFetch() routine

Cause: The execution of ODCIIndexFetch routine caused an error.

Action: Examine the error messages produced by the indextype code and take appropriate action.

ORA-29904: error in executing ODCIIndexClose() routine

Cause: The execution of ODCIIndexClose routine caused an error.

Action: Examine the error messages produced by the indextype code and take appropriate action.

ORA-29905: method *string* does not exist in type *string.string*

Cause: A required method with the required signature does not exist in the specified type.

Action: Add the required method to the type.

ORA-29906: indextype *string.string* does not exist

Cause: The indextype does not exist.

Action: Create the indextype.

ORA-29907: found duplicate labels in primary invocations

Cause: There are multiple primary invocations of operators with the same number as the label.

Action: Use distinct labels in primary invocations.

ORA-29908: missing primary invocation for ancillary operator

Cause: The primary invocation corresponding to an ancillary operator is missing.

Action: Add the primary invocation with the same label as the ancillary operator.

ORA-29909: label for the ancillary operator is not a literal number

Cause: The label used for invoking the ancillary operator is not a literal number.

Action: Use a literal number as the label.

ORA-29910: invalid callback operation

Cause: Encountered an invalid callback operation.

Action: Ensure that all the callbacks executed from callouts are valid in the statement context.

ORA-29911: null scan context returned by ODCIIndexStart() routine

Cause: The ODCIIndexStart() routine returned a null scan context

Action: Ensure that the ODCIIndexStart() routine returns a non-null scan context.

ORA-29913: error in executing *string* callout

Cause: The execution of the specified callout caused an error.

Action: Examine the error messages take appropriate action.

ORA-29914: ODCIGETINTERFACES routine does not return required stream version

Cause: The ODCIObjectList returned by the ODCIGetInterfaces routine does not contain the required stream version for external tables.

Action: Ensure that the ODCIGetInterfaces routine returns the required stream version.

ORA-29915: cannot select FOR UPDATE from collection operand

Cause: Collection operands cannot be updated

Action: Remove FOR UPDATE clause

ORA-29917: cannot lock a table which gets its rows from a collection operand

Cause: Tables which gets its rows from a collection operand cannot be locked

Action: Don't lock the table

ORA-29918: cannot create domain indexes on temporary tables

-
- Cause:** An attempt was made to create a domain index on a temporary table
- Action:** Either create another type of index on the temporary table or change the table from temporary to a permanent table
- ORA-29919: failed in the execution of the ODCIINDEXUPDPARTMETADATA routine**
- Cause:** Failed to successfully execute the ODCIINDEXUPDPARTMETADATA routine.
- Action:** Check to see if the routine has been coded correctly.
- ORA-29920: failed in the partition maintenance operation of secondary table**
- Cause:** Failed to successfully execute the partition maintenance operation of a secondary table in system managed domain index.
- Action:** Check to see if the partition of a secondary table exists.
- ORA-29921: Ancillary operator not supported with set view query block**
- Cause:** Outer view query block contains ancillary operator and view query block contains union all.
- Action:** Define the union-all view query to contain the primary and ancillary query terms. i.e. have the operators within the view definition rather than in the query outside the view.
- ORA-29922: Invalid rowid returned by the user-defined query methods**
- Cause:** An invalid row identifier was returned by the user-defined query methods.
- Action:** Check the implementation of the indextype methods to make sure that the index creation and query methods are correct.
- ORA-29925: cannot execute *string***
- Cause:** The specified function does not exist or does not have an appropriate signature.
- Action:** Implement the function with the appropriate signature.
- ORA-29926: association already defined for the object**
- Cause:** The object for which the association is being defined, already has a statistics type associated with it.
- Action:** Disassociate the object and then associate the object.
- ORA-29927: error in executing the ODCIStatsCollect / ODCIStatsDelete routine**
- Cause:** The ODCIStatsCollect / ODCIStatsDelete function is causing an error.
- Action:** Check the ODCIStatsCollect / ODCIStatsDelete function.
- ORA-29928: duplicate default selectivity specified**
- Cause:** The keyword DEFAULT SELECTIVITY can only be specified once.
- Action:** Remove the duplicate keyword.
- ORA-29929: missing SCAN Keyword**
- Cause:** The scan context is not specified.
- Action:** Supply the SCAN keyword.
- ORA-29930: COMPUTE ANCILLARY DATA specified without the INDEX CONTEXT clause**

Cause: The COMPUTE ANCILLARY DATA option was specified without the WITH INDEX CONTEXT clause.

Action: Specify the WITH INDEX CONTEXT option.

ORA-29931: specified association does not exist

Cause: One or more of the object(s) that have been specified to be disassociated, do not have an association defined for them.

Action: Verify the objects which have an association defined and issue the disassociate command again.

ORA-29932: the type being dropped is a statistics type

Cause: Some objects have defined their statistics methods in the type being dropped.

Action: First drop the relevant associations using the DISASSOCIATE command and then retry the DROP command, or use the FORCE option with DROP TYPE command.

ORA-29933: object being disassociated has some user defined statistics stored

Cause: There are some user defined statistics collected for the object being disassociated.

Action: First delete the user defined statistics and then reissue the DISASSOCIATE command or specify the FORCE option with DISASSOCIATE.

ORA-29934: index specified for association is not a domain index

Cause: The user issued an ASSOCIATE STATISTICS command with an index which is not a domain index.

Action: Issue an ASSOCIATE STATISTICS WITH INDEXES command on a domain index only

ORA-29935: missing FROM keyword

Cause: The keyword FROM is missing.

Action: Specify the FROM keyword or check the SQL statement.

ORA-29936: NULL association is allowed only with a column or an index

Cause: User tried to use the ASSOCIATE command with a schema object other than a column or an index

Action: Specify the NULL clause only with a column or an index

ORA-29937: domain index cannot be system-managed

Cause: An ASSOCIATE STATISTICS command was issued with a domain index which is system-managed.

Action: Check to see if the domain index has been implemented with system-managed storage tables. To associate statistics with a system-managed domain index, issue ASSOCIATE STATISTICS command with the indextype of this domain index.

ORA-29938: both indextype and statistics type should be system-managed

Cause: Either an ASSOCIATE STATISTICS WITH SYSTEM MANAGED STORAGE TABLES command was issued with an indextype which is not system-managed, or an ASSOCIATE STATISTICS command was issued with an indextype which is system-managed.

Action: Check to see if both indextype and statistics type are implemented with system-managed storage tables.

ORA-29939: could not implicitly transform user-managed domain index to system-managed domain index

Cause: Implicit validation of a user-managed domain index with a system-managed indextype failed.

Action: Issue an ALTER INDEX COMPILE command on the domain index.

ORA-29950: warning in the execution of ODCIINDEXMERGEPARTITION routine

Cause: A warning was returned from the ODCIIndexMergePartition routine.

Action: Check to see if the routine has been coded correctly Check user specified log tables for greater detail.

ORA-29951: warning in the execution of ODCIINDEXSPLITPARTITION routine

Cause: A warning was returned from the ODCIIndexSplitPartition routine.

Action: Check to see if the routine has been coded correctly Check user specified log tables for greater detail.

ORA-29952: cannot issue DDL on a domain index partition marked as LOADING

Cause: Tried to issue a DROP/ALTER/TRUNCATE on a domain index partition in a LOADING state.

Action: Wait till the index partition operation completes OR issue a DROP INDEX FORCE to drop the index OR issue a ALTER TABLE DROP PARTITION to drop the partition.

ORA-29953: cannot issue DDL on a domain index partition marked as FAILED

Cause: Tried to issue a DROP/ALTER on a domain index partition in a FAILED state.

Action: do ALTER INDEX REBUILD PARTITION to rebuild the index partition OR ALTER TABLE TRUNCATE PARTITION to mark the index partition as valid.

ORA-29954: domain index partition is marked LOADING/FAILED/UNUSABLE

Cause: An attempt has been made to access a domain index that is being built or is marked failed by an unsuccessful DDL or is marked unusable by a DDL operation.

Action: Wait if the specified index partition is marked LOADING Rebuild the specified index partition if it is marked FAILED or UNUSABLE.

ORA-29955: error occurred in the execution of ODCIINDEXEXCHANGEPARTITION routine

Cause: Failed to successfully execute the ODCIIndexExchangePartition routine.

Action: Check to see if the routine has been coded correctly.

ORA-29956: warning in the execution of ODCIINDEXEXCHANGEPARTITION routine

Cause: A warning was returned from the ODCIIndexExchangePartition routine.

Action: Check to see if the routine has been coded correctly Check user specified log tables for greater detail.

ORA-29957: cannot create a function-based domain index on a *string* table

Cause: User specified an unsupported create function-based domain index statement.

Action: Issue the create function-based domain index statement only on supported types of tables.

ORA-29958: fatal error occurred in the execution of ODCIINDEXCREATE routine

Cause: Failed to successfully execute the ODCIIndexCreate routine.

Action: Check to see if the routine has been coded correctly.

ORA-29959: error in the execution of the *string* routine for one or more of the index partitions

Cause: An error occurred during execution of the routine for one or more of the index partitions

Action: Check the *_IND_PARTITIONS view to see which partitions are marked FAILED. Rebuild or Truncate the FAILED index partitions

ORA-29960: line *string*, *string*

Cause: The ODCIIndex DDL routine has put a warning message into table SYS.ODCI_WARNINGS\$

Action: Check the warning message

ORA-29961: too many warnings occurred in the execution of ODCIIndex DDL routine

Cause: The number of warnings during the ODCIIndex DDL routine is too high.

Action: Query table SYS.ODCI_WARNINGS\$ to get more warning messages

ORA-29962: fatal error occurred in the execution of ODCIINDEXALTER routine

Cause: Failed to successfully execute the ODCIIndexAlter routine.

Action: Check to see if the routine has been coded correctly.

ORA-29963: missing BINDING keyword

Cause: Keyword BINDING is expected .

Action: Specify the BINDING keyword or check the SQL statement.

ORA-29964: missing ADD or DROP keyword

Cause: One of the keywords ADD or DROP is expected.

Action: Specify the ADD or DROP keyword or check the SQL statement.

ORA-29965: The specified binding does not exist

Cause: The binding specified in the DROP BINDING clause is not a valid binding for this operator.

Action: Specify an existing binding for this op in DROP BINDING clause.

ORA-29966: The only binding of an operator cannot be dropped

Cause: This operator only has one binding. It cannot be dropped using Alter Operator Drop Binding.

Action: If you wish to drop the entire operator, call Drop Operator.

ORA-29967: Cannot drop an operator binding with dependent objects

Cause: The operator binding that is being dropped has dependent objects.

Action: Either drop the dependent objects first and then issue the ALTER OPERATOR DROP BINDING command or specify the FORCE option with ALTER OPERATOR DROP BINDING.

ORA-29968: No primary operator bindings found for ancillary binding #string

Cause: At least one ancillary binding of the specified operator could not be validated because all of its associated primary operator bindings have been dropped.

Action: Either drop the ancillary binding whose primary operators are missing, or drop the entire operator, if this is the only binding. This binding cannot be re-validated.

ORA-29970: Specified registration id does not exist

Cause: An incorrect regid value was passed to dbms_chnf procedure.

Action: pass the correct regid value.

ORA-29971: Specified table name not found or does not have any registrations

Cause: The database could not locate the passed in table name

Action: Check the table name passed in.

ORA-29972: user does not have privilege to change/ create registration

Cause: User passed in an incorrect or someone else's regid/ handle.

Action: Check the passed in regid/ reg handle

ORA-29973: Unsupported query or operation during change notification registration

Cause: The user attempted to register an unsupported query type or an unsupported operation like a DML/DDI for change notification.

Action: Please check the statement being executed and refer to the documentation.

ORA-29975: Cannot register a query in the middle of an active transaction

Cause: User tried to register a query within an uncommitted transaction.

Action: Commit the transaction and retry.

ORA-29976: Unsupported query for registration in guaranteed mode

Cause: An operator or expression in the query was incompatible with query registration in the guaranteed granularity mode.

Action: Check all expressions, clauses and operators in the query and refer to the documentation for supported query types. The application can reattempt the query registration in best effort mode.

ORA-29977: Unsupported column type for query registration in guaranteed mode

Cause: An attempt was made to register a query with an unsupported column type or too many columns.

Action: Examine all column datatypes in the expression and refer to the documentation for supported query types. The application can reattempt the query registration in best effort mode.

ORA-29979: Query registration not supported at current compatible setting

Cause: An attempt was made to register a query with the database compatible setting lower than 11.

Action: Increase the database compatible setting to 11.0.0.0

ORA-29981: Cannot register query: conflicting DDL in progress

Cause: A query registration was attempted while there was a concurrent DDL in progress.

Action: Retry the query registration.

ORA-29982: Table type not supported for query registration in guaranteed mode

Cause: The user attempted to register a query involving an unsupported table type.

Action: Examine all tables in the query registration and refer to the documentation for supported table types. The application can reattempt registration in best effort mode.

ORA-29983: Unsupported query for Continuous Query Notification

Cause: The query cannot be registered for Continuous Query Notification.

Action: The query has some constructs that make it incompatible with Continuous Query Notification like synonyms or views. Please check the documentation for complete list.

ORA-29985: Query Registration is only supported for automatic undo management

Cause: User is using manual undo management

Action: Switch to using automatic undo management

ORA-29990: Cannot complete operation because of cross-instance issue

Cause: The operation attempted by the user could not be completed because of a cross-instance issue (for example, an instance died).

Action: Retry the operation.

ORA-30000: missing either trim specification or char expression in TRIM

Cause: Since FROM is specified in TRIM function, either trim specification (TRAILING, LEADING, BOTH) or trim character or both must be specified.

Action: Add either trim specification (TRAILING, LEADING, BOTH) or trim character or both.

ORA-30001: trim set should have only one character

Cause: Trim set contains more or less than 1 character. This is not allowed in TRIM function.

Action: Change trim set to have only 1 character.

ORA-30002: SYS_CONNECT_BY_PATH function is not allowed here

Cause: SYS_CONNECT_BY_PATH function was called at places other than the SELECT list and ORDER BY clause.

Action: Remove calls to SYS_CONNECT_BY_PATH function at places other than the SELECT list and ORDER BY clause.

ORA-30004: when using SYS_CONNECT_BY_PATH function, cannot have separator as part of column value

Cause: A column value contained the string that the SYS_CONNECT_BY_PATH function was to use to separate column values.

Action: Specify another separator for the SYS_CONNECT_BY_PATH function to use which does not occur in any column value, then retry.

ORA-30005: missing or invalid WAIT interval

Cause: A non-zero integer must be specified for wait interval (in seconds) after the WAIT keyword.

Action: Correct the syntax and retry.

ORA-30006: resource busy; acquire with WAIT timeout expired

Cause: The requested resource is busy.

Action: Retry the operation later.

ORA-30007: CONNECT BY ROOT operator is not supported in the START WITH or in the CONNECT BY condition

Cause: An attempt was made to use CONNECT BY ROOT operator in the START WITH or in the CONNECT BY condition.

Action: Remove CONNECT BY ROOT operator from the START WITH or from the CONNECT BY condition.

ORA-30008: CONNECT BY clause must reference a PRIOR

Cause: A CONNECT BY clause did not include a predicate referencing a PRIOR so there was no condition connecting a parent row to its child row.

Action: Add a reference to a PRIOR in the CONNECT BY clause.

ORA-30009: Not enough memory for *string* operation

Cause: The memory size was not sufficient to process all the levels of the hierarchy specified by the query.

Action: In WORKAREA_SIZE_POLICY=AUTO mode, set PGA_AGGREGATE_TARGET to a reasonably larger value. Or, in WORKAREA_SIZE_POLICY=MANUAL mode, set SORT_AREA_SIZE to a reasonably larger value.

ORA-30010: Not enough I/O buffers for the sort operation

Cause: The sort was unable to allocate enough I/O buffers.

Action: Increase the amount of memory allowed for the sort or increase the maximum number of I/O buffers allowed in the system and retry the query.

ORA-30011: Error simulated: *psite=string*, *pctype=string*

Cause: error generated for testing purposes.

Action: None

ORA-30012: undo tablespace '*string*' does not exist or of wrong type

Cause: the specified undo tablespace does not exist or of the wrong type.

Action: Correct the tablespace name and reissue the statement.

ORA-30013: undo tablespace '*string*' is currently in use

Cause: the specified undo tablespace is currently used by another instance.

Action: Wait for the undo tablespace to become available or change to another name and reissue the statement.

ORA-30014: operation only supported in Automatic Undo Management mode

Cause: the operation is only supported in automatic undo mode.

Action: restart instance in Automatic Undo Management mode before retrying operation.

ORA-30015: previously offlined undo tablespace '*string*' is still pending

Cause: the current operation is not allowed because an undo tablespace containing active transactions is pending from a previous SWITCH UNDO operation. The operation will be allowed again after all transactions in the previous undo tablespace are committed.

Action: Wait for all previous transactions to commit before reissuing the current statement.

ORA-30016: undo tablespace '*string*' is already in use by this instance

Cause: the specified undo tablespace is currently used by this instance. The operation failed.

Action: If the specified undo tablespace name is wrong, reissue the statement with the correct name.

ORA-30017: segment '*string*' is not supported in *string* Undo Management mode

Cause: the type of the specified undo segment is incompatible with the current undo management mode of the instance.

Action: Check the undo segment name and the undo management mode and reissue statement if necessary.

ORA-30018: Create Rollback Segment failed, USN *string* is out of range

Cause: the system runs out of undo segment number. Too many undo segments exist.

Action: drop some of the unused undo segments and retry operation.

ORA-30019: Illegal rollback Segment operation in Automatic Undo mode

Cause: This operation only allowed in Manual Undo mode.

Action: restart instance in Manual Undo_Management mode and retry operation.

ORA-30021: Operation not allowed on undo tablespace

Cause: This operation is not allowed on undo tablespaces

Action: Check the tablespace name and reissue command if necessary

ORA-30022: Cannot create segments in undo tablespace

Cause: Cannot create segments in undo tablespace

Action: Check the tablespace name and reissue command

ORA-30023: Duplicate undo tablespace specification

Cause: Cannot create more than one undo tablespace during database creation

Action: Modify the command to contain only one undo tablespace

ORA-30024: Invalid specification for CREATE UNDO TABLESPACE

Cause: You have specified an clause that should not used with CREATE UNDO TABLESPACE

Action: Drop the clause from the command and reissue it.

ORA-30025: DROP segment '*string*' (in undo tablespace) not allowed

Cause: Explicit DROP operation is not allowed on undo tablespace segments

Action: Check the undo segment name and reissue statement if necessary.

ORA-30026: Undo tablespace '*string*' has unexpired undo with *string*(sec) left, Undo_Retention=*string*(sec)

Cause: Tried to drop a tablespace that contains unexpired undo information

Action: lower setting of UNDO_RETENTION or wait a while before reissue command to drop undo tablespace

ORA-30027: Undo quota violation - failed to get *string* (bytes)

Cause: the amount of undo assigned to the consumer group of this session has been exceeded.

Action: ask DBA to increase undo quota, or wait until other transactions to commit before proceeding.

ORA-30029: no active undo tablespace assigned to instance

Cause: the current instance does not have an active undo tablespace assigned to execute transactions.

Action: ask DBA to create an undo tablespace, online the undo tablespace and then retry operation.

ORA-30031: the suspended (resumable) statement has been aborted

Cause: DBA or the user aborted the execution of the suspended statement in the resumable session

Action: None

ORA-30032: the suspended (resumable) statement has timed out

Cause: A correctible error was signaled in the resumable session and the error was not cleared within the timeout interval.

Action: Fix the correctible error within the timeout. Default is 2 hours. Or increase the (resumable) timeout.

ORA-30033: Undo tablespace cannot be specified as default user tablespace

Cause: It is incorrect to specify undo tablespace as default user tablespace

Action: Check the tablespace name and reissue the command

ORA-30034: Undo tablespace cannot be specified as temporary tablespace

Cause: Undo tablespace cannot be specified as default temporary tablespace for the user

Action: Check the tablespace name and reissue the command

ORA-30035: Undo tablespace cannot be specified as default temporary tablespace

Cause: Undo tablespace cannot be specified as default temporary tablespace for the database

Action: Check the tablespace name and reissue the command

ORA-30036: unable to extend segment by *string* in undo tablespace '*string*'

Cause: the specified undo tablespace has no more space available.

Action: Add more space to the undo tablespace before retrying the operation. An alternative is to wait until active transactions to commit.

ORA-30037: Cannot perform parallel DML after a prior DML on the object

Cause: Attempt to perform parallel DML after another DML on the same object in the same transaction.

Action: Use bitmap segments to perform multiple (parallel) DML operations on the same object. Or commit before issuing the DML

ORA-30038: Cannot perform parallel insert on non-partitioned object

Cause: Attempt to perform parallel insert on a non-partitioned object after a previous DML on the object in the same transaction.

Action: Commit before issuing the insert.

ORA-30039: Cannot drop the undo tablespace

Cause: Cannot drop an undo tablespace that is in use

Action: Switch to a different undo tablespace and then try to drop

ORA-30040: Undo tablespace is offline

Cause: Cannot operate on an offlined undo tablespace

Action: Online the undo tablespace and redo the operation

ORA-30041: Cannot grant quota on the tablespace

Cause: User tried to grant quota on an undo or temporary tablespace

Action: Check the tablespace name and reissue the command

ORA-30042: Cannot offline the undo tablespace

Cause: Cannot offline an undo tablespace that is in use

Action: Switch to a different undo tablespace and then try to offline

ORA-30043: Invalid value '*string*' specified for parameter 'Undo_Management'

Cause: the specified undo management mode is invalid

Action: Correct the parameter value in the initialization file and retry the operation.

ORA-30044: 'Retention' can only specified for undo tablespace

Cause: An attempt was made to specify retention for a non-undo tablespace.

Action: Modify the CREATE TABLESPACE statement.

ORA-30045: No undo tablespace name specified

Cause: If Create Database has the datafile clause, then undo tablespace name has to be specified, unless using OMF.

Action: Specify the undo tablespace name.

ORA-30046: Undo tablespace *string* not found in control file.

Cause: The specified undo tablespace is not present in the control file.

Action: Modify the CREATE CONTROLFILE statement that created the current control file to include undo tablespace(s) and reissue the statement.

ORA-30051: VERSIONS clause not allowed here

Cause: A VERSIONS clause was specified when it was not allowed.

Action: Do not use the VERSIONS clause

ORA-30052: invalid lower limit snapshot expression

Cause: The lower limit snapshot expression was below the UNDO_RETENTION limit.

Action: Specify a valid lower limit snapshot expression.

ORA-30053: invalid upper limit snapshot expression

Cause: The upper limit snapshot expression is greater than the SQL statement read snapshot.

Action: Specify a valid upper limit snapshot expression.

ORA-30054: invalid upper limit snapshot expression

Cause: The upper limit snapshot expression is less than the lower limit snapshot expression.

Action: Specify a valid upper limit snapshot expression.

ORA-30055: NULL snapshot expression not allowed here

Cause: The snapshot expression is NULL.

Action: Specify a non-NULL snapshot expression.

ORA-30071: conversion between datetime/interval and string fail

Cause: An error occurs during a conversion between datetime/interval and string data type due to one of the following reasons:

- The buffer is too short to hold the result.
- The format string is bad.

Action: None

ORA-30072: invalid time zone value

Cause: The value specified for the time zone string, which appears in ALTER SESSION statement, environment variable ORA_SDTZ, or a datetime factor, is not valid.

Action: None

ORA-30073: invalid adjustment value

Cause: The value is none of the followings: 'ADJUST', 'NO_ADJUST', 'ANSI_DATE', 'ADJUST_WITH_ANSI_DATE'. 'NO_ADJUST' is the default value.

Action: set it to one of the three values

ORA-30074: GLOBAL partitioned index on TIME/TIMESTAMP WITH TIME ZONE not allowed

Cause: try to GLOBAL partitioned index on TIME/TIMESTAMP WITH TIME ZONE.

Action: Do not GLOBAL partitioned index on TIME/TIMESTAMP WITH TIME ZONE.

ORA-30075: TIME/TIMESTAMP WITH TIME ZONE literal must be specified in CHECK constraint

Cause: User is trying to create a constraint on a time or timestamp with or without time zone column without explicitly specifying the time zone.

Action: Use time or timestamp with time zone literals only.

ORA-30076: invalid extract field for extract source

Cause: The extract source does not contain the specified extract field.

Action: None

ORA-30077: illegal casting between specified datetime types

Cause: Cannot cast between the specified datetime types.

Action: None

ORA-30078: partition bound must be TIME/TIMESTAMP WITH TIME ZONE literals

Cause: An attempt was made to use a time/timestamp expression whose format does not explicitly have time zone on a TIME/TIMESTAMP or TIME/TIMESTAMP WITH TIME ZONE column.

Action: Explicitly use TIME/TIMESTAMP WITH TIME ZONE literal.

ORA-30079: cannot alter database timezone when database has TIMESTAMP WITH LOCAL TIME ZONE columns

Cause: An attempt was made to alter database timezone with TIMESTAMP WITH LOCAL TIME ZONE column in the database.

Action: Either do not alter database timezone or first drop all the TIMESTAMP WITH LOCAL TIME ZONE columns.

ORA-30081: invalid data type for datetime/interval arithmetic

Cause: The data types of the operands are not valid for datetime/interval arithmetic.

Action: None

ORA-30082: datetime/interval column to be modified must be empty to decrease fractional second or leading field precision

Cause: datetime/interval column with existing data is being modified to decrease fractional second or leading field precisions.

Action: Such columns are only allowed to increase the precisions.

ORA-30083: syntax error was found in interval value expression

Cause: A syntax error was found during parsing an interval value value expression.

Action: Correct the syntax.

ORA-30084: invalid data type for datetime primary with time zone modifier

Cause: When a time zone modifier is specified, the data type of datetime primary must be one of the following: TIME, TIME WITH TIME ZONE, TIMESTAMP, TIMESTAMP WITH TIME ZONE.

Action: None

ORA-30085: syntax error was found in overlaps predicate

Cause: A syntax error was found during parsing an overlaps predicate.

Action: Correct the syntax.

ORA-30086: interval year-month result not allowed for datetime subtraction

Cause: An attempt was made to specify interval year to month as the result of datetime subtraction.

Action: This is not allowed currently due to unclear specification in SQL Standards for this interval type. Change the interval type to interval day to second and resubmit statement.

ORA-30087: Adding two datetime values is not allowed

Cause: An attempt was made to add two datetime values.

Action: This addition is not allowed.

ORA-30088: datetime/interval precision is out of range

Cause: The specified datetime/interval precision was not between 0 and 9.

Action: Use a value between 0 and 9 for datetime/interval precision.

ORA-30089: missing or invalid <datetime field>

Cause: A <datetime field> (YEAR, MONTH, DAY, HOUR, MINUTE, SECOND) is expected but not found, or a <datetime field> specified the <end field> in an <interval qualifier> is more significant than its <start field>.

Action: None

ORA-30091: secondary translation table not loaded

Cause: The secondary translation table for DST patching on TSTZ data was not loaded.

Action: Load the secondary translation table.

ORA-30092: function not allowed at this stage of DST upgrade process

Cause: Query included a function that is not allowed in the current state of DST upgrade process.

Action: This function is not allowed at the current stage of DST upgrade.

ORA-30093: function not allowed until the database is restarted

Cause: Query included a function that is not allowed until the database is restarted.

Action: Shut down and restart the database.

ORA-30094: failed to find the time zone data file for version *string* in \$ORACLE_HOME/oracore/zoneinfo

Cause: There was no corresponding time zone data file in \$ORACLE_HOME/oracore/zoneinfo for the input time zone version.

Action: None

ORA-30100: internal error [*number*]

Cause: An internal error has occurred.

Action: Contact Oracle Worldwide Support and report the error.

ORA-30101: unknown parameter name '*string*'

Cause: You have misspelled the parameter name.

Action: Spell the parameter name correctly.

ORA-30102: '*string*' is not in the legal range for '*string*'

Cause: The value of the parameter is not within the legal range.

Action: Refer to the manual for the allowable values for this parameter.

ORA-30103: '*string*' contains an illegal integer radix for '*string*'

Cause: An illegal integer radix specification was found.

Action: Only 'd', 'h', 'D', and 'H' may be used as radix specifications.

ORA-30104: '*string*' is not a legal integer for '*string*'

Cause: The value is not a valid integer.

Action: Specify only valid integers for this parameter.

ORA-30105: '*string*' is not a legal boolean for '*string*'

Cause: The value is not a valid boolean.

-
- Action:** Refer to the manual for allowable boolean values.
- ORA-30107: parameter name abbreviation '*string*' is not unique**
Cause: The abbreviation given was not unique.
Action: Use a longer abbreviation to make the parameter name unique.
- ORA-30108: invalid positional parameter value '*string*'**
Cause: An invalid positional parameter value has been entered.
Action: Remove the invalid positional parameter.
- ORA-30109: could not open parameter file '*string*'**
Cause: The parameter file does not exist.
Action: Create an appropriate parameter file.
- ORA-30110: syntax error at '*string*'**
Cause: A syntax error was detected.
Action: Change the input so that the correct syntax is used.
- ORA-30111: no closing quote for value '*string*'**
Cause: A quoted string was begun but not finished.
Action: Put a closing quote in the proper location.
- ORA-30112: multiple values not allowed for parameter '*string*'**
Cause: You attempted to specify multiple values for a parameter which can take only one value.
Action: Do not specify more than one value for this parameter.
- ORA-30113: error when processing file '*string*'**
Cause: A problem occurred when processing this file.
Action: Examine the additional error messages and correct the problem.
- ORA-30114: error when processing from command line**
Cause: A problem occurred when processing the command line.
Action: Examine the additional error messages and correct the problem.
- ORA-30115: error when processing an environment variable**
Cause: A problem occurred when processing an environment variable.
Action: Examine the additional error messages and correct the problem.
- ORA-30116: syntax error at '*string*' following '*string*'**
Cause: A syntax error was detected.
Action: Change the input so that the correct syntax is used.
- ORA-30117: syntax error at '*string*' at the start of input**
Cause: A syntax error was detected.
Action: Change the input so that the correct syntax is used.
- ORA-30118: syntax error at '*string*' at the end of input**
Cause: A syntax error was detected.
Action: Change the input so that the correct syntax is used.

-
- ORA-30119: unable to obtain a valid value for 'string'**
Cause: No valid value was obtained for this parameter.
Action: Rerun the application and enter a valid value.
- ORA-30120: 'string' is not a legal oracle number for 'string'**
Cause: The value is not a valid oracle number.
Action: Refer to the manual for allowable oracle number values.
- ORA-30121: 'string' is not an allowable value for 'string'**
Cause: The value is not a legal value for this parameter.
Action: Refer to the manual for allowable values.
- ORA-30122: value 'string' for 'string' must be between 'number' and 'number'**
Cause: The value of the parameter is not within the legal range.
Action: Specify a value that is within the legal range.
- ORA-30129: invalid function argument received**
Cause: A function received an invalid argument
Action: Check function calls, make sure correct arguments are being passed.
- ORA-30130: invalid parameter key type received**
Cause: A function received an invalid parameter key type
Action: Check parameter key types in function calls
- ORA-30131: number of keys being set exceeds allocation**
Cause: Number of parameter keys being set exceeds allocation
Action: Reduce the number of keys being set or increase allocation
- ORA-30132: invalid key index supplied**
Cause: The key index specified was not within bounds
Action: Change key index to ensure it lies within bounds
- ORA-30135: OCI Thread operation fails**
Cause: An OCI Thread function call has failed.
Action: Check the function call to make sure that the correct parameters are being passed and take the appropriate action.
- ORA-30136: Drop-in compatibility is not supported for this application**
Cause: The current application is statically linked with defopt.o from an older release, which is incompatible with the current client shared library.
Action: 1) Relink the application against the new release of the client library; or 2) Relink the application against the older release of the client library without statically linking defopt.o.
- ORA-30150: Invalid argument passed to OCIFile function**
Cause: An invalid argument is passed to the OCIFile function. The most common cause is that a NULL pointer is passed where a non-NULL pointer is expected.
Action: Make sure that the values passed as arguments are valid. Esp check for NULL pointers.
- ORA-30151: File already exists**

Cause: Tried to open a file with OCI_FILE_EXCL flag and the file already exists.

Action: OCIFile is supposed throw this exception in this case.

ORA-30152: File does not exist

Cause: The OCIFile function requires the file to exist, but it does not.

Action: Make sure that the file exists.

ORA-30153: An invalid File Object is passed to the OCIFile function

Cause: An invalid File Object is passed to the OCIFile function.

Action: Make sure that the file object is a valid one. Create a new file object by calling OCIFileOpen if needed.

ORA-30154: The memory address given as buffer for OCIFileRead/Write is invalid

Cause: An invalid memory address is given as the buffer pointer for OCIFileRead/Write.

Action: Make sure that the required memory is allocated and pass a valid memory address as buffer pointer.

ORA-30155: An I/O Error occurred during an OCIFile function call

Cause: An I/O error occurred at the system level.

Action: This is a system error and the action will depend on the error.

ORA-30156: Out of disk space

Cause: The disks associated with the underlying file system are full.

Action: Create more disk space.

ORA-30157: An invalid argument was given to operating system call

Cause: The OS call was called with an invalid argument.

Action: Check the values passed. If unsuccessful to solve the problem contact ORACLE support.

ORA-30158: The OCIFileWrite causes the file to exceed the maximum allowed size

Cause: There is no space to write to the file. Its size is at the maximum limit.

Action: Up to the user.

ORA-30159: OCIFileOpen: Cannot create the file or cannot open in the requested mode

Cause: The create flag was specified in OCIFileOpen such that the file was to be created. But unable to do so. Or the file already exists and the permissions on it doesn't allow the file to be opened in in the requested open mode

Action: Check whether the user has permissions to create the specified file or if the file exists whether the permissions on it allow the requested open mode.

ORA-30160: Unable to access the file

Cause: The function was unable to access the existing file.

Action: Check if the user has the required permissions on the file.

ORA-30161: A system error occurred during the OCIFile function call

Cause: A system error occurred while executing the OCIFile function.

Action: Depend on the error.

ORA-30162: The OCIFile context is not initialized

Cause: The function OCIFileInit need to be called before calling any other OCIFile function to initialize the OCIFile context.

Action: Call the function OCIFileInit need to be called before calling any other OCIFile function.

ORA-30163: The thread safety initialization failed

Cause: The call to SlgInit failed in OCIFileInit.

Action: Contact support

ORA-30175: invalid type given for an argument

Cause: There is an argument with an invalid type in the argument list.

Action: Use the correct type wrapper for the argument.

ORA-30176: invalid format code used in the format string

Cause: There is an invalid format code in the format string.

Action: Replace the invalid format code with a valid one.

ORA-30177: invalid flag used in a format specification

Cause: There is an invalid flag in a format specification.

Action: Replace the invalid flag with a valid one.

ORA-30178: duplicate flag used in a format specification

Cause: There is a duplicate flag in a format specification.

Action: Remove the duplicate flag.

ORA-30179: invalid argument index used in a format code

Cause: Zero or negative argument index or index not following (."

Action: Replace the invalid argument index with a valid one.

ORA-30180: argument index is too large

Cause: An argument index exceeds actual number of arguments supplied.

Action: Fix format string or pass additional arguments.

ORA-30181: integer in argument index is not immediately followed by)

Cause: Missing closing parenthesis in argument index.

Action: Fix the format specification.

ORA-30182: invalid precision specifier

Cause: Period in format specification not followed by valid format.

Action: Replace the invalid precision specifier with a valid one.

ORA-30183: invalid field width specifier

Cause: Invalid field width supplied.

Action: Replace the invalid field width with a valid one.

ORA-30184: argument type not compatible with a format code

Cause: Bad argument type given for a format code.

Action: Make format and arguments be compatible.

ORA-30185: output too large to fit in the buffer

Cause: The buffer is not large enough to hold the entire output string.

Action: Fix the buffer size and length passed in.

ORA-30186: '\ ' must be followed by four hexadecimal characters or another '\ '

Cause: In the argument of SQL function UNISTR, a " must be followed by four hexadecimal characters or another "

Action: Fix the string format

ORA-30191: missing argument list

Cause: No argument list supplied.

Action: Modify the argument list to have at least OCIFormatEnd in it.

ORA-30200: Wrong NLS item was passed into OCINlsGetInfo()

Cause: The item is not supported NLS item

Action: Correct the item number passed to OCINlsGetInfo().

ORA-30201: Unable to load NLS data object

Cause: It may be caused by invalid NLS environment setting

Action: Check your NLS environment setting such as ORA_NLS33

ORA-30202: NULL pointer to OCIMsgh was passed to OCIMsg function

Cause: The NULL pointer was passed.

Action: Check your value of OCIMsgh pointer.

ORA-30203: Cannot open message file

Cause: The message may not exist in your system.

Action: Check your message for the given product and facility.

ORA-30204: buffer is not large enough

Cause: The destination buffer is not large enough for storing converted data.

Action: Check the size of the destination buffer.

ORA-30205: invalid Character set

Cause: The specified character set is invalid.

Action: Check if the character set ID is valid.

ORA-30331: summary does not exist

Cause: A non-existent summary name was specified.

Action: Check the spelling of the summary name.

ORA-30332: container table already in use by other summary

Cause: Another summary is already using this table as a container table.

Action: Select another table or materialized view as the container table for this summary.

ORA-30333: dimension does not exist

Cause: The dimension named in a dimension DDL statement does not exist.

Action: Check the spelling of the dimension name.

ORA-30334: illegal dimension level name

Cause: A level name in a dimension ddl statement did not conform to SQL identifier rules.

Action: Use a level name that begins with a letter, consists of only letters, digits, and underscores and contains no more than 30 characters.

ORA-30335: JOIN KEY clause references a level not in this hierarchy

Cause: The level name specified with the REFERENCES portion of a JOIN KEY clause in a dimension DDL statement does not reference a level in the hierarchy that contains the JOIN KEY clause. *Action: Check the spelling of the level name.

Action: None

ORA-30336: no child for specified JOIN KEY

Cause: The level specified in the REFERENCES portion of a JOIN KEY clause in a dimension DDL statement does not have a child level.

Action: Check the spelling of the level name referenced in the JOIN KEY clause. If the referenced level is the first level in the hierarchy, you need not and must not specify a JOIN KEY clause.

ORA-30337: multiple JOIN KEY clauses specified for the same parent level

Cause: Multiple JOIN KEY clauses were specified for a given parent level in a dimension hierarchy.

Action: Match up each JOIN KEY clause with the level it references in the hierarchy. Eliminate the redundant JOIN KEY clause.

ORA-30338: illegal dimension hierarchy name

Cause: An illegal dimension hierarchy name was specified in a dimension DDL statement.

Action: Make sure the name begins with a letter, contains only letters, digits and underscore and contains no more than 30 characters. If you qualify the name with the owner name, make sure the owner name conforms with the requirements for an owner name on your system.

ORA-30339: illegal dimension attribute name

Cause: An illegal dimension attribute name was specified in a dimension DDL statement.

Action: Make sure the name begins with a letter, contains only letters, digits and underscore and contains no more than 30 characters. If you qualify the name with the owner name, make sure the owner name conforms with the requirements for an owner name on your system.

ORA-30340: illegal dimension name

Cause: An illegal dimension name was specified in a dimension DDL statement.

Action: Make sure the name begins with a letter, contains only letters, digits and underscore and contains no more than 30 characters. If you qualify the name with the owner name, make sure the owner name conforms with the requirements for an owner name on your system.

ORA-30341: dropped level has references

Cause: An attempt was made to drop a level using the default or RESTRICT option in a dimension while references to that level remain in the dimension. References can occur in hierarchies and attributes within the dimension.

Action: First remove any referenes to the level prior to dropping it, or specify the CASCADE option with the DROP LEVEL clause.

ORA-30342: referenced level is not defined in this dimension

Cause: A reference to a level not defined within the dimension was found.

Action: Check the spelling of the level name.

ORA-30343: level name is not unique within this dimension

Cause: Two or more levels were defined with the same name.

Action: Check the spelling of the level names.

ORA-30344: number of child cols different from number of parent level cols

Cause: The number of child columns specified in a JOIN KEY clause is not the same as the number of columns in the specified parent level.

Action: Check the child columns and the columns in the definition of the referenced parent level and correct the discrepancy.

ORA-30345: circular dimension hierarchy

Cause: A circularity was found the dimension hierarchy.

Action: Check the hierarchy for a level name that occurs more than once.

ORA-30346: hierarchy name must be unique within a dimension

Cause: The same name was used for more than one hierarchy in a dimension.

Action: Check the spelling of the hierarchy name.

ORA-30347: a table name is required to qualify the column specification

Cause: A table name was omitted in a column specification where where the column must be qualified by the table name.

Action: Qualify the column with the table name.

ORA-30348: ADD and DROP cannot both be specified

Cause: One or more ADD clauses were found in the same ALTER DIMENSION statement with one or more DROP clauses.

Action: Separate your ADD operations into one ALTER DIMENSION statement and your DROP operations into another.

ORA-30349: specified dimension hierarchy does not exist

Cause: A hierarchy name was encountered that is not defined within the dimension.

Action: Check the spelling of the hierarchy name.

ORA-30350: specified dimension attribute does not exist

Cause: An attribute name was encountered that is not defined within the dimension.

Action: Check the attribute name spelling.

ORA-30351: query rewrite does not currently support this expression

Cause: A complex expression was specified that is not currently supported by query rewrite.

Action: Reduce the complexity of the expression.

ORA-30352: inconsistent numeric precision or string length

Cause: The SELECT expression was of a different numeric precision or string length than the corresponding container column. Therefore, query rewrite cannot guarantee results that are identical to the results obtained with the un-rewritten query.

Action: Correct the precision or string length difference, specify the WITH REDUCED PRECISION option, or disable the REWRITE option on the materialized view.

ORA-30353: expression not supported for query rewrite

Cause: The SELECT clause referenced UID, USER, ROWNUM, SYSDATE, CURRENT_TIMESTAMP, MAXVALUE, a sequence number, a bind variable, correlation variable, a set result, a trigger return variable, a parallel table queue column, collection iterator, a non-deterministic date format token RR, etc.

Action: Remove the offending expression or disable the REWRITE option on the materialized view.

ORA-30354: Query rewrite not allowed on SYS relations

Cause: A SYS relation was referenced in the select clause for a materialized view with query rewrite enabled.

Action: Remove the reference to the SYS relation from the select clause or disable the REWRITE option on the materialized view.

ORA-30355: materialized view container does not exist

Cause: A DROP TABLE command was issued directly against the materialized view container table.

Action: Use the DROP MATERIALIZED VIEW command to clean up the residual meta data for the materialized view. Then use the CREATE MATERIALIZED VIEW statement to recreate the materialized view. Thereafter, use the DROP MATERIALIZED VIEW command rather than the DROP TABLE command to drop a materialized view.

ORA-30356: the specified refresh method is not supported in this context

Cause: The refresh method that was specified is not currently supported.

Action: Specify a different refresh method or change the context to enable support of the chosen refresh method.

ORA-30357: this PL/SQL function cannot be supported for query rewrite

Cause: The statement referenced a PL/SQL function that is not marked DETERMINISTIC.

Action: Perform one of the following actions:

- Remove the use of the PL/SQL function.
- Mark the PL/SQL function as DETERMINISTIC.
- Disable the REWRITE option on the materialized view. The function should be marked DETERMINISTIC only if it always returns the same result value for any given set of input argument values, regardless of any database state or session state. Do not mark the function as DETERMINISTIC if it has any meaningful side-effects.

ORA-30358: summary and materialized view are not in same schema

Cause: An internal Oracle error occurred.

Action: Report the problem through your normal support channels.

ORA-30359: Query rewrite is not supported on SYS materialized views

Cause: An attempt was made to enable the REWRITE option on a materialized view in the SYS schema.

Action: Create the materialized view in a different schema or disable the REWRITE option.

ORA-30360: REF not supported with query rewrite

Cause: The statement contained a REF operator. Repeatable behavior cannot be guaranteed with the REF operator. Therefore, query rewrite cannot support the REF operator.

Action: Remove the reference to the REF operator or disable the REWRITE option on the materialized view.

ORA-30361: unrecognized string type

Cause: An internal Oracle error occurred.

Action: Report the problem through your normal support channels.

ORA-30362: dimension column cannot be a sequence

Cause: The dimension statement referenced a column that is a sequence.

Action: Remove the reference to the sequence.

ORA-30363: columns in a dimension column list must be in the same relation

Cause: The dimension statement contained a column list where the columns are not all from the same relation.

Action: Specify the list of columns using only columns from a single relation.

ORA-30364: this level has the same set of columns as another

Cause: The level definition contained the same set of columns as another level.

Action: Eliminate the redundant level definition.

ORA-30365: left relation in the JOIN KEY clause cannot be same as right

Cause: The relation of the child columns on the left side of the JOIN KEY clause was the same as that of the parent level on the right side.

Action: Remove the JOIN KEY clause. It is not required or allowed when the child and the parent are in the same relation.

ORA-30366: child JOIN KEY columns not in same relation as child level

Cause: The relation of the child columns on the left side of the JOIN KEY clause differed from that of that child level.

Action: Specify the correct child columns in the JOIN KEY clause.

ORA-30367: a JOIN KEY clause is required

Cause: A JOIN KEY clause was omitted in a dimension statement. A JOIN KEY clause is required when the child level and the parent level are not in the same relation.

Action: Specify a JOIN KEY clause to indicate how the relation of the child level joins to the relation of the parent level.

ORA-30368: ATTRIBUTE cannot determine column in a different relation

Cause: An ATTRIBUTE clause in a dimension statement specified a determined column on the right that is in a different relation than that of the level on the left.

Action: Specify attributes only for those dimension levels that functionally determine other columns within the same relation.

ORA-30369: maximum number of columns is 32

Cause: A list of columns was specified using more than 32 columns.

Action: Specify the list using no more than 32 columns.

ORA-30370: set operators are not supported in this context

Cause: A set operator such as UNION, UNION ALL, INTERSECT, or MINUS was encountered in an unsupported context, such as in a materialized view definition.

Action: Re-specify the expression to avoid the use of set operators.

ORA-30371: column cannot define a level in more than one dimension

Cause: A column was used in the definition of a level after it had already been used to define a level in a different dimension.

Action: Reorganize dimension levels and hierarchies into a single dimension such that no column is used to define levels in different dimensions. There is no limit on the number of levels or hierarchies you can place in a dimension. A column can be used to define any number of levels provided all such levels are in the same dimension and provided no two levels contain identical sets of columns.

ORA-30372: fine grain access policy conflicts with materialized view

Cause: A fine grain access control procedure has applied a non-null policy to the query for the materialized view.

Action: In order for the materialized view to work correctly, any fine grain access control procedure in effect for the query must return a null policy when the materialized view is being created or refreshed. This may be done by ensuring that the usernames for the creator, owner, and invoker of refresh procedures for the materialized view all receive a null policy by the user-written fine grain access control procedures.

ORA-30373: object data types are not supported in this context

Cause: An object data type was encountered in an unsupported context.

Action: Re-specify the expression to avoid the use of objects.

ORA-30374: materialized view is already fresh

Cause: If the materialized view is fresh, ORACLE ignores the ALTER MATERIALIZED VIEW <mv> RELY FRESH command, and issues this error message.

Action: None

ORA-30375: materialized view cannot be considered fresh

Cause: If the materialized view is invalid or unusable, it cannot be considered fresh with the ALTER MATERIALIZED VIEW <mv> CONSIDER FRESH command.

Action: None

ORA-30376: prevent sharing of a parsed query of an explain rewrite session

Cause: Explain rewrite generates a shared cursor after parsing the user query. Raising this error will prevent the cursor from being shared.

Action: None

ORA-30377: table *string*.MV_CAPABILITIES_TABLE not found

Cause: You have used the DBMS_MVIEW.EXPLAIN_MVIEW() API before you have defined the MV_CAPABILITIES_TABLE.

Action: Invoke the admin/utlxmv.sql script after connecting to the desired schema.

ORA-30378: MV_CAPABILITIES_TABLE is not compatible with Oracle version

Cause: One or more column definitions in the MV_CAPABILITIES_TABLE is either missing or incompatible with the current Oracle version.

Action: Connect to the appropriate schema, DROP TABLE MV_CAPABILITIES_TABLE and recreate it by invoking the admin/utlxmv.sql script prior to invoking the DBMS_MVIEW.EXPLAIN_MVIEW() API.

ORA-30379: query txt not specified

Cause: You have attempted use DBMS_MVIEW.EXPLAIN_REWRITE() API using an empty query text argument

Action: Input a valid SQL query

ORA-30380: REWRITE_TABLE does not exist

Cause: You have used the DBMS_MVIEW.EXPLAIN_REWRITE() API before you have created the REWRITE_TABLE.

Action: Create it using the admin/utlxrw.sql script after connecting to the desired schema

ORA-30381: REWRITE_TABLE is not compatible with Oracle version

Cause: One or more column definitions in the REWRITE_TABLE is either missing or incompatible with the current Oracle version.

Action: Connect to the appropriate schema, DROP TABLE REWRITE_TABLE and recreate it by invoking the admin/utlxrw.sql script prior to invoking the DBMS_MVIEW.EXPLAIN_REWRITE() API.

ORA-30382: DROP MATERIALIZED VIEW *string.string* operation is not complete

Cause: The drop materialized view operation got an unexpected error while dropping summary object.

Action: Issue the drop materialized view command again

ORA-30383: specified dimension level does not exist in the attribute

Cause: An attribute level was encountered that is not defined within the attribute.

Action: Check the attribute level name spelling.

ORA-30384: specified column name does not exist in the attribute

Cause: A column was encountered that is not defined within the attribute.

Action: Check the attribute column name spelling.

ORA-30385: specified attribute relationship ('*string*' determines '*string*') exists

Cause: The specified attribute relationship has already been declared in one of the attribute clauses

Action: Remove the duplicate attribute relationship

ORA-30386: invalid SQL statement for DECLARE_REWRITE_EQUIVALENCE

Cause: Either the source or destination statement is NULL

Action: Verify both source and destination statement are valid

ORA-30387: invalid rewrite mode for REWRITE_EQUIVALENCE API

Cause: The specified rewrite mode is not supported by REWRITE_EQUIVALENCE API

Action: Verify the rewrite mode is supported by REWRITE_EQUIVALENCE API

ORA-30388: name of the rewrite equivalence is not specified

Cause: The name of the rewrite equivalence is NULL

Action: Input a valid rewrite equivalence name

ORA-30389: the source statement is not compatible with the destination statement

Cause: The SELECT clause of the source statement is not compatible with the SELECT clause of the destination statement

Action: Verify both SELECT clauses are compatible with each other such as numbers of SELECT list items are the same and the datatype for each SELECT list item is compatible

ORA-30390: the source statement is not equivalent to the destination statement

Cause: the set of rows returned by the source SQL text is not the same as the set of rows returned by the destination SQL text

Action: Make sure both source and destination statement return the same number of rows

ORA-30391: the specified rewrite equivalence does not exist

Cause: the specified rewrite equivalence does not exist

Action: Verify the rewrite equivalence has been created

ORA-30392: the checksum analysis for the rewrite equivalence failed

Cause: the given checksum does not match with that generated from the source and destination statements.

Action: Verify the create safe rewrite equivalence statement to see if it has been modified.

ORA-30393: a query block in the statement did not rewrite

Cause: A query block with a REWRITE_OR_ERROR hint did not rewrite

Action: Verify the rewrite equivalence has been created

ORA-30394: source statement identical to the destination statement

Cause: The source statement was identical to the destination statement

Action: Make sure both source and destination statements are not identical

ORA-30397: multiple JOIN KEY clauses specified for the same child level

Cause: Multiple JOIN KEY clauses were specified for a given child level in a dimension hierarchy.

Action: Eliminate the redundant JOIN KEY clauses.

ORA-30398: illegal JOIN KEY clause

Cause: A JOIN KEY clause was specified that did not conform to certain requirements. A JOIN KEY clause connecting a child level with its non-immediate ancestor level is allowed only when that child level and its ancestor level satisfy the following conditions:

1. The immediate parent of the child level must be a skip level.
2. The child level cannot be a skip level.

3. The ancestor level must be a non-skip level.

4. The ancestor level must be the nearest non-skip level to the child level in the hierarchy.

Action: Modify the JOIN KEY clause so that it satisfies the conditions mentioned above.

ORA-30399: a skip level must have at least one column that allows NULL values

Cause: A SKIP clause cannot be specified with a level when all of the columns that make up the level have NOT NULL constraints.

Action: Drop the SKIP clause.

ORA-30400: identical JOIN KEY clauses

Cause: Two JOIN KEY clauses with identical child keys and parent levels were specified.

Action: Eliminate the redundant JOIN KEY clause.

ORA-30401: JOIN KEY columns must be non-null

Cause: The dimension statement failed because the column(s) in the JOIN KEY clause permitted NULL values. The JOIN KEY columns are related to the columns of the dimension's skip levels in one or both of the following ways:

1. A skip level is defined over one or more of the JOIN KEY columns.

2. The attribute clauses of a skip level determine one or more of the JOIN KEY columns.

Action: Modify the JOIN KEY columns so that they do not allow NULL values.

ORA-30403: Daylight Saving Time (DST) upgrade in progress

Cause: Daylight Saving Time upgrade was in progress on a table in the materialized view.

Action: Wait until all tables in the materialized view have gone through DST upgrade.

ORA-30420: *string* is not a valid identifier

Cause: All identifiers used in the DBMS_OLAP package must have at most 30 characters, and must start with a letter that is followed by any combination of letters, numerals, and the signs '\$', '_', and '#'. Other characters cannot be used in identifiers. The rules for DBMS_OLAP identifiers are the same as for PL/SQL identifiers.

Action: Rename object to conform to the DBMS_OLAP naming rules and try again.

ORA-30430: list does not contain any valid summaries

Cause: List is empty or does not contain the names of existing summaries

Action: Verify that the list of names passed to refresh contains the name of at least one existing summary object

ORA-30431: refresh method must be ANY or INCREMENTAL or FORCE_FULL, not *string*

Cause: An invalid refresh method was specified

Action: Verify that the refresh method is one of 'ANY' or 'INCREMENTAL' or 'FORCE_FULL'

ORA-30432: summary '*string.string*' is in INVALID state

Cause: The summary is in INVALID state and cannot be refreshed

Action: None

ORA-30433: '*string.string*' is not a summary

Cause: There is no such summary, therefore it cannot be refreshed

Action: Verify the correct name of the summary

ORA-30434: refresh method must be one of FC?AN, not '*string*'

Cause: An invalid refresh method was specified

Action: Verify that the refresh method is one of 'FC?AN'

ORA-30435: job_queue_processes must be non-zero in order to refresh summaries

Cause: The server must be started with parameter 'job_queue_processes' greater than zero

Action: Correct the value of job_queue_processes and restart the server instance

ORA-30436: unable to open named pipe '*string*'

Cause: The refresh process was unable to open a named pipe to the job queue process usually because of insufficient system resources

Action: This is an internal error. Notify ORACLE technical support

ORA-30437: all job queue processes have stopped running

Cause: All of the job queue processes used by refresh have stopped for some reason. At least one job queue process must be running in order to refresh summaries.

Action: This is an internal error. Notify ORACLE technical support

ORA-30438: unable to access named pipe '*string*'

Cause: The refresh process was unable to access a named pipe to the job queue process after it successfully opened the pipe. This usually indicates an internal or operating system error condition.

Action: This is an internal error. Notify ORACLE technical support

ORA-30439: refresh of '*string.string*' failed because of *string*

Cause: The refresh job queue process encountered an error and is reporting it. The accompanying text of the message indicates cause of the error

Action: Varies, depending upon the reported cause.

ORA-30440: can't fast refresh;refresh complete or set event 30441 for partial refresh

Cause: Both DML and direct-load are performed against detail tables. Fast refresh can only process direct-load inserts.

Action: Refresh complete or set event 30441 to enable partial refresh with only direct-load inserts

ORA-30442: can not find the definition for filter *string*

Cause: For the specified filterid parameter, there is no corresponding filter definition found in the advisor repository

Action: Use a valid filterid generated by the create_filter function

ORA-30443: definition for filter *string*'s item *string* is invalid

Cause: The specified filter is invalid. It contains at least one invalid filter item. If a filter item has a string list, it becomes illegal when the string list cannot be successfully parsed. If the filter item contains a range definition, and the lower bound of the range is greater than the higher bound, the item also becomes invalid.

Action: Remove the illegal filter with the `purge_filter` sub-program and redefine a correct filter

ORA-30444: rewrite terminated by the sql analyzer

Cause: The sql analyzer terminates the rewrite process

Action: This is an internal error. Notify ORACLE technical support

ORA-30445: workload queries not found

Cause: No workload queries in the advisor repository can satisfy the specified filter

Action: Redefine a new filter or load additional workload queries that can satisfy the specified filter

ORA-30446: valid workload queries not found

Cause: None of the specified queries can be successfully parsed. The error may come from many sources: SQL syntax error, the owner specified by the `load_workload` subprograms do not match the real user who generates the SQL statement

Action: Only load valid SQL statements into the advisor repository. Make sure the statements can be parsed with privilege of the owner as specified in the `owner` parameter of the `load_workload()` subprogram.

ORA-30447: internal data for run number *string* is inconsistent

Cause: Users should not explicitly modify summary advisor's internal tables. Such modifications may cause inconsistency in the internal tables and result in this error.

Action: Users can call the `DBMS_OLAP.PURGE_RESULTS` subprogram to remove the inconsistent data from summary advisor's internal tables

ORA-30448: internal data of the advisor repository is inconsistent

Cause: Users should not explicitly modify summary advisor's internal tables. Such modifications may cause inconsistency in the internal tables and result in this error.

Action: This is an internal error. Notify ORACLE technical support

ORA-30449: syntax error in parameter *string*

Cause: The syntax for the specified parameter is incorrect

Action: Check ORACLE documentation for the correct syntax

ORA-30450: refresh_after_errors was TRUE; The following MVs could not be refreshed: *string*

Cause: One or more errors occurred during a refresh of multiple summaries.

Action: The `number_of_failures` parameter returns the count of how many failures occurred. The trace logs for each refresh operation describe the each individual failure in more detail

ORA-30451: internal error

Cause: An internal error was detected by the summary refresh subsystem, and aborted the refresh operation

Action: Notify ORACLE support.

ORA-30452: cannot compute AVG(X), VARIANCE(X) or STDDEV(X), without COUNT(X) or SUM(X)

Cause: Incremental refresh of summaries requires a COUNT(X) column in order to incrementally refresh AVG(X). It requires both SUM(X) and COUNT(X) columns in order to refresh STDDEV(X) or VARIANCE(X)

Action: Make sure that the required columns are part of the summary definition if incremental refresh capability is desired.

ORA-30453: summary contains AVG without corresponding COUNT

Cause: Incremental refresh of summaries with AVG(X) requires a COUNT(X) column to be included in the summary definition

Action: Make sure that the required columns are part of the summary definition if incremental refresh capability is desired.

ORA-30454: summary contains STDDEV without corresponding SUM & COUNT

Cause: Incremental refresh of summaries with STDDEV(X) requires COUNT(X) and SUM(X) columns to be included in the summary definition

Action: Make sure that the required columns are part of the summary definition if incremental refresh capability is desired.

ORA-30455: summary contains VARIANCE without corresponding SUM & COUNT

Cause: Incremental refresh of summaries with VARIANCE(X) requires COUNT(X) and SUM(X) columns to be included in the summary definition

Action: Make sure that the required columns are part of the summary definition if incremental refresh capability is desired.

ORA-30456: '*string.string*' cannot be refreshed because of insufficient privilege

Cause: The user lacks one or more permissions that are required in order to refresh summaries.

Action: Make sure that the user is granted all required privileges.

ORA-30457: '*string.string*' cannot be refreshed because of unmanaged NOT NULL columns in container

Cause: The container object for the summary contains one or more unmanaged columns do not allow nulls, and which do not specify a default value for those columns.

Action: Make sure that default values are specified for all NOT NULL columns that are not part of the summary definition.

ORA-30458: '*string.string*' cannot be refreshed because the refresh mask is *string*

Cause: An attempt was made to incrementally refresh a summary that is not incrementally refreshable.

Action: Do not attempt to incrementally refresh the summary; use full refresh instead.

ORA-30459: '*string.string*' cannot be refreshed because the refresh method is NONE

Cause: An attempt was made to refresh a summary whose refresh method is NONE

Action: Summaries whose refresh method is NONE (NEVER REFRESH) cannot be refreshed. Alter the summary to change the default refresh method from NONE to some other value.

ORA-30460: '*string.string*' cannot be refreshed because it is marked UNUSABLE

Cause: An attempt was made to refresh a summary which is UNUSABLE

Action: Determine why the summary is UNUSABLE, re-enable it, and retry the refresh.

ORA-30461: '*string.string*' cannot be refreshed because it is marked DISABLED

Cause: An attempt was made to refresh a summary which is DISABLED

Action: Determine why the summary is DISABLED, re-enable it, and retry the refresh.

ORA-30462: unsupported operator: *string*

Cause: An attempt was made to refresh a summary containing an unsupported operator

Action: Verify that all columns of the summary contain expressions that are refreshable.

ORA-30463: '*string*' is not a detail table of any summary

Cause: The list of tables passed to refresh_dependent contains at least one invalid table name. That table is not a detail table of any summary and is therefore an invalid input to refresh_dependent

Action: Verify the correct name of all tables in the list

ORA-30464: no summaries exist

Cause: A call was made to refresh_all_mvviews, but no summaries exist. At least one summary must exist before calling refresh_all_mvviews

Action: Create one or more summaries

ORA-30465: supplied run_id is not valid: *string*

Cause: There are three possible causes: The specified run_id does not exist; the run_id was created by another user other than the current user; the run_id has already been used.

Action: Call DBMS_OLAP.CREATE_ID to create a new id

ORA-30466: can not find the specified workload *string*

Cause: The specified workload_id is not valid

Action: Use a valid workload_id or DBMS_OLAP.WORKLOAD_ALL

ORA-30467: internal data for filter number *string* is inconsistent

Cause: Users should not explicitly modify summary advisor's internal tables. Such modifications may cause inconsistency in the internal tables and result in this error.

Action: Users can call the DBMS_OLAP.PURGE_FILTER subprogram to remove the inconsistent data from summary advisor's internal tables

ORA-30475: feature not enabled: *string*

Cause: The specified feature is not enabled.

Action: Do not attempt to use this feature.

ORA-30476: PLAN_TABLE does not exist in the user's schema

Cause: Estimate_Summary_Size uses Oracle SQL "EXPLAIN PLAN" command to estimate cardinality of the specified select-clause. This requires a table called the PLAN_TABLE in the user's schema. For more information refer to the SQL Reference Manual.

Action: Create the PLAN_TABLE as described for EXPLAIN PLAN. On most systems a script utlxplan.sql will create this table.

ORA-30477: The input select_clause is incorrectly specified

Cause: The input select-clause parameter to Estimate_Summary_Size is incorrectly specified and cannot be compiled.

Action: Check the syntax of the select-clause.

ORA-30478: Specified dimension does not exist

Cause: the specified dimension to be verified does not exist

Action: Check the spelling of the dimension name

ORA-30479: Summary Advisor error *string*

Cause: An error has occurred in the Summary Advisor package This message will be followed by a second message giving more details about the nature of the error.

Action: See the Summary Advisor documentation for an explanation of the second error message.

ORA-30483: window functions are not allowed here

Cause: Window functions are allowed only in the SELECT list of a query. And, window function cannot be an argument to another window or group function.

Action: None

ORA-30484: missing window specification for this function

Cause: All window functions should be followed by window specification, like <function>(<argument list>) OVER (<window specification>)

Action: None

ORA-30485: missing ORDER BY expression in the window specification

Cause: Either the ORDER BY expression is mandatory for this function, or there is an aggregation group without any ORDER BY expression.

Action: None

ORA-30486: invalid window aggregation group in the window specification

Cause: If the window specification is specified using RANGE option and there are multiple ORDER BY expressions, then the aggregation group cannot contain any expression (It can only have CURRENT ROW, UNBOUNDED PRECEDING, or UNBOUNDED FOLLOWING). First end point (bound) cannot be UNBOUNDED FOLLOWING and second end point cannot be UNBOUNDED PRECEDING. If the first end point is CURRENT ROW, then second end point can only be CURRENT ROW or <expr> /UNBOUNDED FOLLOWING. If the first end point is <expr> FOLLOWING, then second end point can only be <expr>/UNBOUNDED FOLLOWING.

Action: None

ORA-30487: ORDER BY not allowed here

Cause: DISTINCT functions and RATIO_TO_REPORT cannot have an ORDER BY

Action: None

ORA-30488: argument should be a function of expressions in PARTITION BY

Cause: The argument of the window function should be a constant for a partition.

Action: None

ORA-30489: Cannot have more than one rollup/cube expression list

Cause: GROUP BY clause has more than one rollup/cube expression list.

Action: Modify the query such that only one rollup/cube expressions appear per sub-query.

ORA-30490: Ambiguous expression in GROUP BY ROLLUP or CUBE list

Cause: An expression in the GROUP BY ROLLUP or CUBE list matches an expression in the ordinary GROUP BY expression list

Action: Remove the expression from either ordinary GROUP BY expression list or ROLLUP or CUBE expression list

ORA-30493: The percentile value should be a number between 0 and 1.

Cause: A percentile value for PERCENTILE_CONT or PERCENTILE_DISC function is specified out of range.

Action: Specify a value from [0,1].

ORA-30500: database open triggers and server error triggers cannot have BEFORE type

Cause: An attempt was made to create a trigger that fires before the database is open or before server errors, but these types of triggers are not supported.

Action: Do not attempt to create a trigger that fires before the database is open or before server errors.

ORA-30501: instance shutdown triggers cannot have AFTER type

Cause: An attempt was made to create a trigger that fires after an instance shutdown, but this type of trigger is not supported.

Action: Do not attempt to create a trigger that fires after an instance shutdown.

ORA-30502: system triggers cannot have INSERT, UPDATE, or DELETE as triggering events

Cause: An attempt was made to create a system trigger with INSERT, UPDATE, or DELETE triggering events, but this type of trigger is not supported because a system trigger does not have a base table.

Action: Do not attempt to create a system trigger with INSERT, UPDATE, or DELETE triggering events.

ORA-30503: system triggers cannot have a REFERENCING clause

Cause: An attempt was made to use a REFERENCING clause with a system trigger, but this type of trigger is not supported because a system triggers does not have a base table.

Action: Do not use a REFERENCING clause with a system trigger.

ORA-30504: system triggers cannot have a FOR EACH ROW clause

Cause: An attempt was made to use a FOR EACH ROW clause with a system trigger, but this type of trigger is not supported because a system triggers does not have a base table.

Action: Do not use a FOR EACH ROW clause with a system trigger.

ORA-30505: system triggers should not reference a column in a WHEN clause

Cause: An attempt was made to use a WHEN clause to reference a column with a system trigger, but this type of trigger is not supported because a system trigger does not have a base table.

Action: Change the WHEN clause to an appropriate clause.

ORA-30506: system triggers cannot be based on tables or views

Cause: An attempt was made to base a system trigger on a table or a view.

Action: Make sure the type of the trigger is compatible with the base object.

ORA-30507: normal triggers cannot be based on a schema or a database

Cause: An attempt was made to base a normal trigger on a schema or a database, but normal triggers can be based only on tables or views.

Action: Make sure the type of the trigger is compatible with the base object.

ORA-30508: client logon triggers cannot have BEFORE type

Cause: An attempt was made to create a trigger that fires before logon. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires before logon.

ORA-30509: client logoff triggers cannot have AFTER type

Cause: An attempt was made to create a trigger that fires after logoff. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires after logoff.

ORA-30510: system triggers cannot be defined on the schema of SYS user

Cause: An attempt was made to define a system trigger on the schema of SYS user. This type of trigger is not supported currently.

Action: Do not attempt to create a system trigger defined on the schema of SYS user.

ORA-30511: invalid DDL operation in system triggers

Cause: An attempt was made to perform an invalid DDL operation in a system trigger. Most DDL operations currently are not supported in system triggers. The only currently supported DDL operations are table operations and ALTER?COMPILE operations.

Action: Remove invalid DDL operations in system triggers.

ORA-30512: cannot modify *string.string* more than once in a transaction

Cause: An attempt was made to modify an object more than once in a transaction. This error is usually caused by a DDL statement that fires a system trigger that tries to modify the same object. It can also happen when an attempt is made to perform more than one DDL operation on a queue table in the same transaction without issuing a commit between operations.

Action: Do not create system triggers that might modify an already modified object. Also, do not specify more than one DDL operation on a queue table in the same transaction.

ORA-30513: cannot create system triggers of INSTEAD OF type

Cause: Only BEFORE or AFTER triggers can be created on system events.

Action: Change the trigger type to BEFORE or AFTER.

ORA-30514: system trigger cannot modify tablespace being made read only

Cause: A before trigger tries to modify a tablespace which is being made READ ONLY as the part of DDL operation

Action: Modify the trigger to avoid modifications to the objects in the same tablespace as the one which is being made read only, or use autonomous transactions to commit modifications

ORA-30515: suspend triggers cannot have BEFORE type

Cause: An attempt was made to create a trigger that fires before execution suspended. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires before execution suspended.

ORA-30516: database role change triggers cannot have BEFORE type

Cause: An attempt was made to create a trigger that fires before the role change completed. This type of trigger is not supported.

Action: Do not attempt to create a trigger that fires before the role change completes.

ORA-30550: index depends on a package/function spec/body which is not valid

Cause: the functional indexes depends on some invalid/non-existent package/function spec/body

Action: verify that all the package/functions which the index depends on exist and are valid

ORA-30551: The index depends on a package/type body which does not exist

Cause: the functional indexes depends on a package/type body which does not exist

Action: create the package/type body

ORA-30552: The package/procedure/function cannot be changed

Cause: The package/procedure/function is deterministic and some object depends on it

Action: Drop the other object which depends on the package/function/procedure you are trying to change

ORA-30553: The function is not deterministic

Cause: The function on which the index is defined is not deterministic

Action: If the function is deterministic, mark it DETERMINISTIC. If it is not deterministic (it depends on package state, database state, current time, or anything other than the function inputs) then do not create the index. The values returned by a deterministic function should not change even when the function is rewritten or recompiled.

ORA-30554: function-based index *string.string* is disabled

Cause: An attempt was made to access a function-based index that has been marked disabled because the function on which the index depends has been changed.

Action: Perform one of the following actions: -- drop the specified index using the DROP INDEX command -- rebuild the specified index using the ALTER INDEX REBUILD command -- enable the specified index using the ALTER INDEX

ENABLE command -- make the specified index usable using the ALTER INDEX UNUSABLE command

ORA-30555: global index partitioning key is an expression

Cause: An attempt was made to use an expression as a partitioning key in an index.

Action: Do not attempt to use an expression as index partitioning key.

ORA-30556: either functional or bitmap join index is defined on the column to be modified

Cause: An ALTER TABLE MODIFY COLUMN was issued on a column on which either a functional index or bitmap join index exists.

Action: Drop the functional or bitmap join index before attempting to modify the column.

ORA-30557: function based index could not be properly maintained

Cause: The user updated a column on which a function based index is present which was not successfully updated

Action: Determine the error in updating the index and fix the problem

ORA-30558: internal error [*string*] in function based index

Cause: This is an internal error.

Action: Contact Worldwide support with the exact error text.

ORA-30563: outer join operator (+) not allowed in select-list, CONNECT BY, or START WITH

Cause: An attempt was made to reference (+) in select-list, CONNECT BY clause, or START WITH clause.

Action: Do not use the operator in select-list, CONNECT BY clause, or START WITH clause.

ORA-30564: Index maintenance clause not allowed for ADD partition to RANGE partitioned tables

Cause: The clause INVALIDATE or UPDATE GLOBAL INDEXES is allowed only for ADD partition to a HASH partitioned table or ADD subpartition to a composite partitioned table.

Action: Remove clause and reissue operation

ORA-30565: Only one INVALIDATE or UPDATE GLOBAL INDEXES clause may be specified

Cause: The clause INVALIDATE or UPDATE GLOBAL INDEXES was specified more than once.

Action: Remove all but one of the INVALIDATE or UPDATE GLOBAL INDEXES clause and reissue the statement

ORA-30566: Index maintenance clause not allowed for this command

Cause: The clause INVALIDATE or UPDATE GLOBAL INDEXES is not allowed for this command

Action: Remove clause and reissue operation

ORA-30567: name already used by an existing log group

Cause: The specified log group name has to be unique.

Action: Specify a unique name for the log group. The name cannot be the same as any other log group, constraint, or cluster hash expression.

ORA-30568: cannot drop log group - nonexistent log group

Cause: The <log_group_name> specified in alter table drop log group is incorrect or nonexistent.

Action: Reenter the statement using the correct log group name.

ORA-30569: data type of given column is not supported in a log group

Cause: An attempt was made to include a column with one of these unsupported data types: LONG, VARRAY, nested table, object, LOB, FILE, or REF in a log group.

Action: Change the column data type or remove the log group. Then retry the operation.

ORA-30570: SEGMENT SPACE MANAGEMENT option already specified

Cause: In CREATE TABLESPACE, the SEGMENT SPACE MANAGEMENT option was specified more than once.

Action: Remove all but one of the SEGMENT SPACE MANAGEMENT specifications.

ORA-30571: invalid SEGMENT SPACE MANAGEMENT clause

Cause: An invalid option appears for SEGMENT SPACE MANAGEMENT clause.

Action: Specify one of the valid options: AUTO, MANUAL.

ORA-30572: AUTO segment space management not valid with DICTIONARY extent management

Cause: in CREATE TABLESPACE, the AUTO SEGMENT SPACE MANAGEMENT was used with a DICTIONARY extent management clause.

Action: Either specify LOCAL extent management or remove the AUTO SEGMENT SPACE MANAGEMENT specification.

ORA-30573: AUTO segment space management not valid for this type of tablespace

Cause: in CREATE TABLESPACE, the AUTO SEGMENT SPACE MANAGEMENT was used while creating an UNDO or TEMPORARY tablespace.

Action: Remove the AUTO SEGMENT SPACE MANAGEMENT clause.

ORA-30574: Cannot create rollback segment in tablespace with AUTO segment space management

Cause: A rollback segment is being created in a tablespace that was created with AUTO segment space management.

Action: Create the rollback segment in a different tablespace.

ORA-30575: ConText Option not installed

Cause: Oracle executable doesn't have ConText Option linked in

Action: get the correct version of Oracle

ORA-30576: ConText Option dictionary loading error

Cause: ConText dictionary tables may be corrupted

Action: not a user error

ORA-30625: method dispatch on NULL SELF argument is disallowed

Cause: A member method of a type is being invoked with a NULL SELF argument.

Action: Change the method invocation to pass in a valid self argument.

ORA-30645: reject limit out of range

Cause: Reject limit specifies the number of records rejected before terminating a table scan. The range is either a number between 1..100000 or UNLIMITED if no limit is intended.

Action: Change the token representing the reject limit to either a number in the range of 0 and 100000 or the keyword UNLIMITED.

ORA-30646: schema for external table type must be SYS

Cause: A schema other than SYS was specified for the TYPE

Action: For this version of oracle server always use schema name SYS.

ORA-30647: error retrieving access parameters for external table *string.string*

Cause: an error occurred when fetching the access parameters for the specified external table.

Action: If the access parameter is a query which returns a CLOB, check EXTERNAL_TAB\$ to make sure the query is correct.

ORA-30649: missing DIRECTORY keyword

Cause: DEFAULT DIRECTORY clause missing or incorrect.

Action: Provide the DEFAULT DIRECTORY.

ORA-30653: reject limit reached

Cause: the reject limit has been reached.

Action: Either cleanse the data, or increase the reject limit.

ORA-30654: missing DEFAULT keyword

Cause: DEFAULT DIRECTORY clause not specified or incorrect.

Action: Provide the DEFAULT DIRECTORY.

ORA-30655: cannot select FOR UPDATE from external organized table

Cause: A select for update on an external table was attempted.

Action: Don't do it!

ORA-30656: column type not supported on external organized table

Cause: Attempt to create an external organized table with a column of type LONG, LOB, BFILE, ADT, or VARRAY.

Action: These column types are not supported, change the DDL.

ORA-30657: operation not supported on external organized table

Cause: User attempted on operation on an external table which is not supported.

Action: Don't do that!

ORA-30658: attempt was made to create a temporary table with EXTERNAL organization

Cause: An attempt was made to create an External Organized Temporary table. This is not supported.

Action: Don't do that!

ORA-30659: too many locations specified for external table

Cause: An attempt was made to create an External Organized table with more than the maximum allowable (32767) locations specified.

Action: Don't do that, use fewer location clauses. Either consider concatenating the input files, or, creating two external tables with the input files split between them.

ORA-30676: socket read or write failed

Cause: A problem kept a socket from reading or writing the expected amount of data. More specific information is not available.

Action: Try re-establishing a connection. You may need to restart whatever program is at the other end of the socket that failed, or you may need to have some problem on your network fixed.

ORA-30677: session is already connected to a debugger

Cause: An attempt to connect a session to a debugger could not proceed because the session is already connected to some debugger.

Action: Either use the option to force a connection or first disconnect the session from its existing debugger.

ORA-30678: too many open connections

Cause: An attempt to open a connection failed because too many are already open by this session. The number of allowed connections varies as some may be in use through other components which share the same pool of allowed connections.

Action: Retry after closing some other connection. The number of connections supported is currently not adjustable.

ORA-30679: JDWP-based debugging not supported in this configuration

Cause: An attempt to open a debugging connection failed because this server configuration cannot support the required asynchronous socket traffic detection.

Action: This feature will not work under this server configuration. Either the feature is not supported on this platform at all, or is available only through use of a protocol=tcp dispatcher in shared-server configurations. Please consult the platform-specific documentation and "readme" material.

ORA-30680: debugger connection handshake failed

Cause: A problem occurred when trying to establish a debugger connection. This might indicate that the port specified as the location of the debugger is actually being used by some other type of application.

Action: Correct the host or port specifications if they are incorrect, and verify that the debugger is properly waiting for a connection.

ORA-30681: improper value for argument EXTENSIONS_CMD_SET

Cause: An improper parameter value was provided in a call to DBMS_DEBUG_JDWP.CONNECT_TCP.

Action: Correct the indicated parameter value and try again.

ORA-30682: improper value for argument OPTION_FLAGS

Cause: An improper parameter value was provided in a call to DBMS_DEBUG_JDWP.CONNECT_TCP.

Action: Correct the indicated parameter value and try again.

ORA-30683: failure establishing connection to debugger

Cause: An error was indicated when trying to establish a connection to a debugger. Usually a TNS error will display along with this message to further explain the problem, although this TNS error will likely be hidden if you choose to trap the error.

Action: Correct the indicated parameter value and try again.

ORA-30685: package version is not compatible with Oracle version

Cause: The installed version of the package from which this error is raised is not compatible with this release of Oracle.

Action: Install a compatible version of the package's spec and body.

ORA-30686: no dispatcher accepted TCP/IP connection request

Cause: A connection had to be routed through a local socket rather than a dispatcher. When this occurs, shared servers are less beneficial because the session that owns the socket cannot relinquish the process until the socket is closed. The most likely cause is that no dispatcher is configured for protocol=tcp.

Action: To improve the scalability of your configuration, configure a dispatcher for protocol=tcp. To route these particular connections through a particular set of dispatchers, you can specify presentation=kgas. However, if you haven't done so, any protocol=tcp dispatcher will be used.

ORA-30687: session terminated by debugger

Cause: Your program's execution has been stopped by the debugger. This can occur because of an explicit request to do so sent by the debugger, or because the debugger disconnected without first telling Oracle to let your program continue to run after the disconnection. To stop your program completely, Oracle needs to fully terminate the process.

Action: This is in response to a debugger request; it is not an error. No action required.

ORA-30688: maximum program calling depth exceeded

Cause: Your program contains a set of calls that are too deep to be handled. Only transitions between the different execution engines (SQL, PL/SQL, and Java) count in reaching this limit; calls within the same engine don't count.

Action: Restructure your program so as to not call so deeply. Perhaps some recursion can be replaced with iteration.

ORA-30689: improper value for ORA_DEBUG_JDWP

Cause: An improper value was used for ORA_DEBUG_JDWP when trying to establish a connection to a debugger. The value either did not conform to the format of ORA_DEBUG_JDWP or was too long.

Action: Correct the value for ORA_DEBUG_JDWP and try again.

ORA-30690: timeout occurred while registering a TCP/IP connection for data traffic detection

Cause: A timeout occurred while registering a TCP/IP connection for data traffic detection.

Action: Retry the operation later.

ORA-30691: failed to allocate system resources while registering a TCP/IP connection for data traffic detection

Cause: System resources ran out while registering a TCP/IP connection for data traffic detection.

Action: Retry the operation later.

ORA-30695: JDWP message format problem

Cause: A message passed from one software subcomponent to another using the JDWP protocol appears invalidly formatted.

Action: This is an internal error. Contact ORACLE Support Services.

ORA-30725: JDWP-based debugging is not yet available

Cause: This feature is not yet available for use.

Action: Please wait for a future release.

ORA-30726: cannot specify referenced column list here

Cause: An attempt was made to specify a referenced column list for a referential constraint involving a REF column.

Action: Remove the referenced column list specification.

ORA-30727: duplicate referential constraint for a REF column

Cause: Multiple referential constraints were specified for a single REF column.

Action: Remove the duplicate referential constraint and retry the operation.

ORA-30728: maximum number of columns exceeded

Cause: Adding referential constraint on a REF column requires the the creation of an additional column.

Action: Drop some columns and retry the operation.

ORA-30729: maximum number of columns exceeded

Cause: Adding scope or referential constraint on a REF column requires the creation of additional columns if the target table's object identifier is primary key based.

Action: Drop some columns and retry the operation.

ORA-30730: referential constraint not allowed on nested table column

Cause: An attempt was made to define a referential constraint on a nested table column.

Action: Do not specify referential constraints on nested table columns.

ORA-30731: scope constraint not allowed on nested table column when the nested table is being created

Cause: An attempt was made to define a scope constraint on a nested table column when the nested table is being created.

Action: Do not specify a scope constraint on a nested table column when creating it. Instead, specify it using the ALTER TABLE statement.

ORA-30732: table contains no user-visible columns

Cause: An attempt was made to query on a system table which has no user-visible columns.

Action: Do not query on a system table that has no user-visible columns.

ORA-30733: cannot specify rowid constraint on scoped ref column

Cause: An attempt was made to specify rowid constraint on a scoped REF column.

Action: Remove the rowid constraint and then retry the operation.

ORA-30734: cannot specify scope constraint on ref column with rowid

Cause: An attempt was made to specify scope constraint on a REF column with the rowid constraint.

Action: Remove the scope constraint and then retry the operation.

ORA-30735: cannot create multiple subtables of the same type under a supertable

Cause: An attempt was made to create under a supertable (superview), a subtable(subview) of the same type as another existing subtable (subview).

Action: Drop the existing subtable(subview) and retry the operation.

ORA-30736: objects in a table or view hierarchy have to be in the same schema

Cause: An attempt was made to create a subtable(subview) under a supertable(superview) located in another schema.

Action: Connect as schema owner of the superobject and retry the operation.

ORA-30737: cannot create subtable of a type which is not a subtype of the type of the supertable

Cause: An attempt was made to create a subtable(subview) of a type which is not a subtype of the type of the super object.

Action: Change the type of the subtable to be a subtype of the superobject's type and then retry the operation.

ORA-30738: object "string" does not exist in schema "string"

Cause: The specified object does not exist.

Action: Ensure that the specified object exists and retry the operation.

ORA-30739: cannot drop a table that has subtables

Cause: The user tried to drop a table that has subtables defined under it.

Action: Drop all subtables before trying this operation.

ORA-30740: cannot grant UNDER privilege on this object

Cause: The user tried to grant UNDER privilege on an object that is not one of the following : non final object type, object table of non final type, object view of non final type.

Action: Ensure that the UNDER privilege is granted on a valid object.

ORA-30741: WITH HIERARCHY OPTION can be specified only for SELECT privilege

Cause: The user tried to specify WITH HIERARCHY OPTION for a privilege other than SELECT privilege.

Action: Ensure that the HIERARCHY OPTION is specified only with the SELECT privilege

ORA-30742: cannot grant SELECT privilege WITH HIERARCHY OPTION on this object

Cause: The user tried to grant SELECT privilege WITH HIERARCHY OPTION on an object that is not one of the following : object table of non final type, object view of non final type.

Action: Ensure that the SELECT privilege WITH HIERARCHY OPTION is granted on a valid object.

ORA-30743: "string" is not an object view

Cause: The specified object is not an object view.

Action: Specify an object view and retry the operation.

ORA-30744: "string" is not an object table

Cause: The specified object is not an object table.

Action: Specify an object table and retry the operation.

ORA-30745: error occurred while trying to add column "string" in table "string"

Cause: The user tried to add a subtype which tried to alter the tables dependent on the supertype.

Action: Ensure that the table will not exceed the columnlimit on adding this subtype.

ORA-30746: error occurred while trying to drop column "string" in table "string"

Cause: The user tried to drop a subtype with VALIDATE option which tried to check for stored instances of the type in the stated table

Action: Delete all instances of this subtype and then drop the type.

**ORA-30747: cannot create substitutable tables or columns of non final type
*string.string***

Cause: The user tried to create substitutable table or column of a non final type. This operation is not currently supported.

Action: Change the statement to create a non substitutable table/column.

ORA-30748: column *string* already enabled to store objects of type *string.string*

Cause: The user is trying to enable a column to store instances of a type for which it is already enabled.

Action: None

ORA-30749: column *string* not enabled to store objects of type *string.string*

Cause: The user is trying to disable a column from storing instances of a type for which it is already enabled.

Action: None

ORA-30750: cannot enable column *string* to store objects of type *string.string*

Cause: The user is trying to enable a column to store instances of a subtype. The error is raised due to one of the following :

Action: Fix the cause of the error and retry the operation.

ORA-30751: cannot disable column *string* from storing objects of type *string.string*

Cause: The user is trying to drop a type from being stored in a substitutable column or table. This error is raised due to one of the following reasons :

- the column is enabled to store instances of some subtype of the type being dropped.

- the column is enabled to store instances of only one type

Action: Fix the cause of the error and retry the operation.

ORA-30752: column or table *string* is not substitutable

Cause: The user is performing an operation that is not allowed on non substitutable column or table.

Action: None

ORA-30753: column or table *string* is substitutable

Cause: The user is performing an operation that is not allowed on substitutable column or table.

Action: None

ORA-30754: column or table *string* stores objects of only one type

Cause: The user is trying to perform an operation that is not allowed on object column or table that is enabled to store instances of a single type.

Action: None

ORA-30755: error during expansion of view hierarchy

Cause: There was an error while trying to expand a view hierarchy. This could be due to invalid subviews (or subviews with errors)

Action: Ensure that all subviews are valid e.g. alter view ... compile and retry the operation.

ORA-30756: cannot create column or table of type that contains a supertype attribute

Cause: The user tried to create a column or table of an object type that contains a supertype attribute. This is not supported because it leads to infinite recursion in our current storage model. Note that creating a column of a type implies that we create columns corresponding to all subtype attributes as well.

Action: Change the type definition to contain a supertype REF attribute instead of the supertype object attribute.

ORA-30757: cannot access type information

Cause: Either a subtype was created and operations performed with this new type while the session was in progress, or the type information was unpinned from the object cache.

Action: Commit necessary changes, end the user session, reconnect again and re-try the object operations. If problem persists, contact your Oracle Support representative.

ORA-30758: cannot specify local on a non-partitioned table

Cause: The user specified local or global for a nested table storage parameter while the base table is non-partitioned.

Action: None

ORA-30759: nested table cannot be partitioned for a composite partitioned base table

Cause: The user specified local or nested table parameters inside partition clause for a composite partitioned table.

Action: Issue the DDL without nested table partition clauses for composite partitioned table.

ORA-30765: cannot modify scope for an unscoped REF column

Cause: An attempt was made to modify the scope for an unscoped REF column.

Action: Use an ALTER TABLE ADD SCOPE FOR command instead.

ORA-30766: cannot modify scope for a REF column with a REFERENCES constraint

Cause: An attempt was made to modify the scope for a REF column with a REFERENCES constraint.

Action: Drop the REFERENCES constraint, and retry the operation.

ORA-30767: OID type mismatch

Cause: An attempt was made to modify the scope for a REF column to a table whose object identifier's type is different from that of the original scoped table.

Action: None

ORA-30768: Cannot evaluate pipelined function

Cause: Pipelined functions can only be used in a TABLE expression in the from clause.

Action: Use a non-pipelined function instead.

ORA-30770: Cannot specify storage options for fixed size opaque type

Cause: Storage clause was specified during table creation for a fixed size opaque type.

Action: Do not provide storage option clause.

ORA-30771: Cannot add more than one referential constraint on REF column "string"

Cause: Multiple referential constraints were specified for a single REF column.

Action: Remove the additional referential constraints and retry the operation.

ORA-30772: opaque types do not have default constructors

Cause: Constructor invocation did not succeed, since no user-defined constructors were defined for the opaque type, and since opaque types do not have default constructors.

Action: Add user-defined constructors to opaque type, or specify a member or static method for the opaque type.

ORA-30773: opaque types do not have default constructors

Cause: Constructor invocation did not succeed, since no user-defined constructors were defined for the opaque type, and since opaque types do not have default constructors.

Action: Add user-defined constructors to opaque type, or specify a member or static method for the opaque type.

ORA-30774: Library "string" was erroneously defined as a trusted library for opaque types

Cause: User has defined some library as trusted library for opaque types.

Action: Trusted libraries for opaque types can only be defined in internal code.

ORA-30926: unable to get a stable set of rows in the source tables

Cause: A stable set of rows could not be got because of large dml activity or a non-deterministic where clause.

Action: Remove any non-deterministic where clauses and reissue the dml.

ORA-30927: Unable to complete execution due to failure in temporary table transformation

Cause: In memory temporary tables we create are aged out of shared pool before we are able to grab them again.

Action: Reduce activities that use a lot of shared pool space or wait for a while, then retry.

ORA-30928: Connect by filtering phase runs out of temp tablespace

Cause: It is probably caused by the fact that there is a loop in the data.

Action: Please retry the query with the NO_FILTERING hint. If the same error still occurs, then increase temp tablespace.

ORA-30929: ORDER SIBLINGS BY clause not allowed here

Cause: ORDER SIBLINGS BY clause is specified in a query which doesn't have CONNECT BY clause.

Action: Remove ORDER SIBLINGS BY clause or add CONNECT BY clause.

ORA-30930: NOCYCLE keyword is required with CONNECT_BY_ISCYCLE pseudocolumn

Cause: CONNECT_BY_ISCYCLE was specified in a query which does not have the NOCYCLE keyword.

Action: Remove CONNECT_BY_ISCYCLE or add NOCYCLE.

ORA-30931: Element '*string*' cannot contain mixed text

Cause: XML elements must be declared mixed to contain multiple text nodes

Action: Declare this element type as mixed in its schema

ORA-30932: Reference node '*string*' not contained in specified parent node '*string*'

Cause: When using a reference node, it must have the specified parent node

Action: Use a node in the specified parent as the reference

ORA-30933: Element '*string*' may not appear at this point within parent '*string*'

Cause: The ordering specified by the content model of the parent does not allow for this element to occur at this position.

Action: Reorder the child elements to conform with the content model of the parent element

ORA-30934: '*string*' (*string* node) cannot be inserted in parent '*string*' (*string* node)

Cause: The schema does not allow a child node of this type to be inserted into a parent node of this type. For example, only element nodes may only be inserted into a document

Action: Insert only child nodes that make sense for this node type

ORA-30935: XML maxoccurs value (*string*) exceeded

Cause: An attempt was made to insert more than maxoccurs values into a schema-based XML document.

Action: Do not insert more than maxoccurs values into the document.

ORA-30936: Maximum number (*string*) of '*string*' XML node elements exceeded

Cause: An attempt was made to insert more than the allowed number of elements (specified by the maxoccurs facet) into an XML document.

Action: Do not attempt to add more than the maximum number of elements to XML documents.

ORA-30937: No schema definition for '*string*' (namespace '*string*') in parent '*string*'

Cause: The schema definition for the parent node being processed does not allow for the specified child node in its content model. Note that any typecasting via xsi:type must occur before the schema definitions for the new type can be used.

Action: Only insert elements and attributes declared in the schema. Check to make sure that xsi:type (if used) is specified first.

ORA-30938: No prefix defined for namespace '*string*' (particle *string*)

Cause: An XML namespace mapping (xmlns:<prefix>=<namespace URL>) must be defined for each particle (element or attribute) stored in an schema-constrained XMLType document.

Action: Add an xmlns attribute definition (attribute name="xmlns:prefix" and value="namespace URL") to the current XMLType document. The safest place to add this attribute is in the root node of the document to ensure that the mapping will be in scope.

ORA-30939: Order violation: Element '*string*' may not follow element '*string*'

Cause: The XML schema specifies a content model that is sequential, where the order of nodes in the instance must follow the order specified by the schema, and this instance relies on the schema validity to avoid maintaining instance order information

Action: Insert elements only in the order specified in the schema

ORA-30940: Cannot resolve prefix '*string*' for QName node '*string*'

Cause: An attempt was made to store a QName value without having a valid namespace in scope for that prefix.

Action: Declare the namespace for the prefix used

ORA-30941: Cannot specify empty URI for non-default namespace '*string*'

Cause: An attempt was made to insert a namespace declaration for a non-default namespace using an empty URI string.

Action: Specify a non-empty URI for namespace declarations other than the default namespace.

ORA-30942: XML Schema Evolution error for schema '*string*' table *string* column '*string*'

Cause: The given XMLType table/column which conforms to the given schema had errors during evolution. For more information, see the more specific error below this one

Action: Based on the schema, table and column information in this error and the more specific error below, take corrective action

ORA-30943: XML Schema '*string*' is dependent on XML schema '*string*'

Cause: Not all dependent schemas were specified and/or the schemas were not specified in dependency order, i.e., if schema S1 is dependent on schema S, S must appear before S1.

Action: Include the previously unspecified schema in the list of schemas and/or correct the order in which the schemas are specified. Then retry the operation.

ORA-30944: Error during rollback for XML schema '*string*' table *string* column '*string*'

Cause: The given XMLType table/column which conforms to the given schema had errors during a rollback of XML schema evolution. For more information, see the more specific error below this one

Action: Based on the schema, table and column information in this error and the more specific error below, take corrective action

ORA-30945: Could not create mapping table '*string*'

Cause: A mapping table could not be created during XML schema evolution. For more information, see the more specific error below this one

Action: Ensure that a table with the given name does not exist and retry the operation

ORA-30946: XML Schema Evolution warning: temporary tables not cleaned up

Cause: An error occurred after the schema was evolved while cleaning up temporary tables. The schema evolution was successful

Action: If the user needs to remove the temporary tables, use the mapping table to get the temporary table names and drop them.

ORA-30947: Dependent table '*string*' of XML schema '*string*' is version-enabled

Cause: An XMLType table that is dependent on an XML schema being evolved is version-enabled.

Action: Disable versioning on the XMLType table

ORA-30948: Illegal in-place XML schema evolution operation: *string*

Cause: An attempt was made to make an XML schema change that is not permitted through in-place XML schema evolution.

Action: Ensure that the XML schema changes specified in the XMLDiff argument to DBMS_XMLSCHEMA.inPlaceEvolve are permitted.

ORA-30951: Element or attribute at Xpath *string* exceeds maximum length

Cause: An attempt was made to insert a node of length exceeding the maximum length (specified by the maxLength facet) into an XML document.

Action: Do not attempt to add a node exceeding the maximum length to XML documents.

ORA-30952: illegal configuration of HTTP/HTTPS in xdbconfig.xml

Cause: An attempt was made to update xdbconfig.xml when either 1) a value was specified for http2-port but not for http2-protocol (or vice versa), OR 2) http-port and http2-port were set to the same value.

Action: Specify values for both elements http2-port and http2-protocol, AND set different values for http-port and http2-port.

ORA-30953: XML minoccurs value (*string*) violated

Cause: An attempt was made to delete more than the required minimum number of elements (specified by the minoccurs facet) from an XML document.

Action: Do not attempt to delete more than the required minimum number of elements that must be present from the XML document.

ORA-30954: char *string* is invalid in *string*

Cause: An invalid XML character was found.

Action: Use only characters allowed by the XML specification.

ORA-30955: The XML Index does not exist or is not asynchronous

Cause: An attempt was made to synchronize a nonexistent XML Index or a synchronous XML Index.

Action: Create the XML Index in asynchronous mode.

ORA-30956: invalid option for XML Index

-
- Cause:** Unexpected error.
Action: File a bug.
- ORA-30957: cannot downgrade because there are XML indexes**
Cause: An attempt was made to downgrade a database that has XML indexes.
Action: Drop all XML indexes before attempting the downgrade.
- ORA-30958: operation directly on the Pending Table is disallowed**
Cause: An illegal operation was attempted on secondary objects of an XML Index.
Action: Try appropriate operation on the XML Index.
- ORA-30959: The indexed column is not stored in CLOB.**
Cause: An attempt was made to create an XML Index on an OR-XMLType column.
Action: Re-create the XML Index on a CLOB-XMLType column.
- ORA-30960: The entity is neither an XPATH nor a NAMESPACE.**
Cause: The given string had invalid syntax.
Action: Check the syntax for XPATH and NAMESPACE.
- ORA-30961: internal SQL statement is too long**
Cause: unexpected internal error
Action: File a bug and provide the test case.
- ORA-30962: inconsistent ODCI input arguments**
Cause: unexpected internal error
Action: File a bug and provide the test case.
- ORA-30963: The indexed column is not of XMLType.**
Cause: An attempt was made to create an XML Index on a non-XMLType column.
Action: Re-create the XML Index on an XMLType column.
- ORA-30964: The XML Index was not usable.**
Cause: The domain index for XML was not created properly. The Path Table is missing.
Action: Drop and re-create the XML Index.
- ORA-30965: fragment does not fit into the VARCHAR2 VALUE column**
Cause: The fragment size exceeded the max size.
Action: Re-create the XML Index with values stored in CLOB.
- ORA-30966: error detected in the XML Index layer**
Cause: Unexpected error.
Action: File a bug.
- ORA-30967: operation directly on the Path Table is disallowed**
Cause: illegal operation on secondary objects of a domain index
Action: Try appropriate operation on the domain index.
- ORA-30968: invalid XPATH or NAMESPACE option for XML Index**
Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30969: invalid syntax for PARAMETERS

Cause: An attempt was made to specify an invalid option.

Action: Check and use valid options.

ORA-30970: option not supported for XML Index

Cause: An attempt was made to specify an invalid option.

Action: Check and use valid options.

ORA-30971: illegal operation on the Path Table

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate command on the XML Index.

ORA-30972: invalid ALTER INDEX option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30973: invalid Path Table option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30974: invalid Path Id Index option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30975: invalid Order Key Index option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30976: invalid Parent Order Key Index option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30977: invalid Value Index option for XML Index

Cause: An attempt was made to use an unsupported option.

Action: Use the appropriate option.

ORA-30978: The XML Index is not locally partitioned.

Cause: An attempt was made to create a global partitioned XML Index.

Action: Do not attempt to create global partitioned XML Index or to maintain a non-local partitioned XML Index.

ORA-30979: Partitioned XML Index not yet supported.

Cause: An attempt was made to create a partitioned XML Index.

Action: Do not attempt to create partitioned XML Index.

ORA-30980: Invalid Input.

Cause: The input to the function is not valid.

Action: Make sure the input is valid (both syntactically as well as semantically).

ORA-30982: Invalid option for a partition of an XML Index

Cause: An invalid option was specified at the partition level.

Action: Remove the invalid option.

ORA-30983: Maximum order key depth exceeded

Cause: The document could not be indexed because its nesting depth was more than that allowed by XML Index.

Action: Remove the offending document.

ORA-30984: The XMLType column has to be declared as virtual

Cause: The XMLType column was not declared as virtual when creating a structured XMLIndex.

Action: The XMLType column has to be declared as virtual when creating a structured XMLIndex.

ORA-30985: The virtual XMLType column for chaining is missing

Cause: The virtual XMLType column for chaining was missing when creating a structured XML index.

Action: A virtual XMLType column for chaining has to be specified when creating a structured XML Index.

ORA-30986: XML Index with more than one virtual column is disallowed

Cause: An attempt was made to create an XML Index with more than one virtual column.

Action: Create only one virtual column.

ORA-30987: XML Index on XML DB repository does not exist

Cause: An attempt was made to operate on a non-existent XML Index on XML DB repository.

Action: First create the index using DBMS_XDB_ADMIN.CREATEREPOSITORYXMLINDEX. Try the operation again.

ORA-30988: Metadata of XML Index corrupted

Cause: An attempt to locate the XML Index failed.

Action: Contact Oracle Support Services.

ORA-30989: XML Index on an Index Organized Table is not yet supported

Cause: XML Index supported only on Heap Organized Table.

Action: Contact Oracle Support Services.

ORA-30990: insufficient privileges to change owner of resource *string*

Cause: An attempt was made to change the <Owner> field of an XML DB resource without sufficient privileges to do so.

Action: Switch to SYS before performing the ownership change, or have the intended recipient of the resource perform the transfer.

ORA-30991: cannot use DOM to add special attribute to schema-based parent

Cause: An attempt was made to add or remove an xsi:schemaLocation, xsi:noNamespaceSchemaLocation, xsi:type, or xsi:nil attribute to or from a schema-based XML node using DOM.

Action: Use the updateXML operator instead of DOM.

ORA-30994: Invalid argument for DOM stream

Cause: Either a null or a nonleaf node was passed.

Action: Use a combination of DOM API and DOM streams to produce desired effect.

ORA-30995: DOM streams operations cannot be performed on null/invalid node

Cause: The node is NULL or inexistent

Action: Check the input parameters.

ORA-30996: Streams operations over non-existent stream

Cause: The stream passed is NULL or invalid.

Action: Check the input parameters.

ORA-30997: XSL processing of XML failed with error LPX-string

Cause: An LPX routine (XML/XSL processing) returned an error while transforming an XML doc.

Action: Look up the LPX error and follow its corrective action.

ORA-30998: transformation error: *string*

Cause: Error occurred while transforming an XML doc with an XSL style sheet.

Action: Contact Oracle Support Services.

ORA-30999: XML context creation failed while *string*

Cause: Error occurred while creating XML context.

Action: Contact Oracle Support Services.

ORA-31000: Resource '*string*' is not an XDB schema document

Cause: The given schema URL does not refer to a registered XDB schema

Action: Make sure the specified schema has been registered in XDB

ORA-31001: Invalid resource handle or path name "*string*"

Cause: An invalid resource handle or path name was passed to the XDB hierarchical resolver.

Action: Pass a valid resource handle or path name to the hierarchical resolver.

ORA-31002: Path name *string* is not a container

Cause: XDB expected the given path name to represent a container.

Action: Pass a path name or resource handle that represents a container.

ORA-31003: Parent *string* already contains child entry *string*

Cause: An attempt was made to insert a duplicate child into the XDB hierarchical resolver.

Action: Insert a unique name into the container.

ORA-31004: Length *string* of the BLOB in XDB\$H_INDEX is below the minimum *string*

Cause: In the XDB\$H_INDEX table, the CHILDREN column, a BLOB, must have a certain minimum length without being chained. The calculated length of the LOB was less than the stated minimum.

Action: Set the value of the init.ora parameter db_block_size to at least 2K. For XDB to run at its fastest, set db_block_size to 8K.

ORA-31005: Path name length *string* exceeds maximum length *string*

Cause: The length of a path name passed to the XDB hierarchical resolver exceeded the maximum length.

Action: Choose a shorter path name.

ORA-31006: Path name segment length *string* exceeds maximum length *string*

Cause: The length of a path name segment passed to the XDB hierarchical resolver exceeded the maximum length of a path name segment.

Action: Choose a shorter path name segment.

ORA-31007: Attempted to delete non-empty container *string/string*

Cause: An attempt was made to delete a non-empty container in the XDB hierarchical resolver.

Action: Either perform a recursive deletion, or first delete the contents of the container.

ORA-31008: LPX context creation failed while *string*

Cause: Error occurred while creating LPX context because of an unexpected NULL value.

Action: Contact Oracle Support Services.

ORA-31009: Access denied for property *string*

Cause: An attempt was made to access a property you don't have access to

Action: Check the ACL to see what privileges you have for this property

ORA-31010: XML element index *string* exceeds maximum insertion index *string*

Cause: An attempt was made to insert an XML element at an invalid index location in the node.

Action: Choose a new index that falls within the allowed range.

ORA-31011: XML parsing failed

Cause: XML parser returned an error while trying to parse the document.

Action: Check if the document to be parsed is valid.

ORA-31012: Given XPATH expression not supported

Cause: XPATH expression passed to the function is currently unsupported.

Action: Check the xpath expression and change it to use a supported expression.

ORA-31013: Invalid XPATH expression

Cause: XPATH expression passed to the function is invalid.

Action: Check the xpath expression for possible syntax errors.

ORA-31014: Attempted to delete the root container

Cause: An attempt was made to delete the root container in the hierarchical index.

Action: Do not delete the root container.

ORA-31015: Attempted to insert entry without name

Cause: An attempt was made to insert an entry into the hierarchical resolver without a child name.

Action: Supply a child name and try inserting again.

ORA-31016: Attempted to delete entry without name

Cause: An attempt was made to delete an entry from the hierarchical resolver without a child name.

Action: Supply a child name and try deleting again.

ORA-31017: Error generating unique OID for XML document

Cause: An error occurred while generating a globally unique OID for storing an XML document.

Action: None

ORA-31018: Error deleting XML document

Cause: The XMLType object pointed to by the given REF could not be deleted because either the REF was invalid or it pointed to a non-existent table.

Action: Either use FORCE deletion or supply a valid REF.

ORA-31019: Recursive deletion snapshot too old for *string/string*

Cause: Changes were made to the structure of a directory while it was being recursively deleted.

Action: Try deleting the directory again.

ORA-31020: The operation is not allowed, Reason: *string*

Cause: The operation attempted is not allowed

Action: See reason and change to a valid operation.

ORA-31021: Element definition not found

Cause: The element definition was not found.

Action: Supply the definition for the element or use a defined element.

ORA-31022: Element not found

Cause: The element was not found.

Action: Make sure the specified element exists.

ORA-31023: Index size error

Cause: The index is greater than the allowed value.

Action: Make sure the index is less than allowed value.

ORA-31024: Parser initialization failed with LPX-*string* error while *string*

Cause: Error occurred while initializing a parser.

Action: Contact Oracle Support Services.

ORA-31025: Invalid document element

Cause: An attempt was made to replace the data at an invalid index number in the XML document

Action: Supply a correct occurrence number and try again.

ORA-31026: unable to allocate additional memory while *string*

Cause: A dynamic memory allocation failure occurred.

Action: Report this problem to a database administrator.

ORA-31027: Path name or handle *string* does not point to a resource

Cause: An attempt was made to retrieve a resource based on a path name or resource handle that points to an entity other than a resource.

Action: Do not attempt to retrieve a resource based on that path name or resource handle.

ORA-31028: Resource metadata length *string* exceeded maximum length *string*

Cause: An attempt was made to insert resource metadata that exceeded the maximum length of that type of metadata.

Action: Keep resource metadata within its allowed length.

ORA-31029: Cannot bind to unsaved resource

Cause: An attempt was made to bind to a resource that had not been saved to disk.

Action: Bind only to saved resources.

ORA-31030: Unable to retrieve XML document

Cause: The resource had an invalid (dangling) REF to an XML document.

Action: Rebind the resource using a valid XMLType REF.

ORA-31031: cannot create context to parse an XPath *string*

Cause: Error occurred while parsing an XPath.

Action: Contact Oracle Support Services.

ORA-31032: XML parsing failed with error LPX-*string* while *string*

Cause: An LPX routine returned an error while transforming an XML doc.

Action: Look up the LPX error and follow its corrective action.

ORA-31033: Requested number of XML children *string* exceeds maximum *string*

Cause: An attempt was made to add more than the maximum number of allowable children in an XML element.

Action: Redefine the schema to allow breaking up of the children among siblings.

ORA-31034: invalid node set encountered while executing *string*

Cause: The given node set was either NULL or has an invalid type associated with it.

Action: Contact Oracle Support Services.

ORA-31035: Could not bind locked resource to path *string/string*

Cause: An attempt was made to bind an existing resource to a new location in the hierarchy, but a lock could not be obtained on the resource.

Action: Commit or roll back the transaction that has the lock on the resource.

ORA-31036: XSL processing context initialization failed

Cause: A error occurred while creating a XSL context.

Action: Contact Oracle Support Services.

ORA-31037: Invalid XML attribute name *string*

Cause: The attribute name in the XML document did not match anything in the associated schema.

Action: Supply only schema-defined or XML standard attributes.

ORA-31038: Invalid *string* value: "*string*"

Cause: The text in the XML document did not represent a valid value given the datatype and other constraints in the schema.

Action: Ensure that the specified value in XML documents is valid with respect to the datatype and other constraints in the schema.

ORA-31039: XML namespace length *string* exceeds maximum *string*

Cause: The length of the disk-formatted XML namespace exceeded the maximum.

Action: Keep XML namespace declarations below the maximum length.

ORA-31040: Property *string*: XML type (*string*) not compatible with internal memory type (*string*)

Cause: The XML datatype given is inconsistent with the database datatype, and a conversion cannot be made.

Action: This is an internal error, generally resulting from corruption of the compiled XML schema. Re-register schemas, or contact Oracle support.

ORA-31041: Property *string*: Memory type (*string*) not compatible with database type (*string*)

Cause: The memory type associated with this property is mapped to an incompatible database type, and a conversion cannot be made.

Action: This is an internal error, generally resulting from corruption of the compiled XML schema. Re-register schemas, or contact Oracle support.

ORA-31042: Too many properties in type '*string*'

Cause: The type can only have the same number of properties (elements and attributes) as a table can have columns.

Action: Modify the XML schema to move properties into subelements that are not inlined.

ORA-31043: Element '*string*' not globally defined in schema '*string*'

Cause: The specified element name has not been defined at the top level of the XML schema (i.e. globally). Elements must be defined globally to be the root of an XMLType object.

Action: Check the XML schema definition to make sure the specified element name has been defined at the top level.

ORA-31044: Top-level prefix length *string* exceeds maximum *string*

Cause: An attempt was made to save to disk a top-level XML namespace prefix whose length exceeded the maximum.

Action: Do not define XML namespace prefixes that exceed the maximum length.

ORA-31045: Cannot store more than *string* extras outside the root XML node

Cause: An attempt was made to store more than the maximum number of XML extras (e.g. comments and processing instructions) either before or after the document's root node.

Action: Keep the number of extras outside the root node below the maximum.

ORA-31046: Incorrect argument(s) specified in the operator

Cause: One or more of the arguments specified in the operator in the query are incorrect

Action: Correct the arguments specified in the operator

ORA-31047: Could not retrieve resource data at path *string*

Cause: An error occurred while retrieving the contents and/or metadata of a resource.

Action: Contact Oracle customer support.

ORA-31048: Unsaved resources cannot be updated

Cause: An attempt was made to update a resource that was never saved to disk.

Action: Perform a resource insertion instead.

ORA-31050: Access denied

Cause: The requested access privileges have not been granted to the current user. User must be granted privileges prior to resource access.

Action: Check the set of requested access privileges to make sure that they are included in the set of access privileges granted to the user.

ORA-31051: Requested access privileges not supported

Cause: The requested access privileges are not supported for the specified resource.

Action: Ensure that the set of requested access privileges are valid access privileges for the specified resource.

ORA-31052: Cannot delete ACL with other references

Cause: The requested deletion of an ACL resource cannot proceed. The ACL is in use by other resources.

Action: Remove the resources that are making reference to the ACL in question and try again.

ORA-31053: The value of the depth argument in the operator cannot be negative

Cause: The value of the depth argument passed to the primary operator is not a positive integer

Action: Pass a positive value of the depth argument

ORA-31054: The *string* operator cannot have an ancillary operator

Cause: An ancillary operator was used with an operator which does not support ancillary operators

Action: Remove the ancillary operator in the query

ORA-31055: A null XMLType element cannot be inserted into RESOURCE_VIEW

Cause: The element which is being inserted into the RESOURCE_VIEW is NULL

Action: Specify a non-null XMLType element to insert into RESOURCE_VIEW

ORA-31056: The document being inserted does not conform to *string*

Cause: The XMLType element being inserted into the RESOURCE_VIEW does not conform to the specified Schema

Action: Insert an element which conforms to the specified Schema

ORA-31057: Display Name of the element being inserted is null

Cause: The Display Name of the element which is being inserted into the RESOURCE_VIEW is null

Action: Specify the Display Name and insert the element into RESOURCE_VIEW

ORA-31058: cannot modify read-only XOBs

Cause: Read-Only XOBs cannot be modified.

Action: Use only read operations on such a XOB.

ORA-31059: Cannot insert root XML document node if it already exists

Cause: An attempt was made to insert a root node into an XML document that already had a root node.

Action: Call the appropriate replace function to replace the node instead of inserting it anew.

ORA-31060: Resource at path *string* could not be deleted

Cause: An error occurred while deleting the named resource. The specific error can be found one lower on the error stack.

Action: Look at the next error on the stack and take appropriate action.

ORA-31061: XDB error: *string*

Cause: The specified error occurred in XDB.

Action: Correct the error or contact Oracle Support Services.

ORA-31062: Cannot delete an unsaved resource

Cause: An attempt was made to delete a resource that had not been saved to disk.

Action: Delete only saved resources.

ORA-31063: XPath compilation failed: *string*. *string*

Cause: XPath compilation failed for specified reason.

Action: Contact Oracle Support Services.

ORA-31064: Cannot instantiate abstract element or property [*string*]

Cause: An attempt was made instantiate an abstract element.

Action: Use only read operations on such elements.

ORA-31065: Cannot modify read-only property [*string*]

Cause: An attempt was made to modify an immutable XML node.

Action: Use only read operations on such properties.

ORA-31066: Insertion of *string* into *string* creates a cycle

Cause: An attempt was made to insert a link into the XDB hierarchy that would create a cycle in the tree.

Action: Ensure that links to existing resources do not cause cycles.

ORA-31067: XML nodes must be updated with valid nodes and of the same type

Cause: An attempt was made to use updateXML to update an XML node with a node of another type.

Action: Ensure that the node specified by the XPath matches the type of new data provided.

ORA-31068: updateXML expected data format [*string*] instead of [*string*]

Cause: An attempt was made to use updateXML to update data with a node of the incorrect type. Text and attribute nodes must be updated with string data, whereas element nodes must be updated with XMLType data.

Action: Use CREATEXML or getStringVal to coerce the new data to the proper format.

ORA-31069: Cannot apply typed changes to non-schema-based XMLType nodes

Cause: An attempt was made to insert, delete, or update a non-schema-based XMLType node using an XML schema definition.

Action: Make changes to non-typed nodes only by referencing their tag names.

ORA-31070: Invalid database user ID *string*

Cause: An attempt was made set an invalid user ID into an XDB resource metadata property.

Action: Verify the validity of the user ID and try again.

ORA-31071: Invalid database username or GUID *string*

Cause: An attempt was made to set an invalid username or GUID into an XDB resource metadata property.

Action: Verify the validity of the username or GUID and try again.

ORA-31072: Too many child nodes in XMLType fragment for updateXML

Cause: An attempt was made to pass an XMLType fragment with multiple children as new data for the updateXML operator.

Action: Extract the desired child from the XMLType before passing it to updateXML as the desired new XML node.

ORA-31073: Resource not retrieved using path name

Cause: An attempt was made to access the path name of a resource that was either never saved to disk or was loaded using a method other than with its path name.

Action: Perform path name operations only on resources obtained using a path name.

ORA-31074: XML comment length *string* exceeds maximum *string*

Cause: The length of the disk-formatted XML comment exceeded the maximum.

Action: Keep outer XML comments declarations below the maximum length.

ORA-31075: invalid *string* declaration in XML Schema

Cause: The XML schema contains an invalid declaration identified by the message.

Action: Fix the identified error and try again.

ORA-31076: required attribute "*string*" not specified

Cause: The XML schema does not specify a required attribute.

Action: Specify a value for the required attribute.

ORA-31077: invalid attribute "*string*" specified

Cause: The XML schema specifies an invalid attribute.

Action: Remove specification of the invalid attribute.

ORA-31078: error in SQL mapping information

Cause: There is an error in the SQL type and table specification within the XML Schema.

Action: Ensure that all specified SQL types and tables are valid and compatible with the corresponding XML types.

ORA-31079: unable to resolve reference to *string* "*string*"

Cause: The identified type or attribute or element could not be resolved.

Action: Make sure that the name corresponds to a valid XML (simple/complex) type or attribute or element and try again.

-
- ORA-31080: type not specified for attribute or element "*string*"**
Cause: The identified attribute or element does not have a type.
Action: Make sure that every attribute and element has a valid type specification.
- ORA-31081: name not specified for global declaration**
Cause: The XML schema does not specify the name for the global declaration of attribute or element or simpleType or complexType.
Action: Specify names for all global declarations.
- ORA-31082: invalid attribute "*string*" specified in declaration of "*string*"**
Cause: The XML schema specifies an invalid attribute.
Action: Remove specification of the invalid attribute.
- ORA-31083: error while creating SQL type "*string*"."*string*"**
Cause: An error occurred while trying to create the SQL type based on the specification of a complex type.
Action: Fix the identified error and try again.
- ORA-31084: error while creating table "*string*"."*string*" for element "*string*"**
Cause: An error occurred while trying to create the table based on the declaration for the identified element.
Action: Fix the identified error and try again.
- ORA-31085: schema "*string*" already registered**
Cause: An attempt was made to register a schema with the same URL as a previously registered schema.
Action: Register the schema with a different URL.
- ORA-31086: insufficient privileges to register schema "*string*"**
Cause: An attempt was made to register a schema without sufficient privileges.
Action: Make sure that the user has sufficient privileges to register the schema.
- ORA-31087: insufficient privileges to delete schema "*string*"**
Cause: An attempt was made to delete a schema resource without sufficient privileges.
Action: Make sure that the user has sufficient privileges to delete the schema.
- ORA-31088: object "*string*"."*string*" depends on the schema**
Cause: An attempt was made to delete a schema which has dependent objects.
Action: Either drop the dependent objects prior to deleting the schema or use the CASCADE or FORCE options.
- ORA-31089: schema "*string*" does not target namespace "*string*"**
Cause: The schema document contains references (via include and import definitions) to other schemas that do not belong to valid namespaces.
Action: Make sure that all schemas referenced via include definitions target the same namespace as the parent schema. Further make sure that the namespace specified in the import definition matches the actual target namespace of the specified schema.
- ORA-31090: invalid database schema name "*string*"**

Cause: The XML schema document contains an invalid database schema name
For example, the value of attribute SQLSchema

Action: Make sure that all database user/schema names specified in the XML schema document refer to existing database users/schemas.

ORA-31091: empty string specified as a SQL name

Cause: The XML schema document contains a null SQL name. For example, the values of attributes SQLName, SQLType, defaultTable.

Action: Make sure that all names of SQL schema objects specified in the XML schema document are valid SQL names. Otherwise, remove such attributes from the schema and try again.

ORA-31092: invalid SQL name "string"

Cause: The XML schema document contains an invalid SQL name. For example, the values of attributes SQLName, SQLType, defaultTable.

Action: Make sure that all names of SQL schema objects specified in the XML schema document are valid SQL names. This implies that the database length and other restrictions on names be satisfied.

ORA-31093: null or invalid value specified for parameter : string

Cause: The argument value passed for the given parameter is null or invalid.

Action: Make sure that all the input argument values are valid.

ORA-31094: incompatible SQL type "string" for attribute or element "string"

Cause: The SQL type information provided in the XML schema is not compatible with the XML datatype for the specified attribute or element.

Action: Make sure that the specified SQL types are compatible with the declared XML datatypes.

ORA-31095: cannot generate string : "string.string" already exists

Cause: The type/table name specified in the XML schema document cannot be generated because it is already being used.

Action: Use different names for types/tables or use the NOGEN mode so that schema compiler does not generate new types/tables.

ORA-31096: validation failed for schema

Cause: The XML Schema could not be validated.

Action: Make sure that the SQLType and other datatype mapping is valid.

ORA-31097: Hierarchical Index not empty

Cause: An attempt was made to rebuild the hierarchical index which is not empty.

Action: Delete all rows in the hierarchical index and then rebuild it.

ORA-31099: XDB Security Internal Error

Cause: An XDB Security internal error has occurred.

Action: Contact Oracle Support.

ORA-31100: XDB Locking Internal Error

Cause: An XDB Locking Internal error has occurred.

Action: Contact Oracle Support.

ORA-31101: Token "string" not given while locking resource "string"

-
- Cause:** Locking attempted on resource when the principal already owns a lock given by the token above.
- Action:** Reattempt the lock with the token.
- ORA-31102: Already locked in exclusive mode. Cannot add lock.**
- Cause:** The resource is already locked in exclusive mode. Cannot add another lock.
- Action:** Unlock the existing lock.
- ORA-31103: Resource locked in shared mode. Cannot add exclusive lock**
- Cause:** The resource is locked in shared mode. Cannot add a shared lock.
- Action:** Try locking in shared mode or unlocking the existing lock.
- ORA-31104: Cannot find lock with token "string" on "string"**
- Cause:** The lock may have been unlocked or expired. If token was supplied, token may be wrong.
- Action:** Verify this lock exists. Supply correct token.
- ORA-31105: User does not own lock with supplied token "string"**
- Cause:** The lock corresponding to the supplied token is not owned by the user.
- Action:** Log on as correct user. Supply correct token.
- ORA-31107: Action failed as resource "string" is locked by name lock**
- Cause:** Lock requests cause the whole request URI to be locked
- Action:** Supply lock token or unlock the lock
- ORA-31108: Action failed as resource *string* is locked**
- Cause:** Delete/Rename failed because of an existing lock
- Action:** Do lockdiscovery to find the lock and delete it.
- ORA-31109: Action failed as parent resource *string* is locked**
- Cause:** Delete/Rename failed because of an lock on parent resource
- Action:** Do lockdiscovery to find the lock and delete it.
- ORA-31110: Action failed as resource *string* is locked by name**
- Cause:** Delete/Rename failed because one of the children is locked.
- Action:** Do lockdiscovery to find the lock and delete it.
- ORA-31111: table *string* cannot be hierarchically enabled**
- Cause:** Trigger <tabname>_xdb_pittrigger already exists
- Action:** Delete all rows in the hierarchical index and then rebuild it.
- ORA-31112: fail to *string* for *string* port using xdb configuration**
- Cause:** port number for the defined presentation is not valid
- Action:** Either the port number is already in use or it is protected. Specify another port number.
- ORA-31113: XDB configuration may not be updated with non-schema compliant data**
- Cause:** An attempt was made to update the XDB configuration resource with non-schema or non-schema compliant data.

Action: Check the document to make sure it is schema based and schema compliant.

ORA-31114: XDB configuration has been deleted or is corrupted

Cause: The XDB configuration resource has been deleted or corrupted.

Action: Reinstall XDB, or reinsert a valid configuration document.

ORA-31115: XDB configuration error: *string*

Cause: An error related to XDB configuration has occurred.

Action: Make sure the configuration resource contains valid data.

ORA-31116: Tablespace not specified correctly

Cause: XDB cannot be moved to the specified tablespace.

Action: Specify a valid tablespace.

ORA-31117: Table "*string*"."*string*" is not resource metadata enabled

Cause: This table does not have a RESID column for resource metadata

Action: Use disable/enable_hierarchy to enable resource metadata

ORA-31118: System schema "*string*" already registered

Cause: An attempt was made to register schema with same URL as a system schema.

Action: Change the schema URL to avoid conflicts with system XML schemas.

ORA-31119: XDB configuration cannot be updated on all instances

Cause: An attempt was made to update XDB configuration.

Action: Ensure that each instance is correctly configured with its listener.

ORA-31121: The *string* operator cannot be FALSE

Cause: The value of the operator that was specified is FALSE.

Action: Specify an operator that evaluates to TRUE.

ORA-31122: The *string* operator has incorrect RHS value

Cause: The value on the right hand side, that has been specified for the operator did not evaluate to TRUE.

Action: Specify a value on the right hand side that evaluates to TRUE .

ORA-31127: RCList cannot contain noncommitted resource configuration

Cause: A commit was not executed after adding a resource configuration to an RCList by calling DBMS_RESCONFIG.ADDRESCONFIG()

Action: Make sure a commit is executed after calling DBMS_RESCONFIG.ADDRESCONFIG()

ORA-31128: The event handler calls cannot exceed the depth of *string*

Cause: Tried to fire an event with depth exceeding the maximum.

Action: Make sure the event that is being fired does not generate infinitely recursive calls, either to itself or to other functions or procedures.

ORA-31129: Unable to retrieve repository's resource configuration

Cause: Tried to access a resource configuration referenced by the XDB repository that has been deleted.

Action: Disassociate the resource configuration from the repository.

-
- ORA-31130: Specified resource configuration is not associated with given resource**
Cause: Tried to delete a nonexistent resource configuration from the configuration list of the target resource.
Action: Make sure that the resource and resource configuration names are specified correctly and the resource configuration belongs to the configuration list of the given resource.
- ORA-31131: <RCList> contains OID that is not a resource configuration OID**
Cause: The OID in <RCList> element was not a resource configuration OID.
Action: Update the <RCList> element and resubmit statement.
- ORA-31132: Cannot validate handler "*string*"."*string*"**
Cause: Attempted to invoke an invalid event handler. This can be a result of one of the following reasons: 1) The handler did not exist. 2) The handler could not be compiled successfully.
Action: Verify that the named handler does exist, then recompile and fix all compilation errors that may subsequently arise.
- ORA-31133: Cannot execute handler "*string*"."*string*" with invoker rights**
Cause: Attempted to invoke an event handler with invoker rights when the SET-INVOKER attribute in the resource configuration that defines the handler was not set to TRUE.
Action: Either redefine the named handler with definer rights or change the SET-INVOKER attribute in the resource configuration that defines the named handler to TRUE.
- ORA-31134: Cannot delete a configuration that is referenced by other resources**
Cause: Attempted to delete a resource configuration that was referenced by other resources.
Action: Remove all references to the target resource configuration by executing DELETETERESCONFIG or DELETEREPOSITORYRESCONFIG procedures in DBMS_RESCONFIG package or specify the DELETE_FORCE option in the DELETETERESOURCE statement.
- ORA-31135: Resource has already been rendered**
Cause: One of the following has occurred: 1) Attempted to invoke setRender* method after the resource was rendered through a setRender* method or after data was written to the output stream. 2) Attempted to access the output stream of the resource after a setRender* method was executed on the resource.
Action: Remove the method causing the problem.
- ORA-31136: Resource configuration *string* is already associated with the resource *string***
Cause: The resource configuration already exists in the resource configuration list of the resource or the repository
Action: Check if this resource configuration really needs to be added. If so, remove it from resource and repository lists before adding it.
- ORA-31137: Index out of range**
Cause: The position specified was not valid.
Action: Check ($0 \leq \text{pos} < \text{size}$ of the configuration list of the target resource)
- ORA-31138: Resource-configuration is being referenced by one or more resources**

Cause: Tried to add a resource configuration to the repository that was being referenced by existing resources.

Action: Remove the resource configuration from other resources before trying to add it to the repository again.

ORA-31139: Invalid resource configuration list

Cause: Attempted to create or update a resource that had duplicate resource configurations or conflicted with the repository configurations.

Action: Correct the resource configuration list and re-submit statement.

ORA-31140: Illegal operation: *string*

Cause: Tried to invoke a method when it was not allowed.

Action: Do not execute the indicated method.

ORA-31141: Must specify a valid path value

Cause: The path specified for the <defaultChildConfig> or <defaultChildACL> element must refer to an existing resource.

Action: Correct problem and resubmit statement.

ORA-31142: Must specify the schema for each listener

Cause: The schema element was not specified.

Action: Correct problem and resubmit statement.

ORA-31143: XDB_SET_INVOKER role is required

Cause: XDB_SET_INVOKER role was required to set the SET-INVOKER attribute to TRUE.

Action: Correct problem and resubmit statement.

ORA-31144: Implementation language for *string* is not specified

Cause: Implementation language for specified listener source was not specified.

Action: Correct problem and resubmit statement.

ORA-31145: Duplicate listener, *string*, found in resource configuration

Cause: Duplicate listener source was found in resource configuration.

Action: Remove duplicates and resubmit statement.

ORA-31146: Invalid listener source *string.string*

Cause: The listener source specified in the resource configuration did not exist or was invalid.

Action: Correct the listener source in the <listener> element and resubmit statement.

ORA-31147: *string* is not an ACL resource

Cause: The specified resource did not conform to acl.xsd schema.

Action: Specify a valid path for the <defaultChildACL> element and resubmit statement.

ORA-31148: *string* is not a valid resource configuration

Cause: The resource specified in the <defaultChildConfig> element while creating a resource configuration or specified as the rpath in a call using DBMS_RESCONFIG package did not conform to XDBResConfig.xsd schema.

Action: Specify a valid path and resubmit statement.

ORA-31149: no such schema: *string*

Cause: Nonexistent schema defined in the resource configuration.

Action: Specify a valid schema in the resource configuration and resubmit statement.

ORA-31150: uncaught error in handler *string*

Cause: The named handler raised an exception.

Action: Fix the identified error.

ORA-31151: Cyclic definition encountered for *string*: "*string*"

Cause: The schema definition for this type has cycles.

Action: Remove cyclic definition and re-compile schema.

ORA-31153: Cannot create schema URL with reserved prefix "<http://xmlns.oracle.com/xdb/schemas/>"

Cause: This prefix is reserved for XDB extended schema URLs and cannot be used in a user specified URL.

Action: Modify the prefix to a different one.

ORA-31154: invalid XML document

Cause: The XML document is invalid with respect to its XML Schema.

Action: Fix the errors identified and try again.

ORA-31155: attribute *string* not in XDB namespace

Cause: The specified attribute should be prefixed with XDB's namespace.

Action: Ensure that all XDB specified attributes are prefixed with XDB's namespace and try again.

ORA-31157: Invalid Content-Type charset

Cause: HTTP Content-Type header had a charset that Oracle does not understand.

Action: Fix the Content-Type header in the HTTP request.

ORA-31158: schema "*string*" currently being referenced

Cause: The specified schema URL is currently being referenced by the same session. This could happen because of PLSQL XMLType variables still in scope.

Action: Ensure all references to this schema in this session are released and try the operation again.

ORA-31159: XML DB is in an invalid state

Cause: XML DB's internal tables are in an invalid state, probably because the database was not upgraded or the upgrade was not successful

Action: Ensure that the database is upgraded successfully. If the problem persists, contact Oracle Support

ORA-31160: max substitution group size *string* exceeded by "*string*" (*string*) for head element "*string*" (*string*)

Cause: The maximum limit on nested substitution groups has been exceeded by an element.

Action: Delete specified schema and re-register it after removing the offending substitution element.

ORA-31161: element or attribute "string" cannot be stored out of line

Cause: An element or attribute of a simple type has SQLInline=false

Action: Remove the SQLInline=false qualification for the offending element or attribute

ORA-31162: element or attribute "string" has no SQLType specified

Cause: Schema registration was invoked with GENTYPES=false without specifying a SQLType for some element or attribute

Action: Specify a SQLType for the offending element or attribute and register the schema again

ORA-31163: element or attribute "string" has invalid attribute value "string" (should be "string")

Cause: An element or attribute for a complextype derived by restriction has an attribute whose value is different from that in the base type

Action: Remove the mismatched attribute values from the offending element or attribute

ORA-31164: cannot load object-relational XML attribute using direct path

Cause: The table being loaded contains a xml column with object-relational storage. The xmltype column contains a type with subtypes. This type of attribute cannot be loaded with direct path.

Action: Perform the load with conventional path mode.

ORA-31165: cannot load object-relational XML attribute using direct path

Cause: The table being loaded contains a xml column with object-relational storage. The xmltype column either contains an out-of-line partitioned table or the table itself is partitioned by one of the attributes of xmltype. This type of table cannot be loaded with direct path.

Action: Perform the load with conventional path mode.

ORA-31167: XML nodes over 64K in size cannot be inserted

Cause: An attempt was made to insert an XML Text Node with a size greater than 64K. This is not supported.

Action: Create text nodes under 64K.

ORA-31168: Node localname and namespace values should be less than 64K

Cause: An attempt was made to specify an XML Node with localname or namespace value greater than or equal to 64K. This is not supported.

Action: Node localnames and namespace values should be under 64K.

ORA-31169: Number of children (string) defined in 'string' exceeds maximum (string)

Cause: An attempt was made to define more than the allowed number of children in a complexType of an XMLSchema document.

Action: Modify the XML Schema to move children of complexType into subelements that are not inlined.

ORA-31170: Cyclic Schema Registration without using FORCE option

Cause: An attempt was made to register cyclic schemas with FORCE = false.

Action: Use FORCE = true when registering cyclic schemas.

ORA-31171: schema processing error LSX-string while string

Cause: An LSX routine returned an error.

Action: Look up the LSX error and follow its corrective action.

ORA-31172: cannot load XMLType column using direct path

Cause: The table being loaded contained an XML column with object-relational or binary storage and supplemental logging was enabled for the table. Direct path load is not supported for such table when supplemental logging is enabled.

Action: Perform the load with conventional path mode.

ORA-31176: API not supported in this release

Cause: This API was not supported.

Action: None

ORA-31180: DOM Type mismatch in invalid PL/SQL DOM handle

Cause: The specified PL/SQL DOM handle is referencing a DOM Node whose DOM Type that does not match the one available in the session. This could happen because the pl/sql handle was reused, or the original document is no longer available.

Action: Ensure that the pl/sql handle for the target node is valid and try the operation again.

ORA-31181: PL/SQL DOM handle accesses node that is no longer available

Cause: The specified pl/sql handle is referencing a node in a DOM Document that is no longer available.

Action: Ensure that the pl/sql handle for the target node is valid and try the operation again.

ORA-31182: Too many PL/SQL DOM handles specified

Cause: An attempt was made to create a PL/SQL DOM handle that exceeded the maximum allowable number of PL/SQL DOM handles.

Action: Free PL/SQL DOM handles and try the operation again.

ORA-31183: Node type string cannot be converted to desired type

Cause: The given node's type cannot be converted correctly for this operation. For example, a DOM Element cannot be converted to Document Fragment

Action: Pass a valid node type for the conversion.

ORA-31185: DOM Nodes do not belong to the same DOM Document

Cause: The specified PL/SQL DOM Node does not belong to the parent DOM Document of the referring DOM Node.

Action: Ensure that both the DOM Nodes are part of the same DOM Document.

ORA-31186: Document contains too many nodes

Cause: Unable to load the document because it has exceeded the maximum allocated number of DOM nodes.

Action: Reduces the size of the document.

ORA-31187: Cannot Add Node 'string' (type='string') to Simple Type Node 'string'

Cause: Trying to add attribute/element nodes to a simple type against the schema definition. Simple types can have only special attribute like namespaces, xsi:nil etc.

Action: Use a valid node for the operation.

ORA-31188: The specified printing option is invalid

Cause: The printing option specified in the operation is invalid.

Action: Use a valid printing option for the operation.

ORA-31190: Resource *string* is not a version-controlled resource

Cause: Either one of the following is the cause:

- Checkout is requested for a resource that isn't under version control". Only version-controlled resource can be checked out.

- Checkout is requested for a row of a non-versioned table.

Action: put the resource under version-control before checking out.

ORA-31191: Resource *string* is already checked out

Cause: Either one of the following is the cause:

- Checkout is requested for a resource that is already checked out to the workspace by the same or different user.

Action: checked in the resource from the workspace before checking out

ORA-31192: Resource *string* has not been checked out

Cause: Either one of the following is the cause:

- Checkin or uncheckout is requested for a resource that has not been checked out to the workspace by any user in a workspace

Action: checked in the resource from the workspace before checking out

ORA-31193: This versioning feature isn't supported for resource *string*

Cause: Either one of the following is the cause:

- Container cannot be put under version-controlled.

Action: Avoid using these features.

ORA-31194: Resource *string* is already deleted

Cause: Access a version-controlled resource that is already deleted.

Action: Remove the cyclic definitions in the type and retry compilation.

ORA-31195: XML node '*string*' (type=*string*) does not support this operation

Cause: The given node's type is not supported for this operation. For example, trying to add children to an attribute node, or passing in a document node as a child, are unsupported operations.

Action: Use a valid node type for the operation.

ORA-31196: XML nodes over *string* in size cannot be printed

Cause: An attempt was made to use an XML Text Node with a size greater than 64K, or an XML Comment Node with a size greater than 4K. These cannot be printed. For example, trying to add children to an attribute node, or passing in a document node as a child, are unsupported operations.

Action: Use getClobVal() or getStringVal() to print the Document.

ORA-31197: Error in processing file *string*

Cause: An error occurred while operating on the specified file. The possible causes are the file header is corrupt or check the next error on stack

Action: Ensure that the specified file is correct. Look at the next error on the stack and take appropriate action.

-
- ORA-31198: Mismatch in number of bytes transferred due to non-binary mode**
Cause: An error occurred while reading the specified file. The most probable cause is that the transfer was initiated in ASCII mode.
Action: Ensure that the transfer mode is set to BINARY
- ORA-31199: Warning in processing file *string***
Cause: A warning was raised while operating on the specified file. However, the current operation was completed successfully.
Action: This is primarily an informational message. Look at the next error on the stack to obtain further information.
- ORA-31200: Invalid ACL Argument**
Cause: A System Constraining ACL was passed as one of the arguments to this function.
Action: Please ensure that none of the aclid arguments are for the System Constraining ACL.
- ORA-31201: DBMS_LDAP: generic error: *string***
Cause: There has been an error in the DBMS_LDAP package.
Action: Please report the error number and description to Oracle Support.
- ORA-31202: DBMS_LDAP: LDAP client/server error: *string***
Cause: There is a problem either on the LDAP server or on the client.
Action: Please report this error to the LDAP server administrator or your Database administrator.
- ORA-31203: DBMS_LDAP: PL/SQL - Init Failed.**
Cause: There has been an error in the DBMS_LDAP Init operation.
Action: Please check the host name and port number, or report the error number and description to Oracle Support.
- ORA-31204: DBMS_LDAP: PL/SQL - Invalid LDAP Session.**
Cause: There has been an error in the DBMS_LDAP bind operation.
Action: Please check the session handler that you use for binding, or report the error number and description to Oracle Support.
- ORA-31205: DBMS_LDAP: PL/SQL - Invalid LDAP Auth method.**
Cause: There has been an error in the DBMS_LDAP bind operation.
Action: Please check the authentication credentials that you use for binding, or report the error number and description to Oracle Support.
- ORA-31206: DBMS_LDAP: PL/SQL - Invalid LDAP search scope.**
Cause: There has been an error in the DBMS_LDAP search operation.
Action: Please check the search scope that you use for search, or report the error number and description to Oracle Support.
- ORA-31207: DBMS_LDAP: PL/SQL - Invalid LDAP search time value.**
Cause: There has been an error in the DBMS_LDAP search operation.
Action: Please check the search time value that you use for search, or report the error number and description to Oracle Support.
- ORA-31208: DBMS_LDAP: PL/SQL - Invalid LDAP Message.**

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP message that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31209: DBMS_LDAP: PL/SQL - LDAP count_entry error.

Cause: There has been an error in the DBMS_LDAP count_entry operation.

Action: Please check the LDAP count_operation, or report the error number and description to Oracle Support.

ORA-31210: DBMS_LDAP: PL/SQL - LDAP get_dn error.

Cause: There has been an error in the DBMS_LDAP get_dn operation.

Action: Please check the LDAP get_dn, or report the error number and description to Oracle Support.

ORA-31211: DBMS_LDAP: PL/SQL - Invalid LDAP entry dn.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the entry dn that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31212: DBMS_LDAP: PL/SQL - Invalid LDAP mod_array.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP mod_array that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31213: DBMS_LDAP: PL/SQL - Invalid LDAP mod option.

Cause: There has been an error in the DBMS_LDAP populate_mod_array operation.

Action: Please check the LDAP mod option that you use for LDAP populate_mod_array operation, or report the error number and description to Oracle Support.

ORA-31214: DBMS_LDAP: PL/SQL - Invalid LDAP mod type.

Cause: There has been an error in the DBMS_LDAP populate_mod_array operation.

Action: Please check the LDAP mod type that you use for LDAP populate_mod_array operation, or report the error number and description to Oracle Support.

ORA-31215: DBMS_LDAP: PL/SQL - Invalid LDAP mod value.

Cause: There has been an error in the DBMS_LDAP populate_mod_array operation.

Action: Please check the LDAP mod value that you use for LDAP populate_mod_array operation, or report the error number and description to Oracle Support.

ORA-31216: DBMS_LDAP: PL/SQL - Invalid LDAP rdn.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP rdn value that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31217: DBMS_LDAP: PL/SQL - Invalid LDAP newparent.

Cause: There has been an error in the DBMS_LDAP rename_s operation.

Action: Please check the LDAP newparent value that you use for LDAP rename_s operation, or report the error number and description to Oracle Support.

ORA-31218: DBMS_LDAP: PL/SQL - Invalid LDAP deleteoldrdn.

Cause: There has been an error in the DBMS_LDAP rename_s operation.

Action: Please check the LDAP deleteoldrdn value that you use for LDAP rename_s operation, or report the error number and description to Oracle Support.

ORA-31219: DBMS_LDAP: PL/SQL - Invalid LDAP notypes.

Cause: There has been an error in the DBMS_LDAP explode_dn or explode_rdn operation.

Action: Please check the LDAP notypes value that you use for LDAP explode_dn or explode_rdn operation, or report the error number and description to Oracle Support.

ORA-31220: DBMS_LDAP: PL/SQL - Invalid LDAP SSL wallet location.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP sslwrl value that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31221: DBMS_LDAP: PL/SQL - Invalid LDAP SSL wallet passwd.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP sslpasswd value that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31222: DBMS_LDAP: PL/SQL - Invalid LDAP SSL authentication mode.

Cause: There has been an error in the DBMS_LDAP operation.

Action: Please check the LDAP sslauth value that you use for LDAP operation, or report the error number and description to Oracle Support.

ORA-31223: DBMS_LDAP: cannot open more than *string* LDAP server connections

Cause: An attempt was made to open more than the maximum allowed LDAP server connections.

Action: Free unused connections.

ORA-31224: DBMS_LDAP: invalid LDAP session

Cause: An attempt was made by a PL/SQL module to use an LDAP session which is not valid and might have already been closed.

Action: Check the LDAP session handle in PL/SQL module involving DBMS_LDAP.

ORA-31225: DBMS_LDAP: invalid BER_ELEMENT

Cause: An attempt was made by a PL/SQL module to use a BER_ELEMENT which is not valid and might have already been freed.

Action: Check the BER_ELEMENT in PL/SQL module involving DBMS_LDAP.

ORA-31226: DBMS_LDAP: MOD_ARRAY size limit exceeded

Cause: An attempt was made by a PL/SQL module to add an element beyond the MOD_ARRAY size limit.

Action: Increase the MOD_ARRAY size limit in PL/SQL module involving DBMS_LDAP.

ORA-31227: DBMS_LDAP: invalid LDAP MESSAGE handle

Cause: An attempt was made by a PL/SQL module to use an LDAP MESSAGE handle which is not valid and might have already been freed.

Action: Check the LDAP MESSAGE handle in PL/SQL module involving DBMS_LDAP.

ORA-31228: DBMS_LDAP: invalid MOD_ARRAY

Cause: An attempt was made by a PL/SQL module to use a MOD_ARRAY which is not valid and might have already been freed.

Action: Check the MOD_ARRAY in PL/SQL module involving DBMS_LDAP.

ORA-31229: DBMS_LDAP: invalid input parameter

Cause: An invalid argument has been passed by a PL/SQL module to a DBMS_LDAP subprogram

Action: Check the input argument to the DBMS_LDAP subprogram in PL/SQL module involving DBMS_LDAP.

ORA-31230: DBMS_LDAP: unable to dynamically allocate additional memory

Cause: An error occurred during dynamic memory allocation from session heap.

Action: Verify that adequate memory resources are available.

ORA-31231: DBMS_LDAP: invalid PROPERTY_SET

Cause: An attempt was made by a PL/SQL module to use a PROPERTY_SET which is not valid and might have already been freed.

Action: Check the PROPERTY_SET in PL/SQL module involving DBMS_LDAP.

ORA-31232: DBMS_LDAP: invalid MOD_PROPERTY_SET

Cause: An attempt was made by a PL/SQL module to use a MOD_PROPERTY_SET which is not valid and might have already been freed.

Action: Check the MOD_PROPERTY_SET in PL/SQL module involving DBMS_LDAP.

ORA-31398: DBMS_LDAP: Shared servers are not supported.

Cause: The session executing functions from the DBMS_LDAP package is being handled by a shared server in the Database.

Action: Use dedicated database sessions to execute functions in the DBMS_LDAP package.

ORA-31399: Cannot contact LDAP server *string* at port number

Cause: The LDAP server specified could not be contacted. This can happen if the server is down or inaccessible.

Action: Contact the administrator of the LDAP server

ORA-31401: change source *string* is not an existing change source

Cause: The caller did not use the name of an existing change source. The name given does not match the name of any existing change source.

Action: Check the spelling of the change source name. Choose an existing change source.

ORA-31402: unrecognized parameter *string*

Cause: Unrecognized parameter was detected.

Action: Check for too many parameters in the call.

ORA-31403: change table *string* already contains a column *string*

Cause: Issued ALTER_CHANGE_TABLE with an add operation but a column by this name already exists in the specified table.

Action: Check the names and call the procedure again.

ORA-31404: all input parameters are null

Cause: All input parameters are null. At least one property must be altered.

Action: Call the procedure again, making sure that all the required parameters have been specified. Ensure that at least one parameter is not null. Refer to user documentation for the correct way of calling this procedure.

ORA-31405: cannot make changes while change set *string* is advancing

Cause: The change set is currently advancing. Change sources related to an advancing change set cannot be altered. Change tables related to the advancing change set cannot be created, altered or dropped. Some or all the parameters of the change set cannot be altered while the set is advancing.

Action: Wait until the change set has finished advancing, then reissue the command. If altering the change set, only the advance_enable parameter can be altered during an advance.

ORA-31406: change source *string* is referenced by a change set

Cause: The operation cannot complete because this change source is referenced by one or more change sets.

Action: Drop the change sets first, then re-issue the command. May have to drop some change tables before the change sets are dropped.

ORA-31407: end_date must be greater than the begin_date

Cause: The end data of the change set is earlier than the begin date. The end date must always be later in time than the begin date, so that the duration between the begin and end dates is a positive amount of time.

Action: Change the begin date and/or the end date, so that the end date is later than the begin date.

ORA-31408: invalid value specified for begin_scn or end_scn

Cause: The begin_scn was not greater than zero. The end_scn was less than zero. The end_scn was less than the begin_scn.

Action: Check the values of both begin_scn and end_scn. Correct them to make sure that they form a legal SCN range. An end_scn value of zero indicates an infinite scn range.

ORA-31409: one or more values for input parameters are incorrect

Cause: One or more of the inputs to the procedure had invalid values.

Action: Identify the bad parameter(s) and supply correct values to the procedure.

ORA-31410: change set *string* is not an existing change set

Cause: Could not find an existing change set by this name.

Action: Check the spelling of the change set name. Call the procedure again, passing the correct change set name.

ORA-31411: change set *string* is referenced by a change table

Cause: The operation cannot be performed because the change set contains one or more change tables.

Action: You will need to drop the change table(s) first, then repeat the operation

ORA-31412: change set *string* is disabled and cannot be advanced

Cause: The specified change set is disabled. The change set needs to be enabled for the operation to succeed.

Action: Determine why the change set is disabled and correct this condition. Alter the change set specifying 'y' for `advance_enable` then retry the operation.

ORA-31413: change set *string* is currently being advanced

Cause: An advance operation is in progress for this change set and we only allow one at a time.

Action: Since the change set is currently being advanced, the best action is to wait for it to finish advancing. Only one caller at a time can advance the change set. Check for the cause of long running advance operations.

ORA-31414: error(s) occurred during change table advance

Cause: One or more errors occurred during the advance operation.

Action: Check the log file(s) for a more detailed report of the underlying errors.

ORA-31415: change set *string* does not exist

Cause: Specified change set does not exist or the user does not have access to the publications in that change set. The name specified did not match the name of any existing change set. Certain privileges are required to access the publications within that change set.

Action: Check the name and call the procedure again, with the name of an existing change set. Contact the publisher or database administrator if user privileges are required to access the publications in the change set.

ORA-31416: invalid SOURCE_COLMAP value

Cause: A `source_colmap` value of 'y' was specified for an asynchronous change table.

Action: Specify a `source_colmap` parameter value of 'n' and call the procedure again.

ORA-31417: column list contains control column *string*

Cause: Reserved column name was specified in a column list or column type parameter.

Action: Control columns are selected with separate parameters. If you did not want a control column, then change the name of the specified column so that it does not conflict with a reserved column name.

ORA-31418: source schema *string* does not exist

Cause: Trying to create a synchronous change table and the source schema did not match any existing schema names in the database.

Action: Specify the name of an existing schema.

ORA-31419: source table *string* does not exist

Cause: When creating a synchronous change table, the underlying source table must exist when the procedure is called. In this case, the source table did not exist.

Action: Specify the name of an existing table.

ORA-31420: unable to submit the purge job

Cause: When creating the first change table, a purge job is submitted to the job queue. Submission of this purge job failed.

Action: Make sure that job queue processes are enabled and are currently running. If this does not solve the problem, contact Oracle.

ORA-31421: change table does not exist

Cause: Specified change table does not exist.

Action: Recheck the name, and call the procedure again using an existing change table.

ORA-31422: owner schema *string* does not exist

Cause: Value specified for the owner parameter does not contain the name of an existing schema in the database.

Action: Recheck the name, and call the procedure again using an existing schema name.

ORA-31423: change table *string* does not contain column *string*

Cause: Issued ALTER_CHANGE_TABLE with a drop operation and the specified column does not exist in the change table.

Action: Recheck the names, and call the procedure again.

ORA-31424: change table has active subscriptions

Cause: The change table is subscribed to, so it cannot be dropped.

Action: Do not drop a change table while there are active subscribers. If this is an emergency, use the FORCE parameter. This will forcibly drop the change table out from under all subscribers.

ORA-31425: subscription does not exist

Cause: The subscription either did not exist or did not belong to this user.

Action: Call the function again with a valid subscription name.

ORA-31426: cannot modify active subscriptions

Cause: The subscription was already activated so that additional calls to SUBSCRIBE were prohibited.

Action: Subscribe to all the desired tables and columns before activating the subscription. Ensure that the correct subscription name is specified.

ORA-31427: publication *string* already subscribed

Cause: The subscription already contained this publication.

Action: Check the values of subscription_name and publication_id. Check any other subscribe calls to see if they subscribe to columns that are shared among more than one publication on the same source table. Do not attempt to subscribe to the same publication more than once in the same subscription. Use the publication_id variant of the SUBSCRIBE call if needed to specify precise publications.

ORA-31428: no publication contains all the specified columns

Cause: One or more of the specified columns cannot be found in a single publication.

Action: Change the subscription request to select only columns that are in the same publication. Consult the USER_PUBLISHED_COLUMNS view to see current publications.

ORA-31429: subscription has not been activated

Cause: The called procedure required an activated subscription.

Action: Check the subscription name and correct if necessary. Call the `ACTIVATE_SUBSCRIPTION` procedure for this subscription and then reissue the original command.

ORA-31430: subscriber view exists

Cause: A view that is already in use was specified for the subscriber view.

Action: Call the `SUBSCRIBE` procedure using a different subscriber view name.

ORA-31431: all source tables must belong to the synchronous change set

Cause: Not all of the source tables belong to the synchronous change set.

Action: Check the spelling of the source tables. Make sure that all of the source tables belong to the synchronous change set.

ORA-31432: invalid source table

Cause: Either the `schema_name.source_table` did not exist or it did not belong to this subscription.

Action: Check the spelling of the `schema_name` and `source_table`. Verify that the specified table exists in the specified schema and is subscribed to by the subscription.

ORA-31433: subscriber view does not exist

Cause: The subscription did not contain this subscriber view.

Action: Recheck the name, and specify the name of an existing subscriber view.

ORA-31434: purge is currently running

Cause: Called the `PURGE` procedure while a purge job was currently running.

Action: Wait for purge to complete before reissuing this command.

ORA-31435: an error occurred during the purge operation

Cause: An error occurred during the purge operation

Action: Check the logfile for a more detailed report of the underlying errors.

ORA-31436: duplicate change source *string*

Cause: A change source by the specified name already exists.

Action: Recreate the change source with a unique name.

ORA-31437: duplicate change set *string*

Cause: A change set by the specified name already exists.

Action: Recreate the change set with a unique name.

ORA-31438: duplicate change table *string*

Cause: A change table by the specified name already exists.

Action: Recreate the change table with a unique name.

ORA-31439: subscription is already active

Cause: The subscription is already active.

Action: Check name and retry.

ORA-31440: change set *string* is empty and cannot be advanced

Cause: User attempted to advance a change set which does not contain any change tables. Without change tables, a change set cannot be advanced.

Action: Create change tables in the change set, then retry the advance.

ORA-31441: table is not a change table

Cause: User attempted to execute the DROP_CHANGE_TABLE procedure on a table that is not a CHANGE table. This can also occur when a CHANGE table object has been orphaned. CHANGE tables can become orphaned after a CREATE_CHANGE_TABLE failure or an incomplete DROP_CHANGE_TABLE.

Action: Check spelling. If error was due to an incorrect name, then retry the procedure using the correct name. To drop a table that is not a CHANGE table, or an orphaned CHANGE table, use the DROP TABLE DDL command instead.

ORA-31442: operation timed out while acquiring lock on *string*

Cause: CDC attempted to acquire a lock on the resource, but the operation timed out.

Action: Retry the operation later.

ORA-31443: deadlock detected while acquiring lock on *string*

Cause: CDC attempted to acquire a lock on the resource, but encountered a deadlock.

Action: Contact Oracle corporation

ORA-31444: parameter error while acquiring lock on *string*

Cause: CDC attempted to acquire a lock on the resource, but encountered a problem passing parameters to the lock manager.

Action: Contact Oracle corporation

ORA-31445: invalid lock handle while acquiring lock on *string*

Cause: CDC attempted to acquire a lock on the resource, but encountered a invalid lock handle, which did not correspond to any existing handle.

Action: Contact Oracle corporation

ORA-31446: this session does not own the lock handle for *string*

Cause: CDC attempted to acquire a lock on the resource, does not own the the lock associated with the lock. This is an internal error.

Action: Contact Oracle corporation

ORA-31447: cannot create change tables in the SYS schema

Cause: Attempted to create a change table in the SYS schema. This is not allowed.

Action: Use a different existing schema and retry the command.

ORA-31448: invalid value for change_source

Cause: The specified value was not a valid name for a Change Source.

Action: Specify a valid name and retry the command.

ORA-31449: invalid value for change_set_name

Cause: The specified value was not a valid name for a Change Set.

Action: Specify a valid name and retry the command.

ORA-31450: invalid value for change_table_name

Cause: The specified value was not a valid name for a Change Table.

Action: Specify a valid name and retry the command.

ORA-31451: invalid value *string* for capture_values, expecting: OLD, NEW, or BOTH

Cause: The specified value was not a valid option for a capture_values.

Action: Specify a valid option and retry the command.

ORA-31452: invalid value *string* for parameter, expecting: Y or N

Cause: The specified value was not Y or N.

Action: Specify Y or N for the parameter and retry the command.

ORA-31453: invalid value *string* for parameter, expecting: Y, N, or NULL

Cause: The specified value was not Y, N or NULL.

Action: Specify Y, N or NULL for the parameter and retry the command.

ORA-31454: invalid value *string* for operation parameter, expecting: ADD or DROP

Cause: The specified value was not ADD or DROP.

Action: Specify ADD or DROP and retry the command.

ORA-31455: nothing to ALTER

Cause: The specified column list is NULL and all optional control columns are 'N'.

Action: Specify one or more columns to ALTER.

ORA-31456: error executing a procedure in the DBMS_CDC_UTILITY package

Cause: An internal attempt to invoke a procedure within the DBMS_CDC_UTILITY package failed.

Action: Check the trace logs for more information. Ensure that the package has been installed successfully. Try issuing a DESCRIBE command from SQL on the package. If it fails, then try reinstalling the package. If it succeeds then try invoking one of the procedures from SQL.

ORA-31457: maximum length of description field exceeded

Cause: The maximum number of characters permitted in the description field was exceeded.

Action: The maximum length of the description field is 30 characters. Ensure the length does not exceed this value and retry the command.

ORA-31458: an internal error occurred

Cause: This is an internal error.

Action: Contact Oracle Worldwide Customer Support and report the error.

ORA-31459: system triggers for DBMS_CDC_PUBLISH package are not installed

Cause: One or more required system triggers are not installed. These triggers are required for the proper operation of Change Data Capture. Operations on Change tables cannot continue.

Action: Install or reenale the triggers, or reinstall the package.

ORA-31460: logfile location *string* is not an existing directory

Cause: The directory specification for logfile location for the change source, does not correspond with an existing directory, or the directory was not accessible.

Action: 1. Create the directory if it does not exist. If the directory does exist, change the file system permissions so the directory can be accessed. OR 2. perform ALTER CHANGE SOURCE and change the logfile_location to be an existing directory that contains the logfiles

ORA-31461: logfile location *string* contains no files that match pattern *string*

Cause: The directory specification for logfile location for the change source, does not contain any files whose names pattern-match the logfile_suffix.

Action: 1. Make sure that the logfile location contains logfiles whose names match the logfile_suffix pattern for the change set. OR 2. perform ALTER CHANGE SOURCE and change the logfile_suffix such that it matches the names of existing logfiles in the directory

ORA-31462: internal error while accessing metadata

Cause: An unexpected internal error occurred while CDC was accessing its internal Metadata.

Action: Contact Oracle Corporation

ORA-31463: logfile location *string* is an empty directory

Cause: The directory specification for logfile location for the change source, is an empty directory

Action: 1. Make sure it is the correct location of the logfiles. If it is, make sure the directory contains logfiles. OR 2. perform ALTER CHANGE SOURCE and change the logfile_location to be an existing directory that contains the logfiles

ORA-31464: target table for the change table no longer exists

Cause: User tried to drop a change table but its underlying storage table (that contains the change data) has been dropped.

Action: Contact Oracle Corporation

ORA-31465: cannot obtain a lock on the subscription

Cause: A timeout occurred while trying to place a lock on the subscription. Another session had already acquired the lock on the subscription.

Action: Ensure the subscription name is correct and correct it if necessary. If it is already correct, try the operation again after the session holding the lock has released it.

ORA-31466: no publications found

Cause: Did not find any publications that matched the input parameters or the user does not have the privileges to access the specified publication.

Action: Check the input parameters on the call to SUBSCRIBE. Validate that the proposed source table has been published by checking the USER_PUBLICATIONS view for that source table. Contact the publisher if user privileges are required to access the publication. Retry the command with correct security or publication information.

ORA-31467: no column found in the source table

Cause: The OBJECT_ID flag was set to 'Y' on the call to CREATE_CHANGE_TABLE and change table belongs to the synchronous change set. The corresponding object column was not detected in the source table.

Action: Create the change table with the OBJECT_ID flag set to 'N' or investigate why the object column is not in the source table and add it to the source table.

ORA-31468: cannot process DDL change record

Cause: The change set has stop_on_ddl enabled and was trying to process a DDL change record.

Action: Check the alert log to find out what the DDL record contained. Make any necessary changes to the change tables. Call ALTER_CHANGE_SET with recover_after_error and remove_ddl set to 'Y'.

ORA-31469: cannot enable Change Data Capture for change set *string*

Cause: The change set has reached the specified limit that was set up by the CREATE_CHANGE_SET command.

Action: Check the alert log to find out whether capture, apply or both reached the limit. Once apply reaches its limit, the change set is permanently disabled. Create a new change set with new limits to continue capturing data.

ORA-31470: asynchronous change tables must contain the RSID\$ column

Cause: If creating an asynchronous change table, the RSID was set to 'N'. If altering an asynchronous change table with an operation parameter of 'DROP' RSID was set to 'Y'.

Action: When creating asynchronous change tables, always specify 'Y' for the RSID parameter. When altering asynchronous change tables always specify 'N' for RSID.

ORA-31471: invalid OBJECT_ID value

Cause: An object_id value of 'y' was specified for an asynchronous change table.

Action: Specify an object_id parameter value of 'n' and call the procedure again.

ORA-31472: Importing Change Data Capture version *string.string* is too new

Cause: An attempt was made to Import a file that was exported by a newer version of Oracle than the target instance.

Action: If possible, re-export the file using a version of export that matches the import target. Objects can not be imported into previous versions of Oracle that did not support them.

ORA-31473: date bound out of range

Cause: The upper_bound or lower_bound specified in extend_window or purge_window API is beyond the range of records in the change set.

Action: Either select a bound that is within range or do not select an upper or lower bound at all.

ORA-31474: Invalid change view window

Cause: The specified upper_bound or lower_bound is forcing a condition where the change view window will have nothing in it.

Action: Select a different upper_bound or lower_bound and reissue the API call that produced the error. Alternatively, make the upper_bound or lower_bound parameter NULL and reissue the API call.

ORA-31475: redo log catalog contains no metadata for the source table

Cause: While advancing a change set, an CDC attempted to query the LogMiner dictionary system tables to obtain the columns from the source table. The query returned no rows. This may be because none of the redo logs contains a catalog, or it may be an internal error.

Action: First, verify that the source system contains the source table. execute dbms_logmnr_d.build procedure to populate the redos log with logminer dictionary information. If this has been done and the problem persists, then contact Oracle Corporation

ORA-31476: a change table data column is missing from the source table

Cause: While advancing a change set, an CDC determined that at least one of the data columns in a change table does not match the name of any of the columns in

the source table. The source table column list is stored in dictionary table SYSTEM.LOGMNR_OBJ\$

Action: Make sure that all of the data columns of the change table have the same names as the corresponding columns in the source table, and that all the columns exist in the source table.

ORA-31477: could not detach LogMiner session during cleanup

Cause: Failure during detach from a LogMiner session during advance of an asynchronous change set. This is an internal error. This exception is raised when a previous exception occurred during the internal protocol with LogMiner, after which Change Data Capture attempted to detach the LogMiner session as part of recovery. The detach session also failed

Action: Contact Oracle Corporation

ORA-31478: could not detach LogMiner session after change set advance

Cause: Failure during detach from a LogMiner session after successful advance of an asynchronous change set. This is an internal error. This exception is raised when an asynchronous change set has been successfully advanced but CDC was unable to detach from the LogMiner session

Action: Contact Oracle Corporation

ORA-31479: could not create LogMiner session

Cause: Failure during create of a new LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31480: staging database and source database cannot be the same

Cause: A CDC API call specified a source database name that matched the staging database on which the CDC API call is being executed.

Action: Make sure that the CDC API call is being executed from the staging database and that the source database is correctly specified. The source database and staging database need to be different databases.

ORA-31481: change source *string* is not a HotLog change source

Cause: A change source was specified that was not a HotLog change source, but a HotLog change source was required.

Action: Correct the call to supply a HotLog change source.

ORA-31482: invalid option for non-distributed Hotlog change source

Cause: A CDC API call specified `enabled_source = 'Y'` on a non-Distributed HotLog change source.

Action: Specify a Distributed HotLog change source.

ORA-31483: cannot have spaces in the parameter *string*

Cause: The specified parameter contained at least 1 space character.

Action: Check the value of the specified parameter. Remove the spaces and reissue the CDC API call.

ORA-31484: source database version must be at least 9.2.0.6 or greater

Cause: The source database is not at version 9.2.0.6 or higher.

Action: Upgrade the source database to 9.2.0.6 or higher.

ORA-31485: invalid database link

Cause: The database link used to connect from a staging database to a source database was invalid. The database link may not exist, may not be accessible to the current user, or may have been redefined since the Distributed HotLog change source was originally created.

Action: Make sure that there is a database link to the source_database for the Distributed HotLog change source. Make sure this database link is accessible to the current user.

ORA-31486: cannot support column *string* in this configuration

Cause: The specified column cannot be used in a Distributed HotLog configuration when the source database version is 9.2.0.6 or 10.1.0.0.

Action: Remove the specified column from the CREATE_CHANGE_TABLE or ALTER_CHANGE_TABLE CDC API call.

ORA-31487: cannot support begin dates or end dates in this configuration

Cause: The specified values cannot be used in a Distributed HotLog configuration.

Action: Remove the specified values from the CREATE_CHANGE_SET CDC API call.

ORA-31488: cannot support change set *string* in this configuration

Cause: Change sources with the hot mine option enabled are limited to 1 change set. The system detected an existing change set so a second one can not be created.

Action: Associate the change set with a different change source.

ORA-31489: invalid DDL_MARKERS value

Cause: A DDL_MARKERS value of 'y' was specified for an synchronous change table.

Action: Specify a DDL_MARKERS parameter value of 'n' and call the procedure again.

ORA-31490: could not attach to LogMiner session

Cause: Failure during attach to a LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31491: could not add logfile to LogMiner session

Cause: Failure during add logfile to a LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31492: could not set session parameters for LogMiner session

Cause: Failure during set parameters for a LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31493: could not prepare session for LogMiner session

Cause: Failure during prepare session for a LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31494: could not activate a LogMiner session

Cause: Failure during activation of a LogMiner session while advancing an asynchronous change set. This is an internal error.

Action: Contact Oracle Corporation

ORA-31495: error in synchronous change table on "*string*".*string*"

Cause: There was an error originating from this synchronous change table. One possible cause is that schema redefinition has occurred on the source table and one or more columns in the change table are now a different type than corresponding source columns. Another possible cause is that there is a problem accessing the synchronous change table.

Action: Check further error messages in stack for more detail about the cause. If there has been schema redefinition, drop and recreate the synchronous change table.

ORA-31496: must use DBMS_CDC_PUBLISH.DROP_CHANGE_TABLE to drop change tables

Cause: An attempt was made to use the SQL command DROP TABLE for change tables, but DROP TABLE is not supported for change tables.

Action: Use the DBMS_CDC_PUBLISH.DROP_CHANGE_TABLE procedure instead of the DROP TABLE command.

ORA-31497: invalid value specified for first_scn

Cause: The first_scn was not greater than zero or was less than the previous value of first_scn.

Action: Check the value of first_scn. Correct it to make sure it is an integer greater than zero and greater than any previous value for this change source.

ORA-31498: description and remove_description cannot both be specified

Cause: The description and remove_description parameters were both specified.

Action: Check the values of description and remove_description. Correct call to only supply one of these values.

ORA-31499: null value specified for required parameter *string*

Cause: A null value was specified for a parameter that requires an explicit value.

Action: Correct call to supply a value for this parameter.

ORA-31500: change source *string* is not a ManualLog change source

Cause: A change source was specified that is not a ManualLog change source, but a ManualLog change source is required.

Action: Correct call to supply a ManualLog change source.

ORA-31501: change source *string* is not an AutoLog change source

Cause: A change source was specified that was not an AutoLog change source, but an AutoLog change source was required.

Action: Correct call to supply an AutoLog change source.

ORA-31502: invalid number supplied for supplemental_processes

Cause: The caller supplied an invalid value for supplemental_processes. The value must be a positive integer.

Action: Correct call to supply a positive integer value for supplemental_processes.

ORA-31503: invalid date supplied for begin_date or end_date

Cause: The caller supplied an invalid value for begin_date or end_date. The value must be a valid date value.

Action: Correct call to supply a valid date value for begin_date and/or end_date.

ORA-31504: cannot alter or drop predefined change source

Cause: The caller attempted to alter or drop one of the predefined change sources HOTLOG_SOURCE or SYNC_SOURCE.

Action: Do not attempt to alter or drop a predefined change source or correct call to supply the name of a user-created change source.

ORA-31505: cannot alter or drop predefined change set

Cause: The caller attempted to alter or drop the predefined change set SYNC_SET.

Action: Do not attempt to alter or drop the predefined change set or correct call to supply the name of a user-created change set.

ORA-31506: duplicate subscription name *string*

Cause: A subscription by the specified name already exists.

Action: Recreate the subscription with a unique name.

ORA-31507: *string* parameter value longer than maximum length *string*

Cause: A value was specified for a parameter that was longer than the maximum permitted length.

Action: Correct the call to supply a shorter value for this parameter that fits within the maximum length.

ORA-31508: invalid parameter value for synchronous change set

Cause: A parameter value was specified that is not supported for synchronous change sets.

Action: Correct the call to supply only valid parameter values for a synchronous change set. Synchronous change sets only support the default values for the following parameters: begin_scn, end_scn, begin_date, end_date, stop_on_ddl, supplemental_processes.

ORA-31509: publication does not exist

Cause: The specified publication did not exist or the specified subscription subscribed to a publication that no longer exists.

Action: Recheck the publication or subscription specified. Either call the procedure again with an existing publication or create a new subscription that only subscribes to existing publications.

ORA-31510: name uses reserved prefix CDC\$

Cause: A name was specified that starts CDC\$. The name prefix CDC\$ is reserved for use by Oracle Corporation.

Action: Change the name so it does not start with characters CDC\$

ORA-31511: name exceeds maximum length of 30 characters

Cause: A name was supplied that exceeds the maximum length of 30 characters.

Action: Change the name so it does not exceed 30 characters

ORA-31512: name cannot contain double quotation marks

Cause: A name containing a double quotation mark was supplied. Subscription names cannot contain the double quotation mark.

Action: Change the name so it has no double quotation marks

ORA-31513: unsupported column type specified in change table

Cause: A source column of an unsupported type was specified for inclusion in a change table. Columns types of LOB or LONG are not currently supported for change capture.

Action: Change the column list so that it does not include columns of LOB or LONG types.

ORA-31514: change set *string* disabled due to capture error

Cause: This change set has encountered a capture error and was disabled.

Action: Contact the change set's publisher to request that the capture error be resolved. Subscriptions using this change set cannot be activated or have their subscription windows extended or purged until the capture error is resolved.

ORA-31515: CDC change source *string* already exists

Cause: A Change Data Capture change source intended for import already existed.

Action: Either verify that the existing change source has the desired characteristics or drop the existing change source and perform the import again.

ORA-31516: CDC change set *string* already exists

Cause: A Change Data Capture change set intended for import already existed.

Action: Either verify that the existing change set has the desired characteristics or drop the existing change set and perform the import again.

ORA-31517: CDC change table *string.string* already exists

Cause: A Change Data Capture change table intended for import already existed.

Action: Either verify that the existing change table has the desired characteristics or drop the existing change table and perform the import again.

ORA-31518: change column *string* already exists in CDC change table *string.string*

Cause: A column in a Change Data Capture change table intended for import was already present in the change table.

Action: Either verify that the change table contains the desired columns or drop the change table and perform the import again.

ORA-31519: CDC subscription *string* already exists

Cause: A Change Data Capture subscription intended for import already existed.

Action: Either verify that the existing subscription has the desired characteristics or drop the existing subscription and perform the import again.

ORA-31520: CDC subscription *string* already subscribes to publication ID *string*

Cause: A Change Data Capture subscription intended for import already subscribed to a publication.

Action: Either verify that the existing subscription has the desired characteristics or drop the existing subscription and perform the import again.

ORA-31521: CDC subscription *string* already subscribes to publication ID *string* column *string*

Cause: A Change Data Capture subscription intended for import already subscribed to a published column.

Action: Either verify that the existing subscription has the desired characteristics or drop the existing subscription and perform the import again.

ORA-31522: could not find Streams object *string* for CDC change set *string*

Cause: An underlying Streams capture, apply, or queue was missing for an imported Change Data Capture change set.

Action: Drop the imported change set because it is invalid. Retry the import, ensuring that STREAMS_CONFIGURATION=y is specified.

ORA-31523: could not find change source *string* for CDC change set *string*

Cause: The change source was missing for an imported Change Data Capture change set.

Action: Drop the imported change set because it is invalid. Verify that the schema containing the missing change source was included in the original export. If needed, perform the export again, including the schema of the missing change source.

ORA-31524: could not find change set *string* for CDC change table *string.string*

Cause: The change set was missing for an imported Change Data Capture change table.

Action: Drop the imported change table because it is invalid. Verify that the schema containing the missing change set was included in the original export. If needed, perform the export again, including the schema of the missing change set.

ORA-31525: could not find column *string* in CDC change table *string.string*

Cause: A column was missing for an imported Change Data Capture change table.

Action: It is likely that this table existed before the import operation and import did not overwrite it. Determine whether the imported change table should supercede the original table. If so, drop the original table and retry the import. If not, the change table must have a different name in order to be imported.

ORA-31526: could not find source table *string.string* for CDC change table *string.string*

Cause: The source table was missing or was not set up correctly for an imported Change Data Capture change table. A synchronous change table requires the source table to exist and have the Change Data Capture trigger defined on it. An asynchronous change table requires table rules to be defined for the source table.

Action: Drop the imported change table because it is invalid. Verify that the schema containing the source table was included in the original export. If needed, perform the export again, including the schema of the source table. If change table is asynchronous, ensure that STREAMS_CONFIGURATION=y is specified for the import.

ORA-31527: could not find source column *string* for CDC change table *string.string*

Cause: A source column was missing for an imported Change Data Capture change table.

Action: Drop the imported change table because it is invalid. Verify that the schema containing the source table was included in the original export. If needed, perform the export again, including the schema of the missing source table.

ORA-31528: could not find change set *string* for CDC subscription *string*

Cause: The change set was missing for an imported Change Data Capture subscription.

Action: Drop the imported subscription because it is invalid. Verify that the schema containing the missing change set was included in the original export. If needed, perform the export again, including the schema of the missing change set.

ORA-31529: could not find publication for CDC subscriber view *string.string*

Cause: A publication was missing for an imported Change Data Capture subscription.

Action: Drop the imported subscription because it is invalid. Verify that the schema containing the missing publication was included in the original export. If needed, perform the export again, including the schema of the missing publication.

ORA-31530: could not find published column *string* for CDC subscriber view *string.string*

Cause: A published column was missing for an imported Change Data Capture subscription.

Action: Drop the imported subscription because it is invalid. Verify that the schema containing the missing published column was included in the original export. If needed, perform the export again, including the schema of the missing published column.

ORA-31531: could not find column *string* in CDC subscriber view *string.string*

Cause: A column was missing in a subscriber view for an imported Change Data Capture subscription.

Action: It is likely that this view existed before the import operation and import did not overwrite it. Determine whether the imported subscriber view should supercede the original view. If so, drop the original view and retry the import. If not, the subscriber view must have a different name in order to be imported.

ORA-31532: cannot enable change source *string*

Cause: The change source cannot be enabled when there is no change table created in any of the change sets associated with the change source.

Action: Add a change table to a change set before enabling the the change source.

ORA-31533: only one change set (*string*) is allowed in change source

Cause: A Distributed HotLog change source can contain at most one change set.

Action: Create a new change source and create the change set in the new change source.

ORA-31534: Change Data Capture *string* publisher *string* is missing DBA role

Cause: The publisher does not have the DBA role, which is required by the Change Data Capture operation.

Action: Grant the DBA role the Change Data Capture publisher.

ORA-31535: cannot support change source *string* in this configuration

Cause: Each database can only have one change source with hot mine option enabled. The system detected an existing hot mine change source in the database, therefore, a second hot mine change source cannot be created.

Action: Remove the existing change source and create this new change source again.

ORA-31536: cannot support encrypted column *string* in the source table

Cause: One of the columns specified in the parameter COLUMN_TYPE_LIST was an encrypted column in the source table

Action: remove the encrypted column in the parameter COLUMN_TYPE_LIST

ORA-31537: specified purge date is invalid

Cause: The purge date specified was an invalid date or was outside of the range of data currently in the change set.

Action: Do not specify purge date or specify a date that is within the range of data in the change set.

ORA-31538: change set *string* disabled

Cause: This change set was disabled.

Action: Contact the change set's publisher to request that the change set be enabled. Subscriptions using this change set cannot be activated or have their subscription windows extended or purged until the change set is enabled.

ORA-31539: no privilege to create job

Cause: This change table could not be created because the create job privilege is needed to submit the default purge job.

Action: Grant the create job privilege and try again

ORA-31540: *string* is not a valid identifier

Cause: All Change Data Capture (CDC) identifiers must have at most 30 characters, and must start with a letter that is followed by any combination of letters, numerals, and the signs '\$', '_', and '#'. Other characters cannot be used in identifiers. The rules for CDC identifiers are the same as for PL/SQL identifiers.

Action: Rename object to conform to CDC naming rules and try again.

ORA-31600: invalid input value *string* for parameter *string* in function *string*

Cause: A NULL or invalid value was supplied for the parameter.

Action: Correct the input value and try the call again.

ORA-31601: Function *string* cannot be called now that fetch has begun.

Cause: The function was called after the first call to FETCH_XXX.

Action: Correct the program.

ORA-31602: parameter *string* value "*string*" in function *string* inconsistent with *string*

Cause: The parameter value is inconsistent with another value specified by the program. It may be inconsistent with the object type associated with the OPEN context, or it may be of the wrong datatype (a boolean rather than a text string or vice versa).

Action: Correct the program

ORA-31603: object "*string*" of type *string* not found in schema "*string*"

Cause: The specified object was not found in the database.

Action: Correct the object specification and try the call again.

ORA-31604: invalid *string* parameter "*string*" for object type *string* in function *string*

Cause: The specified parameter value is not valid for this object type.

Action: Correct the parameter and try the call again.

ORA-31605: the following was returned from *string* in routine *string*: LPX-number: *string*

Cause: An LPX routine (XML/XSL processing) returned an internal error number to its PL/SQL wrapper routine in facility KUX which provides the implementation for package UTL_XML.

Action: Look up the LPX error number and follow its corrective action.

ORA-31606: XML context *number* does not match any previously allocated context

Cause: A method in package UTL_XML was called with an invalid XML context handle. All handles must have previously been allocated by UTL_XML.XMLINIT.

Action: Always call XMLINIT before any other methods in pkg. UTL_XML.

ORA-31607: function *string* is inconsistent with transform.

Cause: Either (1) FETCH_XML was called when the "DDL" transform was specified, or (2) FETCH_DDL was called when the "DDL" transform was omitted.

Action: Correct the program.

ORA-31608: specified object of type *string* not found

Cause: The specified object was not found in the database.

Action: Correct the object specification and try the call again.

ORA-31609: error loading file "*string*" from file system directory "*string*"

Cause: The installation script initmeta.sql failed to load the named file from the file system directory into the database.

Action: Examine the directory and see if the file is present and can be read.

ORA-31610: cannot call this function from a non-master process

Cause: Called a Data Pump process model function from a process which is not a master process.

Action: Create a master process first. Then call the function from the master process. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31612: Allocation of process descriptor failed.

Cause: During creation of a master process or a worker process, a failure occurred allocating a process descriptor for the process.

Action: Try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31613: Master process *string* failed during startup.

Cause: The master process whose name is listed failed during startup.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure.

Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31614: routine *string* received this error from *string*: *string*

Cause: The call to the specified routine failed and the specific error text is included in this error message (the last %s string).

Action: Correct inputs to the specified routine.

ORA-31615: routine *string* received this error: *string*

Cause: The specified routine failed and the specific error text is included in this error message (the last %s string).

Action: Correct inputs to the specified routine.

ORA-31616: unable to write to dump file "*string*"

Cause: Export was unable to write to the export file, probably because of a device error. This message is usually followed by a device message from the operating system.

Action: Take appropriate action to restore the device.

ORA-31617: unable to open dump file "*string*" for write

Cause: Export was unable to open the export file for writing. This message is usually followed by device messages from the operating system.

Action: Take appropriate action to restore the device.

ORA-31618: FILESIZE is outside valid range of *string*KB to *string*TB

Cause: The value specified for the FILESIZE parameter was either too small to hold the header information for the export file, plus any data, or exceeded the allowed maximum size for a dump file.

Action: Retry the operation using a value for FILESIZE that falls within the valid range.

ORA-31619: invalid dump file "*string*"

Cause: Either the file was not generated by Export or it was corrupted.

Action: If the file was indeed generated by Export, report this as an Import bug and submit the export file to Oracle Customer Support.

ORA-31620: file or device "*string*" cannot be specified for *string* operation

Cause: There was an inappropriate use of file or device in the current operation.

Action: Correct operation or job setup.

ORA-31621: error creating master process

Cause: Setup to create a master process failed.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31622: premature end of file at block *string*

Cause: d either by a corrupted Data Pump export dump file or by an Oracle internal error. This message should be preceded by another message identifying the name of the dump file in question.

Action: Retry the Data Pump import operation. Contact Oracle Support Services if the problem persists.

ORA-31623: a job is not attached to this session via the specified handle

Cause: An attempt to reference a job using a handle which is invalid or no longer valid for the current session.

Action: Select a handle corresponding to a valid active job or start a new job.

ORA-31624: A job cannot be modified after it has started.

Cause: The user attempted to change the definition of a Data Pump job through filters, transforms or parameters after it had started. These changes can only be made while defining a job.

Action: Stop the current job and rerun it with the correct definition.

ORA-31625: Schema *string* is needed to import this object, but is inaccessible

Cause: An error occurred when attempting to import objects. The schema specified is needed to import this object, but access to this schema is not available.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31626: job does not exist

Cause: An invalid reference to a job which is no longer executing, is not executing on the instance where the operation was attempted, or that does not have a valid Master Table. Refer to any following error messages for clarification.

Action: Start a new job, or attach to an existing job that has a valid Master Table.

ORA-31627: API call succeeded but more information is available

Cause: The user specified job parameters that yielded informational messages.

Action: Call DBMS_DATAPUMP.GET_STATUS to retrieve additional information.

ORA-31628: error getting worker process exception

Cause: Attempt to get a worker process exception failed.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31629: unable to allocate additional memory

Cause: A dynamic memory allocation failure occurred.

Action: Report this problem to a database administrator.

ORA-31630: a job name is required to attach a job for user *string*

Cause: No job name was supplied for an attach and the user has either no jobs executing or multiple jobs executing.

Action: Provide a job name for attach to use in selecting an executing job, or to use for restarting a stopped job.

ORA-31631: privileges are required

Cause: The necessary privileges are not available for operations such as: restarting a job on behalf of another owner, using a device as a member of the dump file set, or omitting a directory object associated with any of the various output files. Refer to any following error messages for additional information.

Action: Select a different job to restart, try a different operation, or contact a database administrator to acquire the needed privileges.

ORA-31632: master table "*string.string*" not found, invalid, or inaccessible

Cause: A Master Table is required but no such table exists, or the content is not consistent with that of a valid Master Table, or the table is not accessible. Refer to any following error messages for clarification.

Action: Make sure a valid Master Table exists, and eliminate any problems indicated by the following error messages.

ORA-31633: unable to create master table "*string.string*"

Cause: Job creation failed because a Master Table and its indexes could not be created, most commonly due to the pre-existence of a table with the same name (job name) in the user schema. Refer to any following error messages for clarification.

Action: Select a different job name, DROP the existing table, or eliminate any problems indicated by the following error messages.

ORA-31634: job already exists

Cause: Job creation or restart failed because a job having the selected name is currently executing. This also generally indicates that a Master Table with that job name exists in the user schema. Refer to any following error messages for clarification.

Action: Select a different job name, or stop the currently executing job and re-try the operation (may require a DROP on the Master Table).

ORA-31635: unable to establish job resource synchronization

Cause: A lock used in synchronizing Data Pump resources during job creation and deletion could not be obtained during job creation. This indicates that a process for some other Data Pump job has not released the lock due to an internal error.

Action: Eliminate the processes for any failed Data Pump job and try to create the new job again. If the error continues to occur, contact Oracle Customer Support and report the error.

ORA-31636: session is already attached to job *string* for user *string*

Cause: The session executing the attach is already attached to the specified job.

Action: Select a different job or create a new session.

ORA-31637: cannot create job *string* for user *string*

Cause: Unable to create or restart a job. Refer to any following or prior error messages for clarification.

Action: Eliminate the problems indicated.

ORA-31638: cannot attach to job *string* for user *string*

Cause: Unable to attach a job to a session. Refer to any following or prior error messages for clarification.

Action: Eliminate the problems indicated.

ORA-31639: unexpected data found

Cause: The Master Table or Data Pump file contents appear invalid. The table or file may not have been produced by a Data Pump job, or they may have been corrupted.

Action: Select a different job name (Master Table) or replace the table or file with one produced by Data Pump.

ORA-31640: unable to open dump file "*string*" for read

Cause: Import was unable to open the export file for reading. This message is usually followed by device messages from the operating system.

Action: Take appropriate action to restore the device.

ORA-31641: unable to create dump file "*string*"

Cause: Export was unable to create the specified file with write enabled.

Action: Check the file name and file system for the source of the error.

ORA-31642: the following SQL statement fails: *string*

Cause: An internal error was generated from package DBMS_METADATA.

Action: Contact Oracle Customer Support and report the error.

ORA-31643: unable to close dump file "*string*"

Cause: Export or Import was unable to close the dump file. This message is usually followed by device messages from the operating system.

Action: Take appropriate action to restore the device.

ORA-31644: unable to position to block number *string* in dump file "*string*"

Cause: Export or Import was unable to position its file pointer to a specific block within the dump file. This message is usually followed by device messages from the operating system.

Action: Take appropriate action based on the device messages.

ORA-31645: unable to read from dump file "*string*"

Cause: Import could not read from the dumpfile, probably because of a device error. This message is usually followed by a device message from the operating system.

Action: Take appropriate action to restore the device.

ORA-31648: Timeout before master process *string* finished initialization.

Cause: The master process whose name is listed started up but did not finish its initialization within the allowed time limit.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure.

Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31649: Master process *string* violated startup protocol.

Cause: The master process whose name is listed started up but then exited before notifying the creating process that it was finished with initialization.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure.

Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31650: timeout waiting for master process response

Cause: After creating the job infrastructure and sending the initial message to the master process, it failed to respond in the allotted time and most likely aborted during startup.

Action: Retry the open or attach request. Contact Oracle Customer Support if the problem persists.

ORA-31651: communication error with master process - detaching job

Cause: Unexpected failure trying to communicate with the master process.

Action: Attach again and retry operation. Contact Oracle Customer Support if the problem persists.

ORA-31652: command response message was invalid type - detaching job

Cause: Something horribly wrong with the command/response protocol.

Action: Reattach and retry operation. Contact Oracle Customer Support if the problem persists.

ORA-31653: unable to determine job operation for privilege check

Cause: Failure trying to determine the operation of the current job in order to test for appropriate privileges.

Action: Retry in case it's an intermittent failure. If it still fails, detach, reattach, and retry the call. Contact Oracle Customer Support if the problem persists.

ORA-31654: unable to convert file or volume size as specified to a number

Cause: File or volume size specification has an error that prevents it from being converted into a numeric value.

Action: Fix the call.

ORA-31655: no data or metadata objects selected for job

Cause: After the job parameters and filters were applied, the job specified by the user did not reference any objects.

Action: Verify that the mode of the job specified objects to be moved. For command line clients, verify that the INCLUDE, EXCLUDE and CONTENT parameters were correctly set. For DBMS_DATAPUMP API users, verify that the metadata filters, data filters, and parameters that were supplied on the job were correctly set.

ORA-31656: cannot use TABLESPACE_EXPR filter with transportable mode

Cause: A TABLESPACE_EXPR metadata filter was supplied for a transportable mode import job. Transportable mode import does not support the subsetting of tablespaces from a dump file set.

Action: Remove the filter expression.

ORA-31657: data filter name can not be defaulted

Cause: A null data filter name was supplied.

Action: Fix the call to specify a data filter name.

ORA-31658: specifying a schema name requires a table name

Cause: The caller specified a schema name but neglected to specify a corresponding table name.

Action: Fix the call to include a table name.

ORA-31659: status message was invalid type - detaching job

Cause: Message from the master process on the status queue had an invalid message type, indicating a failure in the protocol.

Action: Reattach and retry the operation. Contact Oracle Customer Support if the problem persists.

ORA-31660: metadata filter name can not be defaulted

-
- Cause:** A null metadata filter name was supplied.
Action: Fix the call to specify a metadata filter name.
- ORA-31661: there are no metadata transform values of type VARCHAR2**
Cause: The specified metadata transform value was an invalid type.
Action: Fix the call to specify a valid metadata transform value.
- ORA-31662: metadata transform name can not be defaulted**
Cause: A null metadata transform name was supplied.
Action: Fix the call to specify a metadata transform name.
- ORA-31663: metadata remap name can not be defaulted**
Cause: A null metadata remap name was supplied.
Action: Fix the call to specify a metadata remap name.
- ORA-31664: unable to construct unique job name when defaulted**
Cause: The job name was defaulted, and the name creation algorithm was unable to find a unique job name for this schema where the table name (for the master table) didn't already exist.
Action: Specify a job name to use or delete some of the existing tables causing the name conflicts.
- ORA-31665: mode can only be defaulted for IMPORT and SQL_FILE operations**
Cause: The job mode can not be null except for IMPORT and SQL_FILE operations.
Action: Fix the call to specify the job mode.
- ORA-31666: Master process *string* had an unhandled exception.**
Cause: A Data Pump process model master process had an unhandled exception condition.
Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.
- ORA-31667: parameter name can not be defaulted**
Cause: A null was supplied for the parameter name.
Action: Fix the call by providing a valid parameter name.
- ORA-31668: Timeout before worker process *string* finished initialization.**
Cause: The worker process whose name is listed started up but did not finish its initialization within the allowed time limit.
Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.
- ORA-31669: Worker process *string* violated startup protocol.**
Cause: The worker process whose name is listed started up but then exited before notifying the creating process that it was finished with initialization.
Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure.

Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31670: Username argument must be specified and non-null.

Cause: Called change user with a NULL username or a null string.

Action: Specify a valid username argument. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31671: Worker process *string* had an unhandled exception.

Cause: A Data Pump process model worker process had an unhandled exception condition.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31672: Worker process *string* died unexpectedly.

Cause: A Data Pump process model worker process died unexpectedly, so PMON is cleaning up the process.

Action: Check your system for problems. Check the trace file for the process, if one was created, for any additional information. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31673: worker process interrupt for normal exit by master process

Cause: A worker process was requested to clean up and exit because the master process is doing a normal exit.

Action: If this error occurs from a Data Pump client (e.g. expdp or impdp), it means that the master process for the operation exited prematurely. Try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31674: worker process interrupt for unhandled exception in master process

Cause: A worker process was requested to clean up and exit because an unhandled exception occurred in the master process.

Action: If this error occurs from a Data Pump client (e.g. expdp or impdp), it means that the master process for the operation had an unhandled exception. Check the log file for the operation and the trace file for the master process for any additional information. Try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31675: worker process interrupt for unexpected death of master process

Cause: A worker process was requested to clean up and exit (signaled by PMON, doing cleanup because the master process died unexpectedly).

Action: If this error occurs from a Data Pump client (e.g. expdp or impdp), it means that the master process for the operation died unexpectedly. Check the log file for the operation and the trace file for the master process for any additional information. Try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31676: illegal value for number of workers, *string*

Cause: Called create worker processes with an illegal number of workers specified.

Action: Make sure that the number of workers value is greater than 0 and less than the maximum value for the platform (normally 32767). If this error occurs from a Data Pump client (e.g. expdp or impdp) and you specified the parallel parameter, try the operation again with a smaller value for the parallel parameter. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31679: Table data object *string* has long columns, and longs can not be loaded/unloaded using a network link

Cause: Table data objects that contain long columns can not be selected over a network link.

Action: Export this table to a file and then import the same table from the file.

ORA-31686: error creating worker processes

Cause: Setup to create worker processes failed.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31687: error creating worker process *string* with worker id *string*

Cause: Attempt to create the listed worker process failed.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31688: Worker process *string* failed during startup.

Cause: The worker process whose name is listed failed during startup.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31689: illegal value for base worker id, *string*

Cause: Called create worker processes with an illegal base worker id value specified.

Action: Make sure that the base worker id value is greater than 0 and less than the maximum value for the platform (normally 32767). If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31690: Process name buffer size must be specified and must be greater than 0.

Cause: Called get worker exception and either specified NULL or 0 for the buffer size argument.

Action: Be sure to specify a buffer size that is big enough to hold the worker process name (e.g. 30 bytes). If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-31691: The worker received message number *string* from the MCP, which is invalid.

Cause: Bad code.

-
- Action:** Fix mcp code and reissue export/import command.
- ORA-31692: The following SQL statement failed trying to insert a row into the Master table: *string***
Cause: Bad code.
Action: Fix code and reissue export/import command.
- ORA-31693: Table data object *string* failed to load/unload and is being skipped due to error: *string***
Cause: Table failed to load or unload due to some error.
Action: Check load/unload error, correct problem and retry command.
- ORA-31694: master table *string* failed to load/unload**
Cause: Master table failed to load or unload.
Action: Check load/unload error, correct problem and retry command.
- ORA-31695: Inconsistent master table on restart. The following SQL statement returned *string* identical objects. *string***
Cause: Master table on restart has the same object inserted multiple times.
Action: Restart not possible, reissue original export/import.
- ORA-31696: unable to export/import *string* using client specified *string* method**
Cause: Table attributes prevent client specified method for exporting or importing data.
Action: Use default 'DATA_ACCESS' parameter value.
- ORA-31697: aborting operation at process order number *string***
Cause: User asked for it.
Action: Don't ask for it.
- ORA-31698: Error stack buffer size must be specified and must be greater than 0.**
Cause: Called get worker exception and either specified NULL or 0 for the error stack size argument.
Action: Be sure to specify an error stack buffer size that is big enough to hold the error stack string (e.g. 4096 bytes). If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.
- ORA-31700: Very long string supplied for AUDIT_SYSLOG_LEVEL parameter**
Cause: Very long string supplied for AUDIT_SYSLOG_LEVEL in init.ora
Action: Use a valid facility.level such as "local1.notice" as described in syslog's manual pages
- ORA-31701: Event to enable xmltype table export/import with schema**
Cause: Event to enable xmltype table export/import with schema
Action: Disable the event at level 0x100
- ORA-31901: the current operation was cancelled by the user**
Cause: The user requested to cancel current operation
Action: No action is necessary
- ORA-32000: write to SPFILE requested but SPFILE is not modifiable**

-
- Cause:** An ALTER SYSTEM command or an internal self-tuning mechanism requested a write to the SPFILE but the SPFILE was not modifiable.
- Action:** Perform an in-memory parameter update only.
- ORA-32001: write to SPFILE requested but no SPFILE is in use**
- Cause:** An ALTER SYSTEM command or an internal self-tuning mechanism requested a write to the SPFILE but no SPFILE was in use.
- Action:** Re-start the instance using an SPFILE, or execute ALTER SYSTEM SET SPFILE.
- ORA-32002: cannot create SPFILE already being used by the instance**
- Cause:** A create spfile command is trying to write to an SPFILE that was used to startup the instance.
- Action:** Specify a different SPFILE name
- ORA-32003: error occurred processing parameter '*string*'**
- Cause:** An error occurred while parsing the parameter file.
- Action:** See additional errors to determine the root cause.
- ORA-32004: obsolete or deprecated parameter(s) specified for *string* instance**
- Cause:** Obsolete or deprecated parameters for this instance type were specified in the SPFILE or the PFILE on the server side.
- Action:** See alert log for a list of parameters that are obsolete or deprecated. Remove them from the SPFILE or the server side PFILE.
- ORA-32005: error while parsing size specification [*string*]**
- Cause:** The value specified for an alter operation on a size parameter is not valid
- Action:** Correct the value and retry the operation
- ORA-32006: *string* initialization parameter has been deprecated**
- Cause:** A deprecated parameter was specified at startup
- Action:** Consult Oracle documentation to find new parameters to use instead.
- ORA-32007: internal**
- Cause:** A parameter error occurred.
- Action:** Call Oracle support.
- ORA-32008: error while processing parameter update at instance *string***
- Cause:** An error occurred while processing a parameter on a remote instance.
- Action:** See accompanying error messages.
- ORA-32009: cannot reset the memory value for instance *string* from instance *string***
- Cause:** Memory resets of local parameters are only allowed.
- Action:** Retry the query for the local instance if needed.
- ORA-32010: cannot find entry to delete in SPFILE**
- Cause:** The SPFILE did not contain the sid.parameter entry.
- Action:** Change the sid and/or the parameter.
- ORA-32011: cannot restore SPFILE to location already being used by the instance**
- Cause:** A restore operation trying to write to an SPFILE that was used to startup the instance.

Action: Specify a different SPFILE name

ORA-32012: SPFILE format is inconsistent with value of COMPATIBLE parameter

Cause: The SPFILE was in H.A.R.D. (Hardware Assisted Resilient Data) compliant format but the value of the COMPATIBLE parameter was set to pre-11.0. This is not allowed since Oracle has a policy of irreversible compatibility advance.

Action: Change the value of the COMPATIBLE parameter to be 11.0 or higher.

ORA-32013: failure in verifying parameters from the restored SPFILE

Cause: Failure during processing of parameters from restored SPFILE. It could be that restore image of the SPFILE is corrupted.

Action: Further diagnostic information should be in the error stack.

ORA-32014: error processing parameter "*string*" from the SPFILE restore image

Cause: Failure during processing of parameters from restored SPFILE. It could be that restore image of the SPFILE is corrupted.

Action: Further diagnostic information should be in the error stack.

ORA-32015: unable to restore SPFILE

Cause: Failure during SPFILE restore. It could be that the restore destination is not valid.

Action: Further diagnostic information should be in the error stack.

ORA-32016: parameter "*string*" cannot be updated in SPFILE

Cause: Database is mounted.

Action: Unmount the database to update the parameter in the SPFILE

ORA-32017: failure in updating SPFILE

Cause: A failure occurred while updating the SPFILE.

Action: See associated errors.

ORA-32018: parameter cannot be modified in memory on another instance

Cause: Parameter adjustment can take a very long time

Action: Modify the parameter individually on each instance using the SID clause of the alter system command

ORA-32019: The parameter SPFILE cannot be updated in the server parameter file.

Cause: An attempt was made to update the parameter SPFILE in the server parameter file.

Action: Convert the server parameter file into a parameter file and then add the parameters needed and recreate the server parameter file.

ORA-32020: SID='*' clause needed to modify this parameter

Cause: The parameter did not have the same value on all RAC instances.

Action: Retry the command by specifying SID='*'

ORA-32021: parameter value longer than *string* characters

Cause: An attempt was made to alter a parameter value but the number of characters in the parameter value was longer than the allowed maximum. For a list parameter, one of the values in the list was longer than the allowed maximum.

Action: Reduce the parameter value length and retry the command. For the DISPATCHERS parameter, use listener aliases to reduce value length.

ORA-32022: parameter value longer than *string* characters

Cause: An attempt was made to alter a parameter value but the combined length of all the parameter values was more than the allowed maximum.

Action: Reduce the parameter value length and retry the command. For the DISPATCHERS parameter, use listener aliases to reduce value length.

ORA-32024: invalid directory specified for audit_file_dest parameter

Cause: Either the directory does not exist or it is not writable.

Action: Retry the command by specifying a valid directory or granting appropriate directory permissions.

ORA-32025: *string.string* is not a table or view object.

Cause: An attempt was made to set the audit table to a non-table object or a non-view object.

Action: Specify a valid table or view object for the audit table option.

ORA-32026: *string.string* has fewer columns compared to *string* table.

Cause: An attempt was made to set the audit table to a table or view object that has fewer columns compared to the base audit table.

Action: Specify a valid table or view object for the audit table option.

ORA-32027: There is no *string* column with the matching type in *string.string*.

Cause: An attempt was made to set the audit table to a table or view object that does not have a column with the same name and type as the one in the audit table.

Action: Specify a valid table or view object for the audit table option.

ORA-32028: Syslog facility or level not recognized

Cause: Syslog facility or level did not conform to the standard facility or level provided in the syslog.h file

Action: Specify a facility or level such as "LOCAL1.NOTICE" which conforms to the syslog.h file

ORA-32029: resetting with SCOPE=MEMORY or SCOPE=BOTH is currently not supported

Cause: An attempt was made to reset an in-memory parameter value

Action: Specify SCOPE=SPFILE if applicable, or explicitly set the parameter to the desired value

ORA-32030: an SPFILE is already associated with the instance

Cause: An attempt was made to update the parameter SPFILE on an instance that was already associated with an spfile.

Action: Restart the instance with a parameter file.

ORA-32031: illegal reference of a query name in WITH clause

Cause: forward or recursive reference of a query name in WITH clause is not allowed.

Action: Correct query statement, then retry.

ORA-32032: free temporary object number not available

Cause: Too many queries using temp table transformation are currently being run to use up all temporary object numbers.

Action: Turn off temporary table transformation or wait, then retry

ORA-32033: unsupported column aliasing

Cause: column aliasing in WITH clause is not supported yet

Action: specify aliasing in definition subquery and retry

ORA-32034: unsupported use of WITH clause

Cause: Improper use of WITH clause because one of the following two reasons:

1. nesting of WITH clause within WITH clause not supported yet
2. For a set query, WITH clause can't be specified for a branch.
3. WITH clause cannot be specified within parenthesis.

Action: correct query and retry

ORA-32035: unreferenced query name defined in WITH clause

Cause: There is at least one WITH clause query name that is not referenced in any place.

Action: remove the unreferenced query name and retry

ORA-32036: unsupported case for inlining of query name in WITH clause

Cause: There is at least one query name which is inlined more than once because its definition query is too simple and references another query name. This is currently unsupported yet.

Action: remove such query name and retry

ORA-32037: unsupported use of LEVEL in membership condition

Cause: An attempt was made to use LEVEL in membership condition with subquery that is not supported.

Action: Rewrite query to avoid using LEVEL in membership condition

ORA-32038: number of WITH clause column names does not match number of elements in select list

Cause: A list of column aliases or names was specified for a WITH clause query name but the number of elements in the list did not match the number of elements in the select list of the definition query.

Action: Update the column alias list or the select list to ensure they have the same number of elements.

ORA-32039: recursive WITH clause must have column alias list

Cause: A WITH clause query referred to itself (recursive) but did not have a column alias list specified for it.

Action: Add a column alias list for the WITH clause query name.

ORA-32040: recursive WITH clause must use a UNION ALL operation

Cause: A WITH clause query referred to itself (recursive) but did not use a UNION ALL operation in its definition query.

Action: Rewrite the recursive WITH clause query to use a UNION ALL operation.

ORA-32041: UNION ALL operation in recursive WITH clause must have only two branches

Cause: A WITH clause query referred to itself (recursive) but used a UNION ALL operation with more than two branches, which is not currently supported.

Action: Rewrite the recursive WITH clause query to use only two branches in the UNION ALL operation.

ORA-32042: recursive WITH clause must reference itself directly in one of the UNION ALL branches

Cause: A WITH clause query referred to itself (recursive) indirectly, such as through a subquery or view.

Action: Rewrite the recursive WITH clause query to refer to itself directly in the FROM clause of one of the UNION ALL branches.

ORA-32043: recursive WITH clause needs an initialization branch

Cause: A WITH clause query referred to itself (recursive) but did not have a branch in a UNION ALL with no references to itself (the initialization branch or anchor member).

Action: Rewrite the recursive WITH query to have a branch in a UNION ALL operation with no references to itself.

ORA-32044: cycle detected while executing recursive WITH query

Cause: A recursive WITH clause query produced a cycle and was stopped in order to avoid an infinite loop.

Action: Rewrite the recursive WITH query to stop the recursion or use the CYCLE clause.

ORA-32045: maximum level of recursion reached while executing recursive WITH query

Cause: A recursive WITH query reached the maximum level of recursion specified and was stopped.

Action: Increase the maximum level of recursion or use the CYCLE clause.

ORA-32046: sequence column name for SEARCH clause must not be part of the column alias list

Cause: The SEARCH clause for a recursive WITH query specified a sequence column that was already listed in the column alias list for the WITH clause query name.

Action: Specify a different name for the sequence column for the SEARCH clause or remove the name from the column alias list.

ORA-32047: cycle mark value and non-cycle mark value must be one byte character string values

Cause: The cycle mark or the non-cycle mark values specified in the CYCLE clause of a recursive WITH query were not one byte character string values as required.

Action: Specify a one byte character string for the cycle mark and non-cycle mark values of the CYCLE clause for the recursive WITH query.

ORA-32048: cycle mark column name for CYCLE clause must not be part of the column alias list

Cause: The CYCLE clause for a recursive WITH query specified a cycle mark column that was already listed in the column alias list for the WITH clause query name.

Action: Specify a different name for the cycle mark column for the CYCLE clause or remove the name from the column alias list.

ORA-32049: duplicate name found in column alias list for WITH clause

Cause: The column alias list for a WITH clause element contained a name which appeared more than once in the list.

Action: Remove the duplicate name from the column alias list.

ORA-32050: *string* operation failed

Cause: A mapping operation failed.

Action: Check FMON trace files for errors.

ORA-32051: mapping service not available

Cause: The mapping service was never started or previously failed to start properly.

Action: Set FILE_MAPPING to TRUE if it is not currently set. Otherwise, check FMON trace files for an ORA-32052 error.

ORA-32052: failed to start mapping service

Cause: The mapping service failed to start properly.

Action: Check FMON trace files for errors.

ORA-32053: operation not supported

Cause: Mapping libraries do not support operation.

Action: Check whether mapping libraries are available and whether operation is supported by the libraries.

ORA-32054: lost communication with FMPUTL process

Cause: Lost communication with mapping utility.

Action: Check FMON and FMPUTL trace files for errors.

ORA-32055: invalid file type

Cause: Invalid file type used when mapping files.

Action: Specify one of expected file types.

ORA-32056: invalid number of extents

Cause: Invalid number of extents used for map operation.

Action: Specify a non-negative number of extents.

ORA-32057: invalid lock mode

Cause: An invalid mode was used for a lock operation.

Action: Specify one of expected lock modes.

ORA-32058: operation restricted to SYSDBA users

Cause: Operation requires SYSDBA privileges.

Action: Connect to the database as SYSDBA.

ORA-32059: deadlock detected on mapping structures

Cause: Mapping structures already locked by the same session.

Action: Unlock mapping structures before proceeding with current operation.

ORA-32060: channel failure

Cause: Channel failure between foreground and background process.

Action: Check foreground trace files for errors.

ORA-32100: operation invalid on transient object

Cause: Trying to perform an operation on transient object which is valid only on persistent objects

Action: Make sure object is persistent

ORA-32101: cannot create OCI Environment

Cause: An OCI Environment could not be created for OCCI

Action: Insure that the parameters to the creatEnvironment method are valid

ORA-32102: invalid OCI handle

Cause: An invalid OCI handle is passed to an OCI call.

Action: This is an internal OCCI Error. Please contact customer support.

ORA-32103: error from OCI call

Cause: An error code other than OCI_ERROR is returned from an OCI call.

Action: This is an internal OCCI Error. Please contact customer support.

ORA-32104: cannot retrieve OCI error message

Cause: Error message after an OCI call could not be retrieved.

Action: This is an internal OCCI Error. Please contact customer support.

ORA-32106: array fetch not allowed without setBuffer on all columns

Cause: The setBuffer method was not called for all column postions and the next method was called to fetch more than one row.

Action: Call the setBuffer method for all column positions if next is to to be called to fetch more than one row.

ORA-32107: internal OCI memory allocation failure

Cause: Memory could not be allocated from an OCI heap.

Action: Increase the process memory size.

ORA-32108: max column or parameter size not specified

Cause: The max column or parameter size is not specified.

Action: Specify the max size by setMaxColumnSize or setMaxParamSize.

ORA-32109: invalid column or parameter position

Cause: An invalid column or parameter position is specified.

Action: Specify a valid column or position number.

ORA-32110: Connection not specified

Cause: A null connection was passed.

Action: Pass a valid, non-null connection.

ORA-32113: Null object passed

Cause: Null object was passed.

Action: Pass a non-null object.

ORA-32114: Cannot perform operation on a null LOB

Cause: The LOB instance on which the operation was attempted was null.

Action: Use a valid, non-null LOB instance to perform this operation.

ORA-32116: Buffer size is less than amount specified

Cause: The buffer size specified for the LOB read or write operation was less than the amount to be read or written.

Action: The buffer size must be equal to or greater than than the amount to be read from or written to the LOB.

ORA-32117: Source LOB is null

Cause: The source LOB instance on which the operation was attempted was null.

Action: Use a valid, non-null source LOB instance for this operation.

ORA-32118: Cannot perform operation on a null FILE

Cause: The FILE instance on which the operation was attempted was null.

Action: Use a valid, non-null FILE instance to perform this operation.

ORA-32120: Buffer size is less than amount specified

Cause: The buffer size specified for the FILE read or write operation was less than the amount to be read or written.

Action: The buffer size must be equal to or greater than than the amount to be read from or written to the FILE.

ORA-32121: Source FILE is null

Cause: The source FILE instance on which the operation was attempted was null.

Action: Use a valid, non-null source FILE instance for this operation.

ORA-32123: Attribute number is out of range

Cause: The attribute number passed is greater than the total number of attributes of the described object.

Action: Pass the attribute number within the allowable range.

ORA-32124: Illegal attribute passed

Cause: The attribute passed is not applicable for the described object.

Action: Pass a valid attribute.

ORA-32125: Attribute type is not appropriate

Cause: The return type of the get method does not match the type of the attribute being passed.

Action: Call the appropriate get method.

ORA-32126: Cannot perform operations on a null REF

Cause: The REF instance on which the operation was attempted was null.

Action: Use a valid, non-null REF instance to perform this operation.

ORA-32127: REFs do not belong to any connection

Cause: Neither of the REFs being compared had associated connection information.

Action: Atleast one of the REFs being compared must be associated with a valid connection.

ORA-32128: setDataBuffer called after fetch has started

Cause: Fetch from result set has already started and the setDataBuffer call was made.

Action: Call the setDataBuffer method before calling the next() method.

ORA-32129: cannot get information about this column

Cause: The setDataBuffer method was called to get information about this column. Therefore, the current method cannot be called.

Action: Use the information from the buffers specified in the setDataBuffer call.

ORA-32130: invalid offset/index referenced in Bytes

Cause: The offset/index is out of range of valid data locations in Bytes offsets.

Action: Insure that offsets or index is within the range of Bytes object.

ORA-32131: bind data type cannot be changed

Cause: The setXXX method is called again with a different data type than originally specified, or the setXXX method is called for a subsequent iteration without being called before the first iteration.

Action: Call the setXXX method with the same data type as done before the first iteration. If no setXXX method was called for this parameter position the first iteration, then make sure that a setXXX method is called before the first addIteration method is called.

ORA-32132: maximum iterations cannot be changed

Cause: The setMaxIterations is called after a setXXX method has been called.

Action: Call the setMaxIterations method before calling any setXXX methods.

ORA-32133: Cannot get stream from LOB/FILE

Cause: An open stream exists on the the LOB/FILE on which the operation was attempted.

Action: Close the stream before getting another.

ORA-32134: Cannot assign LOBs

Cause: An open stream exists on the target LOB.

Action: Close the stream on the target LOB before assigning the LOBs.

ORA-32135: Cannot assign FILEs

Cause: An open stream exists on the target FILE.

Action: Close the stream on the target FILE before assigning the FILEs.

ORA-32136: Cannot perform operation on an invalid stream

Cause: The LOB/FILE from which the stream was obtained had been nullified or destroyed.

Action: Use a valid stream.

ORA-32139: Cannot write to the stream

Cause: A write was performed after the last buffer was written.

Action: Close this stream and get a new stream to perform the write.

ORA-32140: cannot perform this operation on stream

Cause: Either a read is attempted from a stream in write mode, or a write is attempted on a stream in read mode.

Action: Check the status of the stream to find out the valid operations that can be performed.

ORA-32141: get method does not match the type of the parameter

Cause: The getXXX method called on the Statement object does not match the type of the bind parameter.

Action: Call the getXXX method that is the same as the type of the parameter.

ORA-32142: maximum number of iterations exceeded

Cause: The addIteration exceeds the maximum number of iterations set by the the setMaxIterations method.

Action: Increase the maximum number of allowed iterations.

ORA-32143: Environment not specified

Cause: A null environment was passed.

Action: Pass a valid, non-null environment.

ORA-32144: Cannot perform operation on a null interval

Cause: The interval involved in this operation is null.

Action: Use valid, non-null interval instance to perform this operation.

ORA-32145: Environment not specified

Cause: The interval on which the operation was attempted was null and no environment was specified.

Action: Specify non-null environment or perform the operation on a non null instance.

ORA-32146: Cannot perform operation on a null date

Cause: The date involved in this operation is null.

Action: Use valid, non-null date instance to perform this operation.

ORA-32147: Environment not specified

Cause: The date on which the operation was attempted was null and no environment was specified.

Action: Specify non-null environment or perform the operation on a non null instance.

ORA-32150: Cannot perform operation on a null timestamp

Cause: The timestamp involved in this operation is null.

Action: Use valid, non-null timestamp instance to perform this operation.

ORA-32151: Environment not specified

Cause: The timestamp on which the operation was attempted was null and no environment was specified.

Action: Specify non-null environment or perform the operation on a non null instance.

ORA-32152: Cannot perform operation on a null number

Cause: The number involved in this operation is null.

Action: Use valid, non-null number instance to perform this operation.

ORA-32153: Environment not specified

Cause: The number on which the operation was attempted was null and no environment was specified.

Action: Specify non-null environment or perform the operation on a non null instance.

ORA-32154: Anydata context not specified

-
- Cause:** A null anydata context was passed.
Action: Pass a valid, non-null anydata context.
- ORA-32155: Anydata not specified**
Cause: A null anydata was passed.
Action: Pass a valid, non-null anydata.
- ORA-32156: Cannot perform operation on stream**
Cause: This operation is not applicable to streams obtained from LOBs.
Action: None
- ORA-32158: Invalid type passed**
Cause: An inapplicable type was passed to this call.
Action: Pass an applicable type.
- ORA-32159: Cannot set prefetch options for a null Type**
Cause: A null Type name was passed.
Action: Pass an non-null Type name.
- ORA-32161: Cannot perform piecewise fetch**
Cause: Zero amount was passed and buffer size was less than LOB size
Action: Specify a larger buffer or use Stream
- ORA-32162: Read/Write SQL method not registered**
Cause: readSQL/writeSQL method was NULL or was not registered
Action: Register readSQL/writeSQL by calling put method in Map
- ORA-32163: Method called on Invalid Environment type**
Cause: A non-XA call made on an XA Environment or XA call made on non-XA Environment
Action: Make sure Environment type is OK
- ORA-32164: Method called on Invalid Connection type**
Cause: A non-XA call made on an XA Connection or XA call made on non-XA Connection
Action: Make sure Connection type is OK
- ORA-32165: Cannot get XA environment**
Cause: Incorrect dbname string was passed or the XA connection has not been opened
Action: Pass the correct dbname string or check if the XA connection is open
- ORA-32166: Cannot get XA connection**
Cause: Incorrect dbname string was passed or the XA connection has not been opened
Action: Pass the correct dbname string or check if the XA connection is open
- ORA-32167: No payload set on the Message**
Cause: An attempt was made to enqueue a message without setting a payload on it.
Action: Set a payload on the message before calling the send method.

ORA-32168: Cannot perform operation on a null AnyData

Cause: The AnyData instance on which the operation was attempted was null.

Action: Use a valid, non-null AnyData instance to perform this operation.

ORA-32300: cannot drop a secondary materialized view "string"."string"

Cause: An attempt was made to drop a materialized view of a nested table column's storage table.

Action: Drop the materialized view that contains the nested table column. This will implicitly drop all secondary materialized views.

ORA-32301: object-relational materialized views must be primary key based

Cause: An attempt was made to create an object-relational materialized view that is not primary key based.

Action: Create the materialized view with the PRIMARY KEY keyword.

ORA-32302: object materialized views must be object ID based

Cause: An attempt was made to create an object materialized view that is not object ID based.

Action: Create the materialized view using the OF clause but omit any ROWID or PRIMARY KEY clauses.

ORA-32303: mvviews with user-defined types cannot reference multiple master sites

Cause: For materialized views with user-defined types, the definition query cannot reference tables from different master sites.

Action: Do not create materialized views with user-defined types referencing multiple master sites.

ORA-32304: materialized views with user-defined types cannot use prebuilt table

Cause: An attempt was made to create a materialized view with the ON PREBUILT TABLE option.

Action: Do not create the materialized view with the ON PREBUILT TABLE option.

ORA-32305: RepAPI materialized views with user-defined types are not supported

Cause: An attempt was made to create a RepAPI materialized view with user-defined types.

Action: Do not create a RepAPI materialized view with user-defined types.

ORA-32306: updatable materialized views with user-defined types must use SELECT *

Cause: An attempt was made to create an updatable materialized view with user-defined types where the definition query did not use SELECT * at the topmost level.

Action: Rewrite the definition query so that SELECT * is used at the topmost level.

ORA-32307: must use FROM ONLY clause when referencing an object table

Cause: An attempt was made to create a materialized view whose definition query references object tables without the FROM ONLY clause.

Action: Rewrite the definition query to use the FROM ONLY clause for all the object tables in the query.

ORA-32308: object materialized views must use SELECT *

Cause: An attempt was made to create an object materialized view where the definition query did not use SELECT * at the topmost level.

Action: Rewrite the definition query so that SELECT * is used at the topmost level.

ORA-32309: object mview type "string"."string" does not match the master table type

Cause: An attempt was made to create an object materialized view whose type does not match the type of the master object table.

Action: Redefine the type so that it matches the type of the master object table.

ORA-32310: object materialized views must select from an object table

Cause: An attempt was made to create an object materialized view whose definition query did not select from an object table.

Action: Rewrite the definition query to select from an object table.

ORA-32311: materialized view definition query selects an unsupported user-defined type

Cause: An attempt was made in the definition query to select an embedded user-defined type, function returning a user-defined type, or a function whose arguments are user-defined types.

Action: Rewrite the definition query to exclude these unsupported user-defined types.

ORA-32312: cannot refresh a secondary materialized view "string"."string"

Cause: An attempt was made to refresh a materialized view of a nested table column's storage table.

Action: Refresh the materialized view that contains the nested table column. This will implicitly refresh all secondary materialized views.

ORA-32313: REFRESH FAST of "string"."string" unsupported after PMOPs

Cause: A Partition Maintenance Operation (PMOP) has been performed on a detail table, and the specified materialized view does not support fast refresh after PMOPs.

Action: Use REFRESH COMPLETE. Note: you can determine why your materialized view does not support fast refresh after PMOPs using the DBMS_MVIEW.EXPLAIN_MVIEW() API.

ORA-32314: REFRESH FAST of "string"."string" unsupported after deletes/updates

Cause: One or more deletes or updates has been performed on one or more of the detail tables referenced by the specified materialized view. This materialized view does not support fast refresh after deletes or updates.

Action: Use REFRESH COMPLETE. Note: you can determine why your materialized view does not support fast refresh after deletes or updates using the DBMS_MVIEW.EXPLAIN_MVIEW() API.

ORA-32315: REFRESH FAST of "string"."string" unsupported after mixed DML and Direct Load

Cause: One or more of the materialized view logs on the detail tables referenced by the specified materialized view omits the sequence number option. Such a log cannot be used to refresh a materialized view after deletes or updates and direct path insert.

Action: Use REFRESH COMPLETE. Note: you can use the DBMS_MVIEW.EXPLAIN_MVIEW() API to determine which materialized view logs omit the sequence number option.

ORA-32316: REFRESH FAST of "string"."string" unsupported after mixed DML

Cause: One or more of the materialized view logs on the detail tables referenced by the specified materialized view omits the sequence number option. Such a log cannot be used to refresh a materialized view after deletes or updates have been performed on multiple detail tables.

Action: Use REFRESH COMPLETE. Note: you can use the DBMS_MVIEW.EXPLAIN_MVIEW() API to determine which materialized view logs omit the sequence number option.

ORA-32317: cannot run a job from a job

Cause: An attempt was made to execute a job from within another job.

Action: Do not submit jobs that run other jobs.

ORA-32318: cannot rename a materialized view

Cause: Renaming a materialized view or its base table is not supported.

Action: Do not rename the base table of a materialized view.

ORA-32319: Cannot use direct loader log to FAST REFRESH materialized view "string"."string"

Cause: The direct loader log might have been dropped

Action: Need to do complete refresh

ORA-32320: REFRESH FAST of "string"."string" unsupported after container table PMOPs

Cause: A Partition Maintenance Operation (PMOP) has been performed on the materialized view, and no materialized view supports fast refresh after container table PMOPs.

Action: Use REFRESH COMPLETE. Note: you can determine why your materialized view does not support fast refresh after PMOPs using the DBMS_MVIEW.EXPLAIN_MVIEW() API.

ORA-32321: REFRESH FAST of "string"."string" unsupported after detail table TRUNCATE

Cause: A detail table has been truncated and no materialized view supports fast refresh after a detail table has been truncated

Action: Use REFRESH COMPLETE. Note: you can determine why your materialized view does not support fast refresh after TRUNCATE using the DBMS_MVIEW.EXPLAIN_MVIEW() API.

ORA-32322: PCT refresh of "string"."string" not allowed the sequence of DMLs/PMOPs

Cause: A table join dependent on another table on which PCT refresh is enabled has changed

Action: Use REFRESH FORCE which will pick the best possible refresh method on the materialized view

ORA-32330: invalid operation on online redefinition interim table "string"."string"

Cause: An invalid operation was performed on an interim table which was being used for online redefinition of a table.

Action: Do not perform any unsupported operation on the interim table.

ORA-32331: type "*string*".*string*" is incompatible with the master site

Cause: A type used by the materialized view was found to be incompatible with its corresponding type on the master site. This could be because the type does not exist on the master site or has been evolved to a different version from that on the materialized view site.

Action: Make sure that the types used by the materialized view are the same on both the materialized view and master sites.

ORA-32332: cannot refresh materialized view "*string*".*string*" as type evolution has occurred

Cause: The types used by the materialized view or its master tables have been evolved.

Action: Ensure that the types used by the materialized view have been evolved to the same version at both the master and materialized sites. Then, before refreshing the materialized view, evolve the materialized view using ALTER MATERIALIZED VIEW.

ORA-32333: disable table scn update for Materialized view

Cause: an event is set for disabling table scn update to prevent deadlock situation. (bug 1376209)

Action: disable null refresh and/or base table scn update for Materialized view

ORA-32334: cannot create prebuilt materialized view on a table already referenced by a MV

Cause: the table on which the materialized view is created as prebuilt is already referenced by a materialized view

Action: create the materialized view on a different table

ORA-32335: dimension must have at least one level

Cause: An level-less dimension is not allowed.

Action: Do not drop the only level of a dimension.

ORA-32336: cannot use USING NO INDEX to create materialized view "*string*".*string*"

Cause: The USING NO INDEX option was specified to create an updatable primary key based materialized view, an index-organized materialized view or an object-id materialized view.

Action: Do not use the USING NO INDEX option to create an updatable primary key based materialized view, an index-organized materialized view or an object-id materialized view.

ORA-32337: cannot alter materialized view with pending changes refresh on commit

Cause: There are some pending changes in the detail tables

Action: Execute an on-demand refresh on the materialized view to synchronize the data between the materialized view and the detail tables and then issue an ALTER MATERIALIZED VIEW statement.

ORA-32338: on commit refresh grab all the detailed tables

Cause: an event is set to let on-commit MV refresh to grab all the detailed tables, no matter whether they have modified or not.

Action: None

ORA-32339: cannot alter materialized view with the PMOP

Cause: the materialized view is not allowed to have destructive PMOPS such as DROP, TRUNCATE and EXCHANGE (sub)partition. The UGA flag of `i_am_a_refresh` should be set first.

Action: execute `set_i_am_a_refresh` first before alter materialized view with the PMOP.

ORA-32340: cannot tune the materialized view definition

Cause: Due to constructs in the materialized view definition, it could not be tuned to be fast-refreshable or rewriteable.

Action: Execute `DBMS_MVIEW.EXPLAIN_MVIEW` to determine the cause.

ORA-32341: The EXPLAIN_MVIEW facility failed to explain the materialized view "*string*".*string*"

Cause: The dependent object(s) of the materialized view may have changed. The materialized view may no longer be valid.

Action: Execute `ALTER MATERIALIZED VIEW COMPILE` and to determine the status of the materialized view in catalog views.

ORA-32342: The EXPLAIN_MVIEW facility failed to explain the materialized view statement

Cause: An error exists in the materialized view definition. As a result, the materialized view statement could not be explained.

Action: Check the syntax of the statement. If it is a `CREATE MATERIALIZED VIEW` statement, then also check the `PARAMETERS` specified for the materialized view.

ORA-32344: cannot create a secondary materialized view with synonym as base table

Cause: It is not supported to create a secondary materialized view with synonym in the `FROM` clause.

Action: Removed the synonym(s) from the statement.

ORA-32345: fail to refresh the materialized view *string.string* due to the changed synonym

Cause: The definition of one or more synonyms in the from clause have changed. The structure of the materialized view has become invalid.

Action: Restore the synonym(s) or drop the materialized view and recreate it again.

ORA-32346: ON COMMIT materialized view refresh caused changes to the master table/materialized view

Cause: `ON COMMIT` refresh of a read-only materialized view changed the master table/materialized view. A trigger on the refreshed materialized view may be the cause.

Action: Do not create triggers on materialized view which update the master table/materialized view.

ORA-32347: NULL capabilities during explain mview

Cause: The supplied defining query did not generate any capabilities information.

Action: Replace the query since it is not suitable for creating a materialized view.

ORA-32348: revalidate summary object based on user input

Cause: An event was set to specify the number of attempts that the system needed to make in order to validate an invalidated summary object.

Action: Revalidate an invalidated summary object based on user input.

ORA-32349: cannot reference prebuilt table in definition query for materialized view

Cause: The prebuilt container table of the materialized view was referenced in the definition query.

Action: Change the definition query to reference a non-prebuilt table.

ORA-32350: ON COMMIT refresh obtain shared lock for all the detailed tables

Cause: An event was set to let ON COMMIT materialized view refresh to obtain a shared lock for all the detailed tables, whether they have been modified or not.

Action: No action necessary.

ORA-32351: database link name cannot start with a number while creating materialized view

Cause: This event was disabled by default. If enabled, the fix for bug 6074902 will be disabled and you will be unable to create database links starting with a number when creating a materialized view on remote tables.

Action: No action necessary.

ORA-32400: cannot use object id columns from materialized view log on "string"."string"

Cause: The materialized view log either does not have object id columns logged, or the timestamp associated with the object id columns is more recent than the last refresh time.

Action: A complete refresh is required before the next fast refresh. Add object id columns to the materialized view log, if required.

ORA-32401: materialized view log on "string"."string" does not have new values

Cause: Materialized view log on the indicated table does not have new values information.

Action: Add new values to materialized view log using the ALTER MATERIALIZED VIEW LOG command.

ORA-32403: cannot use new values from mv log on "string"."string"

Cause: The materialized view log either does not have new values logged, or the timestamp associated with the new values columns is more recent than the last refresh time.

Action: Perform a complete refresh is required before the next fast refresh.

ORA-32404: snapshot log uses Change Data Capture which is not enabled for this database

Cause: A snapshot log that utilizes Change Data Capture is being imported to a database where Change Data Capture has not been enabled.

Action: First enable Change Data Capture on the database then retry the import.

ORA-32405: cannot alter tablespace for existing materialized view log

Cause: The tablespace specification for the existing materialized view log cannot be altered or changed.

Action: remove the tablespace clause from the statement.

ORA-32406: cannot alter partitioning for existing materialized view log

Cause: The partitioning specification for the existing materialized view log cannot be altered or changed.

Action: remove the partitioning clause from the statement.

ORA-32407: cannot exclude new values when materialized view log includes new values

Cause: The excluding new values specification for the existing materialized view log cannot be accepted when including new values is the current option.

Action: change excluding new values clause.

ORA-32408: materialized view log on "string"."string" already has new values

Cause: The materialized view log on the indicated table already has new values.

Action: No action required.

ORA-32409: materialized view log on "string"."string" already excludes new values

Cause: The materialized view log on the indicated table already excludes new values.

Action: No action required.

ORA-32411: materialized view definition query exceeds the maximum length

Cause: The materialized view definition query exceeds the 64K limit.

Action: Change the materialized view definition query so that it does not exceed the maximum length of 64K.

ORA-32412: encrypted column "string" not allowed in the materialized view log

Cause: The materialized view log being created/changed is to capture an encrypted column of the base table.

Action: Do not capture the encrypted column.

ORA-32413: allow concurrent refresh of materialized view and truncate

Cause: This event is set to allow concurrent refresh of materialized view and truncate of base table; it prevents a deadlock situation. (bug 6710019)

Action: Set this event to allow concurrent refresh of materialized view and truncate of the base table.

ORA-32414: materialized view logs are not compatible with each other for fast refresh

Cause: An attempt was made to create a fast refreshable materialized view on tables which have commit SCN-based materialized view logs and tables which have timestamp-based materialized view logs.

Action: Use COMPLETE REFRESH or change underlying materialized view logs to make them compatible with each other for fast refresh.

ORA-32415: fast refreshable remote materialized view on a detail table with commit SCN-based materialized view log is not supported

Cause: The materialized view creation failed because fast refreshable remote materialized view on a detail table with commit SCN-based materialized view log was not supported.

Action: None

-
- ORA-32416: one or more commit SCN-based materialized view logs are not in consistent state for fast refresh**
Cause: Dictionary table "SYS"."SNAP_XCMT\$" is not in consistent state.
Action: No action required.
- ORA-32417: must use DROP MATERIALIZED VIEW LOG to drop "string"."string"**
Cause: An attempt was made to drop materialized view log using a command other than DROP MATERIALIZED VIEW LOG.
Action: No action required.
- ORA-32418: COMMIT SCN keyword only appears in CREATE MATERIALIZED VIEW LOG statement**
Cause: An attempt was made to alter an existing materialized view log to have commit SCN.
Action: No action required.
- ORA-32419: on commit materialized view is not supported on detail tables with commit SCN-based materialized view logs**
Cause: An attempt was made to create an on commit materialized view on detail tables with commit SCN-based materialized view logs.
Action: No action required.
- ORA-32420: unsupported fast refreshable materialized view defined on detail tables which have commit SCN-based materialized view logs**
Cause: An attempt was made to create an unsupported fast refreshable materialized view on detail tables with commit SCN based materialized view logs.
Action: No action required.
- ORA-32421: commit SCN-based materialized view log is not supported on a table with LOB column(s)**
Cause: An attempt was made to create a commit SCN-based materialized view log on a table which has LOB column(s).
Action: No action required.
- ORA-32422: commit SCN-based materialized view log cannot be created on table "string"."string" when there exist direct load/PMOP log entries for the table**
Cause: An attempt was made to create a commit SCN-based materialized view log on a table which had direct load/PMOP log entries in sys.sumdelta\$ and sys.sumpartlog\$.
Action: Refresh the table's dependent materialized views before creating commit SCN-based materialized view log on the table.
- ORA-32423: commit SCN-based materialized view log cannot be dropped on table "string"."string" when there exist direct load/PMOP log entries for the table**
Cause: An attempt was made to drop a commit SCN-based materialized view log on a table which had direct load/PMOP log entries in sys.sumdelta\$ and sys.sumpartlog\$.
Action: Refresh the table's dependent materialized views before dropping commit SCN-based materialized view log on the table.
- ORA-32424: materialized view log on "string"."string" already has this purge option**

Cause: Materialized view log on the indicated table already has the purge option specified.

Action: Specify a different purge option or omit the purge option.

ORA-32425: asynchronous and scheduled purge option is not allowed on commit SCN-based materialized view log

Cause: An attempt was made to create or alter a commit SCN-based materialized log with asynchronous and scheduled purge option.

Action: Specify a different purge option or omit the purge option.

ORA-32426: materialized view log on "string"."string" in DST upgrade

Cause: The materialized view log was created or altered on a table that had a Daylight Saving Time upgrade in progress.

Action: Wait until DST upgrade finishes on the master table.

ORA-32427: materialized view contains unsupported NLS transformation

Cause: An attempt was made to create or alter materialized view under NLS settings which transformed the materialized view's defining query in ways not by supported by Oracle.

Action: Contact Oracle support or workaround problem by removing NLS settings or modifying the materialized view's defining query.

ORA-32480: SEARCH and CYCLE clauses can only be specified for recursive WITH clause elements

Cause: A SEARCH or a CYCLE clause was specified for a WITH clause element that was not recursive.

Action: Remove the SEARCH or CYCLE clause, or add recursion to the WITH clause element.

ORA-32481: cycle value for CYCLE clause must be different from the non-cycle value

Cause: A CYCLE clause was specified for a recursive WITH query but the cycle value was the same as the non-cycle or DEFAULT value.

Action: Change either the cycle or the non-cycle values so that they no longer match.

ORA-32482: sequence column for SEARCH clause must be different from the cycle mark column for CYCLE clause

Cause: A SEARCH clause and a CYCLE clause was specified for a recursive WITH query, but the sequence column of the SEARCH clause matched the cycle mark column of the CYCLE clause.

Action: Change either the sequence column or the cycle mark column so that they no longer match.

ORA-32483: duplicate name found in sort specification list for SEARCH clause of WITH clause

Cause: A SEARCH clause was specified for a recursive query with a sort specification list which contained duplicate names.

Action: Remove the duplicate names from the sort specification list of the SEARCH clause.

ORA-32484: duplicate name found in cycle column list for CYCLE clause of WITH clause

Cause: A CYCLE clause was specified for a recursive query with a cycle column list which contained duplicate names.

Action: Remove the duplicate names from the cycle column list of the CYCLE clause.

ORA-32485: element in cycle column list of CYCLE clause must appear in the column alias list of the WITH clause element

Cause: An element in the cycle column list of a CYCLE clause that was specified for a recursive WITH query did not appear in the column alias list of the WITH clause element.

Action: Change the cycle column list to use only names which are listed in the column alias list of the WITH clause element.

ORA-32486: unsupported operation in recursive branch of recursive WITH clause

Cause: The recursive component of the UNION ALL in a recursive WITH clause element used an operation that was currently not supported. The following should not be used in the recursive branch of the UNION ALL operation: GROUP BY, DISTINCT, MODEL, grouping sets, CONNECT BY, window functions, HAVING, aggregate functions.

Action: Rewrite the query without the unsupported operation.

ORA-32487: unsupported join in recursive WITH query

Cause: The recursive component of a recursive WITH clause element contained one of the following:

- A LEFT OUTER join where the right side was the recursive query name.
- A RIGHT OUTER join where the left side was the recursive query name.
- A FULL OUTER join involving the recursive query name.

Action: Rewrite the query without the unsupported join operation.

ORA-32488: WITH clause element did not have a column alias list

Cause: A WITH clause element used the SEARCH clause or CYCLE clause or both but did not have a column alias list specified for it.

Action: Add a column alias list for the WITH clause query name.

ORA-32489: element in sort specification list of SEARCH clause did not appear in the column alias list of the WITH clause element

Cause: An element in the sort specification list of a SEARCH clause that was specified for a recursive WITH query did not appear in the column alias list of the WITH clause element.

Action: Change the sort specification list to use only names which are listed in the column alias list of the WITH clause element.

ORA-32490: recursive query name referenced more than once in recursive branch of recursive WITH clause element

Cause: The recursive component of the UNION ALL in a recursive WITH clause element referenced the recursive query name more than once. Only one reference to the recursive query name is allowed in the recursive branch of a recursive WITH clause element.

Action: Rewrite the query using only one reference to the recursive query name in the recursive branch of the recursive WITH clause element.

ORA-32500: Dirname 'string' cannot exceed 'string' characters

-
- Cause:** Path name too long
Action: Use shorter pathname than maximum specified for dirname.
- ORA-32501: Writing SGA to file failed**
Cause: Underlying OSDs encountered an error
Action: Check additional information. slercerrno contains errno.
- ORA-32502: Cannot execute command. Flash Freeze is not in effect**
Cause: This command can only be issued after a flash freeze
Action: Refer to instructions for flash freeze and Oracle diagnostics.
- ORA-32503: Mapping SGA from file failed**
Cause: Underlying OSDs encountered an error
Action: Check additional information. slercerrno contains errno.
- ORA-32504: expecting one of *string*, *string*, *string*, or *string* but found *string***
Cause: illegal value specified for create watchpoint mode
Action: specify one of the expected modes
- ORA-32505: too many watchpoints**
Cause: too many watchpoints created
Action: increase appropriate initialization parameters
- ORA-32506: expecting one of *string*, *string*, or *string* but found *string***
Cause: invalid arguments provided
Action: provide one of the expected arguments
- ORA-32507: expecting *string* but found *string***
Cause: invalid arguments to command
Action: provide one of the expected arguments
- ORA-32508: no such watchpoint id**
Cause: invalid watchpoint id
Action: use oradebug show to list valid watchpoint ids
- ORA-32509: watchpoint was already deleted**
Cause: trying to delete an already deleted watchpoint
Action: use oradebug show to list valid watchpoint ids
- ORA-32510: cannot create watchpoint on unreadable memory**
Cause: trying to create watchpoint on invalid address
Action: provide a different valid address
- ORA-32511: cannot create watchpoint in memory needed by watchpointing code**
Cause: overlap exists between requested memory range to watch and internal memory structures that watchpointing operations need
Action: provide a different address range
- ORA-32512: type '*string*' is unknown**
Cause: trying to dump an invalid type name
Action: specify a known type

-
- ORA-32514: cannot dump multiple 'string' types: structure size is unknown**
Cause: trying to dump an invalid address
Action: provide a different valid address
- ORA-32515: cannot issue ORADEBUG command 'string' to process 'string'; prior command execution time exceeds string ms**
Cause: The process targeted to execute the ORADEBUG command was busy executing another ORADEBUG command for a time greater than the timeout value specified.
Action: Increase the timeout value.
- ORA-32516: cannot wait for process 'string' to finish executing ORADEBUG command 'string'; wait time exceeds string ms**
Cause: The execution of the ORADEBUG command took longer than the the timeout value specified.
Action: Increase the timeout value.
- ORA-32517: cannot issue ORADEBUG command 'string' to process 'string' (prior command execution time exceeds string ms); total wait time exceeds string ms**
Cause: The process targeted to execute the ORADEBUG command was busy executing another ORADEBUG command. But, because the total wait time for all targeted processes exceeded the maximum wait time, the ORADEBUG command was not issued to the target process.
Action: Increase the timeout value.
- ORA-32518: cannot wait for process 'string' to finish executing ORADEBUG command 'string' (waited string ms); total wait time exceeds string ms**
Cause: The total wait time for all targeted processes exceeded the maximum wait time, therefore the wait for the targeted process to finish executing the ORADEBUG command was aborted.
Action: Increase the timeout value.
- ORA-32519: insufficient privileges to execute ORADEBUG command: string**
Cause: Sufficient privileges were not granted.
Action: Perform the operation using a database session that has the required privileges. See the Oracle ORADEBUG documentation for more details.
- ORA-32520: error authenticating credentials**
Cause: An error was encountered while authenticating credentials.
Action: Check the other error messages for additional information or contact Oracle Support Services.
- ORA-32521: error parsing ORADEBUG command: string**
Cause: An invalid ORADEBUG command was specified.
Action: Specify the correct ORADEBUG command and arguments.
- ORA-32550: Replacement occurred despite hint to the contrary**
Cause: This should never be signalled; it's internal.
Action: Report to Oracle support.
- ORA-32575: Explicit column default is not supported for modifying views**
Cause: Default keyword was used to modify views.

Action: Use implicit default - omitting column-value pair.

ORA-32576: missing TYPE keyword

Cause: keyword TYPE is missing.

Action: Use TYPE keyword.

ORA-32577: username must be SYS or SYSTEM

Cause: A user name of SYS or SYSTEM was not specified when providing a password in the CREATE DATABASE statement.

Action: Only passwords for the SYS and SYSTEM users can be provided in the CREATE DATABASE statement. Re-issue the statement with passwords for users SYS or SYSTEM.

ORA-32578: password for SYS already specified

Cause: A password for the SYS user was specified twice in the CREATE DATABASE statement.

Action: Re-issue the CREATE DATABASE statement with only one password for the SYS user.

ORA-32579: password for SYSTEM already specified

Cause: A password for the SYSTEM user was specified twice in the CREATE DATABASE statement.

Action: Re-issue the CREATE DATABASE statement with only one password for the SYSTEM user.

ORA-32580: both SYS and SYSTEM passwords must be provided

Cause: Passwords for both the SYS and SYSTEM users were not provided in the CREATE DATABASE statement. If one of the passwords was provided, then both should be provided.

Action: Re-issue the CREATE DATABASE statement with a password for both the SYS and SYSTEM users.

ORA-32581: missing or invalid password

Cause: An incorrect password was provided for the SYS or SYSTEM user in the CREATE DATABASE statement.

Action: Re-issue the CREATE DATABASE statement with a valid password.

ORA-32582: table function with left correlation to a table cannot also be left outer-joined to the table

Cause: A table function T2 contains a reference to a table T1. T2 is also left outer-joined to T1. This is not allowed.

Action: Remove the reference to T1 from T2 or remove the left outer-join specification (+).

ORA-32583: query passed to table function has wrong number of elements in select list

Cause: The query used as an input to a table function which takes a a ref cursor as argument has wrong number of elements in the select list which does not correspond to the elements in ref cursor. The ref cursor mentioned here refers to the one referenced in order by partition clauses. This is not allowed.

Action: Make sure that the select list of the query matches the ref cursor columns as defined in the function.

ORA-32584: missing LOG keyword

Cause: keyword LOG is missing.

Action: Use LOG keyword.

ORA-32585: duplicate specification of a supplemental log attribute

Cause: In a create/alter DDL a supplemental log attribute is specified more than once.

Action: Rewrite the Create/Alter DDL such that it has a single occurrence of any supplemental log attribute.

ORA-32586: multiple specification of a supplemental logging attribute

Cause: The primary key, unique index, foreign key or all column supplemental logging attribute can be specified at most once in a create/alter ddl.

Action: Rewrite the Create/Alter DDL with single occurrence of the offending supplemental logging attribute.

ORA-32587: Cannot drop nonexistent *string* supplemental logging

Cause: specified supplemental log attribute does not exist.

Action: None

ORA-32588: supplemental logging attribute *string* exists

Cause: specified supplemental logging attribute exists.

Action: retry the alter/create ddl after removing this supplemental logging attribute.

ORA-32589: unable to drop minimal supplemental logging

Cause: Minimal supplemental logging could not be dropped as one of primary key, foreign key, unique or all column supplemental logging is enabled at the database level.

Action: Use V\$DATABASE to determine the databasewide supplemental logging directives. Minimal supplemental logging could be dropped if and only if no other databasewide supplemental logging directives are enabled.

ORA-32590: log group specification not allowed here

Cause: Supplemental log specification is not allowed in the statement.

Action: Remove the supplemental log specification from the statement.

ORA-32591: connect string too long

Cause: The connect string specified for the database link was more than 2000 characters.

Action: Specify a connect string less than 2000 characters.

ORA-32592: all columns in log group can not be no log columns

Cause: A supplemental log group must have at least one column of scalar type that is not marked as no log.

Action: Redefine the supplemental log group with at least one column of scalar type that is not marked as no log.

ORA-32593: database supplemental logging attributes in flux

Cause: there is another process actively modifying the database wide supplemental logging attributes.

Action: Retry the DDL or the LogMiner dictionary build that raised this error.

ORA-32594: invalid object category for COMMENT command

Cause: The object category specified is not a valid object for which to use the COMMENT command.

Action: Retry the COMMENT command by specifying an accepted object category. (ie, Table, Operator, Indextype, etc.)

ORA-32595: DDL statement cannot be audited with BY SESSION specified

Cause: An attempt was made to audit a DDL statement with BY SESSION clause specified. DDL statements can be audited BY ACCESS only.

Action: Specify BY ACCESS instead of BY SESSION to audit the DDL statement.

ORA-32596: duplicate ALTER USER or CREATE USER option

Cause: An ALTER USER option was duplicated.

Action: Remove the duplicate option.

ORA-32597: database supplemental logging attributes inconsistent

Cause: failed to propagate supplemental logging attributes to all RAC instances. Most likely caused by an instance leaving the RAC while this DDL was in progress.

Action: Retry the DDL or the LogMiner dictionary build that raised this error.

ORA-32598: user names cannot be changed in ALTER DATABASE LINK command

Cause: An attempt was made to change the fixed user name of the database link.

Action: None

ORA-32600: RETENTION and PCTVERSION cannot be used together

Cause: cannot use both RETENTION and PCTVERSION together.

Action: Use either RETENTION or PCTVERSION.

ORA-32601: value for retention cannot be provided

Cause: cannot give a value for Retention Period.

Action: do not provide the value for parameter.

ORA-32602: FREEPOOLS and FREELIST GROUPS cannot be used together

Cause: cannot use both FREEPOOLS and FREELIST GROUPS together.

Action: Use either FREEPOOLS or FREELIST GROUPS.

ORA-32603: invalid FREEPOOLS LOB storage option value

Cause: The specified FREEPOOLS LOB storage option value must be an integer.

Action: Choose an appropriate integer value and retry the operation.

ORA-32604: invalid REBUILD option

Cause: Keyword FREEPOOLS expected after the REBUILD keyword.

Action: User must specify FREEPOOLS keyword.

ORA-32605: invalid REBUILD option

Cause: cannot rebuild freepools while creating table with lob column.

Action: User must not specify REBUILD... in this context.

ORA-32606: missing NAV keyword in MODEL clause

Cause: The NAV keyword was specified where it is expected.

Action: Specify the NAV keyword or check the SQL statement.

ORA-32607: invalid ITERATE value in MODEL clause

Cause: The specified ITERATE value must be a 4 byte positive integer.

Action: Choose an appropriate value and retry the operation.

ORA-32608: missing INCREMENT or DECREMENT keyword in FOR loop

Cause: INCREMENT or DECREMENT keyword was not specified where it is expected.

Action: Specify the INCREMENT or DECREMENT keyword or check the SQL statement.

ORA-32609: missing REFERENCE keyword in MODEL clause

Cause: The REFERENCE keyword was not specified where it is expected.

Action: Specify the REFERENCE keyword or check the SQL statement.

ORA-32610: missing SINGLE REFERENCE or DIMENSION keyword in MODEL clause

Cause: SINGLE REFERENCE or DIMENSION keyword was not specified where it is expected.

Action: Specify the applicable keywords or check the SQL statement.

ORA-32611: incorrect use of MODEL CV operator

Cause: CV function was used outside a dimension expression, in UNTIL condition, or with non-dimensional arguments.

Action: Check the SQL statement and rewrite if necessary.

ORA-32612: invalid use of FOR loop

Cause: The MODEL FOR loop was used where it is not allowed. FOR loops are not allowed in complex dimensional predicates, on the right hand side of rules, or in the until condition.

Action: Check the SQL statement and rewrite if necessary.

ORA-32613: not a MODEL cell

Cause: The operator requires a MODEL cell as operand.

Action: Specify MODEL cell as operand, check SQL statement.

ORA-32614: illegal MODEL SELECT expression

Cause: An expression other than MODEL aliases, constants, or expressions of the two is specified in the MODEL SELECT clause.

Action: Reformulate the query, perhaps nesting inside another SELECT.

ORA-32615: incorrect use of MODEL IS ANY predicate

Cause: IS ANY predicate is used outside dimension expression or with non-dimensional or different dimensional arguments.

Action: Check the SQL statement and rewrite if necessary.

ORA-32616: missing DIMENSION BY keyword in MODEL clause

Cause: The DIMENSION keyword was not specified where it is expected.

Action: Specify the DIMENSION keyword or check the SQL statement.

ORA-32617: missing MEASURES keyword in MODEL clause

Cause: The MEASURES keyword was not specified where it is expected.

Action: Specify the MEASURES keyword or check the SQL statement.

ORA-32618: incorrect use of MODEL PREVIOUS function

Cause: The MODEL PREVIOUS function was used outside of MODEL "ITERATE UNTIL" clause, or was nested.

Action: Check the SQL statement and rewrite if necessary.

ORA-32619: incorrect use of MODEL ITERATION_NUMBER

Cause: ITERATION_NUMBER was used outside of an iterated MODEL.

Action: Check the SQL statement and rewrite if necessary.

ORA-32620: illegal subquery within MODEL rules

Cause: A subquery was used illegally within the MODEL rule.

Action: Check the SQL statement and rewrite if necessary.

ORA-32621: illegal aggregation in UNTIL iteration condition

Cause: An aggregate function was used in UNTIL condition.

Action: Check the SQL statement and rewrite if necessary.

ORA-32622: illegal multi-cell reference

Cause: Multi-cell reference was specified on a measure expression without an aggregate function.

Action: Use an aggregate function on the measure expression or qualify the cell reference.

ORA-32623: incorrect use of MODEL PRESENT* functions

Cause: A PRESENT* function (IS PRESENT, PRESENTV, PRESENTNNV) was used in a measure expression.

Action: Check the SQL statement and rewrite if necessary.

ORA-32624: illegal reordering of MODEL dimensions

Cause: The expressions to qualify dimensions were specified in an incorrect order within a cell reference.

Action: Reorder dimension expressions in the cell reference.

ORA-32625: illegal dimension in cell reference predicate

Cause: A non-positional dimension was referenced in the predicate.

Action: Check the SQL statement and rewrite if necessary.

ORA-32626: illegal bounds or increment in MODEL FOR loop

Cause: FOR loop allows only numeric and datetime without timezone type for bounds. Only constants of interval and numeric types are allowed as increment/decrement expressions.

Action: Check the SQL statement and rewrite if necessary.

ORA-32627: illegal pattern in MODEL FOR LIKE loop

Cause: The FOR LIKE pattern had zero or more than one wild characters.

Action: Simplify the pattern to have a single wildcard character.

ORA-32628: invalid nesting of MODEL cell reference

Cause: MODEL cell reference was nested too deeply.

Action: Avoid deep nesting of cell references and rewrite if necessary.

ORA-32629: measure used for referencing cannot be updated

Cause: A measure used in nested referencing is updated by a MODEL rule in the automatic order MODEL.

Action: Modify the SQL statement or use sequential order MODEL.

ORA-32630: multiple assignment in automatic order MODEL

Cause: A MODEL cell was updated on the same measure in multiple MODEL rules. Multiple assignment is not allowed in automatic order MODELS as it causes in ambiguity and nondeterminism.

Action: Use sequential order MODEL or rewrite the rule to avoid this.

ORA-32631: illegal use of objects in MODEL

Cause: An object column was used as a MODEL column. Object types are not allowed as partition by, dimension by or measure expressions.

Action: Check the SQL statement and rewrite if necessary.

ORA-32632: incorrect subquery in MODEL FOR cell index

Cause: An illegal subquery was specified in MODEL FOR cell index. A subquery used in a MODEL FOR cell index can not have subqueries, correlation, binds and references to WITH tables.

Action: Check the SQL statement and rewrite if necessary.

ORA-32633: MODEL subquery FOR cell index returns too many rows

Cause: Subquery in MODEL FOR cell index returned more than the allowed maximum.

Action: Split the rule into multiple ones.

ORA-32634: automatic order MODEL evaluation does not converge

Cause: Evaluation using automatic rule ordering did not reach a convergence point.

Action: Modify the rules or use sequential order instead.

ORA-32635: not a single cell reference predicate

Cause: A predicate that is not a single cell reference predicate was specified where a single cell reference predicate was expected. A single cell reference predicate is either a constant expression or a predicate of the form <dimension_key = constant_expr>

Action: Make sure that the predicate is a proper single cell reference. In some cases, you might have to put explicit type conversion operators (or casts) on the constant expression.

ORA-32636: Too many rules in MODEL

Cause: The number of rules (possibly after rule unfolding) exceeded the maximum number of rules allowed.

Action: Reduce the number of rules.

ORA-32637: Self cyclic rule in sequential order MODEL

Cause: A self-cyclic rule was detected in the sequential order MODEL. Sequential order MODELS cannot have self cyclic rules to guarantee that the results do not depend on the order of evaluation of the cells that are updated or upserted.

Action: Use ordered rule evaluation for this rule.

ORA-32638: Non unique addressing in MODEL dimensions

Cause: The address space defined for the MODEL (partition by and dimension by expressions) do not uniquely identify each cell.

Action: Rewrite the MODEL clause. Using UNIQUE SINGLE REFERENCE option might help.

ORA-32639: Aggregate functions on reference MODELs are not allowed

Cause: An aggregate function was specified on the cells of a reference MODEL.

Action: Check the SQL statement and rewrite if necessary.

ORA-32640: FOR LIKE loops are not allowed for multi-byte character types

Cause: FOR LIKE loops was specified for a multi-byte character type.

Action: Check the SQL statement and rewrite if necessary.

ORA-32641: invalid expression in MODEL rule ORDER BY clause

Cause: An invalid expression was specified in the MODEL rule ORDER BY clause where only expressions of dimension and measure columns and reference MODEL cell references are allowed

Action: Modify the order by clause in the MODEL rule.

ORA-32642: non-unique cell values from the ORDER BY clause

Cause: The MODEL rule ORDER BY clause did not generate unique values for all cells that satisfy the predicates in the left side of the rule.

Action: Modify the rule ORDER BY clause in the MODEL rule.

ORA-32643: invalid use of window function in MODEL rule

Cause: The window functions can not be used in SQL Model rules that have FOR-loops on the left side or aggregates on the right side.

Action: Modify the MODEL rule.

ORA-32644: this function is not allowed outside of MODEL clause

Cause: A function allowed only within the MODEL clause is used outside of MODEL clause.

Action: Rewrite the SQL statement.

ORA-32690: Hash Table Infrastructure ran out of memory

Cause: Not enough memory.

Action: Increase memory.

ORA-32695: HTI: Not enough memory

Cause: Memory is not enough.

Action: Increase memory.

ORA-32696: HTI: No free slot

Cause: There is not enough memory.

Action: Increase memory.

ORA-32700: error occurred in DIAG Group Service

Cause: An unexpected error occurred while performing a DIAG Group Service operation.

Action: Verify that the DIAG process is still active. Also, check the Oracle DIAG trace files for errors.

ORA-32701: Possible hangs up to hang ID=*string* detected

Cause: Hang Manager detected one or more hangs. These could be valid hangs that require action or the system could be overloaded causing very slow progress which can be interpreted as hangs. If hang resolution is enabled, Hang Manager may attempt to resolve the hang by terminating the ultimate blocker.

Action: Check the incident logs associated with this message for diagnostic information.

ORA-32702: Rolling migration is going on

Cause: DIAG detected rolling migration in IPC.

Action: No action needed. DIAG is shutting down for rolling migration. This error number is solely used for internal purposes.

ORA-32703: deadlock detected: *string*

Cause: Oracle sessions waiting for resources were deadlocked.

Action: Reissue any commands that failed and contact Oracle Support Services with the incident information.

ORA-32730: Command cannot be executed on remote instance

Cause: DIAG is not registered with DIAG Group Service

Action: Issue the command without the cluster database syntax

ORA-32731: Another Parallel Oradebug session is in progress

Cause: Another session for Parallel Oradebug is in progress with the database

Action: Issue the command later when the current session finishes

ORA-32732: Parallel Oradebug session is aborted

Cause: Group reconfiguration is occurring among DIAGs

Action: Issue the command later when group reconfiguration completes

ORA-32733: Error occurred when executing Parallel Oradebug

Cause: Error is encountered during executing command at local node

Action: Check alert log and DIAG trace file for error detail

ORA-32734: Error occurred when sending Oradebug command to remote DIAGs

Cause: IPC communication problem encountered

Action: Check IPC communication between DIAGs and issue the command again

ORA-32735: DIAG process is not running in the instance

Cause: DIAG process is not alive

Action: Check error in DIAG trace file and issue the command again when DIAG is restarted

ORA-32736: Hang analysis aborted due to wrong message type

Cause: DIAG received wrong message.

Action: Check DIAG trace files for errors.

ORA-32737: Hang analysis aborted due to failed memory allocation

Cause: DIAG couldn't allocate buffer for remote copy.

-
- Action:** Check DIAG trace files for errors.
- ORA-32738: Hang analysis aborted due to failed memory copy**
Cause: DIAG couldn't copy buffer to remote node.
Action: Check DIAG trace files for errors.
- ORA-32739: Hang analysis aborted due to failed heap re-grow**
Cause: DIAG couldn't re-grow the heap for wait-for-graphs.
Action: Check DIAG trace files for errors.
- ORA-32740: The requested operation cannot be proceeded**
Cause: Operation was aborted because instance termination was in progress.
Action: Retry later after restarting the instance.
- ORA-32741: Hang analysis already going on**
Cause: Hang analysis was already in process globally or for the instance.
Action: Wait for the current operation to complete and re-run the command.
- ORA-32742: Hang analysis initialize failed**
Cause: Hang analyzer was not able to allocate memory to initialize.
Action: Check the trace files.
- ORA-32743: command cannot be executed on remote instance**
Cause: The database was not mounted in SHARED mode.
Action: Mount the database in SHARED mode.
- ORA-32766: instr with negative offset: use varchar semantics on LOBs**
Cause: The current varchar behavior is different. e.g. `instr('abcd', 'cd', -2, 1)` returns 3, whereas `instr(to_clob('abcd'), 'cd', -2, 1)` returns 0, (i.e. no match), because the reverse search starts from offset -2, which points to 'c' and moving backward, i.e. 'd' is ignored. This is symmetric to `instr('dcba', 'dc', 2, 1)`, which returns 0.
Action: ORACLE uses the same varchar semantics on LOBs (`instr`). Using the same example, `instr(to_clob('abcd'), 'cd', -2, 1)` will return 3 as in the varchar case.
- ORA-32767: No server connection for this operation**
Cause: The client side `sql` or `plsql` function operation requires a connection to the server, but currently no client/server connection existed.
Action: Establish a client/server connection.
- ORA-32771: cannot add file to bigfile tablespace**
Cause: An attempt was made to add the second file to a bigfile tablespace.
Action: Do not use this command with bigfile tablespace.
- ORA-32772: BIGFILE is invalid option for this type of tablespace**
Cause: An attempt was made to create a bigfile tablespace that is dictionary managed or locally managed with manual segment-space management.
Action: Either change the tablespace type to locally managed with automatic segment-space management, or create a SMALLFILE tablespace instead.
- ORA-32773: operation not supported for smallfile tablespace *string***

Cause: An attempt was made to perform an operation which is supported only for bigfile tablespaces, e.g. resize tablespace.

Action: Use the appropriate clause of the ALTER DATABASE DATAFILE command instead.

ORA-32774: more than one file was specified for bigfile tablespace *string*

Cause: More than one datafile or tempfile was specified in CREATE TABLESPACE command for a bigfile tablespace.

Action: Change command to contain only one file or create a smallfile tablespace instead.

ORA-32775: cannot change size attributes of read only tablespace *string*

Cause: An attempt was made to change size attributes of a tablespace that is read only.

Action: Change the tablespace to read/write and retry the operation.

ORA-32790: Element '*string*' cannot share the default table '*string*' with element '*string*'

Cause: An element in the restriction shared a default table with the corresponding element in it's supertype.

Action: Change the default table's name for the element in restriction.

ORA-32800 to ORA-32857

ORA-32800: internal error *string*

Cause: An unexpected error occurred.

Action: Contact Oracle Support Services.

ORA-32801: invalid value *string* for *string*

Cause: An invalid value was specified for a parameter.

Action: Specify a valid value for the parameter.

ORA-32802: value for *string* must be *string*

Cause: An invalid value was specified for a parameter.

Action: Specify the value as indicated by the message.

ORA-32803: value for *string* cannot be altered

Cause: An attempt was made to alter a value that cannot be altered.

Action: Retry the operation without altering the indicated value.

ORA-32804: invalid value *string*, *string* should have form *string*

Cause: A value specified for a parameter has the incorrect form.

Action: Specify a string of the correct form.

ORA-32805: identifier for *string* too long, maximum length is *string* characters

Cause: An identifier string exceeded the maximum allowed length.

Action: Specify a string whose length is less than the maximum allowed length.

ORA-32806: value for *string* is too long, maximum length is *string*

Cause: A value exceeded its maximum allowed length.

Action: Specify a value whose length is less than the maximum allowed length.

ORA-32807: message system link *string* already exists

Cause: A message system link of the specified name already exists.

Action: Specify a different name.

ORA-32808: message system link *string* does not exist

Cause: A message system link of the specified name does not exist.

Action: Specify a message system link name that already exists.

ORA-32809: foreign queue *string* is already registered

Cause: The foreign queue has already been registered for this message system link (NAME@MSGLINK).

Action: Specify a different name that is not being used for this message system link.

ORA-32810: foreign queue *string* is not registered

Cause: The foreign queue (NAME@MSGLINK) has not been registered for this message system link.

Action: Specify the name of a registered foreign queue.

ORA-32811: subscriber *string* already exists

Cause: The specified subscriber identifier already exists.

Action: Specify a different identifier.

ORA-32812: subscriber *string* does not exist

Cause: The specified subscriber identifier does not exist.

Action: Specify an existing subscriber identifier.

ORA-32813: propagation schedule *string* already exists

Cause: The specified propagation schedule identifier already exists.

Action: Specify a different identifier.

ORA-32814: propagation schedule *string* does not exist

Cause: The specified propagation schedule identifier does not exist.

Action: Specify a schedule identifier that already exists.

ORA-32815: message system link *string* is referenced by a foreign queue

Cause: An attempt was made to remove a message system link currently referenced by one or more registered foreign queues.

Action: Unregister all foreign queues using this message system link and retry the operation.

ORA-32816: foreign queue *string* is referenced by a subscriber or schedule

Cause: An attempt was made to unregister a foreign queue currently referenced by one or more subscribers or propagation schedules.

Action: Remove all subscribers and propagation schedules using this foreign queue and retry the operation.

ORA-32817: message system link *string* is not configured with a log queue for *string*

Cause: An attempt was made to add a propagation subscriber but the message system link was not configured with a log queue for the indicated propagation type.

Action: Alter the message system link to configure the link with a log queue for this propagation type.

ORA-32818: AQ queue *string* does not exist

Cause: An operation was attempted where the specified AQ queue does not exist.

Action: Specify the name of an existing AQ queue.

ORA-32819: AQ queue *string* must be a normal queue

Cause: An operation was attempted where the specified AQ queue exists but is not a normal queue.

Action: Specify the name of an AQ queue which was created as a normal queue (NORMAL_QUEUE).

ORA-32820: subscriber queue and exception queue must use same message system link

Cause: An operation was attempted for INBOUND propagation where the specified subscriber queue and exception queue reference different message system links.

Action: Specify an exception queue that is a registered foreign queue of the same message system link as the subscriber queue.

ORA-32821: subscriber queue and exception queue must have same payload type

Cause: An operation was attempted for OUTBOUND propagation where the AQ queues used for the subscriber queue and exception queue have different payload types.

Action: Specify an exception queue that has the same payload type as the subscriber queue.

ORA-32822: subscriber *string* is marked for removal

Cause: An administration operation was attempted for a subscriber which is marked for removal. If attempting to remove a subscriber, the Messaging Gateway agent is not running or is running but unable to remove the subscriber at this time.

Action: Do not issue propagation administration commands for a subscriber for which removal is pending. Wait for the subscriber to be removed by the agent or issue REMOVE_SUBSCRIBER with the FORCE option to force the subscriber to be removed.

ORA-32823: subscriber exists for queue *string* and destination *string*

Cause: An attempt was made to create a propagation subscriber when one already exists for the specified queue and destination pair.

Action: Specify a different queue and destination pair, or remove the subscriber using that pair and retry the operation.

ORA-32824: schedule exists for source *string* and destination *string*

Cause: An attempt was made to create a propagation schedule when one already exists for the specified source and destination pair.

Action: Specify a different source and destination pair, or remove the schedule using that pair and retry the operation.

ORA-32825: Messaging Gateway agent has not been started

Cause: An attempt was made to shut down the Messaging Gateway agent when it is not started.

Action: No action required.

ORA-32826: Messaging Gateway agent has already been started

Cause: An attempt was made to start the Messaging Gateway agent when it is already started.

Action: No action required.

ORA-32827: Messaging Gateway agent must be shut down

Cause: An operation was attempted that requires the Messaging Gateway agent to be shut down.

Action: Issue SHUTDOWN, wait for MGW_GATEWAY view to show a NOT_STARTED status, and retry the operation. CLEANUP_GATEWAY may need to be issued to reset the gateway state if the agent fails to shut down after a reasonable time period.

ORA-32828: Messaging Gateway agent must be running

Cause: An operation was attempted that requires the Messaging Gateway agent to be started and responsive.

Action: Issue STARTUP, wait for MGW_GATEWAY view to show a RUNNING status, and retry the operation.

ORA-32829: Messaging Gateway agent cannot be shut down while it is starting

Cause: An attempt was made to shut down the Messaging Gateway agent when it is in the process of starting and initializing.

Action: Wait for MGW_GATEWAY view to show a RUNNING status and retry the operation. CLEANUP_GATEWAY may need to be issued to reset the gateway state if the agent fails to start after a reasonable time period.

ORA-32830: result code *string* returned by Messaging Gateway agent

Cause: The Messaging Gateway agent terminated abnormally due to an unexpected error.

Action: Review the Messaging Gateway log file for further information regarding the problem. Resolve the problem and start the Messaging Gateway agent. Contact Oracle Support Services if the problem cannot be resolved.

ORA-32831: timed out trying to acquire administration lock

Cause: A timeout occurred when attempting an administration operation. Either an administration operation was attempted while the Messaging Gateway agent was starting and initializing, or two administration operations were attempted at the same time.

Action: Retry the operation. If the Messaging Gateway agent is starting, wait for MGW_GATEWAY view to show a RUNNING status and retry the operation.

ORA-32832: failure *string* trying to acquire administration lock

Cause: An unexpected error occurred trying to acquire administration lock.

Action: Retry the operation. Contact Oracle Support Services if the error persists.

ORA-32833: failure *string* trying to release administration lock

Cause: An unexpected error occurred trying to release administration lock.

Action: Contact Oracle Support Services if the error persists.

ORA-32834: Messaging Gateway agent user has not been set

Cause: A Messaging Gateway agent user has not been configured.

Action: Create a database user having role MGW_AGENT_ROLE and issue DB_CONNECT_INFO to configure an agent user.

ORA-32835: database user *string* does not exist

Cause: The specified database user does not currently exist.

Action: Create the user and grant all necessary privileges and roles.

ORA-32836: database user *string* must be granted role *string*

Cause: The specified database user does not have a required role.

Action: Grant the user the indicated role.

ORA-32837: invalid configuration state *string*

Cause: The specified configuration state is invalid.

Action: Remove and re-create the configured entities. Contact Oracle Support Services if the problem cannot be identified or resolved.

ORA-32838: exceeded maximum number of properties

Cause: An attempt was made to alter a property list where the number of properties in the resulting list exceeds the maximum allowed.

Action: Order the elements of the alter list differently so the number of elements in the resulting list is less than the maximum.

ORA-32839: property *string* is reserved, names with MGWPROP\$_ prefix are not valid

Cause: An attempt was made to specify a reserved name for a property name.

Action: Use a non-reserved name.

ORA-32840: property name cannot be NULL

Cause: An attempt was made to use NULL for a property name.

Action: Specify a non-NULL name.

ORA-32841: invalid value for property *string*

Cause: An attempt was made to specify an invalid value for a property.

Action: Specify a valid property value.

ORA-32842: value for property *string* cannot be altered

Cause: An attempt was made to alter a property that cannot be altered.

Action: Retry the operation without altering the indicated property.

ORA-32843: value for *string* is outside the valid range of *string* to *string*

Cause: A value was specified that is not in the valid range.

Action: Specify a value within the indicated range.

ORA-32844: exceeded maximum number of *string* values

Cause: An attempt was made to add a value of the specified type but the maximum number of such values has been reached.

Action: No action required.

ORA-32845: Messaging Gateway agent is already running

Cause: An attempt was made to start the Messaging Gateway agent when an agent instance is already running.

Action: Shut down the Messaging Gateway agent currently running, verify the agent process has been terminated, and start the Messaging Gateway agent.

ORA-32846: Messaging Gateway agent cannot be started; status is *string*

Cause: An attempt to start the Messaging Gateway agent failed due to the indicated agent status. A BROKEN status indicates a problem that requires user intervention before the agent can be started.

Action: Review the MGW_GATEWAY view and the Messaging Gateway log file for further information. Resolve the problem and start the Messaging Gateway agent. Contact Oracle Support Services if the problem cannot be resolved.

ORA-32847: operation is not supported on this platform

Cause: An attempt was made to perform an operation that is not supported on this platform.

Action: Switch to a platform on which the operation is supported.

ORA-32848: foreign queue DOMAIN required for JMS unified connections

Cause: A DOMAIN was not specified when registering a foreign queue for a messaging system link that is configured to use the JMS unified messaging model.

Action: Specify a non-NULL value for the DOMAIN parameter.

ORA-32849: *string* cannot be set unless *string* is set

Cause: An attempt was made to specify a value for a parameter that cannot be set unless an associated parameter is also set.

Action: Specify a valid value for both parameters, or, do not specify a value for either parameter.

ORA-32850: agent *string* does not exist

Cause: The specified Messaging Gateway agent name did not exist.

Action: Specify an existing agent name.

ORA-32851: agent *string* already exists

Cause: The specified Messaging Gateway agent name already existed.

Action: Specify a different agent name.

ORA-32852: agent *string* is referenced by a message system link

Cause: An attempt was made to remove a Messaging Gateway agent currently referenced by one or more message system links.

Action: Remove all message system links associated with this agent and retry the operation.

ORA-32853: propagation job *string* does not exist

Cause: The specified propagation job identifier did not exist.

Action: Specify an existing identifier.

ORA-32854: propagation job *string* already exists

Cause: The specified propagation job identifier already existed.

Action: Specify a different identifier.

ORA-32855: propagation job *string* is marked for removal

Cause: An administration operation was attempted for a propagation job which is marked for removal. If attempting to remove a job, the Messaging Gateway agent is not running or is running but unable to remove the job at this time.

Action: Do not issue propagation administration commands for a job for which removal is pending. Wait for the job to be removed by the agent, or, issue REMOVE_JOB with the FORCE option to force the job to be removed.

ORA-32856: operation not supported for propagation job

Cause: An attempt was made to perform an operation that was not supported for a propagation job.

Action: Perform the operation using a propagation job procedure.

ORA-32857: propagation job exists for source *string* and destination *string*

Cause: An attempt was made to create a propagation job, subscriber, or schedule when a propagation job already existed for the specified source and destination pair.

Action: Specify a different source and destination pair, or remove the propagation job using that pair and retry the operation.

ORA-33000 to ORA-37999

ORA-33000: (AGOPEN00) AGGMAP *workspace object* cannot be accessed because it was compiled by a more recent version of *string*.

Cause: The AGGMAP was already compiled by a more recent version of the product than was being used to execute this command.

Action: Recompile the AGGMAP in the current version.

ORA-33002: (XSAGDNGL00) In AGGMAP *workspace object*, the FLOOR argument of *number* must be less than the CEILING argument of *number*.

Cause: The user specified a floor argument greater than the ceiling argument.

Action: Adjust the floor and ceiling arguments so that the floor is less than the ceiling. OBSOLETE, please remove this

ORA-33003: (XSAGDIMDROP) *workspace object*, to be transformed during data load, must be a base dimension and not otherwise referenced in the AGGMAP.

Cause: The user tried to specify a dimension in a dataflow-related clause in an aggmap which is already in another RELATION statement, DIMENSION statement, or possibly dimensioning the AGGMAP, or they specified a composite or conjoint dimension, or an object which is not a dimension

Action: Remove the conflicting reference or specify a valid object

ORA-33004: (XSAGDNGL01) *workspace object* is not a relationship array.

Cause: A RELATION clause in the AGGMAP named a workspace object that is not a relation.

Action: Name a valid self-relation in the RELATION statement.

ORA-33005: (XSAGDIMBREAK) Invalid breakout for dimension *workspace object*.

Cause: The user specified something that was not a valid dimension or relation on a BREAKOUTDIM line in an aggmap. This might be because the object was not a valid relation, was not over the specified dimension or was multidimensional

Action: Use a valid relation instead

ORA-33006: (XSAGDNGL02) The relation *workspace object* is not related to itself.

Cause: A relation was named in a RELATION clause of the AGGMAP that is not a self-relation.

Action: Name a valid self-relation in the RELATION statement.

ORA-33008: (XSAGDNGL03) The relation *workspace object* is not a relation over a base dimension of AGGMAP *workspace object*.

Cause: A relation was named in a RELATION clause of the AGGMAP that is not a relation for a base dimension of the AGGMAP.

Action: Name a valid self-relation in the RELATION statement, that is, one that has a dimension that dimensions the AGGMAP.

ORA-33009: (XSAGDNGLPREC) In AGGMAP *workspace object*, PRECOMPUTE may only be specified either for the entire AGGMAP or for individual RELATION statements.

Cause: PRECOMPUTE was specified both as a line in the AGGMAP and on at least one of the RELATION lines, or it was specified more than once as a line of the AGGMAP.

Action: Remove either the PRECOMPUTE line, or the PRECOMPUTE specification for all of the RELATION lines.

ORA-33010: (XSAGDNGL04) Relation *workspace object* is duplicated in the AGGMAP *workspace object*.

Cause: Two RELATION statements in the AGGMAP reference the same relation object.

Action: Remove the duplicate RELATION statement.

ORA-33012: (XSAGDNGL05) AGGMAP *workspace object* contains invalid syntax.

Cause: A line in the AGGMAP contains invalid syntax.

Action: Change the line to have valid syntax.

ORA-33014: (XSAGDNGL06) In AGGMAP *workspace object*, variable operator *workspace object* cannot be dimensioned by rollup dimension *workspace object*.

Cause: Operator variables cannot have the rollup dimension as one of their base dimensions.

Action: Modify the definition of the operator variable so that the current rollup dimension is not one of its bases.

ORA-33016: (XSAGDNGL07) In AGGMAP *workspace object*, *workspace object* is not a valid operator or variable name.

Cause: An invalid argument was supplied to the OPERATOR clause in the relation statement.

Action: Fix the OPERATOR clause so that it specifies either a valid variable name or a valid operator.

ORA-33018: (XSAGDNGL08) In AGGMAP *workspace object*, the data type of *workspace object* must be TEXT, not *string*.

Cause: An operator variable was supplied whose data type is not TEXT.

Action: Change the operator clause to reference a TEXT variable.

ORA-33022: (XSAGDNGL10) The measure dimension *workspace object* must be a TEXT or ID base dimension that does not dimension AGGMAP *workspace object*, but is in the same analytic workspace.

Cause: A MEASUREDIM was supplied in the AGGMAP that was not acceptable.

Action: Modify the MEASUREDIM clause to specify a valid dimension.

ORA-33024: (XSAGDNGL11) AGGMAP *workspace object* contains duplicate information.

Cause: The aggmap contains multiple instances of a clause that can only be specified once.

Action: Remove the extra clause.

ORA-33026: (XSAGDNGL12) In AGGMAP *workspace object*, *workspace object* is not a valid valueset.

Cause: A line in the AGGMAP contains an invalid element where a valid valueset is required.

Action: Change the line to have a valid valueset.

ORA-33028: (XSAGDNGL13) In AGGMAP *workspace object*, *workspace object* should be scalar, not a dimensioned valueset.

Cause: A line in the AGGMAP contains a dimensioned valueset where a scalar valueset is required.

Action: Change the line to have a scalar valueset.

ORA-33030: (XSAGDNGL14) In AGGMAP *workspace object*, you can have either a single independent PROTECT statement or PROTECT statements in your RELATION statements.

Cause: The AGGMAP either specified multiple PROTECT statements not on a RELATION line, or specified PROTECT statements both independently and on RELATION lines.

Action: Correct the AGGMAP to have valid syntax.

ORA-33032: (XSAGDNGL15) In AGGMAP *workspace object*, VALUESET *workspace object* must be in extra dimensions of the relation.

Cause: The RELATION phrase contains a VALUESET which is not over the extra dimension of the RELATION.

Action: Correct the RELATION phrase to contain a valueset over the extra dimension or not to contain any valueset.

ORA-33034: (XSAGDNGL16) In AGGMAP *workspace object*, VALUESET *workspace object* in PRECOMPUTE phrase must be in the self dimension of the relation.

Cause: The precompute phrase contains a valueset which is not over the self dimension of the relation.

Action: Correct the relation phrase to contain a valueset over the self dimension or not to contain any valueset.

ORA-33036: (XSAGDNGL17) ARGS option *workspace object* must be a TEXT variable.

Cause: An ARGS value had a non-text data type.

Action: Use a text variable for ARGS.

ORA-33038: (XSAGDNGL18) In AGGMAP *workspace object*, RELATION *workspace object* contains hierarchy dimensions that are also dimensions of the AGGMAP.

Cause: Hierarchy dimensions(extra dimensions) of a RELATION in the AGGMAP are base dimensions of the AGGMAP.

Action: Correct the RELATION not to have hierarchy dimensions(extra dimensions) which are also base dimensions of the AGGMAP.

ORA-33040: (XSAGDNGL19) In AGGMAP *workspace object*, VALUESETS *workspace object* and *workspace object* are both over the same hierarchy dimension.

Cause: Two or more different VALUESETs over the same hierarchy dimension are used in the AGGMAP.

Action: Use the same VALUESET for two RELATION phrases or use two different VALUESETs over two different hierarchy dimensions.

ORA-33042: (XSAGDNGL20) In AGGMAP *workspace object*, VALUESET *workspace object* must qualify all relations dimensioned by *workspace object*.

Cause: A VALUESET over a hierarchy dimension qualifies some RELATIONs but not all RELATIONs dimensioned by the same hierarchy dimension.

Action: Use the same VALUESET to qualify all the RELATIONs dimensioned by the same hierarchy dimension.

ORA-33044: (XSAGDNGL21) AGGREGATE operator *string* requires a WEIGHTBY clause, but the ARGS clause in AGGMAP *workspace object* did not specify one.

Cause: The user used an operator which needs weight values but not provided the weight values.

Action: Provide weight values using a WEIGHTBY clause.

ORA-33045: (XSAGDNGL51) The AGGREGATE operator *string* does not require a weight, but ARGS clause in AGGMAP *workspace object* specified *workspace object* as a weight.

Cause: The ARGS variable specified a weight even though one is not needed.

Action: Modify the ARGS variable so that it does not specify a weight for that operation.

ORA-33046: (XSAGDNGL22) In AGGMAP *workspace object*, you can specify only one SCREENBY clause.

Cause: The AGGMAP contained multiple SCREENBY clauses.

Action: Remove one of the SCREENBY clauses from the AGGMAP.

ORA-33048: (XSAGDNGL23) In AGGMAP *workspace object*, the relation *workspace object* and the relation *workspace object* are both over the same base dimension.

Cause: The AGGMAP contains incompatible RELATION statements.

Action: Remove one of the RELATION statements from the AGGMAP.

ORA-33050: (XSAGDNGL24) AGGMAP *workspace object* cannot be used to aggregate *workspace object*, because it is defined in a different analytic workspace.

Cause: The user attempted to aggregate a variable in another analytic workspace.

Action: Create an AGGMAP in the other analytic workspace to aggregate that variable.

ORA-33052: (XSAGDNGL25) AGGMAP *workspace object* is a dimensioned AGGMAP; it can only be used to aggregate like-dimensioned variables.

Cause: The user attempted to aggregate a variable with different dimensions than the AGGMAP. This is only possible with undimensioned AGGMAPs.

Action: Create a new undimensioned AGGMAP.

ORA-33058: (XSAGDNGL28) In AGGMAP *workspace object*, error code *string* is greater than the maximum error code of *number*.

Cause: The user specified an invalid ERRORMASK value.

Action: Remove the invalid value from the ERRORMASK list.

ORA-33060: (XSAGDNGL29) In AGGMAP *workspace object*, the value for the ERRORLOG MAX option must be greater than 0.

Cause: The user specified an ERRORLOG MAX of 0 or a negative number.

Action: Adjust the AGGMAP so that it uses a positive number.

ORA-33062: (XSAGDNGL30) In ALLOCMAP *workspace object*, WEIGHTBY option *workspace object* must be a numerical VARIABLE or FORMULA.

Cause: The WEIGHTBY clause requires numerical VARIABLE or FORMULA but the user used invalid objects.

Action: Correct the WEIGHTBY clause to use a valid numerical VARIABLE or FORMULA.

ORA-33064: (XSAGDNGL31) In AGGMAP *workspace object*, the hierarchy dimension QDR *workspace object* cannot refer to the related dimension of the relation.

Cause: The user specified an invalid hierarchy dimension qualified data reference.

Action: Adjust the AGGMAP so that it uses a valid dimension value qualified data reference.

ORA-33066: (XSAGDNGL32) In AGGMAP *workspace object*, the hierarchy dimension QDR *workspace object* must be a hierarchy dimension of the relation.

Cause: The user specified an invalid qualified data reference for the hierarchy dimension.

Action: Adjust the AGGMAP so that it uses a valid dimension value qualified data reference.

ORA-33068: (XSAGDNGL33) In AGGMAP *workspace object*, the hierarchy dimension QDR over dimension *workspace object* must specify a positive dimension offset.

Cause: The user specified an invalid qualified data reference for the hierarchy dimension.

Action: Adjust the AGGMAP so that it uses a valid dimension value qualified data reference.

ORA-33070: (XSAGDNGL34) In AGGMAP *workspace object*, all QDRs of dimension *workspace object* must map to the same dimension position.

Cause: The user specified two conflicting hierarchy dimension qualified data references.

Action: Adjust the AGGMAP so that it uses a consistent qualified data reference.

ORA-33072: (XSAGDNGL35) In AGGMAP *workspace object*, the hierarchy dimension QDR over dimension *workspace object* must be specified for every relation dimensioned by that hierarchy dimension.

Cause: Multiple dimensions share the same hierarchy dimension, but it is only qualified within a subset of the AGGMAP relations.

Action: Adjust the AGGMAP so that it uses consistent qualified data references.

ORA-33074: (XSAGDNGL36) In AGGMAP *workspace object*, the offset number is not a valid offset into dimension *workspace object*.

Cause: The hierarchy dimension offset is an invalid dimension position.

-
- Action:** Adjust the AGGMAP so that it uses valid qualified data references.
- ORA-33076: (XSAGDNGL37) In AGGMAP *workspace object*, the value 'number' is not a valid value of dimension *workspace object*.**
- Cause:** The hierarchy dimension offset is an invalid dimension position.
- Action:** Adjust the AGGMAP so that it uses valid qualified data references.
- ORA-33078: (XSAGDNGL39) In AGGMAP *workspace object*, the hierarchy dimension QDR *workspace object* must refer to a dimension.**
- Cause:** The user specified an invalid qualified data reference for the hierarchy dimension.
- Action:** Adjust the AGGMAP so that it uses a valid dimension value qualified data reference.
- ORA-33080: (XSAGDNGL40) In AGGMAP *workspace object*, you cannot reference dimension *workspace object* with both a RELATION statement and a DIMENSION statement.**
- Cause:** The user included both RELATION and DIMENSION statements in the AGGMAP referring to the same AGGMAP.
- Action:** Remove one of the conflicting clauses.
- ORA-33082: (XSAGDNGL41) In AGGMAP *workspace object*, the non-dimensioned valueset *workspace object* must have a parent QDR in its VALUESET statement over the VALUESET's base dimension.**
- Cause:** The VALUESET statement specified a scalar valueset but did not include a qualified data reference to specify the parent.
- Action:** Add a qualified data reference specifying the parent to the VALUESET statement.
- ORA-33084: (XSAGDNGL42) In AGGMAP *workspace object*, you cannot qualify the dimensioned valueset *workspace object*.**
- Cause:** The VALUESET line referred to a dimensioned valueset.
- Action:** Use a non-dimensioned valueset to limit the status of the dimensioned one.
- ORA-33086: (XSAGINIT01) AGGMAP *workspace object* cannot be dimensioned by a conjoint dimension.**
- Cause:** The specified AGGMAP was dimensioned by a conjoint dimension.
- Action:** Use the CHGDFN command to change the conjoint to a composite dimension.
- ORA-33092: (XSAGCOMP04) *number* is not the name of a MODEL in any attached analytic workspace.**
- Cause:** An invalid model name was attached to an AGGMAP.
- Action:** Remove the model from the AGGMAP or create a model with that name.
- ORA-33094: (XSAGGMAPLIST01) Your expression uses too much execution space. Eliminate recursion or reduce the levels of nesting.**
- Cause:** formulas likely refer to each other recursively or with a great deal of depth.
- Action:** eliminate recursion and flatten formula trees.

ORA-33098: (APABBR01) A value of '%V' is not valid for the *workspace object* option.

Cause: An inappropriate value was specified for the named option.

Action: Set a legal value for the option.

ORA-33100: (APABBR02) Value '*number*' is not valid for the *workspace object* option.

Cause: An inappropriate value was specified for the named option.

Action: Set a legal value for the option.

ORA-33141: (XSAWFREEZE1) The analytic workspace *string* is already frozen.

Cause: Attempting to freeze an AW when it is already frozen

Action: Thaw the AW before freezing it again.

ORA-33143: (XSAWFREEZE2) The analytic workspace *string* must be attached RW or RX.

Cause: The AW must be updatable to change the freeze state

Action: Reattach AW before freezing or thawing it again.

ORA-33145: (XSAWFREEZE3) Cannot rollback analytic workspace *string*; generations are in use.

Cause: One or more generations due to be destroyed as part of a rollback to freeze command are currently in use.

Action: Get sessions using those generations to detach the AW.

ORA-33147: (XSAWFREEZE4) The analytic workspace *string* is not frozen.

Cause: You are attempting to "rollback to freeze" an AW that is not frozen.

Action: Only execute this command on a frozen AW.

ORA-33213: (CINSERT06) The target position for MAINTAIN ADD or MAINTAIN MOVE cannot fall in the range of session-only values.

Cause: The user specified a BEFORE or AFTER clause specifying a position in the range of SESSION dimension values.

Action: Do not use a position clause, or specify a position before the first SESSION value.

ORA-33214: (CINSERT02) The *workspace object* dimension is too large.

Cause: The dimension has too many values.

Action: Deleted values can still take up space in the dimension and cause this error. Try removing the deleted values by exporting the dimension to EIF and reimporting it with the REPLACE DELETE option.

ORA-33215: (CINSERT07) You cannot add session-only values to the *workspace object* dimension.

Cause: The user tried to add a SESSION dimension value while a spreadsheet spreadsheet cursor was open.

Action: Try adding the SESSION value while the cursor is not active.

ORA-33217: (CINSERT20) Custom member values cannot be added to concat dimension *workspace object*, or to any of its bases, because it is not defined as UNIQUE.

Cause: Only UNIQUE concat dimensions can have custom member values.

Action: Use the CHGDFN command to change the concat dimension to UNIQUE and retry.

ORA-33218: (CINSERT04) %K is not a valid value for the *workspace object* dimension. Values for this dimension can have at most *number* significant digits after rounding to *number* decimal places.

Cause: The user attempted to insert a value that had too many digits into a NUMBER dimension. For instance, the user might have tried to insert the value 99999 (5 digits) into a dimension with data type NUMBER(4).

Action: Use a smaller number for the dimension value, or define a new dimension with a larger precision and replace the old dimension with the new one.

ORA-33219: (CINSERT05) %K cannot be added to *workspace object* because it is already a value of the dependent UNIQUE concat dimension *workspace object*, from leaf dimension *workspace object*.

Cause: A value cannot be added to a dimension if it conflicts with an existing value in a unique concat dimension containing this dimension.

Action: The concat(s) causing the conflict could be CHGDFNed to NOT UNIQUE, or either of the duplicate values could be renamed to make them UNIQUE.

ORA-33223: (CMOVE03) You cannot move a session-only dimension value.

Cause: The user named a SESSION dimension value in the MAINTAIN MOVE command.

Action: Do not try to MAINTAIN MOVE session-only dimension values.

ORA-33247: (CRENAME03) %K is already a value of the dependent UNIQUE concat dimension *workspace object*, from leaf dimension *workspace object*.

Cause: A value cannot be renamed in a dimension if the new value conflicts with an existing value in a unique concat dimension containing this dimension.

Action: The concat(s) causing the conflict could be CHGDFNed to NOT UNIQUE, or either of the duplicate values could be changed to make them UNIQUE.

ORA-33260: (DIMSHOW01) Partition *number* does not exist.

Cause: The DIMSHOW command specified a nonexistent partition.

Action: Specify the name of an existing partition, or remove the PARTITION qualification from the DIMSHOW command.

ORA-33261: (DIMSHOW02) A partition name may be specified only for a partitioned variable.

Cause: A PARTITION qualification was provided for an object other than a partitioned variable.

Action: Remove the PARTITION qualification.

ORA-33262: (DBERR01) Analytic workspace *string* does not exist.

Cause: The analytic workspace requested does not seem to be in the current database

Action: Check that you are in the correct schema and have access to the requested AW.

ORA-33263: Could not create analytic workspace *string*

Cause: A serious error was encountered while trying to set up the tables for the named analytic workspace. Possibilities include a tablespace that can't be written

to, corrupted metadata about which AWs exist, bogus tables with names the code expects to be able to use, or the remains of a partially removed AW.

Action: There should be another error on the error stack. Consult it to determine what is causing the problem and remove that table.

ORA-33265: (DBERRBSZ) Analytic workspace *string* cannot be opened. Tablespace blocksize *number* does not match database cache size *number*.

Cause: The blocksize of the containing tablespace didn't match database cache size.

Action: Change either size to make them consistent, or set `olap_page_pool_size` to 0 to allow automatic OLAP pool management when compatibility is greater than 10.2.

ORA-33267: (DBERRRLS) Analytic workspace *string* cannot be accessed because it has fine-grained access control applied to it

Cause: An attempt was made to access the specified analytic workspace's LOB table. The OLAP option detected the table had fine-grained security applied to it. The OLAP option requires full access to this table to operate correctly.

Action: Remove the fine-grained access control.

ORA-33268: (DBERRTHW) Analytic workspace *string* cannot be attached with the THAW option because it was frozen with the NOTHAW option

Cause: An attempt to attach the AW using the thaw option was made; the AW was frozen using the NOTHAW option.

Action: Either attempt the command again without the THAW option.

ORA-33269: while operating on '*string*'

Cause: Error is raised to inform user what object was being worked on when an error occurred during the creation of an AW. It should always be signaled with 33263

Action: See error#33263

ORA-33270: (DBERR05) Analytic workspace *string* already exists.

Cause: The AW CREATE command was passed the name of an analytic workspace that already exists

Action: Specify a different name.

ORA-33271: simulated paging error

Cause: This is an internal error that should never be seen

Action: Contact Oracle technical support

ORA-33273: (XSCHKRLS01) Analytic workspace *string* has open cursors and cannot be detached.

Cause: A session attempted to detach an analytic workspace while there are cursors open against it.

Action: Close the open cursor before attempting to close the analytic workspace.

ORA-33274: (DBERR07) Timed out while trying to lock analytic workspace *string* for *string*.

Cause: A lock operation that was supposed to happen very quickly was taking too long. It can be due to another session being stopped while holding that lock, another session crashing while holding that lock, or an internal error.

Action: If another session is stopped, resume that session to let it release the lock. If another session has crashed, wait for a few minutes while PMON or SMON process is recovering that lock. Contact Oracle OLAP Support if none of the situations above apply.

ORA-33275: Autonomous transaction query of an UPDATED analytic workspace is not supported

Cause: The user made attempt to reference an analytic workspace that has uncommitted updates within an autonomous query.

Action: Either COMMIT or ROLLBACK your uncommitted changes, or don't use an autonomous transaction.

ORA-33278: (DBERR09) Analytic workspace *string* cannot be attached in RW or EXCLUSIVE mode until the changes made and updated in MULTI mode are committed or rolled back.

Cause: There are still changes to this analytic workspace that were updated and not committed when the workspace was attached in MULTI mode.

Action: Either try attaching the workspace in RO or MULTI mode or commit or roll back the transaction before trying to attach the workspace in RW or EXCLUSIVE mode.

ORA-33280: (DBERR10) Analytic workspace *string* cannot be attached in MULTI mode until the changes made and updated in RW or EXCLUSIVE mode are committed or rolled back.

Cause: There are still changes to this analytic workspace that were updated and not committed when the workspace was attached in RW or EXCLUSIVE mode.

Action: Either try attaching the workspace in RO, RW, or EXCLUSIVE mode or commit or roll back the transaction before trying to attach the workspace in MULTI mode.

ORA-33282: (DBERR11) Cannot wait for analytic workspace *string* to become available since doing so would cause a deadlock.

Cause: Trying to wait for the workspace to become available caused a deadlock.

Action: Release an analytic workspace that some other user might be waiting for before proceeding to attach this analytic workspace in this mode.

ORA-33284: (DBERR12) Analytic workspace *string* cannot be opened in MULTI mode before converting it by the latest version of *string*.

Cause: The AW is stored in 9i format.

Action: Convert the AW to a later format

ORA-33288: (DBERR15) Another user has incompatible access to analytic workspace *string*, and the wait timeout has expired.

Cause: An attempt to access an analytic workspace conflicted with another user's access, and the timeout specified has elapsed.

Action: Wait until the conflicting user is done.

ORA-33290: (DBERR17) Analytic workspace *string* cannot be attached in the mode you requested because another user has it attached in an incompatible mode.

Cause: An attempt to access an analytic workspace conflicted with another user's access, and no timeout was specified

Action: Wait until the conflicting user is done.

ORA-33291: (DBERRSYNC) Analytic workspace *string* cannot be attached RW until a RESYNC command has brought it up to the current generation.

Cause: Another session has updated the analytic workspace since it was attached in the current session.

Action: Execute a RESYNC AW command to bring the analytic workspace up to the most recent version.

ORA-33292: (DBERR18) Insufficient permissions to access analytic workspace *string* using the specified access mode.

Cause: You do not have sufficient permissions to access this analytic workspace in the desired mode.

Action: Ask the owner of the schema or OLAP DBA to grant you sufficient permissions to access the {SCHEMA}.AW\${AWNAME} table (for example, SCOTT.AW\$FOO table).

ORA-33293: Please use the OLAP command AW TRUNCATE to truncate this table.

Cause: This table is part of an analytic workspace, and the OLAP option needs to control the truncation of the table.

Action: use the OLAP option to truncate the table.

ORA-33295: (DBERR20) An attached analytic workspace is blocking this command.

Cause: A table cannot be dropped because an analytic workspace based on this table is being attached.

Action: Look up the session in question in GV\$AW_OLAP and kill it.

ORA-33296: (DBERR21) Analytic workspace *string* can only be attached RO while tablespace *string* is READONLY.

Cause: The underlying tablespace of the analytic workspace is in READONLY status.

Action: Attach the analytic workspace in RO mode or alter the tablespace.

ORA-33297: (DBERR22) Analytic workspace *string* cannot be opened because it was last modified by an incompatible version of *string*.

Cause: The user attempted to attach an old OLAP Services analytic workspace that cannot be converted by this version of OLAP Services.

Action: Either create a new analytic workspace or try using a version of OLAP Services compatible with the one that created this analytic workspace.

ORA-33298: (AWUPG01) Analytic workspace *string* is already in the newest format allowed by the current compatibility setting

Cause: User ran the DBMS_AW.CONVERT procedure on an analytic workspace that was created in or previously upgraded to the current compatibility mode.

Action: If upgrading the analytic workspace is necessary, upgrade the database instance and then re-run DBMS_AW.CONVERT. If the new features offered by upgrading the analytic workspace are not required, then no action is needed.

ORA-33299: Please use DBMS_AW.AW_RENAME to rename this table.

Cause: This table is part of an analytic workspace, and the OLAP option needs to control the rename of the table.

Action: use the OLAP option to rename the table.

ORA-33302: (DBVALID01) SEVERE ERROR: Record *number* multiply used.

Cause: The AW VALIDATE command has detected an error in the structure of the analytic workspace. This error will result in the corruption of one or more objects

Action: Export what you can of the analytic workspace.

ORA-33304: (DBVALID02) Note: Record *number* was allocated but not used. This can result in wasted space.

Cause: This is a benign message. The AW VALIDATE command found an analytic workspace has some inaccessible space.

Action: Either nothing, or export and recreate the analytic workspace

ORA-33305: (DBVALID06) Note: Record *number* was allocated but not used. This can result in wasted space. (PS *number*)

Cause: This is a benign message. The AW VALIDATE command found an analytic workspace has some inaccessible space.

Action: Either nothing, or export and recreate the analytic workspace

ORA-33306: (DBVALID03) The AW VALIDATE command cannot be used with read-only analytic workspace *string*.

Cause: The AW VALIDATE command does not support read-only access.

Action: Attach the analytic workspace read/write and try again.

ORA-33308: (DBVALID04) SEVERE ERROR: Record *number* used but not allocated

Cause: The AW VALIDATE command has detected a problem that will result in corruption of the analytic workspace. There is no corruption yet.

Action: Export and recreate the analytic workspace.

ORA-33309: (DBVALID05) SEVERE ERROR: Record *number* used but not allocated (PS *number*)

Cause: The AW VALIDATE command has detected a problem that will result in corruption of the analytic workspace. There is no corruption yet.

Action: Export and recreate the analytic workspace.

ORA-33313: (DELDENT05) *workspace object* cannot be deleted because it is the target of an external partition of a partitioned variable.

Cause: User attempted to delete a variable, but some partitioned variable was defined to use that variable as the target of one of its external partitions.

Action: DELETE the partitioned variable or CHGDFN DROP PARTITION the the external partition from the partitioned variable, then delete the target variable.

ORA-33315: (XSDELDENTANON) You cannot delete *workspace object* while looping over unnamed composite *workspace object*.

Cause: While looping over the named anonymous composite, an attempt was made to delete an object which is dimensioned by it.

Action: Delete the object outside of a loop over the dimension.

ORA-33332: (DSSEXIST01) Use the AW command to establish a current analytic workspace. Then start your current activity again.

Cause: There is no currently active analytic workspace. The command that generated the error requires an active analytic workspace to operate on.

Action: Execute an AW ATTACH or AW CREATE command to establish an active workspace.

ORA-33334: (DSSEXIST04) Analytic workspace *string* is not attached.

Cause: The specified analytic workspace is currently not attached to the session, or the name is misspelled.

Action: Attach the analytic workspace with the AW ATTACH command, or correct the spelling of the name .

ORA-33336: (DSSEXIST04A) Analytic workspace *string* is not attached.

Cause: The specified analytic workspace is currently not attached to the session, or the name is misspelled.

Action: Attach the analytic workspace with the AW ATTACH command, or correct the spelling of the name .

ORA-33338: (DSSEXIST05) You cannot specify the EXPTEMP analytic workspace.

Cause: The command requires a non-temporary analytic workspace to operate on.

Action: Specify an analytic workspace other than EXPTEMP.

ORA-33339: You cannot detach analytic workspace *string*. It is in use by an API branch.

Cause: The OLAP API is in a branch, and you are not allowed to detach the AW while the branch is active.

Action: End the branch before detaching the AW.

ORA-33413: (EIFMAKEF01) You cannot export compressed composite *workspace object* because one of its bases has limited status or a PERMIT READ restriction.

Cause: Export of a compressed composite to an EIF file or lob failed because one or more of the bases had some values that were not in the current status. This can be caused either by a LIMIT command or a PERMIT READ restriction on the dimension.

Action: Either set the base dimensions' statuses to ALL and remove their PERMIT READ programs, or export using the NOAGGR keyword.

ORA-33425: (EIFMAKEF15) CAUTION: Exporting NTEXT objects using *string* for the EIF file character set can cause loss of data. To preserve all NTEXT data, export using the UTF8 character set for the EIF file.

Cause: The user exported an object with data type NTEXT, but the EIF file that will result from the EXPORT command is not written in Unicode. Because no non-Unicode file can represent all possible Unicode data, it is possible that some data will be lost when converting from the Unicode NTEXT object to the EIF file. The EIF file will be written in the character set indicated by the "nls_charset" argument of the EXPORT command, or, if no such argument is present, in the database character set.

Action: If the user is certain that the contents of the NTEXT object can be represented in the specified character set, then no action is necessary. Otherwise, the user can add "nls_charset 'UTF8'" to the EXPORT command string. This will result in the EIF file being written in UTF8 Unicode, which can represent all the data contained in NTEXT objects.

ORA-33427: (EIFMAKEF16) CAUTION: NTEXT object *workspace object* will be exported with type TEXT.

Cause: User attempted to export an object whose data type is NTEXT, but the EIFVERSION option indicates a version of Express / Oracle OLAP that does not

support the NTEXT data type. The object will be exported as a TEXT object instead.

Action: No action needed.

ORA-33429: (EIFMAKEF17) CAUTION: NTEXT expression will be exported with type TEXT.

Cause: User attempted to export an expression whose data type is NTEXT, but but the EIFVERSION option indicates a version of Express / Oracle OLAP that does not support the NTEXT data type. The expression will be exported as a TEXT object instead.

Action: No action needed.

ORA-33443: (ESDREAD14) Discarding compiled code for *workspace object* because analytic workspace *string* is not attached.

Cause: A program used an analytic workspace name in a qualified object name. The named analytic workspace is not attached at program run time.

Action: No action necessary. The program will be automatically recompiled. It is likely that the recompile will fail with an appropriate exception code, in which case the signaled condition should be corrected and the program re-run.

ORA-33445: (ESDREAD15) Discarding compiled code for *workspace object* because *workspace object* and *workspace object*, which were not partition-dependent when the code was compiled, are now partition-dependent.

Cause: Two variables are "partition-dependent" if they share any external partition target variables, or if one is the target of an external partition of the other. If object names referred to non-partition-dependent variables at compile time but refer to partition-dependent variables in the run-time context, the OLAP DML program, formula, or model will be automatically recompiled.

Action: None needed.

ORA-33447: (ESDREAD16) Discarding compiled code for *workspace object* because *workspace object* and *workspace object*, which were partition-dependent when the code was compiled, are now not partition-dependent.

Cause: Two variables are "partition-dependent" if they share any external partition target variables, or if one is the target of an external partition of the other. If object names referred to partition-dependent variables at compile time but refer to non-partition-dependent variables in the run-time context, the OLAP DML program, formula, or model will be automatically recompiled.

Action: None needed.

ORA-33448: (ESDREAD04) Discarding compiled code for *workspace object* because *number* now has *string* data, whereas it had *string* data when the code was compiled.

Cause: The datatype of the specified variable has changed.

Action: None needed.

ORA-33449: (ESDREAD17) Discarding compiled code for *workspace object* because the partition method or partition dimension of *number* has changed since it was compiled.

Cause: The partitioning method (LIST, RANGE, or CONCAT) or the partition dimension of the partition template is sufficiently different from what it was when the code was compiled that the code must be recompiled.

Action: None needed.

ORA-33450: (ESDREAD05) Discarding compiled code for *workspace object* because *number* now has more or fewer dimensions than it had when the code was compiled.

Cause: The dimensionality of the specified object has changed.

Action: None needed.

ORA-33452: (ESDREAD06) Discarding compiled code for *workspace object* because *number* is now dimensioned by *workspace object*. It was dimensioned by *workspace object* when the code was compiled.

Cause: The dimensionality of the specified object has changed.

Action: None needed.

ORA-33454: (ESDREAD07) Discarding compiled code for *workspace object* because *number* is now *string workspace object*, whereas it was *string workspace object* when the code was compiled.

Cause: The specified object has changed.

Action: None needed.

ORA-33456: (ESDREAD08) Discarding compiled code for *workspace object* because *number* is a(n) *string*, which *string* did not expect to find in a compiled program.

Cause: The type of the specified object has changed.

Action: None needed.

ORA-33458: (ESDREAD09) Discarding compiled code for *workspace object* because *number* is now type *string*, whereas it was type *string* when the code was compiled.

Cause: The type of the specified object has changed.

Action: None needed.

ORA-33460: (ESDREAD10) Discarding compiled code for *workspace object* because object *workspace object* is not in analytic workspace *string*.

Cause: The specified object is not in the same analytic workspace it was in when the compiled object was compiled.

Action: None needed.

ORA-33462: (ESDREAD10A) Discarding compiled code for *workspace object* because object *number* is not in analytic workspace *string*.

Cause: The specified object was not in the same analytic workspace it was when the compiled object was compiled

Action: None needed.

ORA-33468: (ESDREAD13) Discarding compiled code for *workspace object* because *number* is no longer a surrogate of dimension *workspace object*.

Cause: When the compiled code was saved, the specified object was a surrogate of a certain dimension. Now the specified object is a surrogate of a different dimension.

Action: No action needed; program automatically recompiles.

ORA-33557: (MAINTCHK01) You cannot *string* values of dimension *workspace object* during a loop over it.

Cause: User tried to insert or delete a value of the specified dimension while some loop over that dimension was active. The loop could be an explicit FOR or

ACROSS loop, or a natural expression evaluation or OLAP_TABLE loop. Also, it could be a loop over the dimension itself or over a derived dimension (like a composite or partition template) or dimension alias that includes it. The insert or delete could be explicitly caused by the MAINTAIN command. It is also possible that the user attempted to assign a value to a variable or partition dimensioned by a composite during a loop over that composite using a qualified data reference (QDR), and that the exception was generated by the engine's attempt to insert a new position in the composite to hold the new value.

Action: Move the dimension maintenance or QDR-based variable assignment outside the dimension loop.

ORA-33558: (LOCKCHECK01) The status or contents of the *workspace object* dimension cannot be changed while the LOCK_LANGUAGE_DIMS option is set to *value*.

Cause: A LIMIT or MAINTAIN was attempted on the named language dimension while the boolean option LOCK_LANGUAGE_DIMS was set to YES.

Action: SET LOCK_LANGUAGE_DIMS to NO and retry the MAINTAIN or LIMIT.

ORA-33625: (FRASSIGN02) You cannot use the APPEND keyword with concat dimension *workspace object*.

Cause: User used the APPEND keyword on a CONCAT target in a FILEREAD, SQL FETCH or SQL SELECT command.

Action: APPENDING a value to one of the CONCATs leaves automatically appends to the CONCAT.

ORA-33733: (xsILPMLTPreOp01) The analytic workspace *string* cannot be REVERTed or RESYNCD while the *string* program is active.

Cause: The AW REVERT and AW RESYNC commands cannot be used on an analytic workspace that contains a running program.

Action: Execute the command without running the specified program.

ORA-33883: (MAKEDCL36) You cannot use the *string* attribute when you define an EXTERNAL partition with an existing target.

Cause: User gave the TEMPORARY keyword in the definition of an external partition whose target variable was previously defined.

Action: Any storage characteristics of the external partition are determined by the target variable. These attributes should be set when the target is defined, not when the external partition is defined.

ORA-33911: (MAKEDCL29) You cannot define a *string* in analytic workspace *string* because it has not been upgraded to version *string*.

Cause: User attempted to define an object that requires a certain compatibility setting in an AW that has not been upgraded to that compatibility level.

Action: Make sure that the database is running in the appropriate compatibility mode, and upgrade the AW.

ORA-33918: (MAKEDCL33) You cannot define a surrogate of dimension *workspace object* because it is a *string*.

Cause: Not all kinds of dimensions can have surrogates. The user attempted to define a surrogate of a prohibited kind of dimension.

Action: Do not attempt to define a surrogate on this dimension.

ORA-33920: (MAKEDCL34) The *string* SURROGATE must have one of the following data types: ID, NTEXT, TEXT, NUMBER, DATETIME, TIMESTAMP, or INTEGER.

Cause: The user attempted to define a surrogate without specifying a valid data type.

Action: Specify the data type (ID, NTEXT, TEXT, NUMBER, or INTEGER) in the definition of the surrogate.

ORA-33922: (MAKEDCL35) You cannot define a surrogate of dimension *workspace object* because it is a time dimension.

Cause: The user attempted to define a surrogate on a dimension that has type DAY, WEEK, MONTH, or YEAR.

Action: Do not attempt to define a surrogate on this dimension.

ORA-33998: (MODCOMP12) You cannot use both *workspace object* and *workspace object* as model dimensions, because *workspace object* is a surrogate of *workspace object*.

Cause: The user attempted to include both a dimension and its surrogate in the DIMENSION statement of a model.

Action: Use either the dimension or the surrogate in the DIMENSION statement of the model, but not both.

ORA-34000: (MODCOMP13) You cannot use both *workspace object* and *workspace object* as model dimensions, because they are both surrogates of dimension *workspace object*.

Cause: The user attempted to include two dimension surrogates of the same dimension in the DIMENSION statement of a model.

Action: Use either of the two surrogates in the DIMENSION statement of the model, but not both.

ORA-34001: (MODCOMP14) Concat leaf dimension *workspace object* already is used in a DIMENSION statement, either explicitly or as a leaf of another concat dimension.

Cause: Either two concat dimensions which share a common leaf dimension, or a concat and one of its leaves where both specified in the DIMENSION statement(s).

Action: Do not specify overlapping concat dimensions, or any leaves of specified concat dimensions.

ORA-34019: (MSCGADD03) *workspace object* is not a LIST PARTITION TEMPLATE.

Cause: User attempted to MAINTAIN ADD or DELETE a list value from a RANGE or CONCAT partition template.

Action: Partitioning in a RANGE or CONCAT partition template cannot be changed using the MAINTAIN command.

ORA-34021: (MSCGADD04) You must specify a partition when maintaining PARTITION TEMPLATE *workspace object*.

Cause: User attempted to MAINTAIN ADD or DELETE a list value from a LIST partition template, but didn't specify which partition to add to or delete from.

Action: Specify the partition: maintain (template) add to partition (partitionname) (values) or maintain (template) delete from partition (partitionname) (values)

ORA-34059: (MSEXECUT12) You cannot delete non session-only dimension values from unique concat dimension *workspace object*.

Cause: The user tried to apply MAINTAIN DELETE to a non-SESSION value.

Action: Only use MAINTAIN DELETE to remove SESSION values from a concat dimension.

ORA-34061: (MSEXECUT11) Session-only values cannot be added to non-unique concat dimension *workspace object*, or any of its base dimensions.

Cause: Only UNIQUE concat dimensions can have custom member values.

Action: Use the CHGDFN command to change the concat dimension to UNIQUE and retry.

ORA-34141: (MXCGPUT00) You cannot use the ASSIGN keyword with DIMENSION *workspace object*.

Cause: User used the ASSIGN keyword on a DIMENSION target in a FILEREAD, SQL FETCH or SQL SELECT command.

Action: To create a new dimension value in a FILEREAD, SQL FETCH or SQL SELECT command, use the APPEND keyword.

ORA-34143: (MXCGPUT02) You cannot assign values to SURROGATE *workspace object* because it is type INTEGER.

Cause: The user attempted to assign a value to a dimension surrogate whose data type is INTEGER. INTEGER surrogates, like INTEGER dimensions, cannot have values assigned to them. They can only be referenced by position.

Action: Do not attempt to assign values to an INTEGER surrogate. Values will automatically appear and disappear from the INTEGER surrogate as positions are added to or removed from the underlying dimension.

ORA-34145: (MXCGPUT03) You cannot use the APPEND keyword with SURROGATE *workspace object*.

Cause: User used the APPEND keyword on a SURROGATE target in a FILEREAD, SQL FETCH or SQL SELECT command.

Action: To assign a value to a SURROGATE in a FILEREAD, SQL FETCH or SQL SELECT command, use the ASSIGN keyword.

ORA-34164: (MXCGVAR01) A dimension used to define a local *string variable* cannot be located. Execution cannot continue.

Cause: A local relation or valueset has become invalid, most probably because an object used by the currently executing program has been deleted.

Action: This is an internal error that should be referred to Oracle technical support.

ORA-34177: (MXCHGDCL19) *number* cannot be deleted because one or more partitioned variables instantiate it.

Cause: User attempted to CHGDFN DELETE a partition template, but some partitioned variable had data in the partition specified for deletion.

Action: Drop the partitions that are causing the problem, then retry.

ORA-34179: (MXCHGDCL20) *workspace object* is not a PARTITION TEMPLATE.

Cause: User specified an object that is not a partition template where a partition template is required.

Action: Supply the name of a partition template.

ORA-34181: (MXCHGDCL21) *workspace object* is not a partitioned VARIABLE.

Cause: User specified an object that is not a partitioned variable in a place where a partitioned variable is required.

Action: Supply the name of a partitioned variable.

ORA-34183: (MXCHGDCL22) Partition *number* already exists.

Cause: User attempted to ADD a partition that already existed to a partitioned variable.

Action: None required - the partition already exists.

ORA-34210: (MXCHGDCL18) You cannot change *workspace object* to a dimension composite because one or more surrogates has been defined for it.

Cause: The user attempted to redefine a conjoint dimension as a composite, but the conjoint has one or more surrogates defined. A dimension that has surrogates cannot be redefined as a composite.

Action: Either delete all surrogates for the dimension, or do not attempt to redefine the dimension as a composite.

ORA-34243: (MXDCL11) You can only use the *string* keyword when defining a COMPOSITE.

Cause: User supplied the COMPRESSED keyword when defining an object that was not a COMPOSITE.

Action: If the intent is to create a compressed composite, make sure that the object type is COMPOSITE. Otherwise, remove the COMPRESSED keyword from the command string and rerun.

ORA-34260: (MXDCL25) You cannot use *number* to dimension a *string* because it is, or involves, a dimension composite. Use the composite's bases instead.

Cause: The user attempted to use a COMPOSITE in the dimension list of an object that does not allow for such dimensions.

Action: Use the base dimensions of the COMPOSITE in the dimension list.

ORA-34276: (MXDCL33) (Precision, Scale) arguments can only be used with a NUMBER variable or dimension.

Cause: The user attempted to use NUMBER(Precision) or NUMBER(Precision, Scale) as the datatype in a definition for some object other than a DIMENSION or VARIABLE, such as a FORMULA or PROGRAM. This error can also be produced in cases where a NUMBER data type is not allowed at all.

Action: Use the NUMBER type without specifying a precision or scale. If a NUMBER data type is not allowed at all, this fix will only change the exception message to something more specific.

ORA-34279: (MXDCL37) CONCAT can only be used when defining a DIMENSION.

Cause: The CONCAT keyword was used incorrectly.

Action: Retry the command without the CONCAT keyword.

ORA-34286: (MXDCL53) *workspace object* cannot be used in this context because it is a *string*.

Cause: User specified a dimension composite, conjoint, or partition template in a place where that kind of dimension is not allowed. For instance, a relation cannot be dimensioned by a composite, and only a variable can be dimensioned by a partition template.

Action: Usually, the offending dimension can be replaced with its bases. For instance, a relation cannot be dimensioned by a composite of PRODUCT and GEOG, but it can be dimensioned by both PRODUCT and GEOG instead.

ORA-34296: (MXDCL36) A NUMBER dimension must be defined with a fixed precision and scale, using the form NUMBER(precision) or NUMBER(precision, scale).

Cause: The user attempted to define a NUMBER dimension without specifying a precision. The proper format for declaring a number dimension is NUMBER(Precision) or NUMBER(Precision, Scale). NUMBER with no precision or scale is not allowed.

Action: Use NUMBER(Precision) or NUMBER(Precision, Scale) to specify the datatype of a NUMBER dimension.

ORA-34342: (MXDSS01) IMPORTANT: Analytic workspace *string* is read-only. Therefore, you will not be able to use the UPDATE command to save changes to it.

Cause: This is an informational message that reminds you that you may not save changes to the specified analytic workspace.

Action: None, unless it was desired to save changes to the analytic workspace. In that case, detach and reattach the analytic workspace read-write.

ORA-34344: (MXDSS03) Analytic workspace *string* is not attached.

Cause: The command attempted to operate on an analytic workspace that is not currently attached, or the name of the analytic workspace is misspelled.

Action: Attach the analytic workspace or correct the spelling.

ORA-34346: (MXDSS04) The *string* analytic workspace cannot be detached.

Cause: The specified analytic workspace is an internal workspace and may not be detached by the user.

Action: Specify a different analytic workspace to detach.

ORA-34348: (MXDSS05) *string* is used only for internal purposes and cannot be accessed as an analytic workspace.

Cause: The command attempted to operate on an internal analytic workspace used by the system.

Action: Specify a different analytic workspace.

ORA-34350: (MXDSS06) *string* is an open analytic workspace.

Cause: The specified analytic workspace is currently in use.

Action: The desired action requires an analytic workspace that is not currently in use.

ORA-34357: (MXDSS10) *string* is not an alias of analytic workspace *string*.

Cause: User attempted to use AW UNALIAS on a non-existent alias.

Action: Make sure that the command specified the correct analytic workspace and alias. The alias must have been assigned (using AW ALIAS) during the current session and must not have been removed by a previous AW UNALIAS or AW DETACH command.

ORA-34358: (MXDSS14) *number* other users reading

Cause: Used for AW LIST output formatting when %d > 1

Action: None

ORA-34359: (MXDSS11) *string* appears twice in the alias list.

Cause: User included the same name twice in the alias list of an AW ALIAS or AW UNALIAS command.

Action: Remove the duplicate name and try again.

ORA-34360: (MXDSS15) *number* other users writing

Cause: Used for AW LIST output formatting when %d > 1

Action: None

ORA-34361: (MXDSS12) *number* other user reading

Cause: Used for AW LIST output formatting when %d == 1

Action: None

ORA-34363: (MXDSS13) *number* other user writing

Cause: Used for AW LIST output formatting when %d == 1

Action: None

ORA-34374: (MXDSS27) *string* is not a valid analytic workspace name. Analytic workspace names must be 26 characters or less, can contain only letters, digits, and underscores, and cannot begin with a digit.

Cause: a specified AW or ALIAS name was too long or contained invalid characters.

Action: verify that AW name meets the specified criteria.

ORA-34376: (MXDSS28) *string* is not a valid analytic workspace name. Analytic workspace names must be 26 characters or less, can contain only letters, digits, underscores, and dollar signs, and cannot begin with a digit or dollar sign.

Cause: a specified AW or ALIAS name was too long or contained invalid characters.

Action: verify that AW name meets the specified criteria.

ORA-34481: (MXMAINT07) You cannot *string* values of PARTITION TEMPLATE workspace object.

Cause: User attempted to use the MAINTAIN command with some keyword other than ADD or DELETE on a partition template.

Action: It is not possible to MAINTAIN a partition template, except to add or delete values of a partition list.

ORA-34487: (MXMAINT08) You cannot *string* values of non-unique concat dimension workspace object.

Cause: The specified MAINTAIN operation can only be applied to UNIQUE concats.

Action: Use the CHGDFN command to change the concat dimension to UNIQUE and retry.

ORA-34489: (MXMAINT06) You cannot maintain workspace object because it is a SURROGATE.

Cause: The user attempted to use the MAINTAIN command on a dimension surrogate. The MAINTAIN command can only be used with real dimensions, not surrogates.

Action: Use the MAINTAIN command to modify the underlying dimension of the surrogate instead.

ORA-34514: (MXOPERR) You cannot *string string* data in the expression that begins with '*string*'.

Cause: The user attempted an invalid operation.

Action: None

ORA-34647: (MXSQL18) The text expression in a CURSOR FOR TEXT declaration cannot be NA.

Cause: The text for the SELECT expression in a CURSOR FOR TEXT declaration was evaluated at compile time as NA.

Action: Specify a text expression that is not NA at the time the program containing the SQL DECLARE is compiled.

ORA-34656: (MXSQL24) Additional WHERE clause conditions with CURRENT OF <cursor name> syntax

Cause: A SQL UPDATE or DELETE statement tried to use the CURRENT OF <cursor name> syntax with a WHERE clause containing multiple conditions.

Action: When using the CURRENT OF <cursor name> syntax make sure it is the only condition in the WHERE clause.

ORA-34658: (MXSQL25) The words CURSOR FOR TEXT must be followed by a compile-time text expression specifying a SELECT command.

Cause: A SQL DECLARE <csr> CURSOR FOR TEXT command lacked a text expression, or the expression was otherwise invalid.

Action: Specify a single text expression that can be evaluated at compile time to yield a SELECT statement

ORA-34719: (NLSCHARSET03) Character data loss in NTEXT/TEXT conversion

Cause: When character set conversion happens between TEXT and NTEXT either implicitly or explicitly, some characters are lost due to no mapping characters in the destination character set.

Action: Make sure all the characters can be mapped to destination character set or set NLS_NCHAR_CONV_EXCP to be FALSE. Note: This message is the OLAP equivalent of ORA-12713.

ORA-34722: (NLSCHARSET05) CAUTION: Character data loss in character set conversion from *string* to *string*

Cause: Some operation required a string to be converted into a different character set, but the string contained characters that didn't exist in the new character set.

Action: Choose different character sets.

ORA-34726: (NLSCHARSET06) CAUTION: String truncated during character set conversion from *string* to *string*

Cause: Some operation required a string to be converted into a different character set. The string required more bytes in the new encoding, and exceeded some byte limit on its allowable length, causing some characters to be removed from the end of the string.

Action: If the byte limit is due to using the ID datatype, consider using the CHAR datatype instead. If the byte limit is due to the limit of 4000 bytes per line of CHAR data, break the long line up into multiple lines.

ORA-34731: (NLSSORT01) '*number*' is not a valid NLS_SORT specification.

Cause: An unrecognized NLS_SORT value was specified in the SORT command or the SORT, SORTLINES or UNIQUELINES function.

Action: Specify a supported NLS_SORT value.

ORA-34738: (NOUPDATE) A severe problem has been detected. Analytic workspace operations have been disabled.

Cause: A previous fatal error has marked the session so that it cannot perform any UPDATES

Action: Start a new session

ORA-34761: (NXHANDLEALLO) A decimal overflow occurred during an ALLOCATE operation. The results are not reliable.

Cause: While performing an ALLOCATE, a decimal overflow occurred

Action: Correct the data or use a higher precision datatype

ORA-34796: (OCI08) SQL host variable *number* cannot be bound.

Cause: The data type of the host variable is not supported.

Action: Specify only variables of supported types as host variable names.

ORA-34802: (OCI11) OLAP OCI operation caused ROLLBACK past an UPDATE of an attached analytic workspace. Current operation canceled.

Cause: ROLLBACK past the UPDATE of one of the attached Analytic Workspaces was called. The current operation is aborted, and the Analytic Workspace detached.

Action: Change the called SQL procedure to avoid the ROLLBACK

ORA-34804: (OCI12) The value of SQL host variable *number* is too long. Use the WIDE keyword for columns that may exceed *number* bytes.

Cause: The host variable had a text value longer than the maximum SQL VARCHAR length

Action: Use the WIDE keyword in the host variable specification, e.g. :WIDE OLAP_object_name

ORA-34805: (OCI13) Statement *number* must have at least one host variable.

Cause: Statements prepared with DIRECT=YES must have at least one host variable.

Action: Add a host variable to the prepared statements declaration.

ORA-34806: (OCI14) Statement *number* can only be executed within an ACROSS command.

Cause: Statements prepared with DIRECT=YES must be executed in an ACROSS command.

Action: Execute the statement within an ACROSS command.

ORA-34840: (OPCREATE01) The *string* option must be declared with datatype *string*.

Cause: An attempt was made to declare the option with the wrong datatype.

Action: Declare the option with the correct datatype.

ORA-34841: (OPCREATE02) The *string* option must be declared with the READONLY attribute.

Cause: An attempt was made to declare the option without the READONLY attribute.

Action: Declare the option READONLY.

ORA-34871: (PERMIT06) Session-only value 'value' of workspace object has been deleted because a PERMIT change has revealed a duplicate value.

Cause: Execution of a PERMIT command revealed a permanent dimension or surrogate value having the same name as the SESSION value.

Action: If the SESSION value is still needed, add it with a different name.

ORA-34896: (PPMONTHS00) At least 12 month names must be given. Only number were provided.

Cause: There must be at least one name for each month. Not enough names were provided.

Action: Provide at least 12 names.

ORA-34897: (PPMONTHS01) Blank lines are not allowed in the MONTHNAMES option.

Cause: There is at least one blank line in the string populating the MONTHNAMES option. We do not allow blank month names.

Action: Remove the blank line(s) from the string.

ORA-34900: (PPWKDAYS00) At least 7 day names must be given. Only number were provided.

Cause: There must be at least one name for each day. Not enough names were provided.

Action: Make sure there are at least 7 names in the string.

ORA-34901: (PPWKDAYS01) Blank lines are not allowed in the DAYNAMES option.

Cause: There is at least one blank line in the string populating the DAYNAMES option. We do not allow blank day names.

Action: Remove the blank line(s) from the string.

ORA-35016: (QFCHECK00) The analytic workspace and EIF file definitions of workspace object have a mismatched type.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35017: (QFCHECK06) The Analytic Workspace and EIF file definitions of workspace object have different partitioning methods.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35018: (QFCHECK01) The analytic workspace and EIF file definitions of workspace object have a mismatched data type.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35019: (QFCHECK07) The Analytic Workspace and EIF file definitions of *workspace object* have different partition dimensions.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35020: (QFCHECK02) The analytic workspace and EIF file definitions of *workspace object* have mismatched dimensioning.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35021: (QFCHECK08) The EIF file definition of *workspace object* has some partitions that are not present in the existing Analytic Workspace object.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35022: (QFCHECK03) The analytic workspace and EIF file definitions of *workspace object* have a mismatched relation.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35023: (QFCHECK09) The analytic workspace and EIF file definitions of *workspace object* have incompatible partition definitions.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35024: (QFCHECK04) The analytic workspace and EIF file definitions of *workspace object* have mismatched time dimension attributes.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35026: (QFCHECK05) The analytic workspace and EIF file definitions of *workspace object* have a mismatched ALIASOF dimension.

Cause: Importing from an EIF file or LOB into an existing Analytic Workspace object failed because the definition of the existing object was too different from the definition of the object in the EIF file or LOB.

Action: Import the object into an Analytic Workspace that does not already contain an object with the same name.

ORA-35031: (QFSVNS00) The IMPORT command has terminated because of a defect in the EIF file.

Cause: The EIF file contains a compressed composite with defective aggregation data.

Action: Recreate the EIF file using the NOAGGR keyword.

ORA-35062: (QFGET01) Duplicate files found for extension number *number* of EIF file *string*.

Cause: IMPORT searched the directories specified in EIFEXTENSIONPATH and found two EIF extension files with the same name (differing at most by the case used in the final name component).

Action: Delete, rename or move any files that are not to be read by IMPORT.

ORA-35066: (QFGET03) Extension number *number* is missing for EIF file *string*.

Cause: IMPORT searched the directories specified in EIFEXTENSIONPATH and could not find the appropriately numbered extension file.

Action: Move the missing file into one of the searched directories.

ORA-35071: (QFHEAD06) EIF file *string* cannot be imported because analytic workspace *string* has not been upgraded to version *string*.

Cause: User attempted to import from an EIF file that was created by a newer version of the product into an AW that was created by a older version of the product.

Action: Make sure that the compatibility mode parameter in the init.ora of the importing instance specifies a version that is at least as high as the parameter was in the exporting instance. Then, convert the AW to the latest storage format and reexecute the import command. Alternatively, change the EIFVERSION option of the exporting instance to a lower number, recreate the EIF file, and import the new file.

ORA-35074: (QFHEAD02) EIF file *string* cannot be read by this version of *string*.

Cause: The EIF file was created with an internal version number indicating it may contain objects that are not compatible with the current Oracle OLAP version, or the EIF file is in an obsolete format.

Action: If possible, set EIFVERSION in the exporting instance to a lower number, recreate the EIF file, and import the new file.

ORA-35076: (QFHEAD04) CAUTION: The textual data in EIF file *string* is encoded in a character set that is not recognized by this version of *string*.

Cause: IMPORT could not recognize the character set specification in the EIF file.

Action: Check the imported text data. If it was not imported correctly, recreate the EIF file with a character set supported by the current Oracle version.

ORA-35078: (QFHEAD05) An EIF extension file header for *string* is not in the correct format.

Cause: An EIF extension file in multi-file IMPORT did not contain correct header information.

Action: Check to be sure that EIFEXTENSIONPATH is set correctly and that all the extension files for the current IMPORT were created by the same EXPORT command as the main EIF file.

ORA-35095: (QFSVNS01) One or more imported values of fixed-width dimension workspace object have been truncated.

Cause: The data in the EIF file was exported from a dimension with wider values than the target dimension will accommodate.

Action: Change the definition of the target dimension, or check to be sure that multiple values from the target dimension have not become identical during the import process. This could cause data loss as data from later dimension values overstores data imported earlier.

ORA-35106: (REGRESS00) The regression was not calculated because of a linear relationship between your independent variables.

Cause: The values of the specified independent variables are not independent. For example, one may be a multiple of the other.

Action: Chose independent variables whose values are truly independent of one another.

ORA-35171: you may not signal error number *string* with the SIGNAL command

Cause: The user attempted to explicitly signal an invalid error number with the OLAP DML SIGNAL command

Action: Signal another error number

ORA-35180: (SNSYN103) The format of the OUTFILE command is: OUTFILE [APPEND] {EOF | TRACEFILE | filename [NOCACHE] [NLS_CHARSET name]}

Cause: The user specified incorrect syntax for the OUTFILE command.

Action: None

ORA-35276: (SNSYN163) The format of the ALLOCATE command is: ALLOCATE varname [SOURCE svarname] [BASIS bvarname [ACROSS dimname]] [TARGET tvarname [TARGETLOG logvarname]] [USING aggmap]

Cause: The user used incorrect syntax for the ALLOCATE command.

Action: Correct the calling syntax.

ORA-35280: (SNSYN165) The format of the AGGREGATE command is:

AGGREGATE varname1 [varname2 varname3 ...] [USING aggmap-name] [COUNTVAR intvar-name1 [intvar-name2 intvar-name3 ...]] [FUNCDATA] [FORCEORDER] [PARALLEL #] [{FROM | FROMVAR} fromname [, fromname2 ...]]

Cause: The user used incorrect syntax for the AGGREGATE command.

Action: Correct the calling syntax.

ORA-35282: (SNSYN166) The format of the AGGREGATE function is:

AGGREGATE(varname [USING aggmap-name] [COUNTVAR intvar-name] [FORCECALC] [FORCEORDER] [{FROM | FROMVAR} fromname [, fromname2 ...]])

Cause: The user used incorrect syntax for the AGGREGATE function.

Action: Correct the calling syntax.

ORA-35561: (XSRWLD01) Object *workspace object* is not a valid target.

Cause: An invalid object was specified as a target.

Action: Choose a valid object as a target.

ORA-35562: (SQLIMP01) The SQL IMPORT command will produce *number* columns of output, but you have provided *number* host variables in your INTO clause.

Cause: The expression in the source query do not match the targets in the INTO clause.

Action: Make sure the the expressions in the source query match the targets in the INTO clause.

ORA-35563: (XSRWLD17) Multiple values exist for an attribute of this dimension member.

Cause: Multiple source table rows containing different values for a dimension attribute were found. Only the first of the multiple rows has been loaded.

Action: Fix the mapping or remove the rows with conflicting attribute values.

ORA-35564: (XSRWLD02) Cannot convert from the *string* type to the *string* type.

Cause: Conversion from source to target is not allowed

Action: Choose a different target datatype

ORA-35565: (XSRWLD03) For object *workspace object* only APPEND, MATCH or ASSIGN may be used.

Cause: An incorrect setting was applied to the target

Action: For DIMENSIONs use APPEND or MATCH, for SURROGATEs use ASSIGN.

ORA-35566: (XSRWLD04) Object *workspace object* cannot be used with QDRs

Cause: A QDR was placed on a target dimension

Action: Remove the QDR on the target dimension

ORA-35568: (SQLIMP03) The datatype of variable *number* should be INTEGER, LONGINTEGER or SHORTINTEGER.

Cause: The target variable was not INTEGER, LONGINTEGER or SHORTINTEGER.

Action: The target variable must be INTEGER, LONGINTEGER or SHORTINTEGER.

ORA-35569: (XSRWLD05) An error was encountered in converting data *string* to *string* in column *number*.

Cause: The data could not be converted to the target datatype.

Action: Ensure the source data is valid for the target datatype.

ORA-35570: (XSRWLD06) A column value is not a valid member of its target dimension.

Cause: The source value for a dimension is not an existing member of the dimension.

Action: Ensure the column value is an existing member of its target dimension.

ORA-35571: (XSRWLD07) The maximum number of load errors has occurred. No changes from this step were committed to the database.

Cause: The number of load errors exceeded the specified maximum.

Action: Fix the load errors, or increase the maximum number allowed and rerun the load.

ORA-35572: (XSRWLD08) A column value is not a valid member of its related dimension.

Cause: The source data for a relation is not a member of the related dimension.

Action: Ensure the source data is a valid member of the related dimension.

ORA-35573: (XSRWLD09) An incoming dimension value is null.

Cause: A source value for a dimension is null.

Action: Ensure the source data for the dimension is not null.

ORA-35578: (SQLOUT11) SQL cursor '*number*' cannot be used with CURRENT OF <cursor name> syntax

Cause: The CURRENT OF <cursor> syntax in the WHERE clause tried to use a cursor that was not declared with the FOR UPDATE [of <column name>] SQL syntax.

Action: Add the FOR UPDATE [OF <column name>] SQL syntax to the cursor specified.

ORA-35580: (XSRWLD10) An incoming column contains a data type mismatch.

Cause: The data could not be converted to the target datatype.

Action: Ensure the source data is valid for the target datatype.

ORA-35581: (XSRWLD11) You do not have permission to write this value of the target.

Cause: You do not have sufficient permissions to write to the specified target.

Action: Ask the owner of the schema or OLAP DBA to grant you sufficient permissions.

ORA-35582: (XSRWLD12) Cannot change the level of dimension member "*number*" from "*number*" to "*number*" within a single load.

Cause: A dimension member is mapped to more than one level.

Action: Change the mapping so that each dimension member is mapped to only one level.

ORA-35583: (XSRWLD13) Cannot change the level of a dimension member within a single load.

Cause: A dimension member is mapped to more than one level.

Action: Change the mapping so that each dimension member is mapped to only one level.

ORA-35585: (XSRWLD14) This SQL query generated rejected records.

Cause: Rejected records were generated by this query.

Action: Locate the records that were rejected and resolve the rejection (for example, data, mapping, and so on).

ORA-35587: (SQLOUT20) The nesting of table functions and SQL commands has exceeded the maximum of *number* levels.

Cause: The nesting of table functions with the PREDMLCMD token populated with an OLAP DML expression that use the embedded SQL support to access another table function which contains a table functions with the PREDMLCMD

token filled in with an OLAP DML expression that uses the embedded SQL support.

Action: Reduce the level of nesting between table functions and OLAP DML embedded SQL support.

ORA-35588: (XSRWLD15) Cannot change the parent of existing dimension member "number" from "number" to "number" in LOAD RETAIN mode.

Cause: An attempt was made to change the parent of an existing dimension member in LOAD RETAIN mode.

Action: Fix the mapping or use LOAD NOSYNCH mode.

ORA-35589: (XSRWLD16) Cannot change the parent of an existing dimension member in LOAD RETAIN mode.

Cause: An attempt was made to change the parent of an existing dimension member in LOAD RETAIN mode.

Action: Fix the mapping or use LOAD NOSYNCH mode.

ORA-35749: (VCHEX01) 'character' is not a valid hexadecimal digit.

Cause: The text being converted contains an invalid hexadecimal digit.

Action: Replace the character with a digit in the range 0-9 or A-F.

ORA-35756: (VCTODT02) 'number' is not a valid date because number is out of range for a year.

Cause: n'%1p'

Action: None

ORA-35810: (XSINPUTERR) The command has requested more input than was supplied in the command string.

Cause: The command required input that was not supplied in the string.

Action: Reexecute the command with the required input.

ORA-35917: (XSHIDE05) You cannot HIDE model workspace object because the analytic workspace in which it is defined has not been upgraded to version string.

Cause: User attempted to apply the HIDE command to a model in an AW that has not been upgraded to the necessary compatibility level.

Action: Make sure that the database is running in the appropriate compatibility mode, and upgrade the AW.

ORA-35952: (XSSPFC01) The string dimension workspace object and the string dimension workspace object must have the same number of values in status for SPFCEXEC method number.

Cause: This method requires the named dimensions to have the same number of values in status, but the user provided statuses of different lengths.

Action: Relimit the dimensions so that their status lengths are the same.

ORA-36017: (XSHIERCK10) The definition of hierarchy workspace object over number in level number is not star consistent. The collision parents include number.

Cause: The definition of the hierarchy was not star consistent.

Action: Change the definition of the hierarchy.

ORA-36018: (XSHIERCK02) The format of the HIERCHECK command is:
HIERCHECK relation [STATUS | NOSTATUS | valueset] [MULTIPATH]
[CONSISTENT] [{BALANCED | STAR_CONSISTENT} levelrelation] Or
HIERCHECK aggmap [MULTIPATH] [CONSISTENT]

Cause: The wrong object type was specified.

Action: Change the object to a RELATION or AGGMAP.

ORA-36019: (XSHIERCK11) The format of the HIERSHAPE function is:
HIERSHAPE(relation[(qdr)] {level | ragged | skiplevel | regular} USING levelrel
[INHIERARCHY inhvs] LEVELORDER levelvs)

Cause: The wrong object type or the wrong object definition was specified.

Action: Change the object type or use the correct object definition.

**ORA-36020: (XSHIERCK03) The definition of hierarchy *workspace object* over
number is inconsistent.**

Cause: The definition of the hierarchy was inconsistent.

Action: Change the definition of the hierarchy.

ORA-36021: (XSHIERCK12) The format of the HIERCHECK function is:
HIERCHECK(relation [STATUS | NOSTATUS | valueset] [MULTIPATH]
[CONSISTENT] [{BALANCED | STAR_CONSISTENT} levelrelation]) Or
HIERCHECK(aggmap [MULTIPATH] [CONSISTENT])

Cause: The wrong object type was specified.

Action: Change the object to a RELATION or AGGMAP.

**ORA-36022: (XSHIERCK04) Valuesets specified in the HIERCHECK command
must be scalar. *workspace object* is dimensioned.**

Cause: The HIERCHECK command specified a dimensioned valueset.

Action: Specify a scalar valueset in its place.

**ORA-36024: (XSHIERCK05) Valueset *workspace object* must contain values of one
of the extra dimensions of relation *workspace object*.**

Cause: The HIERCHECK command specified a valueset over an invalid
dimension.

Action: Specify a valueset containing values of one of the self-relation's extra
dimensions (the dimensions in the relation's dimension list, minus the self-related
dimension itself).

**ORA-36025: (XSHIERCK06) The level dimension of the level relation *workspace
object* is the same as the relation dimension *workspace object*.**

Cause: The level dimension was the same as the relation dimension.

Action: Change the definition of the level relation.

**ORA-36026: (XSHIERCK07) Level relation *workspace object* is not dimensioned by
relation dimension *workspace object*.**

Cause: The level relation was not dimensioned by the relation dimension.

Action: Change the definition of the level relation.

ORA-36027: (XSHIERCK08) Hierarchy *workspace object* is not balanced.

Cause: The current hierarchy was not balanced.

Action: Change the hierarchy to balanced.

ORA-36028: (XSHIERCK09) Hierarchy *workspace object* has multiple paths from *number* to *number*.

Cause: The current hierarchy had multiple paths.

Action: Remove multiple paths from the hierarchy.

ORA-36034: (XSMHIERCK00) One or more loops have been detected in relationship *workspace object* over *workspace object*. The last *number* of the items are *number*.

Cause: A relation was used that had loops in it. There were more items involved than could be reported.

Action: Correct the relation so that it does not contain loops.

ORA-36035: (XSMHIERCKREL) One or more loops have been detected in *workspace object*. *number* items involved are *number*.

Cause: A relation was used that had loops in it.

Action: Correct the relation so that it does not contain loops.

ORA-36036: (XSMHIERCK01) One or more loops have been detected in relationship *workspace object* over *workspace object*. The *number* items involved are *number*.

Cause: A relation was used that had loops in it.

Action: Correct the relation so that it does not contain loops.

ORA-36145: (SETPROP01) The property "%1" cannot be set for measure "%2".

Cause: A property name was given that is not one of the allowed properties to be set.

Action: Specify one of the legal property names.

ORA-36154: (XSMXAGGR01) *workspace object* is not a data variable.

Cause: An object was specified on the Aggregate command line that was not a variable

Action: Specify a variable instead

ORA-36155: (XSMXAGGRFROM) *workspace object* must be a variable or formula of a similar data type to *workspace object* to be used with FROM, or a TEXT variable or formula to be used with FROMVAR.

Cause: The user specified an illegal variable for use with FROM or FROMVAR on the AGGREGATE command line

Action: Specify a legal variable instead

ORA-36157: (XSMXAGGRCOMMIT) To use the AUTOCOMMIT keyword, you must also specify the AUTOUPDATE keyword.

Cause: The user specified AUTOCOMMIT but not AUTOUPDATE on the AGGREGATE command line, which is illegal

Action: Either also specify AUTOUPDATE or don't specify AUTOCOMMIT

ORA-36160: (XSMXAGGR04) You cannot use *string* on scalar VARIABLE *workspace object*.

Cause: The user tried to run the AGGREGATE or AGGCOUNT command or function on a scalar variable.

Action: Specify a dimensioned variable instead

ORA-36161: (XSAGGRRUVCV) Aggregation variable *workspace object* cannot have itself as a COUNTVAR.

Cause: The user specified the same variable as both an aggregation variable and a COUNTVAR

Action: Specify a different COUNTVAR

ORA-36162: (XSMXAGGR05) COUNTVAR variable *workspace object* must be of type INTEGER, not *string*.

Cause: The user specified a non-INTEGER variable as a COUNTVAR for aggregation

Action: Redefine the COUNTVAR to be an INTEGER

ORA-36164: (XSMXAGGR07) When using the COUNTVAR clause, the number of variables to be aggregated (*number*) must match the number of COUNTVAR variables (*number*).

Cause: The user specified a COUNTVAR clause to the AGGREGATE command, but the number of COUNTVAR variables specified did not match the number of variables to be aggregated

Action: Specify a separate COUNTVAR for each variable

ORA-36165: (XSAGGCNTPROP) Variable *workspace object* cannot have both an AGGCOUNT and the \$COUNTVAR property.

Cause: An attempt was made to add the \$COUNTVAR property to a variable which already had an AGGCOUNT, or vice versa.

Action: Delete the already existing \$COUNTVAR property or AGGCOUNT first.

ORA-36166: (XSMXAGGR08) *workspace object* is not a VARIABLE.

Cause: An attempt was made to perform an AGGREGATE or other action on an object which is not a variable.

Action: Specify a variable instead.

ORA-36167: (XSAGGRFORM) *workspace object* is an illegal AGGMAP for aggregating a FORMULA.

Cause: The user attempted to aggregate a FORMULA using an AGGMAP that is not valid for aggregating FORMULAs. The AGGMAP must specify PRECOMPUTE(NA) for all relation lines and must not specify any caching.

Action: Correct the AGGMAP so it is legal for aggregating a FORMULA.

ORA-36168: (XSMXAGGR10) COUNTVAR variable *workspace object* must have the same dimensionality as *workspace object*

Cause: The user specified a COUNTVAR variable which is missing at least one dimension of the aggregation variable

Action: Specify a COUNTVAR variable which has at least as many base dimensions as the aggregation variable

ORA-36170: (XSMXAGGR12) The data type of the WEIGHT *workspace object* must be numeric or BOOLEAN, not *string*.

Cause: The user specified a WEIGHT variable or formula which wasn't numeric or boolean

Action: Specify a numerical or boolean weight instead

ORA-36174: (XSMXAGGR23) *workspace object* must be either a VARIABLE, a RELATION or a FORMULA.

Cause: The user specified something that was not a variable, a relation or a formula as a weight for AGGREGATE

Action: Specify a valid variable, relation or formula instead

ORA-36176: (XSMXAGGR25) Relation *workspace object* must be a one-dimensional self-relation to be used as a weight for AGGREGATE.

Cause: The user specified an illegal relation as a weight. The relation might have been multidimensional, not a self-relation, or not a relation over one of the bases of the aggregation variable.

Action: Specify a valid self relation over one of the bases of the aggregation variable.

ORA-36178: (XSAGGR01) To be used with AGGREGATE, AGGMAP *workspace object* must be declared with the AGGMAP command.

Cause: The user used the ALLOCMAP command to define the AGGMAP, so the AGGMAP can only be used with the ALLOCATE command, or the AGGMAP has no contents attached to it.

Action: Use the AGGMAP command to define the AGGMAP.

ORA-36179: (XSNOAGM) No AGGMAP was specified for VARIABLE *workspace object*.

Cause: The user used the AGGREGATE command without specifying an AGGMAP on the command line, with a variable which had no \$AGGMAP property.

Action: Specify an AGGMAP on the AGGREGATE command line, or add the \$AGGMAP property to the variable in question.

ORA-36180: (XSAGGR08) AGGREGATE cannot function because there is a permission clause associated with variable *workspace object*.

Cause: When using AGGREGATE, only simple permissions and permissions on base dimensions are valid.

Action: Remove the permissions clause from the variable causing problems.

ORA-36181: A VARIABLE cannot have both the \$AGGREGATE_FROM and \$AGGREGATE_FROMVAR properties applied to it.

Cause: The user attempted to add both the \$AGGREGATE_FROM and \$AGGREGATE_FROMVAR properties to a single variable.

Action: Remove the existing property before applying the new one.

ORA-36182: (XSAGGR09) Could not locate a value for variable *number* in measure dimension *workspace object*.

Cause: A measure dimension was supplied in the AGGMAP, but a position for the variable was not found in it.

Action: Add a position for the variable in the measure dimension.

ORA-36184: (XSAGGR10) You do not have sufficient permissions for the variable *workspace object*.

Cause: The user lacked the permissions necessary for the aggregation variable.

Action: Remove the restricting permissions from the variable or base dimension.

ORA-36185: (XSAGGR11) *workspace object* does not have any AGGCOUNT information.

Cause: User attempted an operation (such as the AVERAGE aggregation operator or the AGGCOUNT function) that requires a variable to have AGGCOUNT information on a variable that does not.

Action: Define the variable using the WITH AGGCOUNT clause, or use the CHGDFN ADD AGGCOUNT command to enable AGGCOUNT for the variable.

ORA-36188: (XSAGGR16) AGGREGATE read a value less than 1 out of COUNTVAR variable *workspace object*. Either the values of the COUNTVAR variable are stored improperly, or there is problem in AGGREGATE. If no one has modified the values in this COUNTVAR, contact Oracle customer support.

Cause: Either someone improperly changed the COUNTVAR variable, or AGGREGATE has an error.

Action: Set the COUNTVAR variable to NA before starting AGGREGATE. If you previously set the COUNTVAR variable to NA, then contact Oracle OLAP technical support.

ORA-36198: (XSAGGR33) Cannot aggregate over COMPRESSED COMPOSITE *workspace object* using AGGMAP *workspace object* because the operator variable with more than 1 line dimensions is not supported for bases of a COMPRESSED COMPOSITE.

Cause: The user specified an aggregation the operator variable with more than 1 line dimensions that is not supported by COMPRESSED COMPOSITES.

Action: Use a MODEL for the calculation, or use an uncompressed COMPOSITE.

ORA-36200: (XSAGGR34) AGGREGATE operator *string* requires a WEIGHTBY clause, but ARGS variable *workspace object* did not specify one.

Cause: The given operator requires a WEIGHT specification, but the ARGS variable did not supply one.

Action: Modify the ARGS variable to specify a weight for the operation.

ORA-36201: (XSAGGR35) Cannot aggregate *workspace object*(*partition workspace object*) because the subpartition is itself partitioned.

Cause: Attempted to aggregate an intermediate partition of a variable with nested partitioning.

Action: rerun the aggregate command separately for each ultimate partition or just for the variable as a whole

ORA-36202: (XSAGOP01) '*number*' is not a valid aggregation operator.

Cause: An invalid string was provided for an aggregation operator.

Action: Check the spelling of the operator to make sure you are specifying a valid one.

ORA-36204: (XSAGOP04N) In AGGMAP *workspace object*, the NAOPERATOR *string* must be HFIRST, HLAST or HEVEN.

Cause: An invalid NAOPERATOR was specified.

Action: Specify HFIRST, HLAST or HEVEN.

ORA-36206: (XSAGOP04R) In AGGMAP *workspace object*, REMOPERATOR *string* must be MIN, MAX, FIRST, LAST, HFIRST or HLAST.

Cause: An invalid REMOPERATOR was specified.

Action: Specify one of the legal operators.

ORA-36208: (XSAGOP05N) In AGGMAP *workspace object*, you can only specify NAOOPERATOR *string* with the PROPORTIONAL or EVEN operators, not *string*.

Cause: The user specified an NAOOPERATOR when you were not using PROPORTIONAL or EVEN.

Action: Remove the NAOOPERATOR clause from the RELATION line.

ORA-36210: (XSAGOP05R) In AGGMAP *workspace object*, you can only specify the REMOPERATOR *string* with the PROPORTIONAL, EVEN, or HEVEN operators, not *string*.

Cause: The user specified a REMOPERATOR without using PROPORTIONAL, EVEN, or HEVEN.

Action: Remove the REMOPERATOR clause from the RELATION line.

ORA-36212: (XSAGOP06) In AGGMAP *workspace object*, you can only specify the MIN, MAX, FLOOR, and CEILING arguments while using the PROPORTIONAL operator, not *string*.

Cause: The user specified MIN, MAX, FLOOR, or CEILING when using an operator other than PROPORTIONAL.

Action: Remove the incorrect argument from the RELATION line.

ORA-36220: (XSLPDSC01) All dimensions in LIST *number* are also in the IGNORE clause.

Cause: One of the dimension lists in the dimension loop descriptor had no base dimensions except those in the IGNORE list. This leaves no dimensions for looping over.

Action: Fix the dimension loop descriptor.

ORA-36221: (XSLPDSC02) LIST *number* and LIST *number* have different base dimensions.

Cause: The base dimensions of the dimension lists given in the loop descriptor do not match.

Action: Ensure that each dimension list has the same set of looping base dimensions. If necessary, use IGNORE within a lists to discard base dimensions that should not be looped.

ORA-36222: (XSLPDSC03) duplicate IGNORE or DENSE information for dimension *workspace object*

Cause: An IGNORE or DENSE list in a dimension loop descriptor included the dimension twice, included two different valuesets of the dimension, or includes the dimension and a valueset of the dimension.

Action: Only use the dimension or a valueset of the dimension once in an IGNORE or DENSE list.

ORA-36223: (XSLPDSC04) object *workspace object* in IGNORE or DENSE list has illegal type

Cause: An IGNORE or DENSE list in a dimension loop descriptor included an object that was not a dimension or a valueset, was a conjoint dimension, or was a dimensioned valueset.

Action: Only use simple dimensions and undimensioned valuesets in the IGNORE or DENSE list.

ORA-36224: (XSLPDSC05) *workspace object* is not a loop dimension

Cause: An IGNORE or DENSE list in a dimension loop descriptor referenced a dimension (or a valueset of a dimension) that was not a base dimension of the loop dimension list.

Action: Remove the dimension or valueset from the IGNORE or DENSE list.

ORA-36225: (XSLPDSC06) A LOOP AGGMAP list must contain an aggmap object, followed by one or more variables and/or dimensions.

Cause: An invalid AGGMAP list was specified. Either too few objects were specified, or an incorrect type of object was used.

Action: Specify a valid AGGMAP list consisting of an aggmap object, followed by one or more variables and/or dimensions.

ORA-36226: (XSLPDSC07) The syntax of the \$LOOP property on formula workspace object is incorrect.

Cause: Unrecognized contents in the \$LOOP property of a formula in the table function measure list.

Action: Restrict the contents of the \$LOOP property to valid elements (other than OPTIMIZED and MEASURES) of the table function LOOP directive.

ORA-36230: (XSANALYZ00) object workspace object cannot be used in the ANALYZE command

Cause: An object that cannot be analyzed was used in the ANALYZE command.

Action: Analyze VARIABLES, RELATIONS, DIMENSIONS, or SURROGATES.

ORA-36231: (XSANALYZ01) object workspace object cannot be used in the INHIERARCHY clause

Cause: An invalid INHIERARCHY object was referenced.

Action: Use either a VALUESET or boolean VARIABLE.

ORA-36232: (XSANALYZ02) a level list was specified when a language dimension was present

Cause: A level list dimension was specified when a language dimension was present.

Action: Remove the USING clause.

ORA-36233: (XSANALYZ03) the dimensionality of object workspace object does not match the ANALYZE command

Cause: The dimensionality of the object did not match the ANALYZE command syntax used.

Action: Match the ANALYZE syntax to the dimensionality of the specified object.

ORA-36234: (XSANALYZ04) all objects in the current status of the NAME dimension must have the same dimensionality when used with the ANALYZE command

Cause: The dimensionality of at least one of the objects listed in the NAME dimension does not match the rest of the objects.

Action: Make sure all objects listed in the NAME dimension have the same dimensionality.

ORA-36235: (XSANALYZ05) the database compatibility must be 11.0.0.0 or higher

Cause: The compatible mode is not 11.0.0.0 or higher

Action: Make sure the compatible mode is 11.0.0.0 or higher

-
- ORA-36236: (XSANALYZ06) the AW format must be 11.0.0.0 or higher to use the ANALYZE command**
Cause: The AW version is less than 11.0.0.0
Action: Make sure the compatible mode is 11.0.0.0 or higher and upgrade the AW
- ORA-36237: (XSANALYZ07) analytic workspace *string.string* must be attached RW or EXCLUSIVE mode**
Cause: The analytic workspace was already attached RO or MULTI mode.
Action: Detach the analytic workspace.
- ORA-36238: (XSANALYZ08) object *string.string* does not exist**
Cause: The object name does not exist
Action: Check the spelling and case of the object name
- ORA-36258: (XSAGINFO00) When the AGGMAPINFO function is called, *workspace object* must be an AGGMAP.**
Cause: The AGGMAPINFO function was called with an object that is not an AGGMAP.
Action: Modify the call to AGGMAPINFO to specify an AGGMAP object.
- ORA-36260: (XSAGHIERPART00) Aggregating from partition %J to partition %J over hierarchy *workspace object* creates an increase in sparsity.**
Cause: In the partition creation / aggmap creation a situation developed such that when aggregating over a particular dimension of the aggmap a partition boundary was crossed such that the sparsity of the target partition included dimensions that were not in the sparsity of the source partition. Since the process of aggregation always densifies rather than sparsifying this is an extremely suboptimal design and it is not supported by the aggregate system.
Action: Set up your partitioning such that for any partition boundary the source and target partitions of the aggregation will always move towards denser partitions. For any child (c) and any parent (p) where (c) and (p) are in different partitions it must be the case that the parent partition contains no dimension in the composite that the child partition does not contain in its composite.
- ORA-36261: (XSAGPARTDEP00) Can not Aggregate PARTITION TEMPLATE %J because the path of aggregation would recursively enter partition %J.**
Cause: The partitioning scheme was such that while aggregating there exists a cell (m) such that both one of its descendants and one of its ancestors are both in the referenced partition, while (m) is in a different partition.
Action: Change the partitioning scheme.
- ORA-36266: (XSCGMDLAGG00) Invalid context for the AGGREGATION function**
Cause: The AGGREGATION function was used outside of the MODEL context.
Action: Use AGGREGATION only in a model.
- ORA-36267: (XSCGMDLAGG09) *workspace object* has no dimensions, so it cannot have a qualified data reference.**
Cause: A dimension qualification was specified for a valueset with no dimensions.
Action: Remove the qualification.
- ORA-36268: (XSCGMDLAGG01) '*string*' is not a valid dimension value.**

Cause: The AGGREGATION parameter list included a value that does not exist in the MODEL dimension that contains the target of the AGGREGATION

Action: Specify only values from the appropriate MODEL dimension

ORA-36269: (XSCGMDLAGG10) '*workspace object*' does not exist or is not a dimension.

Cause: A nonexistent or invalid object was specified as a QDR dimension.

Action: Specify existing dimensions only.

ORA-36270: (XSCGMDLAGG03) The parameter list for the AGGREGATION function includes duplicate values.

Cause: One or more duplicate values appeared in the AGGREGATION parameter list.

Action: Remove the duplication.

ORA-36271: (XSCGMDLAGG11) *workspace object* is not in the dimension list of valueset *workspace object*.

Cause: A QDR dimension was specified that does not appear in the valueset's dimension list.

Action: Specify only dimensions in the valueset's dimension list.

ORA-36272: (XSCGMDLAGG04) '*workspace object*' is not a valid operator for the AGGREGATION function.

Cause: An invalid AGGREGATION operator was specified.

Action: Correct the invalid operator.

ORA-36273: (XSCGMDLAGG12) Dimension *workspace object* appears more than once in the QDR.

Cause: A dimension was specified more than once in the QDR.

Action: Remove the duplication.

ORA-36274: (XSCGMDLAGG05) The operator used in this equation needs a weight variable.

Cause: An invalid weight variable was specified.

Action: Correct the invalid weight variable.

ORA-36275: (XSCGMDLAGG13) *string* is not a valid *workspace object*.

Cause: A value was specified that does not exist in the QDR dimension.

Action: Specify an existing value.

ORA-36276: (XSCGMDLAGG06) The current operator does not need a weight variable.

Cause: A weight variable was specified in a context that does not support it.

Action: Remove the weight variable.

ORA-36278: (XSCGMDLAGG07) *workspace object* does not exist or is not valueset.

Cause: A nonexistent or invalid object was specified where a valueset is required.

Action: Specify an existing valueset only.

ORA-36280: (XSCGMDLAGG08) Valueset *workspace object* does not contain values of any dimension of the current model.

Cause: AGGREGATION specified a valueset of a dimension not listed in a DIMENSION statement for the current model.

Action: Add the valueset's dimension to the model's DIMENSION list, or choose a different valueset.

ORA-36290: (EIFMAKEF14) You cannot export object *workspace object*, because EIFVERSION is set to *number*. That version does not support *string strings*.

Cause: The user tried to export a NUMBER dimension to an EIF file with the EIFVERSION option set to a number less than 80000. Versions previous to that version do not support NUMBER dimensions.

Action: A NUMBER dimension cannot be used in a version of older than 9.2.0. If

ORA-36312: (PHYS00) *workspace object* must be a dimension, dimensioned variable or relation.

Cause: The user specified an invalid OLAP object while attempting to use the PHYSICAL function

Action: Specify a valid object

ORA-36313: (PHYS03) The VALUE option of PHYSICAL cannot be applied to a variable.

Cause: the VALUE argument to PHYSICAL was supplied for a variable.

Action: remove VALUE or specify a relation or dimension.

ORA-36314: (PHYS01) *workspace object* must be a dimension, relation or variable.

Cause: The user specified an invalid OLAP object while attempting to use the PHYSICAL command

Action: Specify a valid object

ORA-36315: (PHYS04) You must specify the VALUE option for scalar relation *workspace object*.

Cause: The VALUE argument to PHYSICAL was omitted for a scalar relation

Action: specify VALUE or choose a dimensioned relation

ORA-36316: (PHYS02) Relation *workspace object* must be a single-dimensional relation that relates one INTEGER dimension to another.

Cause: The user specified an invalid relation while attempting to use the PHYSICAL command

Action: Specify a valid relation

ORA-36340: (SNSYN130) The format of the PARTITIONCHECK function is: PARTITIONCHECK(aggmap, partition_template)

Cause: Bad syntax

Action: Correct syntax

ORA-36342: (SNSYN200) The format of the CLEAR command is: CLEAR [ALL | STATUS] [AGGREGATES | CHANGES | PRECOMPUTES | NONPRECOMPUTES | CACHE] FROM var1 [var2, var3...] [USING aggmap]

Cause: The syntax for the CLEAR command was invalid.

Action: Modify your syntax using the correct format.

ORA-36376: (XSAGZERO) AGGREGATE attempted to divide by zero. Set DIVIDEBYZERO to YES if you want NA to be returned as the result of a division by zero.

Cause: A calculation in the current AGGREGATE command attempted to divide by zero as a result of an AVERAGE, WAVERAGE, HAVERAGE or HWAVERAGE operation.

Action: Either fix the data, or set DIVIDEBYZERO to YES to return NA instead of signaling an error.

ORA-36378: (XSAGTHRWEIGHT) While running AGGREGATE with multiple threads, the weight variable *workspace object* specified by your ARGS variable *workspace object* must exist in the same analytic workspace as your AGGMAP *workspace object*.

Cause: While running AGGREGATE in threaded mode, you attempted to specify a WEIGHT variable in another analytic workspace.

Action: Use a weight variable from the same analytic workspace as the aggmap and rollup variable.

ORA-36380: (AGGRECURSE) AGGREGATE was called recursively, which is not allowed.

Cause: A model, NATRIGGER, or other object called the AGGREGATE function or command while another AGGREGATE function or command was already in progress.

Action: Modify your objects so that they do not need to have two AGGREGATE commands or functions executing at once.

ORA-36389: (XSAGPARTDEP01) Can not aggregate from PARTITION *number* into PARTITION *number* due to increasing sparsity along DIMENSION %J.

Cause: The user is attempting to use partitions as a means of sparsity control, however they have set up their partitions in a manner that simply makes no sense. It is a simple fact that during aggregation data becomes more dense, not less dense, and yet their partitions indicate the opposite.

Action: Modify the partition template add the specified dimension into the source composite, or removing it from the target composite.

ORA-36391: (XSMXCLEA01) When CLEAR is used with the STATUS keyword or an AGGMAP, *workspace object* must be dimensioned identically to *workspace object*.

Cause: The user specified objects whose dimensionality didn't match

Action: Break up the CLEAR command into multiple commands where the dimensionality of the objects matches

ORA-36392: (XSMXCLEA02) When using CLEAR with the PRECOMPUTES or NONPRECOMPUTES options, you must specify an AGGMAP.

Cause: The user didn't specify an AGGMAP with the CLEAR command.

Action: specify an aggmap by adding a USING phrase to the CLEAR command, or attach a '\$AGGMAP' property to the variable.

ORA-36393: (XSMXCLEA03) When using the AGGREGATES, CHANGES or CACHE options, you must specify the ALL keyword.

Cause: The user didn't use the ALL keyword when using CHANGES or CACHE.

Action: Specify the ALL keyword.

-
- ORA-36394: (XSMXCLEA04) When using CLEAR on the AGGMAP workspace object, CACHE is the only valid directive.**
Cause: The user attempted to CLEAR an AGGMAP using a directive other than CACHE.
Action: Amend the CLEAR line to only use the CACHE keyword with AGGMAPs.
- ORA-36395: (XSMXCLEA05) To CLEAR ALL AGGREGATES from workspace object, you must specify an AGGMAP.**
Cause: The CLEAR command could not determine how the variable was aggregated because the variable is not dimensioned by a compressed composite.
Action: Specify an aggmap by adding a USING phrase to the CLEAR command, or attach a '\$AGGMAP' property to the variable.
- ORA-36397: (XSSPROPNA) The value of property string cannot be NA.**
Cause: The user tried to set a system-reserved property on an OLAP object to NA
Action: Set the property to a non-NA value
- ORA-36398: (XSSPROP01) Property name 'number' is invalid because only system-reserved property names can begin with '\$'.**
Cause: The user attempted to add a property which starts with \$ but is not a reserved property name
Action: Remove the \$ from the property name
- ORA-36399: (XSSPROPDTYPE) The data type of property string must be string.**
Cause: The user tried to set a system-reserved property on an OLAP object to a value with an illegal datatype
Action: Set the property with the proper datatype
- ORA-36400: (XSSPROP02) workspace object is not a valid variable name.**
Cause: Not a valid variable name
Action: Change to a valid variable name
- ORA-36401: (XSSPROPOTYPE) Property string may only be applied to objects of type string.**
Cause: The user applied a reserved property name to an incorrect object type
Action: Apply the property to the correct object
- ORA-36402: (XSSPROP03) The property '\$string' requires a leading "\$" because it is a system-reserved property name.**
Cause: The user tried to specify a property name which is reserved, but did not use a leading \$
Action: Either add a leading \$ or choose another property name
- ORA-36403: (XSBADSPROP) number is an illegal value for system-reserved property string on workspace object.**
Cause: The user tried to specify an illegal value for a special property
Action: Specify a legal value.
- ORA-36404: (XSSPROP04) Property string cannot be applied to an undimensioned (scalar) TEMPORARY variable.**
Cause: The user applied a reserved property name to an incorrect object type

Action: Apply the property to the correct object

ORA-36405: (XSSPROP05) Property ignored for object *workspace object*:

Cause: A property was ignored during import.

Action: Refer to the message that follows this one and correct the error it describes.

ORA-36406: (VCACHE00) '*number*' is an invalid value for the VARCHACHE option. The only permissible values are 'SESSION', 'VARIABLE', and 'NONE'.

Cause: The user tried to assign an invalid value to the VARCHACHE option

Action: Assign one of the valid values

ORA-36410: (VCACHE03) '*number*' is an invalid value for the \$VARCHACHE property. The only permissible values are 'DEFAULT', 'SESSION', 'VARIABLE', and 'NONE'.

Cause: The user tried to assign an invalid value to the \$VARCHACHE property on a variable

Action: Assign one of the valid values

ORA-36608: (XSAGHOVERFLOW) The depth of the hierarchies encountered while processing a composite dimension in AGGREGATE caused a counter overflow.

Cause: The depth of the hierarchies that are part of a composite exceeded 4 billion levels during the merge.

Action: Reduce the number of levels in the hierarchies, reduce the number of dimensions in the composite, or do not aggregate over all dimensions at once.

ORA-36610: (XSLMS00) Unable to locate a message file for OLAP message: *value*

Cause: An internal OLAP DML program in the EXPRESS Analytic Workspace failed to retrieve a user message.

Action: Contact support.

ORA-36612: (XSLMS01) invalid OLAP message number: *value*

Cause: An internal OLAP DML program in the EXPRESS Analytic Workspace attempted to retrieve a non-existent message.

Action: Contact support.

ORA-36616: (XSAGMODHIER01) There is a cycle formed by MODEL *workspace object* and other embedded or containing models with the same dimension, *workspace object*.

Cause: Inclusion of a dynamic model formed a cycle in the named dimension.

Action: Edit the models involving this dimension to remove the cycle.

ORA-36617: (XSAGMODHIER02) There is a self-cycle equation in MODEL *workspace object*.

Cause: The model for relation modification included a self-cycle equation.

Action: Remove the self-cycle equation from the model.

ORA-36618: (XSAGMODDIM00) *workspace object* is not a valid dynamic model for AGGMAP.

Cause: The model failed one of the following tests: 1) only one dimension (aside from LAG/LEAD dimensions); 2) assignment to dimension values only; 3) a single simple solution block; 4) no time-series functions with variable step values.

Action: Edit the model so that it conforms to the above requirements.

ORA-36620: (XSAGMODDIM01) MODEL *workspace object* cannot find the matching embedded model.

Cause: AGGMAP ADD model could not find the matching embedded model.

Action: Add the matching embedded model to the AGGMAP.

ORA-36621: (XSAGMODDIM02) You cannot AGGREGATE the individual partition using static model *workspace object* because a partition dimension or its deriver *workspace object* appears in the equation of the step or simultaneous block.

Cause: An attempt was made to AGGREGATE the individual partition using the static model with the partition dimension in the equation of the step or simultaneous block.

Action: AGGREGATE the variable instead of the individual partition.

ORA-36622: (XSAGMODLIST00) *workspace object* cannot be added to the AGGMAP *workspace object* because it is not a valid MODEL.

Cause: An object specified in AGGMAP ADD was not a model.

Action: Specify the name of a model.

ORA-36626: (XSAGMODLIST02) MODEL *workspace object* was skipped because there is already a MODEL by that name attached to AGGMAP *workspace object*.

Cause: An attempt was made to add the same model to the AGGMAP twice.

Action: None required.

ORA-36628: (XSAGMODLIST03) MODEL *workspace object* could not be added to AGGMAP *workspace object*.

Cause: The dimension of the model did not match a hierarchy of the aggmap.

Action: Add a RELATION statement to the AGGMAP for that dimension.

ORA-36630: (XSDUNION00) An empty base dimension list was specified in the concat dimension definition.

Cause: An empty concat dimension list was specified.

Action: Specify a valid list of dimensions when defining a concat dimension.

ORA-36632: (XSDUNION01) The concat dimension *workspace object* is not currently defined as UNIQUE.

Cause: Attempt was made to CHGDFN a concat, which is already non-unique, to NOT UNIQUE.

Action: Since the concat is already non-unique, this command is unnecessary.

ORA-36634: (XSDUNION02) INTEGER dimension *workspace object* cannot be used as a concat dimension base.

Cause: The user cannot specify INTEGER base dimensions when defining a concat dimension.

Action: Change the datatype of the INTEGER base dimension, or omit it from the concat.

ORA-36635: (XSDUNION03) The base dimension *workspace object* has an invalid datatype for use in a UNIQUE concat definition.

Cause: Base dimensions of a unique concat must have TEXT or ID datatypes.

Action: Specify a valid list of dimensions when defining a unique concat dimension.

ORA-36636: (XSDUNION04) The unique concat dimension *workspace object* cannot be changed to NOT UNIQUE, because it is a base of at least one other unique concat dimension.

Cause: A non-unique concat dimension cannot be used as a base of a dependent unique concat.

Action: CHGDFN any dependent unique concat dimensions to NOT UNIQUE and retry.

ORA-36637: (XSDUNION05) The concat dimension cannot be defined as UNIQUE because it has a non-unique concat base dimension *workspace object*.

Cause: A non-unique concat dimension cannot be used as a base of a dependent unique concat.

Action: CHGDFN any non-unique concat base dimensions to UNIQUE and retry.

ORA-36638: (XSDUNION17) Concat dimension *workspace object* cannot be changed to UNIQUE because it has a non-unique concat base dimension *workspace object*.

Cause: A non-unique concat dimension cannot be used as a base of a dependent unique concat.

Action: CHGDFN any non-unique concat base dimensions to UNIQUE and retry.

ORA-36639: (XSDUNION18) UNIQUE cannot be applied to this concat dimension because leaves *workspace object* and *workspace object* share the value *number*.

Cause: Unique concat base dimensions cannot contain duplicate values.

Action: Use MAINTAIN RENAME to change one of the duplicate values and retry.

ORA-36640: (XSDUNION19) Concat dimension *workspace object* cannot be changed to UNIQUE because base dimension *workspace object* does not have a TEXT or ID datatype.

Cause: Base dimensions of a unique concat must have TEXT or ID datatypes.

Action: None

ORA-36641: (XSDUNION20) The concat dimension must be defined as UNIQUE because base dimension *workspace object* contains custom member values.

Cause: The UNIQUE keyword was not specified in the concat dimension definition, and is required if any of its base dimensions contain custom member values.

Action: Define the concat as UNIQUE, or remove all base custom member values.

ORA-36642: (XSDUNION06) Concat dimension list contains duplicate leaf dimension *workspace object*.

Cause: Duplicate concat leaf dimension was found.

Action: Remove duplicate concat base dimensions and retry.

ORA-36643: (XSDUNION21) Concat dimension *workspace object* cannot be changed to NOT UNIQUE because it contains custom member values.

Cause: Only UNIQUE concat dimensions can have custom member values or base dimensions which contain custom member values.

-
- Action:** Remove all custom member values from the concat and all of its bases, and retry.
- ORA-36644: (XSDUNION07) Concat dimension *workspace object* contains a previously detected leaf dimension.**
Cause: Concat dimension contains a previously detected leaf dimension.
Action: None
- ORA-36646: (XSDUNION08) Only concat dimensions can be redefined as UNIQUE. *workspace object* is not a concat dimension.**
Cause: UNIQUE keyword was used with an invalid object.
Action: Retry without the UNIQUE keyword.
- ORA-36648: (XSDUNION09) Concat dimension *workspace object* is already defined as UNIQUE.**
Cause: Attempt to change a concat dimension to UNIQUE, but it is already UNIQUE.
Action: None
- ORA-36650: (XSDUNION10) Concat dimension *workspace object* cannot be changed to UNIQUE. Leaves *workspace object* and *workspace object* share the value *number*.**
Cause: Unique concat base dimensions cannot contain duplicate values.
Action: Use MAINTAIN RENAME to change one of the duplicate values and retry.
- ORA-36652: (XSDUNION11) *workspace object* is not a *string* type dimension.**
Cause: The CHGDFN BASE ADD command is only valid for concat dimensions.
Action: None
- ORA-36664: (XSDPART02) You must specify a partitioning method and one or more partition dimensions when defining a PARTITION TEMPLATE.**
Cause: User tried to define a PARTITION TEMPLATE without a PARTITION BY clause.
Action: Add a PARTITION BY clause.
- ORA-36665: (XSDPART03) *workspace object* is not in the dimension list of the PARTITION TEMPLATE.**
Cause: While defining a partition template, user attempted to specify a partition dimension that is not a dimension of the partition template itself.
Action: Choose a partition dimension from among the dimensions of the partition template.
- ORA-36666: (XSDPART04) *workspace object* is not a concat dimension.**
Cause: User tried to define a partition template with PARTITION BY CONCAT(... dim ...) where dim is not a concat dimension.
Action: Only concat dimensions can serve as partition dimensions with CONCAT partitioning. Choose a different partition dimension.
- ORA-36667: (XSDPART05) *string* is not a legal CONCAT partition.**
Cause: User attempted to use RANGE or LIST syntax in defining a CONCAT partition template.

Action: Use CONCAT partition syntax.

ORA-36668: (XSDPART06) *string* is not a legal RANGE partition.

Cause: User attempted to use CONCAT or LIST syntax in defining a RANGE partition template.

Action: Use RANGE partition syntax.

ORA-36669: (XSDPART07) *string* is not a legal LIST partition.

Cause: User attempted to use RANGE or CONCAT syntax in defining a LIST partition template.

Action: Use LIST partition syntax.

ORA-36670: (XSDPART08) *workspace object* is an INTEGER or NTEXT dimension, or contains an INTEGER or NTEXT dimension. INTEGER and NTEXT dimensions cannot be used as partition dimensions.

Cause: User attempted to define a partition template partitioned by an INTEGER or NTEXT dimension or a concat containing an NTEXT leaf.

Action: Either pick a different partition dimension, or redefine the dimension to use a different datatype.

ORA-36671: (XSDPART09) Leaves of *workspace object* have different datatypes. A partition dimension cannot have more than one datatype when RANGE partitioning is used.

Cause: User attempted to define a range partition template with a concat partition dimension, and the concat had two leaf dimensions with different datatypes.

Action: Pick a different partition dimension.

ORA-36672: (XSDPART10) A RANGE or LIST PARTITION TEMPLATE can only have a single partition dimension.

Cause: User attempted to define a RANGE or LIST partition template with more than one partition dimension.

Action: Remove all but one of the dimensions from the PARTITION BY RANGE(...) or PARTITION BY LIST(...) clause of the partition template definition.

ORA-36673: (XSDPART11) Use simple leaf values to identify concat dimension values in a VALUES LESS THAN clause, rather than the <LEAF: VALUE> format.

Cause: When defining a RANGE partition template with a concat dimension for the partition dimension, the user attempted to define a range using the <LEAF: VALUE> format of a concat dimension value.

Action: Use just the leaf value. Instead of "VALUES LESS THAN <leaf: value>", just say, "VALUES LESS THAN value".

ORA-36674: (XSDPART12) Invalid dimension value starting at *string*.

Cause: When defining a RANGE or LIST partition template, the user specified an invalid value in a VALUES LESS THAN or VALUES clause. An "invalid value" can be one of two things: a value whose datatype does not match the partition dimension's datatype, or a non-constant value.

Action: Modify the offending VALUES LESS THAN or VALUES phrase.

ORA-36676: (XSDPART14) Missing dimension list for *string*.

Cause: User attempted to define a CONCAT partition template, and didn't supply a list of dimensions for one of the partition definitions.

Action: Give a dimension list for each partition.

ORA-36677: (XSDPART15) Duplicate value in value lists of *number* and *number*

Cause: In a LIST PARTITION TEMPLATE definition, a value appeared in more than one value list, or more than once within a single value list.

Action: List each value only once.

ORA-36678: (XSDPART16) *workspace object* is missing from one or more partition dimension lists.

Cause: In the definition of a partition template, one of the partitions had a dimension list that did not contain all the dimensions of the partition template.

Action: Add the offending dimension to the partition's dimension list, or delete it from the partition template's dimension list. If using CONCAT partitioning and the missing dimension is a partition dimension, add to the partition dimension list any leaf of the partition dimension or any concat of leaves of the partition dimension.

ORA-36679: (XSDPART17) *workspace object* contains a leaf (*workspace object*) that is not part of the partition dimension *workspace object*.

Cause: In the definition of a CONCAT partition template, one of the partitions was dimensioned by a dimension that is "concat-related" to a partition dimension, meaning it shares some leaves with the partition dimension, but it contained some leaves that are not in the partition dimension.

Action: Either modify the dimensionality of the partition template to include a concat dimension that contains all the desired leaves, or pick a different dimension for the partition.

ORA-36680: (XSDPART18) *workspace object* is not a dimension of the PARTITION TEMPLATE.

Cause: In the definition of a partition template, one of the partitions was dimensioned by a dimension that was not given in the dimension list of the partition template.

Action: Remove the offending dimension from the partition's dimension list, or add it to the partition template's dimension list.

ORA-36681: (XSDPART19) Partitions *string* and *string* are out of order.

Cause: In the definition of a range partition template, a partition with a lower range boundary was listed after a partition with a higher range boundary.

Action: Alter the order of the partition definition list.

ORA-36682: (XSDPART20) Partition name *string* appears twice.

Cause: User gave a list of AW partitions in which some partition name appeared twice.

Action: Remove all but the first instance of the partition name from the list.

ORA-36683: (XSDPART21) Partition *string* dimensioned by more than one composite.

Cause: It is illegal to define a partition template in which one of the partitions is dimensioned by more than one composite.

Action: Make sure that the partition template being defined has at most one composite per partition.

ORA-36684: (XSDPART22) You cannot rename values of DIMENSION *workspace object* because it is the partition dimension of RANGE PARTITION TEMPLATE *workspace object*

Cause: User attempted to rename a value of a dimension that serves as the partition dimension of some RANGE or LIST partition template.

Action: It is not possible to rename values in such a dimension without deleting all RANGE and LIST partition templates that are partitioned by it.

ORA-36685: (XSDPART23) Only CONCAT partition templates can be subpartitioned.

Cause: User attempted to define a RANGE or LIST partition template with one or more partitions dimensioned by another partition template.

Action: Use only regular dimensions and composites to dimension each partition of the RANGE or LIST template.

ORA-36686: (XSDPART24) Value *number* is not in partition *number*.

Cause: User attempted to reorganize a list partition template by removing a value from some partition's list, but the value was not in the list.

Action: Ensure that the given values match the given partition.

ORA-36687: (XSDPART25) You cannot use compressed composite *workspace object* to dimension multiple partitions of the partition template, because its dimension list includes the PARTITION BY dimension *workspace object*.

Cause: The specified PARTITION BY dimension also occurred in the dimension list of a compressed composite used to dimension multiple partitions.

Action: Ensure that no PARTITION BY dimension occurs among the bases of the compressed composite used to dimension multiple partitions.

ORA-36688: (NTEXTCNV00) Error during conversion from TEXT to NTEXT.

Cause: An unknown character set conversion error occurred when converting a TEXT value to an NTEXT value.

Action: Unknown.

ORA-36691: (NTEXTCNV02) Invalid escape sequence in argument to UNISTR function: *string*.

Cause: The user called the UNISTR function on a string that had an invalid escape sequence. The only valid escape sequences in UNISTR are 1.) an escape-escape sequence, and 2.) an escape, followed by exactly four hexadecimal digits.

Action: Make sure that all escape sequences in UNISTR arguments are exactly four hexadecimal digits. To represent codepoints whose value is less than 0x1000, use preceding zeros. WRONG: 0x10; RIGHT: 0x0010.

ORA-36692: (XSRELID24) A level relation must be specified for the GROUPSET and ROLLUP options of GROUPINGID.

Cause: level relation was not specified.

Action: Specify a level relation.

ORA-36693: (XSRELID25) INHIERARCHY cannot be specified with the GROUPSET and ROLLUP options of GROUPINGID.

Cause: INHIERARCHY option was specified.

Action: Remove INHIERARCHY option.

-
- ORA-36694: (XSRELTBL01) The value cannot be added to dimension *workspace object*.**
Cause: Unknown.
Action: Check the context and permission for dimension maintenance.
- ORA-36695: (XSRELGID26) The length of GID dimension status is *number*. The length of LEVEL dimension status is *number*.**
Cause: GID dimension status did not match LEVEL dimension status.
Action: Change either GID dimension status or LEVEL dimension status.
- ORA-36696: (XSRELTBL02) QDR dimension *workspace object* should not be the related dimension of the relation.**
Cause: An ineligible dimension was specified in the Qualified Data Reference
Action: Do not attempt to qualify this dimension.
- ORA-36698: (XSRELTBL03) QDR dimension *workspace object* should be in the dimension list that dimensions the relation.**
Cause: The named dimension was not in the relation's dimension list.
Action: Select only dimensions that are in the relation's dimension list.
- ORA-36700: (XSRELTBL04) Dimension *workspace object* cannot be qualified more than once.**
Cause: The same dimension was specified more than once in the QDR.
Action: Specify each QDR dimension only once.
- ORA-36702: (XSRELTBL05) The format of the HIERHEIGHT function is: HIERHEIGHT(relation [,] level) level >= 1.**
Cause: The HIERHEIGHT function was specified incorrectly.
Action: Make sure the format is correct.
- ORA-36704: (XSRELTBL06) *workspace object* should be dimensioned by *workspace object*.**
Cause: The level relation is not dimensioned by the source relation dimension.
Action: Make sure the level relation has the correct definition.
- ORA-36706: (XSRELTBL07) *workspace object* should be dimensioned by *workspace object* and one level dimension.**
Cause: The destination relation has the wrong definition.
Action: Make sure the destination relation has the correct dimensions.
- ORA-36708: (XSMXALLOC00) Variable *workspace object* must be dimensioned to be used by the ALLOCATE command.**
Cause: The user supplied an undimensioned (scalar) variable to the ALLOCATE command.
Action: Use a dimensioned variable.
- ORA-36710: (XSMXALLOC01) TARGETLOG variable *workspace object* must be dimensioned identically to TARGET variable *workspace object*.**
Cause: The user attempted to execute ALLOCATE with mismatched TARGET and TARGETLOG variables
Action: Use TARGET and TARGETLOG variables with matching dimensionality.

ORA-36712: (XSMXALLOC02) Relation *workspace object* must be a one-dimensional self-relation to be used as a SOURCE or BASIS with ALLOCATE.

Cause: The user specified an invalid source or basis relation on the ALLOCATE command line.

Action: Modify the relation to be a one-dimensional self-relation.

ORA-36714: (XSMXALLOC03) TARGETLOG variable *workspace object* must have the same data type as TARGET variable *workspace object*.

Cause: The user specified a TARGETLOG variable that had a different data type from the TARGET variable.

Action: Use TARGETLOG and TARGET variables with an identical data type.

ORA-36718: (XSALLOC00) You do not have the necessary permissions to use AGGMAP *workspace object*.

Cause: The user did not have sufficient permissions to run the ALLOCATE command

Action: Change to a user ID with the appropriate permissions, or use objects that you have permission to use.

ORA-36720: (XSALLOC01) To be used with ALLOCATE, your AGGMAP *workspace object* must be defined with the ALLOCMAP command.

Cause: The user used the AGGMAP command to define the AGGMAP, so either the AGGMAP can only be used with the AGGREGATE command, or the AGGMAP has no contents attached to it.

Action: Use the ALLOCMAP command to define the AGGMAP.

ORA-36722: (XSALLOC02) In AGGMAP *workspace object*, you specified an NA or ZERO sourceval but supplied formula *workspace object* as your source for ALLOCATE.

Cause: The user requested that source values be modified during the allocation, but that is not possible when using a formula source.

Action: Either use a VARIABLE source or remove the SOURCEVAL specification for your ALLOCMAP.

ORA-36726: (XSALERR00) The character '*character*' is not a valid format specifier for the ALLOCATE error log.

Cause: The user specified an invalid formatter in the ALLOCERRLOGHEADER or ALLOCERRLOGFORMAT options.

Action: Correct the option to have a valid format.

ORA-36728: (XSALERR01) While performing the ALLOCATE command with AGGMAP *workspace object*, the error logging limit of *number* was exceeded.

Cause: The user specified an ERRORLOG MAX value in the ALLOCMAP, but more errors were encountered while performing the allocation.

Action: Either set ERRORLOG NOSTOP, reduce the allocation errors, or increase the ERRORLOG MAX setting

ORA-36735: A value exceeded the MAX specification

Cause: .

Action: None

ORA-36740: A CHILDLCK was detected in your valueset

Cause: .

Action: None

ORA-36761: (XSLANGDM01) Analytic workspace *string* already contains a dimension (%J) with the *string* property.

Cause: An attempt was made to apply this property to more than one dimension in the AW.

Action: Remove the property from the named dimension and try the command again.

ORA-36762: (XSLANGDM02) You cannot modify the *string* property of %J because analytic workspace *string* is attached in MULTI mode.

Cause: An attempt was made to add or delete a \$DEFAULT_LANGUAGE property in an AW attached in multiwriter mode.

Action: Attach the AW in a different mode.

ORA-36763: (XSAGGCNTMOVE01) Aggregation variable *workspace object* cannot have itself as an AGGCOUNT.

Cause: An attempt was made to turn a variable into its own AGGCOUNT.

Action: Select a different AGGCOUNT variable.

ORA-36764: (XSAGGCNTMOVE02) AGGCOUNT variable *workspace object* must be of type INTEGER, not *string*.

Cause: An attempt was made to create a non-INTEGER AGGCOUNT.

Action: Select an INTEGER AGGCOUNT variable.

ORA-36765: (XSAGGCNTMOVE03) A *string* aggregation variable cannot have a *string* AGGCOUNT.

Cause: The specified AGGCOUNT variable did not have the same permanence as the aggregation variable.

Action: Select an AGGCOUNT variable with the same TEMPORARY or PERMANENT attribute as the aggregation variable.

ORA-36766: (XSAGGCNTMOVE04) *workspace object* cannot be used as an AGGCOUNT because it has an AGGCOUNT.

Cause: The specified AGGCOUNT variable had its own AGGCOUNT

Action: Select a different variable, or remove the AGGCOUNT using CHGDFN.

ORA-36767: (XSAGGCNTMOVE05) *workspace object* cannot be used as an AGGCOUNT while there are permissions applied to it.

Cause: The specified AGGCOUNT variable had its own permissions distinct from those on the aggregation variable.

Action: Select a different AGGCOUNT variable, or remove the permissions. In some cases this may require an UPDATE before the command can succeed.

ORA-36768: (XSAGGCNTMOVE06) An aggregation variable and its AGGCOUNT must have the same base dimensions.

Cause: An AGGCOUNT variable was specified with different base dimensions than the aggregation variable.

Action: Select an AGGCOUNT variable with exactly the same base dimensions as the aggregation variable.

ORA-36778: (XSPGTRLOW) The amount of available temporary storage is still low. Free some temporary storage immediately. You can do so, for example, by UPDATING or DETACHING an analytic workspace.

Cause: Ran out of temporary tablespace storage.

Action: Increase the amount of temporary tablespace storage.

ORA-36779: (XSPGPOOLOUT) Invalid parameter value. Olap_page_pool_size must be between 2097152 and 2147483647. Olap_page_pool_size remain unmodified.

Cause: Specified value for `olap_page_pool_size` out of range.

Action: None

ORA-36800: (XSTBLFUNC00) The OLAP_TABLE function can only have a single LOOP statement within the LIMITMAP

Cause: The OLAP table function given used more than one LOOP statement.

Action: It is currently impossible to specify more than one LOOP composite, either remove one of the statements (and loop densely over relevant dimensions), or create a new composite that encompasses both loops and have a single loop statement refer to that.

ORA-36802: (XSTBLFUNC01) The OLAP_TABLE function must contain a DATAMAP that executes a FETCH command or a LIMITMAP.

Cause: There is no limitmap on the table function and either the datamap does not contain a fetch, or it errored before the fetch was called.

Action: Check the datamap for errors, make sure that it executes a fetch statement, if it is not intended to execute the fetch then make sure that the table function has a valid limitmap.

ORA-36804: (XSTBLFUNC02) The OLAP_TABLE function encountered an error while parsing the LIMITMAP.

Cause: Invalid LIMITMAP syntax, or the name resolution failure of an ANALYTIC WORKSPACE OBJECT.

Action: Check the syntax of the limit map, check that the OLAP_TABLE function refers to a valid analytic workspace, check that all analytic workspace objects within the limitmap actually exist within the analytic workspace

ORA-36806: (XSTBLFUNC03) The OLAP_TABLE function refers to an invalid ADT attribute: *string*.

Cause: The limitmap refers to a matching of ADT attribute to AW object, but the ADT attribute is not an element of the specified ADT table. Most commonly this is a typo.

Action: Add the attribute to the ADT, correct the LIMITMAP, or remove the reference from the LIMITMAP.

ORA-36808: (XSTBLFUNC04) The OLAP_TABLE function LEVELREL clause cannot declare *number* ADT fields from *number* AW fields.

Cause: The limitmap has a levelrel clause which has a different number of values in the list to the right of the FROM than it has to the left.

Action: Change the limitmap so that there is a 1:1 mapping of adt and aw elements.

ORA-36810: (XSTBLFUNC05) Analytic workspace object *number* does not exist.

Cause: The limitmap refers to a non-existent aw object.

Action: Change the limitmap or define the object

ORA-36812: (XSTBLFUNC06) Invalid Syntax at '?'.

Cause: The limitmap has a question mark character outside the context of a string.

Action: Fix the limitmap

ORA-36814: (XSTBLFUNC07) The datatype of the column used in the ROW2CELL clause of a LIMITMAP must be RAW(16).

Cause: Datatype of column used in ROW2CELL clause of a LIMITMAP is not RAW(16).

Action: Change datatype to RAW(16).

ORA-36815: (XSTBLFUNC08) The OLAP_TABLE has attempted to use an AW single row function with the aw_attach parameter set to DURATION QUERY.

Cause: The OLAP_TABLE aw_attach parameter was set to DURATION QUERY.

Action: Change the OLAP_TABLE aw_attach parameter to DURATION SESSION.

ORA-36816: (XSTBLFUNC09) The *workspace object* dimension is of datatype *string* which does not support custom member upserts.

Cause: Custom members were attempted to be added via an upsert to a dimension that does not support them

Action: Disable the AW Hash optimization for this query

ORA-36817: (XSTBLFUNC10) The LIMITMAP LOOP clause specifies an invalid type of object. *workspace object* must be a DIMENSION or COMPOSITE.

Cause: An invalid type of object was specified in the LOOP clause.

Action: Correct the LOOP clause.

ORA-36818: (XSTBLFUNC11) A LIMITMAP DIMENSION clause specifies an invalid type of object. *workspace object* must be a DIMENSION.

Cause: An invalid type of object was specified in the DIMENSION clause.

Action: Correct the DIMENSION clause.

ORA-36819: (XSTBLFUNC12) *workspace object* cannot be used in a LIMITMAP *string* clause.

Cause: An invalid type of object was specified in a LIMITMAP clause.

Action: Correct the LIMITMAP clause.

ORA-36820: (XSLMINFO00) The LIMITMAPINFO function encountered an error while parsing the LIMITMAP.

Cause: Invalid LIMITMAP syntax.

Action: Correct the syntax of the limit map.

ORA-36821: (XSJPUSH00) An error occurred while attempting to push a join of 2 AW tables.

Cause: Unknown.

Action: Re-execute the query with parameter `_optimizer_aw_join_push_enabled = FALSE`.

ORA-36825: (XSTBLFUNC13) An error occurred expanding the `cube_name` argument in the OLAP table function

Cause: Incorrect metadata or invalid cube name

Action: Correct the metadata.

ORA-36826: (XSTBLFUNC14) OLAP C Looper is disabled by event 37395

Cause: init.ora event 37395 includes level 8 which disables the OLAP C looper

Action: Remove event level 8 and use explicit FETCH function for OLAP_TABLE

ORA-36830: (XSLMGGEN00) Object *string.string* does not exist

Cause: The object does not exist

Action: Check view token for errors

ORA-36831: (XSLMGGEN01) View token cannot be NA

Cause: A NA was passed as the view token

Action: Pass in a valid view token

ORA-36832: (XSLMGGEN02) View token cannot be greater than 4000 bytes

Cause: A view token was greater than 4000 bytes

Action: Pass in a view token less than 4000 bytes

ORA-36833: (XSLMGGEN03) View token cannot be blank

Cause: A blank was passed as the view token

Action: Pass in a valid view token

ORA-36834: (XSLMGGEN04) Column tag is greater than 30 bytes

Cause: A value greater than 30 bytes was passed as the column tag

Action: Pass in a column tag of 30 bytes or less

ORA-36835: (XSLMGGEN05) Dimension *string.string* hierarchy *string* level *string* is missing a COLUMNNAME property value

Cause: The COLUMNNAME property has no value

Action: Add a value to COLUMNNAME property

ORA-36836: (XSLMGGEN06) The dimensionality of object *string.string* is different than the view token

Cause: The dimensionality of the cube does not match the view token

Action: Check view token for unrelated hierarchies clauses

ORA-36837: (XSLMGGEN07) Object owner *string* is different than *string*

Cause: The object owners are different

Action: Make the object owners match

ORA-36838: (XSLMGGEN08) Dimension *string.string* attribute *string* is missing a COLUMNNAME property value

Cause: The COLUMNNAME property has no value

Action: Add a value to COLUMNNAME property

ORA-36839: (XSLMGGEN09) Cube *string.string* measure *string* is missing a COLUMNNAME property value

Cause: The COLUMNNAME property has no value

Action: Add a value to COLUMNNAME property

ORA-36840: (XSLMGGEN10) Cube *string.string* has no measures

Cause: The cube has no measures

-
- Action:** Add a measure to the cube
- ORA-36841: (XSLMGEN11) Dimension *string.string* was not found**
Cause: The view token referenced a dimension that does not exist
Action: Pass in a dimension that does exist
- ORA-36842: (XSLMGEN12) Hierarchy *string.string.string* was not found**
Cause: The view token referenced a hierarchy that does not exist
Action: Pass in a hierarchy that does exist
- ORA-36843: (XSLMGEN13) Dimension *string.string* hierarchy *string* is missing a PHYSICALNAME property value**
Cause: The property PHYSICALNAME has no value
Action: Populate the property PHYSICALNAME with a value
- ORA-36844: (XSLMGEN14) Dimension *string.string* is missing a *string* property value**
Cause: The dimension is missing a required property
Action: Check dimension property values
- ORA-36845: (XSLMGEN15) Owner is greater than 30 bytes**
Cause: The owner passed is greater than 30 bytes
Action: Pass in an owner that is 30 bytes or less
- ORA-36846: (XSLMGEN16) AW name is greater than 30 bytes**
Cause: The AW name passed is greater than 30 bytes
Action: Pass in an AW name that is 30 bytes or less
- ORA-36847: (XSLMGEN17) AW name is blank**
Cause: The AW name passed is blank
Action: Pass in an AW name that has a value
- ORA-36848: (XSLMGEN18) Object name *string* is different than *string***
Cause: The object names are different
Action: Make the object names match
- ORA-36849: (XSLMGEN19) AW owner does not match View token owner**
Cause: The AW owner does not match the View token owner
Action: Match AW owner to View token object owner
- ORA-36850: (XSLMGEN20) View token *string* is not correct**
Cause: The view token is not correct
Action: Check view token syntax for errors
- ORA-36861: (XSTFRC01) SQL Cache ID parameter is invalid or missing.**
Cause: SQL Cache ID parameter is required to identify SQL cache to query
Action: Supply a valid SQL Cache ID. Normally, users should not call OLAP Random Access Cursor table function themselves and therefore should not encounter this error.
- ORA-36862: (XSTFRC02) Column number for this SQL Cache must be between 1 and *number*. Specified column number *number* is invalid.**

Cause: Column Map references a column number that is greater than the maximum column number in SQL Cache

Action: Reference a correct column number. Normally, users should not call OLAP Random Access Cursor table function themselves and therefore should not encounter this error.

ORA-36871: (XSFTDSC01) Object *string* cannot be used to define a column in a LIMITMAP.

Cause: The object cannot define a column in LIMITMAP most likely because it is of a wrong type such as, for example, a Worksheet.

Action: Remove the reference from the LIMITMAP.

ORA-36872: (XSTFDSC02) Column type specifier cannot be used when the table function data type is specified.

Cause: Column type can only be used with implicitly-specified table functions

Action: Remove column type from reference from the LIMITMAP or remove the explicit table function data type specification.

ORA-36873: (XSTFDSC03) Column type must be specified explicitly.

Cause: Missing column type specification.

Action: Please, make sure to specify a column type in COLUMN MAP. Normally, users should not call OLAP Random Access Cursor table function themselves and therefore should not encounter this error.

ORA-36874: (XSTFDSC04) Expression *string* cannot be used to define a column in a LIMITMAP.

Cause: The expression cannot define a column in LIMITMAP most likely because it is of a wrong type such as, for example, a Worksheet.

Action: Remove the reference from the LIMITMAP.

ORA-36875: (XSTFDSC05) LIMITMAP is missing or is not a string literal.

Cause: Table functions that have an automatic ADT require LIMITMAP to be a string literal.

Action: Either specify ADT for the table function or specify LIMITMAP as a string literal.

ORA-36876: (XSTFDSC06) The column datatype *string* is not supported in OLAP table functions.

Cause: The object type layer does not support column datatype.

Action: Use a supported column datatype.

ORA-36881: (XSRLF00) The OLAP DML ROW2CELL function can only be used in a LIMITMAP.

Cause: Using the ROW2CELL function outside of the LIMITMAP.

Action: Remove use of the ROW2CELL function.

ORA-36882: (XSRLF01) The second parameter of an AW single row function cannot be NULL.

Cause: The second parameter of the AW single row function was NULL

Action: Pass a valid OLAP DML expression as the second parameter of the AW single row function

ORA-36883: (XSSRF02) The first parameter of an AW single row function cannot be NULL.

Cause: The first parameter of the AW single row function was NULL

Action: Make sure the column specified in the LIMITMAP ROW2CELL clause is the first parameter of the AW single row function.

ORA-36884: (XSSRF03) The value of the first parameter of the AW single row function is incorrect.

Cause: The column specified in the LIMITMAP ROW2CELL clause was not the first parameter of the AW single row function.

Action: Make sure the column specified in the LIMITMAP ROW2CELL clause is the first parameter of the AW single row function.

ORA-36885: (XSSRF04) Error rewriting OLAP DML expression. Column name too big

Cause: The column name specified in the OLAP DML expression was larger than 30 bytes.

Action: Make sure the column name specified in the OLAP DML expression is less than or equal to 30 bytes.

ORA-36886: (XSSRF05) Error rewriting OLAP DML expression. Rewritten expression is greater than *number* bytes

Cause: The rewritten OLAP DML expression was larger than the output buffer.

Action: Create a smaller OLAP DML expression.

ORA-36887: (XSSRF06) Error rewriting OLAP DML expression. Column name *string* is not a valid ADT column.

Cause: The column name passes does not exist.

Action: Only reference columns that exist.

ORA-36902: (XSAGDNGL43) In AGGMAP *workspace object*, the MODEL *workspace object* is not a model over a base dimension of the AGGMAP.

Cause: Model may include equations others than dimension values, or blocks other than simple blocks.

Action: Make sure model only includes the simple blocks with dimension values.

ORA-36904: (XSAGDNGL44) In AGGMAP *workspace object*, RELATION *workspace object* occurs after a dynamic model. The dynamic model must be the last calculation within the AGGMAP.

Cause: Before the current relation, dynamic model exists.

Action: Make sure the dynamic model is the last statement.

ORA-36910: (XSAGDNGL47) In AGGMAP *workspace object*, DYNAMIC MODEL *workspace object* can only edit the top level of its matching relation hierarchy.

Cause: The model attempted to edit a child node in the relation hierarchy.

Action: Remove this attempt from the model definition.

ORA-36912: (XSAGDNGL48) In AGGMAP *workspace object*, MODEL *workspace object* cannot be simultaneous.

Cause: The aggmap contained a simultaneous model.

Action: Change the model definition so that it is no longer simultaneous.

ORA-36913: (XSAGDNGL49) In AGGMAP *workspace object*, LOAD_STATUS object *workspace object* must be an undimensioned VALUESET over the relation dimension.

Cause: The object referred to by the LOAD_STATUS clause of the aggmap wasn't an undimensioned valueset over the related dimension

Action: Change the aggmap definition so that it doesn't refer to an invalid object

ORA-36914: (XSAGDNGL50) In AGGMAP *workspace object*, LOAD_STATUS valueset *workspace object* contains both a child and its ancestor.

Cause: The LOAD_STATUS valueset is not allowed to contain both a dimension value and an ancestor of that value.

Action: Perform a limit remove ancestors on the valueset and confirm that the result matches the intended load.

ORA-36920: (XSVPMVTOPART01) *workspace object* cannot become anonymous because it has properties.

Cause: The OLAP DML command would result in a named object becoming an anonymous object, but the object had one or more properties associated with it.

Action: Remove the properties using the PROPERTY command. In some cases an UPDATE may be required before the command can proceed.

ORA-36921: (XSVPMVTOPART02) *workspace object* and *workspace object* are not in the same analytic workspace.

Cause: The OLAP DML command requires certain objects to be in the same analytic workspace, and the command string specified objects from two different analytic workspaces.

Action: If more than one analytic workspace is attached to the session, make sure that the object names given in the command are unique across all attached analytic workspaces. Use qualified object names (QON's) if necessary.

ORA-36922: (XSVPMVTOPART03) *workspace object* is the target of an external partition of a partitioned variable.

Cause: An attempt was made to perform some prohibited operation on a variable which is itself a partition of some other variable.

Action: If desired, use the CHGDFN command to DROP the partition from the partitioned variable, and then run the command again.

ORA-36923: (XSVPMVTOPART04) *workspace object* is not a LIST or RANGE PARTITION TEMPLATE.

Cause: The user ran a command that only operates on a LIST or RANGE partition template (or a variable dimensioned by a LIST or RANGE partition template) on some other kind of analytic workspace object.

Action: Rerun the command on a LIST or RANGE partition template or a variable dimensioned by a LIST or RANGE partition template.

ORA-36924: (XSVPMVTOPART05) *workspace object* is not in a COMPOSITE.

Cause: The OLAP DML command expected that the variable would be dimensioned by a composite containing the specified dimension, the specified dimension within a composite.

Action: Rerun the command on some variable is dimensioned by a composite containing the specified dimension.

-
- ORA-36930: Cannot start a recursive call to Oracle OLAP because a ROLLBACK past an UPDATE to an attached analytic workspace has been performed.**
Cause: ROLLBACK past the UPDATE of one of the attached Analytic Workspaces was called. A recursive Oracle OLAP call cannot be made until the control returns to the initial OLAP call and the affected Analytic Workspaces detached.
Action: Change the called SQL procedure to avoid the ROLLBACK
- ORA-36950: (XSFCAST22) The list of *string* values cannot have more than *number* members. You supplied *number*.**
Cause: There are more than the maximum number of OFFSET or PERIODICITY values.
Action: Remove some of the values.
- ORA-36951: (XSFCAST28) The ALLOCLAST parameter cannot be set to YES unless PERIODICITY specifies more than one cycle.**
Cause: ALLOCLAST was set to YES when PERIODICITY specified a single value rather than a list of nested cycles.
Action: Set ALLOCLAST to FALSE (the default), or specify more than one value for PERIODICITY (in the form of a parenthesized list).
- ORA-36952: (XSFCAST23) You cannot specify a cycle number when querying the *string* forecasting option.**
Cause: A cycle number was specified in a call to FCQUERY to retrieve forecast data not related to a cycle.
Action: Remove the cycle specification from the call to FCQUERY.
- ORA-36954: (XSFCAST24) The cycle number must be between 1 and *number*. You specified *number*.**
Cause: A cycle number less than 1 or greater than the maximum value was specified in a call to FCQUERY.
Action: Specify a number in the indicated range.
- ORA-36956: (XSFCAST25) There are only *number* PERIODICITY values. You cannot specify more OFFSET values.**
Cause: More OFFSET values were specified than PERIODICITY values.
Action: Supply only as many OFFSETs as there are PERIODICITY values.
- ORA-36958: (XSFCAST26) The OFFSET value for cycle *number* cannot be greater than the cycle's PERIODICITY, which is *number*. You specified *number*.**
Cause: The OFFSET for a cycle exceeded the PERIODICITY for that cycle.
Action: Supply an OFFSET less than or equal to the PERIODICITY for the corresponding cycle.
- ORA-36960: (XSFCAST27) The value of the *string* expression must be an odd number. You specified *number*.**
Cause: An even number was given for an option that requires an odd number.
Action: Supply an odd number or let the option default.
- ORA-36961: Oracle OLAP is not available.**
Cause: The user attempted to utilize functionality found only in Oracle OLAP, but OLAP has not been enabled in the executable.
Action: Install the Oracle OLAP option

ORA-36962: (XSRELTBL08) *string is not a valid workspace object.*

Cause: The specified value does not exist in the dimension.

Action: Specify an existing value of the dimension.

ORA-36963: (XSRELTBL16) *INHIERARCHY object workspace object should be a valid valueset or boolean variable.*

Cause: Invalid valueset or variable was specified.

Action: Specify a valid valueset or variable.

ORA-36964: (XSRELTBL09) *workspace object is not a valid level relation.*

Cause: The specified level relation was not consistent with the parentage hierarchy.

Action: Fix one or both of the relations involved so that all parents are at a higher level than their children.

ORA-36965: (XSRELTBL17) *Invalid LEVELORDER valueset workspace object.*

Cause: Invalid LEVELORDER valueset was specified.

Action: Specify a valid valueset.

ORA-36966: (XSRELTBL10) *workspace object must be a dimension.*

Cause: The qualified object must be a dimensions.

Action: Remove the named object from the QDR.

ORA-36967: (XSRELTBL18) *Invalid INHIERARCHY valueset workspace object.*

Cause: Invalid valueset was specified.

Action: Specify a valid valueset.

ORA-36968: (XSRELTBL11) *Invalid relation workspace object.*

Cause: Non-object or an object other than a RELATION was specified as source or destination.

Action: Specify RELATION objects.

ORA-36969: (XSRELTBL19) *Merged family relation cannot take INHIERARCHY option.*

Cause: INHIERARCHY option was specified.

Action: Remove INHIERARCHY option.

ORA-36970: (XSRELTBL12) *workspace object must be a self-relation.*

Cause: The specified source relation was not a self-relation.

Action: Specify a self-relation as the source.

ORA-36971: (XSRELTBL19) *Merged family relation cannot take LEVELORDER option.*

Cause: LEVELORDER option was specified.

Action: Remove LEVELORDER option.

ORA-36972: (XSRELTBL13) *Relation workspace object must be dimensioned by workspace object.*

Cause: Destination relation is not dimensioned by source relation dimension.

Action: Give a correct destination relation.

-
- ORA-36974: (XSRELTBL14) *workspace object* is not a BOOLEAN variable dimensioned by all the dimensions of the hierarchy.**
Cause: The named variable had either the wrong data type or the wrong dimensions.
Action: Specify a BOOLEAN variable dimensioned by all the dimensions of the hierarchy.
- ORA-36975: (XSRELTBL15) You must specify a USING clause naming a relation with same level dimension as LEVELORDER valueset *workspace object*.**
Cause: USING was omitted from the HIERHEIGHT command, or specified a relation containing values of a different dimension than the LEVELORDER valueset.
Action: Provide a USING clause naming a relation containing values from the correct level dimension. -----
- ORA-36976: (XSRELGID00) Invalid GROUPINGID destination relation or variable *workspace object*.**
Cause: Non-Object or invalid relation or invalid variable.
Action: Specify the valid relation or variable.
- ORA-36977: (XSRELGID17) The GROUPINGID command does not support hierarchies with more than 126 levels.**
Cause: The user specified a hierarchy with more than 126 levels.
Action: Decrease the number of levels in the hierarchy.
- ORA-36978: (XSRELGID01) *workspace object* must be a self-relation.**
Cause: Source relation is not a self-relation.
Action: Specify a self-relation as the source relation.
- ORA-36979: (XSRELGID18) Property *number* can only be set by the GROUPINGID command.**
Cause: You tried to set the \$GID_DEPTH property.
Action: Stop to set the \$GID_DEPTH property.
- ORA-36980: (XSRELGID02) Variable *workspace object* must have a numeric data type.**
Cause: The destination variable does not have a numeric data type.
Action: Make sure the variable is numeric.
- ORA-36981: (XSRELGID19) The format of the GROUPINGID function is: GROUPINGID(gidrel1 [gidrel2]...)**
Cause: Bad syntax
Action: Correct syntax
- ORA-36982: (XSRELGID03) The destination variable/relation *workspace object* must be dimensioned by all dimensions of the source relation *workspace object* that have more than one value in status.**
Cause: Destination variable/relation does not have enough dimensionality to hold the result from the multi-dimensional source relation.
Action: Either limit the status of hierarchy dimensions or redefine the destination variable/relation with the extended dimensionality

ORA-36983: (XSRELGID20) The groupingid relation *workspace object* repeats.

Cause: The groupingid relation repeated.

Action: Remove the duplicated groupingid relation.

ORA-36985: (XSRELGID21) The source relation can be omitted only when using both surrogate GID and level order valueset.

Cause: Source relation was not specified.

Action: Specify the source relation or both surrogate gid and level order valueset.

ORA-36986: (XSRELGID05) Relation *workspace object* must be dimensioned by *workspace object*.

Cause: The destination relation is not dimensioned by the dimension of the source relation.

Action: Redefine the destination relation or choose another relation with the correct dimensionality.

ORA-36988: (XSRELGID06) The related dimension of relation *workspace object* must be of type NUMBER.

Cause: The related dimension of the destination relation has the wrong data type.

Action: Redefine the destination relation or choose another relation whose related dimension is of type NUMBER.

ORA-36989: (XSRELGID23) GROUPSET and ROLLUP options in GROUPINGID require the destination relation.

Cause: Either variable or surrogate dimension was specified as destination.

Action: Specify the destination relation.

ORA-36990: (XSRELGID07) The level relation *workspace object* should be dimensioned by a level dimension.

Cause: The level relation is not dimensioned by a level dimension.

Action: Redefine the level relation or choose another relation with the correct dimensionality.

ORA-36991: (XSRELGID08) The level relation and level order valueset provide inconsistent level mappings.

Cause: There is a conflict between the hierarchy/level relation and the level order valueset.

Action: Choose objects that do not conflict.

ORA-36992: (XSRELGID09) A level relation is needed to produce a surrogate dimension gid.

Cause: A level relation was not specified.

Action: Specify a level relation.

ORA-36993: (XSRELGID10) OBJECT *workspace object* must be a VARIABLE, RELATION, or a numeric SURROGATE DIMENSION based on the level dimension *workspace object*.

Cause: not a surrogate dimension, or the surrogate dimension is not based on the level dimension.

Action: modify/change the surrogate dimension.

-
- ORA-36994: (XSRELGID11) The SURROGATE DIMENSION *workspace object* must be numeric.**
Cause: The surrogate dimension is not numeric
Action: Change the surrogate dimension as numeric
- ORA-36995: (XSRELGID12) There are duplicate values in the surrogate dimension gid. Use the levelorder option to resolve the ambiguity.**
Cause: more than 1 hierarchies in the current computing scope.
Action: use inhierarchy to limit
- ORA-36996: (XSRELGID13) Valueset *workspace object* should be defined over dimension *workspace object*.**
Cause: Valueset doesn't match the dimension
Action: Change the valueset's dimension
- ORA-36997: (XSRELGID14) For variable or relation grouping ids, a level relation is needed when a level order valueset is specified.**
Cause: no level relation exists with level order valueset.
Action: provide the level relation.
- ORA-36998: (XSRELGID15) LEVEL ORDER VALUESET *workspace object* and LEVEL RELATION *workspace object* have the different level dimensions.**
Cause: either level order valueset or level relation has wrong level dimension.
Action: choose the correct level dimension
- ORA-36999: (XSRELGID16) OBJECT *workspace object* is not a surrogate dimension, a source relation must be specified when creating any non-surrogate grouping id.**
Cause: use variable/relation gid without providing the source relation
Action: use the surrogate or provide the source relation
- ORA-37000: (NOTALIAS00) *workspace object* is not an ALIAS DIMENSION of *workspace object*.**
Cause: The user specified an object which is not alias dimension of the first dimension
Action: Specify an alias dimension of the first dimension
- ORA-37001: You have one or more attached but unupdated analytic workspaces.**
Cause: The user has attempted to shut down OLAP, but they have active analytic workspaces whose changes have not been saved.
Action: Either issue the update command to update the AWs, or pass TRUE as the force parameter to `dbms_aw.shutdown()`
- ORA-37002: Oracle OLAP failed to initialize. Please contact Oracle OLAP technical support.**
Cause: A severe error occurred while initializing OLAP.
Action: Contact support (and possibly OLAP development) for help in debugging the issue.
- ORA-37003: (AWLISTALL01) *number* readers**
Cause: used in AW(LISTALL) output formatting when %d is 0
Action: None

ORA-37004: (AWLISTALL02) *number* reader

Cause: used in AW(LISTALL) output formatting when %d is 1

Action: None

ORA-37005: (AWLISTALL03) *number* readers

Cause: used in AW(LISTALL) output formatting when %d is > 1

Action: None

ORA-37006: (AWLISTALL04) *number* writers

Cause: used in AW(LISTALL) output formatting when %d is 0

Action: None

ORA-37007: (AWLISTALL05) *number* writer

Cause: used in AW(LISTALL) output formatting when %d is 1

Action: None

ORA-37008: (AWLISTALL06) *number* writers

Cause: used in AW(LISTALL) output formatting when %d is > 1

Action: None

ORA-37010: (XSACQUIRE_DIFFAW) When using the CONSISTENT WITH clause, all objects must come from the same analytic workspace.

Cause: The ACQUIRE command cannot keep objects from several workspaces consistent with each other

Action: Omit the CONSISTENT WITH clause or make sure all objects being acquired belong to the same analytic workspace.

ORA-37011: (XSACQUIRE_LOCKED) Object *workspace object* is locked by another user.

Cause: Could not acquire (or acquire consistent) the object, since it is locked by another user

Action: Try to acquire this object later

ORA-37012: (XSACQUIRE_TIMEOUT) Object *workspace object* is locked by another user and the WAIT timed out.

Cause: Could not acquire (or acquire consistent) the object for a while, since it is locked by another user

Action: Try to acquire this object later

ORA-37013: (XSACQUIRE_DEADLOCK) Cannot wait to acquire object *workspace object*, since doing so would cause a deadlock.

Cause: Waiting to acquire the object would cause a deadlock

Action: Release some other object that another user is waiting for and try to acquire this object again.

ORA-37014: (XSACQUIRE_ACQUIRED) Object *workspace object* is already acquired.

Cause: The object is already acquired

Action: Do not try to acquire this object again

ORA-37015: (XSACQUIRE_YNRESYNC) Object *workspace object* is ambiguously listed to be acquired both with and without RESYNC.

Cause: The object is listed in with resync list and no resync list. Such usage is ambiguous as to the user's intent on preserving or not preserving private changes.

Action: Do not list the object both with and without RESYNC

ORA-37016: (XSACQUIRE01) You must specify objects to acquire for the ACQUIRE command.

Cause: A list of objects to acquire with or without resync is missing

Action: Specify the list of objects to acquire

ORA-37018: (XSACQUIRE03) Multiwriter operations are not supported for object workspace object.

Cause: Multiwriter presently does not work for this object type

Action: Attach the AW in RW or EXCLUSIVE modes to modify this object.

ORA-37020: (XSMULTI01) Analytic workspace string is not in MULTI mode.

Cause: The workspace for an object is not in multiwriter mode. Hence, no multiwriter operations are allowed on the objects in the workspace

Action: Attach the workspace in the multiwriter mode or do not use multiwriter commands with it.

ORA-37021: (XSMULTI02) Object workspace object is not acquired.

Cause: The object must be acquired for this multiwriter operation

Action: Do not use this multiwriter operation on an object that is not acquired

ORA-37023: (XSMLTUPD01) Object workspace object cannot be updated without dimension workspace object.

Cause: One cannot update an object if it is dimensioned by a maintained dimension without updating that dimension or if the object is a relation and the dimension is its target.

Action: Include the maintained dimension in the update list

ORA-37026: (XSMLTRESYNC01) Object workspace object cannot be resynced without dimension workspace object.

Cause: One cannot resync an object if it is dimensioned by a maintained dimension without updating that dimension or if the object is a relation and the dimension is its target.

Action: Include the maintained dimension in the update list

ORA-37027: (XSMLTRESYNC02) Object workspace object cannot be resynced without modified object workspace object because they share a modified composite dimension.

Cause: When one resyncs an object that is dimensioned by a composite dimension, the composite dimension is resynced automatically, dropping all new tuples. This cannot be done, however, if the automatic resync of the composite dimension might cause data in an object that shares the composite dimension to become NA.

Action: Resync both objects together. Alternatively, you can try to acquire the other object (that will ensure that the composite dimension is locked in the latest generation and will not be resynced when resyncing the first object), resync the first object, and release the other object.

ORA-37028: (XSMLTRESYNC03) Object *workspace object* cannot be resynced without modified object *workspace object* because they share a modified dimension map.

Cause: When one resyncs an object that is dimensioned by a dimension map, the dimension map is resynced automatically, dropping all changes. This cannot be done, however, if the automatic resync of the dimension map might cause data in an object that shares the dimension map to become NA.

Action: Resync both objects together. Alternatively, you can try to acquire the other object (that will ensure that the dimensions map is locked in the latest generation and will not be resynced when resyncing the first object), resync the first object, and release the other object.

ORA-37030: (XSMLTMAINT01) You cannot maintain *workspace object* because it is not ACQUIRED.

Cause: One cannot maintain a dimension in a multiwriter AW if it is not acquired.

Action: Acquire the dimension first.

ORA-37031: (XSMLTMAINT02) You cannot DELETE values of dimension *workspace object* in MULTI mode.

Cause: DELETE is allowed in multiwriter mode only for SESSION dimension members

Action: Attach the AW in a R/W mode and perform the DELETE operation

ORA-37032: (XSMLTMAINT03) You cannot MAINTAIN partition template *workspace object* in MULTI mode.

Cause: User attempted to add or remove values from a LIST partition template's lists while the AW containing the partition template was attached in multiwriter mode.

Action: Do the maintenance in read only or read-write mode.

ORA-37035: (XSMLTDCL01) You can only DEFINE SESSION objects in analytic workspace *string* because it is attached in MULTI mode.

Cause: Persistent object definition in multiwriter mode is not allowed.

Action: Do all persistent object definitions in read-write mode.

ORA-37036: (XSMLTDCL02) You cannot DELETE objects in analytic workspace *string* because it is attached in MULTI mode.

Cause: One cannot delete objects in an analytic workspace attached in MULTI mode.

Action: Do all object in read-only or read-write mode.

ORA-37037: (XSMLTDCL03) You cannot RENAME objects in analytic workspace *string* because it is attached in MULTI mode.

Cause: One cannot rename objects in an analytic workspace attached in MULTI mode.

Action: Do all persistent object maintenance in read-write mode.

ORA-37038: (XSMLTDCL04) You cannot change definitions of objects in analytic workspace *string* because it is attached in MULTI mode.

Cause: One cannot used CHGDFN command on objects in an analytic workspace attached in MULTI mode.

Action: Do all persistent object maintenance in read-write mode.

-
- ORA-37039: (XSMLTDCL05) You cannot maintain triggers in analytic workspace *string* because it is attached in MULTI mode.**
Cause: One cannot use TRIGGER command on objects in an analytic workspace attached in MULTI mode.
Action: Do all persistent object maintenance in read-write mode.
- ORA-37040: (XSACQUIRE_DEP_LOCKED) Composite, concat, dimension map, or internal partition *workspace object* is locked by another user.**
Cause: Some object required locking a composite, concat, dimension map, or internal partition, which is locked by another user
Action: Try to acquire this object later
- ORA-37041: (XSACQUIRE_DEP_TIMEOUT) Composite, concat, dimension map, or internal partition *workspace object* is locked by another user and the WAIT timed out.**
Cause: Some object required locking a composite, concat, dimension map, or internal partition, which could not be locked for a while, since it is locked by another user
Action: Try to acquire this object later
- ORA-37042: (XSACQUIRE_DEP_DEADLOCK) Cannot wait to acquire composite, concat, dimension map, or internal partition *workspace object*, since doing so would cause a deadlock.**
Cause: Some object required locking a composite, concat, dimension map, or internal partition, which would cause a deadlock
Action: Release some other object that another user is waiting for and try to acquire this object again.
- ORA-37043: (XSACQUIRE_DEP_OLDGEN) Composite, concat, dimension map, or internal partition *workspace object* cannot be locked, since another user has committed a new one already.**
Cause: Some object required locking a composite, concat, dimension map, or internal partition in the present generation, which is not possible, since a newer generation already exists.
Action: Try to acquire the main object with resync
- ORA-37044: (XSACQUIRE_OLDGEN) Cannot acquire object *workspace object* without resync.**
Cause: Could not acquire the object without resync because another user has committed a newer version of it already.
Action: Try to acquire this object with resync parameter
- ORA-37050: (XSMLTDCL06) You cannot use the RELATION command with *workspace object* because analytic workspace *string* is attached in MULTI mode.**
Cause: One cannot use the RELATION command on objects in an analytic workspace attached in MULTI mode.
Action: Change the default relation when the analytic workspace is attached in RW or Exclusive mode.
- ORA-37060: (XSMCSESS08) *number* is not a valid custom member in dimension *workspace object*.**
Cause: No custom member or invalid custom member

Action: Create the custom member or use the correct custom member

ORA-37069: You may not execute a parallel OLAP operation against the EXPRESS AW.

Cause: A parallel OLAP command attempted to execute against EXPRESS.

Action: Contact Oracle support. Users should not see this message.

ORA-37070: You may not execute OLAP DML programs in a parallel query session.

Cause: The user attempted to execute a DML program inside of a parallel query session, perhaps in parallel aggregate

Action: Adjust the job so that a program does not need to be executed, or disable parallelism

ORA-37071: You may not execute a parallel OLAP operation against updated but uncommitted AW string.

Cause: The user attempted to use a parallel feature against an AW which they updated but which has not been committed

Action: Commit the current changes

ORA-37072: (XSMCSESS00) Object workspace object has the wrong type.

Cause: The object is not of the object type specified in the APPLY clause

Action: Specify the correct object type

ORA-37073: (XSMCSESS01) Applied relation workspace object must be dimensioned by dimension workspace object.

Cause: Applied relation has the different dimension from the dimension currently being maintained

Action: Maintain relation dimension

ORA-37074: (XSMCSESS02) Variable workspace object has no default aggmap.

Cause: The applied variable has no default aggmap

Action: Use variable with the default aggmap or aggmap directly

ORA-37075: (XSMCSESS03) You cannot rename a session-only dimension value.

Cause: The user tried to apply MAINTAIN RENAME to a SESSION value.

Action: Delete the old value and add a new one with the desired name.

ORA-37076: (XSMCSESS04) workspace object is not the type of dimension that can have session-only values. Valid types are TEXT, NTEXT, ID, NUMBER, and CONCAT with the UNIQUE attribute.

Cause: The user tried to add a SESSION value to a dimension type that does not support SESSION values.

Action: Use a dimension of one of the listed types.

ORA-37077: (XSMCSESS05) Object workspace object is specified more than once.

Cause: The same object name was given more than once in the apply clause or in the step dimension list.

Action: Remove the repetitions.

ORA-37078: (XSMCSESS06) The dimension being maintained (workspace object) cannot also be used as a step dimension.

Cause: The dimension being maintained was named as a step dimension.

Action: Remove this dimension from the list of step dimensions.

ORA-37079: (XSMCSESS07) Aggmap *workspace object* cannot be used for AGGREGATE.

Cause: The current aggmap may be for ALLOCATE

Action: Choose the correct aggmap for AGGREGATE only.

ORA-37080: Advice requested for hierarchy with too many levels

Cause: A request was made for advice on a hierarchy with more levels than are supported.

Action: Only request advice for hierarchies with less than 32 levels.

ORA-37082: Invalid percent

Cause: A request was made for advice with an illegal percent value.

Action: Request between 0 and 100 percent precomputation.

ORA-37083: Invalid object *string*

Cause: A request was made for advice with an illegal object name.

Action: Request using valid object names.

ORA-37084: Output valueset *string* must match *string*'s dimensionality

Cause: A request was made for advice for a relation with different dimensionality from the output valueset.

Action: Request using objects that have the same dimensionality.

ORA-37086: *string* is not a valueset

Cause: An operation was attempted that supports only valuesets as precompute expressions in an aggmap, yet a different kind of precompute expression was used.

Action: Replace this limit expression with an equivalent valueset and retry the operation. General precompute expressions are deprecated.

ORA-37093: (XSOBJORG_BAD_CUBE) invalid property "*string*" specified for cube "*string.string*"

Cause: Either the specified cube did not have an AW organization, or the specified property did not apply to cubes.

Action: Specify a property that applies to cubes and a cube with an AW organization.

ORA-37094: (XSOBJORG_BAD_DIM) invalid property "*string*" specified for dimension "*string.string*"

Cause: Either the specified dimension did not have an AW organization, or the specified property did not apply to dimensions.

Action: Specify a property that applies to dimensions and a dimension with an AW organization.

ORA-37095: (XSOBJORG_BAD_MEAS) invalid property "*string*" specified for measure "*string.string.string*"

Cause: Either the specified measure did not have an AW organization, or the specified property did not apply to measures.

Action: Specify a property that applies to measures and a measure with an AW organization.

ORA-37096: (XSOBJORG_BAD_ATTR) invalid property "string" specified for base attribute "string.string.string"

Cause: Either the specified base attribute did not have an AW organization, or the specified property did not apply to base attribute.

Action: Specify a property that applies to base attributes and a base attribute with an AW organization.

ORA-37097: (XSOBJORG_BAD_DIM_LEVEL) invalid property "string" specified for dimension level "string.string.string"

Cause: Either the specified dimension level did not have an AW organization, or the specified property did not apply to dimension levels.

Action: Specify a property that applies to dimension levels and a dimension level with an AW organization.

ORA-37098: (XSOBJORG_BAD_MODEL) invalid property "string" specified for dimension calculation model "string.string.string"

Cause: Either the specified dimension calculation model did not have an AW organization, or the specified property did not apply to dimension calculation models.

Action: Specify a property that applies to dimension calculation models and a dimension calculation model with an AW organization.

ORA-37099: (XSOBJORG_BAD_DIMALITY) invalid property "string" specified for dimensionality "string.string.string"

Cause: Either the specified dimensionality did not have an AW organization, or the specified property did not apply to dimensionalities.

Action: Specify a property that applies to dimensionalities and a dimensionality with an AW organization.

ORA-37100: (XSUNCOMMITTED) You have one or more updated but uncommitted analytic workspaces.

Cause: The user has attempted to shut down OLAP, but they have active analytic workspaces whose changes have not been saved.

Action: Issue the commit command. ---- 37101 - 37110 are reserved for partitioned variables ----

ORA-37101: (XSVPART01) Partitioning information can only be given for variables dimensioned by a PARTITION TEMPLATE.

Cause: User attempted to define or reference an AW object with the "all internal" phrase or internal / external partition list, but the object was not a variable, was not dimensioned by a partition template, or was an already existing target of an external partition.

Action: Eliminate phrases specific to partitioned variables from the definition string, or dimension the variable by a partition template.

ORA-37102: (XSVPART02) Invalid partition name string.

Cause: The user gave an invalid partition name. When defining a partitioned variable, this message indicates that the partition name does not exist in the partition template. In any other context, it indicates that the partitioned variable or partition template does not have a partition with the given name.

Action: Supply a valid partition name.

ORA-37103: (XSVPART03) The dimensionality or datatype of *workspace object* does not match the dimensionality or datatype of the partition.

Cause: User attempted to define a partitioned variable with an external partition, but the target of the external partition had incorrect dimensionality or datatype.

Action: Pick a different target variable. The target variable must be dimensioned by exactly the same dimensions, composites, and partition templates, in the same order, as are specified in the partition template, and must have the exact same datatype (including width, precision, and scale) as the partitioned variable itself.

ORA-37104: (XSVPART04) A partitioned variable must be dimensioned by a single partition template only.

Cause: User attempted to define a partitioned variable with more than one partition templates, or a partition template and one or more other dimensions, in the dimension list.

Action: Use only a partition template in the dimension list of the variable. All dimensions of the variable must be included in the definition of the partition template.

ORA-37105: (XSVPART05) Only variables dimensioned by a CONCAT PARTITION TEMPLATE can have *string* partitions.

Cause: User attempted to create an external partition on a partitioned variable, but the variable was dimensioned by a RANGE or LIST partition template.

Action: Declare the partition INTERNAL instead of EXTERNAL, or use a CONCAT partition template in place of the RANGE or LIST partition template.

ORA-37106: (XSVPART06) Invalid partition name *number*.

Cause: The user gave an invalid partition name.

Action: Supply a valid partition name.

ORA-37107: (XSVPART07) Attempt to write to non-existent partition of *workspace object*.

Cause: Some action attempted to write data to a partitioned variable, but the variable didn't have a partition for that data. This can result from a partition template that does not assign all possible dimension values to some subcube, or from a partitioned variable that does not have a partition for one of the partitions defined by the partition template.

Action: Make sure that the cell being written is assigned to some partition by the partition template, and that the variable has an actual partition associated with the partition of the template. Use the CHGDFN template DEFINE... command to define new partitions within the template, and the CHGDFN variable ADD... command to add new partitions to the variable. Alternatively, the PARTWRITEERR can be set to false, in which case data being written to a non-existent partition will be silently discarded.

ORA-37108: (XSVPART08) *workspace object* has an AGGCOUNT, but *workspace object* does not.

Cause: An attempt was made to add a partition to a partitioned variable. Either the partition was defined WITH AGGCOUNT and the partitioned variable was not, or the partitioned variable was defined WITH AGGCOUNT and the partition was not.

Action: Use CHGDFN ADD AGGCOUNT or CHGDFN DROP AGGCOUNT to either add or remove an AGGCOUNT from either the partition or the partitioned variable.

ORA-37109: (XSVPART09) Partition *workspace object* and its parent variable *workspace object* cannot both be specified.

Cause: Partition and its parent partition were operated upon together.

Action: Remove the partition from the object list.

ORA-37111: Unable to load the OLAP API sharable library: (*string*)

Cause: This happens if: (1) the OLAP API sharable library is missing. (2) a sharable library upon which the OLAP API sharable library depends is missing. (3) the OLAP API sharable library is the wrong version.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Customer Support.

ORA-37112: OLAP API requires Oracle 9.2 or later

Cause: The version of the OLAP API jar files that you used requires Oracle version 9.2 or later.

Action: Ensure that the URL with which the JDBC connection was opened is correct. If the RDBMS instance is running in compatibility mode for a version older than 9.2, it must be upgraded to at least 9.2.0.0.0 to be used with this version of the OLAP API.

ORA-37113: OLAP API initialization error: (*string*)

Cause: OLAP API initialization failed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Customer Support.

ORA-37114: OLAP API bootstrap error: (*string*)

Cause: OLAP API bootstrapping failed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Customer Support.

ORA-37115: New OLAP API history is not allowed

Cause: If there are active OLAP API sessions, it is not allowed to start a new OLAP API history by setting `_olapi_history_retention` parameter to true.

Action: Wait until all active OLAP API sessions terminate before resetting `_olapi_history_retention` parameter to true.

ORA-37116: OLAP API table function error: (*string*)

Cause: OLAP API table function failed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Customer Support.

ORA-37117: olapi history retention has been disabled

Cause: Under certain circumstances, for example, when the database is read only, olapi history retention is not possible because it requires updating persistent tables from time to time. If olapi history retention has been disabled, setting `_olapi_history_retention` parameter to true has no effect.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Customer Support.

ORA-37118: The OLAP API library was not preloaded.

Cause: In shared-server mode, the OLAP API library should be loaded during process initialization to ensure that the C++ virtual table addresses are identical in all shared-server processes. The OLAP API session was executing in a process in which the library had not been loaded.

Action: Set option `_XSOLAPI_LOAD_AT_PROCESS_START` to `SHARED_SERVER` or `ALWAYS`, restart the instance, and try again.

ORA-37119: Incompatible OLAP API library load address

Cause: The OLAP API session was executing in a process in which the OLAP API sharable library was loaded which was at a different address than the process in which the OLAP API session originated.

Action: Set option `_XSOLAPI_LOAD_AT_PROCESS_START` to `ALWAYS`, restart the instance, and try again.

ORA-37120: expression string is null

Cause: expression parser received a null string for syntax analysis.

Action: Prepare a non-null and well-formed MDX query string and try again.

ORA-37121: AW Spreadsheet invalidated

Cause: While this cursor was open, a command was issued that changed the underlying data to become inconsistent.

Action: Perform the query again, avoid performing dimension maintenance and cache clears during spreadsheet processing.

ORA-37122: AW Session cache disabled

Cause: A SQL Spreadsheet was attempted while the AW Session cache was disabled.

Action: Enable the session cache and perform the query again.

ORA-37123: (XSCCOMP17) Can not AGGREGATE *workspace object*(partition number) because it depends on unaggregated compressed partition number.

Cause: attempted to use a feature not supported by CC's in the current AW format

Action: Remove the unsupported feature from the aggmap, or upgrade the AW

ORA-37124: (XSCCOMP16) COMPRESSED COMPOSITES with *string* are not supported in analytic workspace *string* because it has not been upgraded to version *string*.

Cause: attempted to use a feature not supported by CC's in the current AW format

Action: Remove the unsupported feature from the aggmap, or upgrade the AW

ORA-37126: (XSCCOMP01) The COMPRESSED COMPOSITE *workspace object* can only be used as a base of a single variable.

Cause: The user attempted to DEFINE a variable dimensioned by a COMPRESSED COMPOSITE, but that COMPRESSED COMPOSITE is already being used by another VARIABLE.

Action: Create a second COMPRESSED COMPOSITE for the second VARIABLE or add a measure dimension to the first variable.

ORA-37127: (XSCCOMP02) The COMPRESSED COMPOSITE *workspace object* must be last in the dimension list.

Cause: The user attempted to DEFINE a variable dimensioned by a COMPRESSED COMPOSITE, but gave a slower varying dimension in the dimension list.

Action: Put the COMPRESSED COMPOSITE last in the dimension list when defining the VARIABLE.

ORA-37128: (XSCCOMP20) The partition template *workspace object* has already used the COMPRESSED COMPOSITE *workspace object*.

Cause: The COMPRESSED COMPOSITE specified for either a variable or partition template is already in use in another partition template.

Action: Define a different COMPRESSED COMPOSITE.

ORA-37129: (XSCCOMP04) Cannot aggregate over COMPRESSED COMPOSITE *workspace object* using AGGMAP *workspace object*. All static MODEL statements must precede all RELATION statements over the bases of the COMPRESSED COMPOSITE.

Cause: The AGGMAP was defined with a MODEL statement after a RELATION statement over a base of the COMPRESSED COMPOSITE.

Action: Change the AGGMAP so that the MODEL statements appear before the RELATION statements.

ORA-37130: (XSCCOMP05) Cannot aggregate over COMPRESSED COMPOSITE *workspace object* using AGGMAP *workspace object* because you must specify AGGINDEX OFF when there is a PRECOMPUTE clause on a RELATION over base *workspace object*.

Cause: A PRECOMPUTE clause was specified in the AGGMAP for a RELATION over a base of a COMPRESSED COMPOSITE, but AGGINDEX was ON

Action: Remove the PRECOMPUTE clause from the AGGMAP, or add AGGINDEX OFF

ORA-37131: (XSCCOMP06) Cannot aggregate over COMPRESSED COMPOSITE *workspace object* using AGGMAP *workspace object* because the OPERATOR string is not supported for bases of a COMPRESSED COMPOSITE.

Cause: The user specified an aggregation OPERATOR that is not supported by COMPRESSED COMPOSITES.

Action: Use a MODEL for the calculation, or use an uncompressed COMPOSITE.

ORA-37132: (XSCCOMP07) Incremental aggregation over the dense DIMENSION *workspace object* is not supported when aggregating a VARIABLE dimensioned by a COMPRESSED COMPOSITE.

Cause: The status of the specified dimension did not include all detail cells.

Action: Add all detail cells to the status of the dimension and reissue the AGGREGATE command.

ORA-37133: (XSCCOMP08) You cannot write into an aggregated VARIABLE dimensioned by a COMPRESSED COMPOSITE. Use the CLEAR AGGREGATES command to reenable write access.

Cause: The user attempted to store a value into a variable dimensioned by a compressed composite, and the variable had previously been precomputed using the AGGREGATE command. Once the AGGREGATE command is run on a variable dimensioned by a compressed composite, it becomes read-only until the computed values are removed with the CLEAR command.

Action: Run the CLEAR AGGREGATES command to remove the computed values from the variable and then rerun the failed operation. Note that CLEAR AGGREGATES will remove all the data computed during the last AGGREGATE command on this variable.

ORA-37134: (XSCCOMP09) You cannot add new values to *workspace object* because it includes positions for precomputed aggregate values.

Cause: The user attempted to create a new position in a compressed composite, either directly (using MAINTAIN MERGE or MAINTAIN ADD) or by storing a value into the variable dimensioned by the compressed composite. This is not allowed when the variable has been precomputed using the AGGREGATE command. Once the AGGREGATE command is run on a variable dimensioned by a compressed composite, the compressed composite becomes read-only until the computed values are removed with the CLEAR command.

Action: Run the CLEAR AGGREGATES command to remove the computed values from the variable and then rerun the failed operation. Note that CLEAR AGGREGATES will remove all the data computed during the last AGGREGATE command on this variable.

ORA-37135: (XSCCOMP19) The COMPRESSED COMPOSITE *workspace object* in the current defined partition template should be unique or global.

Cause: The COMPRESSED COMPOSITE was neither unique nor global. Unique means each subpartition should have different COMPRESSED COMPOSITES; Global means all subpartitions should use the same COMPRESSED COMPOSITE if they use any COMPRESSED COMPOSITE.

Action: Redefine the partition template.

ORA-37136: (XSCCOMP11) Cannot ROLLUP dimension *workspace object* which is a base of COMPRESSED COMPOSITE *workspace object*, use AGGREGATE instead.

Cause: The user ran ROLLUP on a variable dimensioned by a COMPRESSED COMPOSITE.

Action: Instead of using ROLLUP, generate an aggmap and use AGGREGATE

ORA-37137: (XSCCOMP12) You cannot CHGDFN *workspace object* because it is a COMPRESSED COMPOSITE.

Cause: The user tried to CHGDFN a compressed composite

Action: If the change is desired then delete the old composite and create a new one.

ORA-37138: (XSCCOMP13) You cannot delete values from *workspace object* because it is an aggregated COMPRESSED COMPOSITE.

Cause: The user tried to MAINTAIN DELETE from an aggregated COMPRESSED COMPOSITE.

Action: In order to perform this sort of maintenance the composite must first be cleared. This can be done by running the CLEAR AGGREGATES command on the variable dimensioning the composite. Note that this will remove all data computed during the last AGGREGATE command.

ORA-37139: (XSCCOMP14) Cannot AGGREGATE *workspace object* using AGGMAP *workspace object* because you can not AGGREGATE a variable dimensioned by a COMPRESSED COMPOSITE using an AGGMAP with a PROTECT clause.

Cause: The user tried to AGGREGATE a variable dimensioned by a COMPRESSED COMPOSITE with an AGGMAP that included a PROTECT clause.

Action: Modify the aggmap or create a new aggmap that does not include a PROTECT clause and reaggregate.

ORA-37140: (XSCCOMP15) Cannot AGGREGATE partitioned variable *workspace object* using AGGMAP *workspace object* because you cannot use the base of a COMPRESSED COMPOSITE as a partition dimension.

Cause: The user tried to run aggregate on a partitioned variable with a partition dimension that is a base of a COMPRESSED COMPOSITE.

Action: Repartition the data, drop the partition dimension from the aggmap, or don't use COMPRESSED COMPOSITES.

ORA-37141: (XSSQLMDQ01) Invalid host variable syntax for MDQUERY procedure.

Cause: The schema and analytic workspace name for the MDQUERY cursor declaration were incorrectly specified.

Action: Specify the schema and aaname as a host variable name preceded by a colon, or as a text literal string of the form 'SCHEMA.AWNAME' or '*.*' (quotes optional).

ORA-37142: (XSSQLMDQ02) Invalid host variable data type for MDQUERY procedure: *string* expected.

Cause: The user specified a host variable that was not of the correct type.

Action: Choose a different host variable.

ORA-37143: (XSSQLMDQ03) *string* is not a valid analytic workspace name.

Cause: The user specified an analytic workspace name not qualified by a schema name, or one or both components of the name exceed the maximum length

Action: Specify a schema-qualified analytic workspace name with components no longer than 30 characters long.

ORA-37144: (MDQUERY01) *string* is not a valid metadata object type for MDQUERY.

Cause: The user specified an unrecognized first argument to MDQUERY

Action: Specify a recognized object type (CUBE or DIMENSION)

ORA-37145: (XSTTS_PLAT) Cannot transport analytic workspace across platforms.

Cause: The user attempted to transport a tablespace containing an analytic workspace from one platform to another.

Action: Use export/import to move an analytic workspace across platforms.

ORA-37146: (XSCCOMP18) The variable *workspace object* is already dimensioned by the COMPRESSED COMPOSITE *workspace object*.

Cause: An attempt was made to define the partition template dimensioned by the COMPRESSED COMPOSITE which had dimensioned the variable.

Action: Define the second COMPRESSED COMPOSITE.

ORA-37147: (XSCCOMP21) The variable *workspace object* must be in the current operation group of the COMPRESSED COMPOSITE *workspace object*.

Cause: The variable dimensioned by the COMPRESSED COMPOSITE was not in the object list of the current operation group. For AGGREGATE, all variables dimensioned by the same COMPRESSED COMPOSITE also must use the same aggmap

Action: Add the variable into the object list of the current operation group.

ORA-37148: (XSCCOMP22) *workspace object* is an aggregated COMPRESSED COMPOSITE.

Cause: Defined the variable or partition template with the aggregated COMPRESSED COMPOSITE.

Action: Clear the COMPRESSED COMPOSITE or use a new COMPRESSED COMPOSITE

ORA-37149: (XSCCOMP23) Individual partitions of the variable dimensioned by *workspace object* cannot be aggregated separately.

Cause: An attempt was made to aggregate partitions of a variable dimensioned by a global COMPRESSED COMPOSITE partition template.

Action: Aggregate the partitioned variable dimensioned by the global COMPRESSED COMPOSITE.

ORA-37150: line *string*, column *string*, *string*

Cause: expression syntax error was found in expression query string.

Action: Check the error message details and make the corrections.

ORA-37151: expression parser initialization error

Cause: expression parser initialization failed

Action: Please report this to Oracle Support Services.

ORA-37152: MDX query error: (*string*)

Cause: An exception occurred while MDX query was processed.

Action: Check the error message details and try again.

ORA-37153: unknown exception caught: (case *string*)

Cause: An unknown exception was caught while MDX query was processed.

Action: Please report it to Oracle Support Services.

ORA-37154: OLAP API initialization error: (case *string*)

Cause: OLAP API initialization failed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37155: OLAP API bootstrap error: (case *string*)

Cause: OLAP API bootstrapping failed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37156: (*string*)

Cause: unknown

Action: Check the error message details.

ORA-37157: expression syntax error was found in expression string but error text was missing

Cause: This happened because the message file was missing.

Action: Make sure that the message file xsous.msb is located in \$ORACLE_HOME/olap/mesg and rerun your expression query.

ORA-37158: Bad clob or varray IN-args: (case string)

Cause: When in clob or varray mode, the PL/SQL mappings of OLAP API's IDL interface methods were executed blindly with null clob/varray or non-null clob/varray containing garbages.

Action: Do not blindly execute them as doing so does not make sense unless you understand how OLAP API works internally.

ORA-37159: C++ virtual table addresses become invalid due to session migration in shared server mode.

Cause: Exec-shield is the primary reason that caused this error in shared server mode. When exec-shield is turned on, there is no way to ensure that the C++ virtual table addresses are identical in all shared-server processes.

Action: Set option _XSOLAPI_FIX_VPTRS to TRUE, restart the instance, and try again.

ORA-37160: OLAP object does not exist

Cause: The specified OLAP object did not exist.

Action: Use an existing OLAP object instead.

ORA-37161: invalid privilege specified for OLAP object

Cause: An attempt was made to grant or revoke an invalid privilege on an OLAP object.

Action: Specify a valid privilege.

ORA-37162: OLAP error

Cause: An exception was raised by OLAP code.

Action: Check error messages and correct any reported problems.

ORA-37163: cannot delete or truncate AW with dependent CUBES or CUBE DIMENSIONS

Cause: User attempted to delete or truncate an AW which currently has a CUBE or CUBE DIMENSION defined over it

Action: Drop the corresponding CUBE or CUBE DIMENSION before deleting the AW

ORA-37164: The current SQL statement does not support this OLAP object

Cause: The OLAP object is not supported in the current SQL statement.

Action: Use a valid SQL command on the OLAP object.

ORA-37165: cannot use EIF IMPORT into a non-empty Analytic Workspace (string,string)

Cause: An attempt was made to use EIF IMPORT to populate a non-empty Analytic Workspace.

Action: Ensure that the target Analytic Workspace is empty before populating it with EIF IMPORT.

ORA-37166: (XSOQ_BAD_OBJ) OLAP object "*string.string*" does not exist

Cause: The specified OLAP object did not exist.

Action: Use an existing OLAP object instead.

ORA-37167: (XSOQ_BAD_SUBOBJ) OLAP object "*string.string.string*" does not exist

Cause: The specified OLAP object did not exist.

Action: Use an existing OLAP object instead.

ORA-37168: (XSOBJORG_UNSUPP_OBJ) unsupported OLAP object "*string.string*" for OBJORG function

Cause: The specified OLAP object was of a type that is not supported by the OBJORG function.

Action: Specify an OLAP object of a type that the OBJORG function supports.

ORA-37169: (XSOBJORG_UNSUPP_SUBOBJ) unsupported OLAP object "*string.string.string*" for OBJORG function

Cause: The specified OLAP object was of a type that is not supported by the OBJORG function.

Action: Specify an OLAP object of a type that the OBJORG function supports.

ORA-37170: (XSOBJORG_NA) The top-level object name argument to the OBJORG function cannot be NA.

Cause: You passed NA as the second argument to the OBJORG function.

Action: Pass the name of the top-level object instead.

ORA-37171: dimension sources not specified

Cause: The user passed an empty or null collection to DBMS_AW.ADVISE_SPARSITY

Action: Specify a valid set of dimension sources

ORA-37172: illegal dimension type

Cause: The user specified an invalid member of the DIMTYPE field in the dimension sources argument

Action: Specify one of the valid enumerated values in DBMS_AW

ORA-37173: null dimension source data

Cause: The user specified NULL for one of the members of the dimension sources argument

Action: Specify a value

ORA-37174: source SQL must be a SELECT statement

Cause: The user specified an INSERT, UPDATE, DELETE or other type of SQL statement

Action: Specify a SQL SELECT statement instead

ORA-37175: column *string* is not a column of source data

Cause: A dimension column was specified which did not exist in the input data

Action: Specify one of the columns of the input data

ORA-37176: argument *string* is not valid for the sparsity advisor

Cause: An invalid argument was passed to the advisor

Action: Specify a TABLE, VIEW or SELECT statement instead

ORA-37177: column *string* does not have any leaf values

Cause: The specified dimension column or fact table did not contain any leaf values

Action: Populate the source data

ORA-37178: column *string* has no values

Cause: The specified dimension column did not contain any values

Action: Populate the source data

ORA-37179: expected at least one column for dimension *string*, got *string*

Cause: Not enough columns were specified for the dimension

Action: Specify more source columns, or change the dimension to another type

ORA-37180: expected exactly one column for dimension *string*, got *string*

Cause: Expected a single source column for the dimension. Either none or more than one was specified.

Action: Specify exactly one column, or change the dimension to another type

ORA-37181: expected exactly *string* columns for dimension *string*, got *string*

Cause: Expected a certain number of source columns for the dimension. Either none or the wrong number of columns was specified.

Action: Specify the right number of columns, or change the dimension to another type

ORA-37182: you may only specify one dimension to partition

Cause: The user passed a DIMENSION_SOURCE_T to ADVISE_SPARSITY which specified partitioning on more than one dimension

Action: Remove all but one of the partitioning requests

ORA-37183: illegal value *string* for PARTBY

Cause: The user passed a value other than PARTBY_DEFAULT, PARTBY_NONE or PARTBY_FORCE to DBMS_AW.ADVISE_SPARSITY *Action: Supply a legal value instead

Action: None

ORA-37184: illegal value *string* for ADVMODE

Cause: The user passed a value other than ADVICE_DEFAULT, ADVICE_FAST or ADVICE_FULL to DBMS_AW.ADVISE_SPARSITY *Action: Supply a legal value instead

Action: None

ORA-37185: length of *string* (*string*) exceeds maximum (*string*)

Cause: The user passed an excessively long value

Action: Specify a legal value

ORA-37186: null child value for parent (*string*) found in parent-child hierarchy

Cause: While reading values for a parent-child hierarchy, a NULL child value was found for a non-NULL parent

Action: Correct the source table or SQL to return value parent and child pairs.

ORA-37187: null parent and child pair found in parent-child hierarchy

Cause: While reading values for a parent-child hierarchy, a row was retrieved which had both null child and parent values.

Action: Correct the source table or SQL to return value parent and child pairs.

ORA-37188: unexpected null result while querying *string*

Cause: While querying the input fact table, the sparsity advisor unexpectedly got no results, possibly due to changes being made during operation.

Action: Retry the operation ensuring that the data is not changed while the sparsity advisor is running / Errors from 37200 - 37399 are reserved for events

ORA-37400: analytic workspace does not exist

Cause: The user attempted to create an OLAP MV or Table on an AW that does not exist.

Action: Specify a valid AW in the ORGANIZATION CUBE clause

ORA-37401: you may not perform this operation on a system analytic workspace

Cause: The user attempted to create a CUBE MV or Table on a system-created AW.

Action: Specify a valid AW in the ORGANIZATION CUBE clause

ORA-37402: analytic workspace object does not exist

Cause: The user attempted to create a CUBE MV or Table mapping to an object that does not exist in the AW.

Action: Specify a valid AW object name in the ORGANIZATION CUBE clause.

ORA-37403: invalid analytic workspace object type

Cause: The user attempted to create a CUBE MV or Table mapping to an object that is not the correct type.

Action: Specify a valid AW object name in the ORGANIZATION CUBE clause.

ORA-37404: Create table as select disallowed for CUBE ORGANIZED tables

Cause: User attempted to create a CUBE ORGANIZED table by doing a create table as select.

Action: Do a create table followed by an insert as select

ORA-37405: unknown ORGANIZATION CUBE keyword

Cause: An unknown keyword was encountered while parsing the ORGANIZATION CUBE clause

Action: Correct the ORGANIZATION CUBE syntax

ORA-37406: invalid option for a CUBE ORGANIZED table

Cause: An attempt to specify one or more options for a CUBE ORGANIZED table such as: [NO]CACHE, NO LOGGING, CLUSTER, (NO)COMPRESS

Action: Remove the illegal option(s)

ORA-37407: invalid column type for a CUBE ORGANIZED table

Cause: A illegal column type is specified in a CUBE ORGANIZED table.

Action: Do not use column types such as LONG, LOB

ORA-37408: Truncate table disallowed for CUBE ORGANIZED tables

Cause: User attempted to perform a TRUNCATE operation on a CUBE ORGANIZED table

Action: Remove data with DELETE or drop the table and recreate it

ORA-37409: cannot delete or truncate AW used by CUBE ORGANIZED table

Cause: User attempted to delete or truncate an AW which currently has a CUBE ORGANIZED table or MV defined over it

Action: Drop the corresponding table or MV before deleting the AW

ORA-37410: cannot delete or modify AW object referenced by CUBE ORGANIZED table

Cause: User attempted to delete, chgdfn, or otherwise modify an object referenced by a CUBE ORGANIZED table or MV

Action: Drop the corresponding table or MV before manipulating the object

ORA-37411: invalid object type

Cause: User referenced an invalid object type

Action: Use an appropriate object

ORA-37412: column not mapped by ORGANIZATION CUBE clause

Cause: Not all columns in the table or MV definition were mapped in the ORGANIZATION CUBE clause

Action: Make sure that all columns are mapped

ORA-37413: column referenced multiple times in ORGANIZATION CUBE clause

Cause: The same column name was referenced multiple times inside of the ORGANIZATION CUBE clause

Action: Supply unique mappings for each column

ORA-37414: dimension without mapping or hierarchy in ORGANIZATION CUBE clause

Cause: A dimension was listed in the ORGANIZATION CUBE clause but no mapping information was supplied

Action: Provide either a column mapping or hierarchy for the dimension

ORA-37415: AW schema must match TABLE or MATERIALIZED VIEW schema

Cause: An ORGANIZATION CUBE table or MV on top of an existing AW must be created in the same schema as the AW

Action: Create the new object in the same schema as the AW

ORA-37416: multiple GROUPING IDs found for ORGANIZATION CUBE

Cause: Multiple GROUPING IDs for the ORGANIZATION CUBE TABLE or MATERIALIZED VIEW

Action: Remove the duplicates

ORA-37417: variable does not have an AGGCOUNT

Cause: A COUNT clause was specified in the ORGANIZATION CUBE description for a variable that does not have an AGGCOUNT

Action: chgdfn the variable to include an AGGCOUNT

ORA-37418: detail query cannot be derived

Cause: If an ORGANIZATION CUBE MV is to automatically derive its loading clause, then its definition query cannot contain set operators (eg UNION ALL), a HAVING clause, START WITH or a SQL MODEL clause. The definition query contains these or other unsupported syntax.

Action: Use an explicit ORGANIZATION CUBE clause, or simplify the defining query.

ORA-37419: ORGANIZATION CUBE clause not allowed in explain mvview

Cause: User tries to explain mvview on a CREATE MATERIALIZED VIEW statement that contains a ORGANIZATION CUBE clause.

Action: Remove the ORGANIZATION CUBE clause from the CREATE MATERIALIZED VIEW statement.

ORA-37420: unsupported feature with CUBE ORGANIZED materialized view

Cause: User attempts operations such as creating a mv log on an CUBE ORGANIZED MATERIALIZED VIEW.

Action: Do not do that.

ORA-37421: specified pseudocolumn is not supported by CUBE ORGANIZED tables

Cause: The pseudocolumn ORA_ROWSCN was referenced with a CUBE ORGANIZED table.

Action: Remove the ORA_ROWSCN reference.

ORA-37521: (HASHSCAN00) Dimension *string* contains duplicate values. Please contact Oracle OLAP Technical Support.

Cause: The named dimension contains duplicate values.

Action: Contact Technical Support for instructions.

ORA-37522: (HASHSCAN01) You must specify the name of an existing TEXT or NTEXT dimension.

Cause: the _HASHSCAN program was invoked with an invalid argument

Action: Provide a text expression yielding the name of an existing TEXT dimension

ORA-37527: (XSCHGDFN01) SESSION values of dimension *string* are being automatically deleted.

Cause: When using CHGDFN to rebuild the hash index of a TEXT or NTEXT dimension, SESSION values were encountered.

Action: Recreate the SESSION values after the CHGDFN command completes. Information about the deleted values has been written to the trace file.

ORA-37530: (XSCCLOAD01) When aggregating between compressed partitions the base dimensions of *workspace object* did not match the base dimensions of *workspace object*.

Cause: When aggregating a partitioned variable the dimensionality of any compressed partitions should be identical.

Action: Delete the upper partition and redefine it with a composite that matches the lower partition. If it is dependent on multiple partitions with varying sparsity you must first unify the the sparsity of the source partitions.

ORA-37531: (XSCCLOAD02) When aggregating between compressed partitions the source partitions were aggregated with a different AGGMAP, or the RELATIONS have changed since the source partitions were aggregated.

Cause: When aggregation crosses partition boundaries within a compressed variable the individual partitions must all be aggregated using a similar aggmap over the same unaltered relations.

Action: Modify the aggmap for the upper partition to more exactly match the aggmap of the source partitions, or if the aggmap is already similar, re-aggregate the source partitions to pick up any changes to the relations.

ORA-37541: Hierarchy element DIMENSION_MEMBER can aggregate into element MEMBER_ANCESTOR through multiple paths.

Cause: When a low level hierarchy element can reach an aggregate element by more than one path through the hierarchy, it is said to have multiple paths. The danger is that the value of the low level hierarchy element will have its value counted multiple times (once per path) in the total of the aggregate element.

Action: Eliminate multiple paths from the hierarchy.

ORA-37542: DIMENSION_MEMBER makes hierarchy HIERARCHY1 unbalanced.

Cause: A hierarchy is balanced if: 1) All members of a level are at the same depth from the root of the hierarchy and 2) All the members in different levels are at different depths from the root of the hierarchy.

Action: Fix the hierarchy so that it is balanced. This is often done by looking for nulls in the middle levels of a hierarchy.

ORA-37543: Hierarchy member DIMENSION_MEMBER is inconsistent across HIERARCHY1 and HIERARCHY2.

Cause: Two hierarchies are inconsistent when members that appear in both hierarchies have different ultimate leaves.

Action: This problem is usually resolved by defining a new dimension member for the secondary hierarchy, or fixing the hierarchy table so that the definitions of the member match across hierarchies.

ORA-37544: Dimension members DIMENSION_MEMBER and MEMBER_ANCESTOR make this dimension star inconsistent.

Cause: A dimension is "star consistent" when it can be represented in a star schema table. This requires that a hierarchy level map to a single underlying column. If a level is shared across one or more hierarchies, it must have the same set of members in each hierarchy (to share a column).

Action: Create a different level for the secondary hierarchy. This provides a separate level column for each hierarchy.

ORA-37545: DIMENSION_MEMBER is part of a hierarchy loop.

Cause: A hierarchy has loops when the ancestor of a dimension member uses that member as its parent. Note that some loops are created across hierarchies. For example, in hierarchy 1, dimension member A is the parent of B, B is the parent of C and in hierarchy 2, C is that parent of A forms a hierarchy loop.

Action: Change the hierarchies so that the loop is eliminated or move the problem hierarchy to a different dimension.

ORA-37546: (XSHIERSP00) Levelorder valueset is empty.

Cause: An empty levelorder valueset was specified for the HIERSHAPE function.

Action: specify a non-empty levelorder valueset.

ORA-37547: (XSHIERSP01) DIMENSION_MEMBER has no level associated with it.

Cause: DIMENSION_MEMBER did not have an associated level. Level based hierarchies must have a level for every dimension member.

Action: Add level assignments for all dimension members in the hierarchy.

ORA-37548: (XSHIERSP02) DIMENSION_MEMBER is not specified as a member of HIERARCHY1.

Cause: When a dimension member is part of a hierarchy, it appears in the INHIER valueset associated with the hierarchy. This dimension member is missing from this value set and thus should not be part of this hierarchy.

Action: Alter the hierarchy's membership to include the specified dimension member.

ORA-37549: (XSHIERSP03) The level of DIMENSION_MEMBER is not lower than the level of MEMBER_ANCESTOR.

Cause: A dimension member has a parent that is lower or on the same level as this member according to the levelorder valueset.

Action: Fix the child and/or parent levels so that every dimension member has a parent whose level is higher than the level of this member.

ORA-37550: (XSHIERSP04) The level of MEMBER_ANCESTOR is not one level above DIMENSION_MEMBER.

Cause: A dimension member has a parent that is not one level above the level of this member according to the levelorder valueset.

Action: Fix the child and/or parent levels so that every dimension member has a parent whose level is one level above the level of this member according to the levelorder.

ORA-37551: (XSHIERSP05) Leaf value DIMENSION_MEMBER is not on the same level as the rest of leaf dimension values.

Cause: The detail or leaf values of this hierarchy must all have the same level. This member is on a different level than most of the leaf values.

Action: Fix DIMENSION_MEMBER's level so that all leaves are on the same level.

ORA-37552: (XSHIERSP06) DIMENSION_MEMBER is associated with a level not found in the levelorder valueset.

Cause: DIMENSION_MEMBER must have an associated level that is found in the levelorder valueset so that we can figure out DIMENSION_MEMBER's level depth.

Action: Fix DIMENSION_MEMBER's associated level.

ORA-37553: A cycle between *number* and *number* has been detected in relation *workspace object over workspace object*.

Cause: A relation was used that had loops in it.

Action: Correct the relation so that it does not contain loops.

ORA-37554: A cycle between *number* and *number* has been detected in relation *workspace object*.

Cause: A relation was used that had loops in it.

Action: Correct the relation so that it does not contain loops.

ORA-37560: lob locator invalid for specified log target

Cause: A log locator was passed as a target to DBMS_CUBE_LOG.ENABLE, but the log_target was not DBMS_CUBE_LOG.TARGET_LOB

Action: Specify LOG_TARGET_LOB as the log_target, or specify a valid location instead

ORA-37561: unknown logging type

Cause: An invalid log_type was specified

Action: Specify a valid logging type from the DBMS_CUBE_LOG package

ORA-37562: unknown logging target

Cause: An invalid log_target was specified

Action: Specify a valid logging target from the DBMS_CUBE_LOG package

ORA-37563: invalid log verbosity

Cause: An invalid log_verbosity was specified

Action: Specify a valid logging verbosity from the DBMS_CUBE_LOG package

ORA-37564: unknown log table version

Cause: Could not determine the version of the specified logging table

Action: Specify a valid target table, or use DBMS_CUBE_LOG.TABLE_CREATE to create one

ORA-37565: invalid parameter for specified log type

Cause: The log_type specified does not support the specified parameter, for instance, DBMS_CUBE_LOG.MAX_ERRORS is not valid for

Action: Specify a valid log_type / log_param combination

ORA-37566: invalid log location

Cause: The specified log location is in an invalid format. For file targets it must be of the form 'directory_alias/filename'

Action: Specify a valid log location

ORA-37567: log location not specified

Cause: The log location was not specified for a log target which requires one

Action: Specify a valid log location

ORA-37568: invalid log parameter

Cause: An invalid log_param was passed to dbms_cube_log.set_parameter or get_parameter

Action: Specify a valid parameter

ORA-37569: invalid log parameter value

Cause: An invalid value was passed to dbms_cube_log.set_parameter

Action: Specify a valid value

ORA-37570: invalid log specification

Cause: An invalid logging specification was supplied to DBMS_CUBE_LOG.SET_LOG_SPEC

Action: Correct the syntax being supplied

ORA-37571: invalid SQL ID

Cause: Either the SQL ID supplied was invalid or no associated logging information was captured.

Action: Specify a valid SQL ID.

ORA-37572: invalid ID

Cause: An invalid ID was supplied for the given SQL ID.

Action: Specify a valid ID for that SQL ID.

ORA-37573: no limits logged

Cause: There were no corresponding OLAP filters to the supplied information.

Action: Specify predicates on the original query or specify a new SQL ID or ID.

ORA-37574: error logging to table "*string.string*"

Cause: An error occurred attempting to write log records to the named table.

Action: Make sure the user has permissions to write to the table.

ORA-37575: Invalid cube operations log component, "*string*".

Cause: Invalid cube operations log component value.

Action: Provide a valid cube operations log component or accept the default value by leaving the parameter unspecified.

ORA-37576: Invalid cube operations log handle id.

Cause: An invalid cube operations log handle id was specified. No oplog handle found for oplogHandleId parameter.

Action: Provide a valid cube operations log handle id for oplogHandleId. Use DBMS_CUBE_LOG.START_OPLOG to get a valid handle id.

ORA-37577: Invalid cube operations log message name.

Cause: Cube operations log message name value is NULL.

Action: Provide a valid non-null cube operations log message name.

ORA-37578: Invalid cube operations log operation value.

Cause: Cube operation log operations value is NULL.

Action: Provide a valid non-null cube operations log operation value.

ORA-37580: The EXPRESS AW does not exist.

Cause: The EXPRESS AW does not exist.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37581: The EXPRESS AW has not been properly installed.

Cause: The EXPRESS AW has not been properly installed.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37582: The EXPRESS AW version *string* is different than the Oracle version *string*.

Cause: The EXPRESS AW version does not match the current Oracle version.

Action: Ensure that Oracle is properly installed with the OLAP option. If the RDBMS has been patched, review the patch log for errors. If the problem persists, report it to Oracle Support Services.

ORA-37600: (XSPGERRPERMDETACH) Ran out of tablespace storage while updating analytic workspace *string*

Cause: Ran out of lob segment space.

Action: Increase tablespace storage. AW may need to be detached.

ORA-37601: (XSPGERRTEMP) Ran out of temporary storage while writing to analytic workspace with ID=*number*. Free some temporary storage immediately. You can do so, for example, by DETACHING an analytic workspace.

Cause: Ran out of temporary tablespace storage.

Action: Increase the amount of temporary tablespace storage.

ORA-37602: (XSPGERRTEMPUSER) Ran out of temporary storage while writing to analytic workspace *string*. Free some temporary storage immediately. You can do so, for example, by DETACHING an analytic workspace.

Cause: Ran out of temporary tablespace storage.

Action: Increase the amount of temporary tablespace storage.

ORA-37603: (XSPGERRTEMPSYSTEM) Ran out of temporary storage while writing to a system temporary analytic workspace. Free some temporary storage immediately. You can do so, for example, by DETACHING an analytic workspace.

Cause: Ran out of temporary tablespace storage.

Action: Increase the amount of temporary tablespace storage.

ORA-37604: (XSPGERRPQUPD) Parallel updating analytic workspace *string* failed

Cause: Unexpected error occurred to parallel update servers.

Action: Check the error underneath and act accordingly. AW may need to be detached.

ORA-37605: error during OLAP AW UPDATE

Cause: An error occurred during the UPDATE process

Action: Refer to the next error in the error stack

ORA-37999: Serious OLAP error: *string*. Please contact Oracle Technical Support.

Cause: Something unexpected occurred in the OLAP system

Action: Contact Oracle technical support

ORA-38029 to ORA-39964

ORA-38029: object statistics are locked

Cause: An attempt was made to modify optimizer statistics of the object.

Action: Unlock statistics with the DBMS_STATS.UNLOCK_TABLE_STATS procedure on base table(s). Retry the operation if it is okay to update statistics.

ORA-38101: Invalid column in the INSERT VALUES Clause: *string*

Cause: INSERT VALUES clause refers to the destination table columns

Action: None

ORA-38102: Invalid column in the INSERT WHERE Clause: *string*

Cause: INSERT WHERE clause refers to the destination table columns

Action: None

ORA-38103: Invalid column in the UPDATE SET Clause: *string*

Cause: UPDATE SET clause refers to the source table columns in the LHS

Action: None

ORA-38104: Columns referenced in the ON Clause cannot be updated: *string*

Cause: LHS of UPDATE SET contains the columns referenced in the ON Clause

Action: None

ORA-38105: Delete not yet supported when Update row-migration is possible

Cause: When Update Row-Migration is possible, Delete in MERGE is not yet supported

Action: None

ORA-38106: MERGE not supported on join view or view with INSTEAD OF trigger.

Cause: The MERGE operation contained a join view or view with INSTEAD of trigger which is not supported.

Action: When using MERGE to modify a view, you must only specify a single table in the view, and the view cannot have an INSTEAD OF trigger.

ORA-38131: specified SQL handle *string* does not exist

Cause: The specified SQL handle did not exist in the repository.

Action: Specify correct SQL handle.

ORA-38132: specified SQL ID *string* does not exist

Cause: The SQL statement for SQL ID did not exist in the cursor cache.

-
- Action:** Specify correct SQL ID.
- ORA-38133: invalid parameter name *string* specified**
Cause: An invalid parameter name was specified.
Action: Verify the name of the parameter.
- ORA-38134: invalid parameter value *string* specified**
Cause: An invalid parameter value was specified.
Action: Verify the parameter value.
- ORA-38135: invalid fixed status value specified**
Cause: Specified fixed status value was neither YES or NO.
Action: Specify either 'YES' or 'NO'.
- ORA-38136: invalid attribute name *string* specified**
Cause: An invalid attribute name was specified.
Action: Verify the name of the attribute.
- ORA-38137: invalid attribute value *string* specified**
Cause: An invalid attribute value was specified.
Action: Verify the attribute value.
- ORA-38138: plan name is missing or NULL**
Cause: A valid plan name was not specified.
Action: Specify a valid plan name.
- ORA-38139: concurrent DDL Error in load plans operation**
Cause: A concurrent DDL operation was performed during a load plans operation.
Action: Try operation again.
- ORA-38140: no SQL plan baselines were found**
Cause: No SQL plan baselines were found during pack or unpack operation.
Action: Specify correct selection criterion.
- ORA-38141: SQL plan baseline *string* does not exist**
Cause: A SQL plan baseline name was specified that did not exist.
Action: Verify the name of the SQL plan baseline.
- ORA-38142: SQL plan baseline named *string* already exists**
Cause: A SQL plan baseline already exists with the name specified.
Action: Specify a different name or drop the existing SQL plan baseline.
- ORA-38143: invalid enabled status value specified**
Cause: Specified enabled status value was neither YES or NO.
Action: Specify either 'YES' or 'NO'.
- ORA-38144: specified plan name *string* does not exist**
Cause: The specified plan name did not exist in the repository.
Action: Specify correct plan name.

ORA-38145: neither SQL handle nor plan name specified

Cause: The SQL handle or plan name was not specified. The SQL handle or plan name is required.

Action: Specify either SQL handle or plan name or both.

ORA-38146: invalid verify value specified

Cause: Specified verify value was neither YES or NO.

Action: Specify either 'YES' or 'NO'.

ORA-38147: invalid commit value specified

Cause: Specified commit value was neither YES or NO.

Action: Specify either 'YES' or 'NO'.

ORA-38148: invalid time limit specified

Cause: Specified time limit value was not a positive integer.

Action: Specify a positive integer value.

ORA-38171: Insufficient privileges for SQL management object operation

Cause: A DDL operation was attempted on a SQL management object by a session without the proper privileges.

Action: Grant the appropriate privilege.

ORA-38172: No SQL management object satisfies specified filters

Cause: An attempt was made to perform an operation by specifying filters that did not target any SQL management objects.

Action: Try different filters.

ORA-38173: Invalid value *string* specified for SQL management object attribute *string*

Cause: An invalid attribute value was specified.

Action: Specify a valid attribute value.

ORA-38301: can not perform DDL/DML over objects in Recycle Bin

Cause: Tried to perform DDL or DML operation on Recycle Bin object.

Action: DDL or DML operations are not permitted on Recycle Bin objects.

ORA-38302: invalid PURGE option

Cause: Invalid purge option specified.

Action: Specify a valid purge option.

ORA-38303: invalid option for PURGE TABLESPACE

Cause: Either a token other than USER was found following the tablespace name or some text was found following USER <user name>.

Action: Place nothing or only USER <user name> after the tablespace name

ORA-38304: missing or invalid user name

Cause: A valid user name was expected.

Action: Specify a valid user name.

ORA-38305: object not in RECYCLE BIN

Cause: Trying to Flashback Drop an object which is not in RecycleBin.

Action: Only the objects in RecycleBin can be Flashback Dropped.

ORA-38306: this object is not recoverable standalone

Cause: Trying to flashback drop an object other than of type TABLE.

Action: Only tables are recoverable.

ORA-38307: object not in RECYCLE BIN

Cause: Trying to Purge the object which is not in RecycleBin.

Action: Only the objects in RecycleBin can be PURGEDED.

ORA-38308: invalid FLASHBACK DROP option

Cause: Invalid Flashback Drop option specified.

Action: Specify a valid Flashback Drop option.

ORA-38309: object not purgable

Cause: An attempt was made to purge an object that is either not purgable or else dependent upon some other object.

Action: Cannot purge this object.

ORA-38310: cannot purge tablespace for other users

Cause: An attempt was made to purge the tablespace for a different user by a user who does not have system DBA privileges.

Action: Cannot purge the tablespace for some other user.

ORA-38311: cannot purge objects owned by other users

Cause: An attempt was made to purge an object which is owned by some other user.

Action: Cannot purge this object.

ORA-38312: original name is used by an existing object

Cause: An attempt was made to recover an object preserving the original name, but that name is taken up by some other object.

Action: use the RENAME clause to recover the object with a different name.

ORA-38401: synonym *string* not allowed

Cause: An attempt was made to use a synonym for a data type of an attribute or a table alias.

Action: Use the object name instead of the synonym.

ORA-38402: invalid name: empty string or spaces in the name

Cause: There were spaces in the name.

Action: Remove spaces in the name or use quotes around the name.

ORA-38403: attribute set name may not be longer than 22 characters

Cause: The attribute set name was longer than 22 characters.

Action: Choose a name that has 22 or fewer characters.

ORA-38404: schema extension not allowed for the attribute set name

Cause: There was a schema extension for the attribute set name. Attribute sets are always created in the current schema and thus schema extended names are not allowed.

Action: Create the attribute set from the appropriate schema.

ORA-38405: quotes not allowed in the attribute set name

Cause: The attribute set name contained quotes.

Action: Remove quotes in the attribute set name.

ORA-38406: attribute set *string* already exists

Cause: An attribute set with a matching name already exists in the current schema.

Action: Drop the existing attribute set or choose a different name.

ORA-38407: The ADT associated with the attribute set already exists.

Cause: The Abstract type (ADT) with the same name as the attribute set already exists in the current schema.

Action: Create the attribute set for the existing ADT or drop the ADT.

ORA-38408: The ADT "*string*" does not exist in the current schema.

Cause: An attempt was made to create the attribute set from a nonexistent ADT.

Action: Make sure that the ADT with the same name as the attribute set exists in the current schema.

ORA-38409: invalid name or option for the attribute set: *string*

Cause: An invalid name or option was used for the attribute set.

Action: Set serveroutput ON and repeat the operation for additional information.

ORA-38410: schema extension not allowed for the table name

Cause: An attempt was made to use a schema extended name for the table storing expressions.

Action: The table storing expressions and the corresponding attribute set should be created in the same schema.

ORA-38411: invalid datatype for the column storing expressions

Cause: An attempt was made to create an expression column from a column of invalid datatype.

Action: Create a VARCHAR2 or CHAR column to store expressions in a table.

ORA-38412: Expression set column *string* does not exist.

Cause: The column storing expressions does not exist.

Action: Pass a valid name for the column storing expressions.

ORA-38413: elementary attribute name may not be longer than 32 characters

Cause: An attempt was made to create an elementary attribute with a name longer than 32 characters.

Action: Use a shorter name for the elementary attribute.

ORA-38414: invalid datatype for the attribute *string*

Cause: The datatype specified for the attribute was invalid.

Action: If the datatype is an ADT, make sure that the ADT exists and the current user has execute permissions to it.

ORA-38415: invalid name or datatype for the attribute: *string*

Cause: An invalid name or datatype was used for the attribute.

Action: Set serveroutput ON and repeat the operation for additional information.

ORA-38416: A stored attribute may not be longer than 300 characters.

Cause: An attempt was made to create a stored or indexed attribute longer than 300 characters.

Action: A predicate with such attribute may not be indexed. It will be evaluated as sparse predicate.

ORA-38417: attribute set *string* does not exist

Cause: An attempt was made to use an attribute set that does not exist.

Action: Create the attribute set or choose an existing attribute set.

ORA-38418: ADT associated with the attribute set *string* does not exist

Cause: The ADT with the same name as the attribute set was not found in the current schema.

Action: Drop the attribute set and recreate it.

ORA-38419: invalid identifier in attribute : *string*

Cause: An identifier used in the stored/indexed attribute sub-expression was not defined or was invalid.

Action: Create all the required elementary attributes and user-defined functions and try again.

ORA-38420: invalid stored attribute sub-expression: *string*

Cause: The sub-expression used for the stored expression was invalid.

Action: Set serveroutput ON and repeat the operation for additional information.

ORA-38421: attribute *string* already exists

Cause: An attribute with a matching name (or form) already exists in the attribute set.

Action: Drop the existing attribute or choose a different name for the new attribute.

ORA-38422: invalid datatype for the attribute: *string*

Cause: An attempt was made to create an attribute with invalid datatype.

Action: If the data type of the attribute is an ADT, make sure that the type exists.

ORA-38423: Attribute set created from an ADT may not be extended.

Cause: An attempt was made to add an elementary attribute to an attribute set created from an ADT.

Action: Create a new attribute set and add all the required elementary attributes one at a time.

ORA-38424: no attribute set currently assigned to the expression set

Cause: An attempt was made to un-assign an attribute set from an expression set when there is no attribute set assigned to it.

Action: No action is required.

ORA-38425: attribute set used for an index object may not be unassigned

Cause: An attempt was made to un-assign an attribute set from an expression set when there is an Expression Filter index defined on the column.

Action: Drop the index before un-assigning the attribute set.

ORA-38426: attribute set assigned to an expression set may not be dropped

Cause: An attempt was made to drop an attribute set when it is still associated with an expression set.

Action: Un-assign the attribute set from the expression set before dropping it.

ORA-38427: attribute *string* does not exist

Cause: An attempt was made to use an attribute set that does not exist.

Action: Create the attribute set.

ORA-38428: too many attributes selected for indexing

Cause: An attempt was made to create an expression filter index with more than 490 indexed attributes.

Action: Remove some of the indexed attributes. Make sure that the default indexed attributes associated with the attribute set combined with the indexed attributes specified in the Create Index Parameters clause are less than or equal to 490.

ORA-38429: invalid datatype for a stored attribute: *string*

Cause: The (resulting) datatype for the attribute was not appropriate for storing.

Action: Choose a stored attribute that has a resulting datatype of NUMBER, VARCHAR2, CHAR or DATE.

ORA-38430: Operation "*string*" not supported in the current release.

Cause: An attempt was made to perform an unsupported operation.

Action: Do not use the operation.

ORA-38431: could not evaluate subexpression "*string*" for rowid "*string*"

Cause: Either the expression was not a valid SQL-WHERE clause format or it had references to nonexistent schema objects.

Action: Correct the expression.

ORA-38432: EVALUATE operator only allowed on an expression column

Cause: An attempt was made to use the EVALUATE operator on a column not configured as a column storing expressions.

Action: Assign an attribute set to the column.

ORA-38433: index "*string*" could not be maintained due to "*string*"

Cause: The error was caused by the recursive operation.

Action: Fix the error and retry.

ORA-38434: could not evaluate expression "*string*"

Cause: Either the expression was not in a valid SQL-WHERE clause format or it had references to nonexistent schema objects or there is a missing attribute value.

Action: Set serveroutput ON for more details.

ORA-38435: missing elementary attribute value or invalid name-value pairs

Cause: The second argument to the EVALUATE operator had either a missing attribute or an invalid value for an attribute.

Action: Try again after fixing the error.

ORA-38436: attribute set used for an Expression set may not be modified.

Cause: An attempt was made to add an elementary attribute to an attribute set assigned to an expression set.

Action: Un-assign the attribute set and try again.

ORA-38437: The ADT "*string*" may not contain any user methods.

Cause: An attempt was made to create an attribute set from an ADT that has one or more user methods.

Action: Drop the ADT and recreate it with no user methods.

ORA-38438: getVarchar not possible due to "*string*" datatype in the attribute set

Cause: An attempt was made to use the getVarchar API when the attribute set has one or more non-scalar types.

Action: Use AnyData conversion to encode the data item.

ORA-38439: invalid operation "*string*"

Cause: An attempt was made to use an invalid operation.

Action: Use one of the following operations : ADD, DROP

ORA-38440: attribute set *string* does not exist

Cause: An attempt was made to copy an attribute set that is not accessible from the current schema.

Action: Grant execute permissions on the corresponding ADT to the current user and try again.

ORA-38441: System could not derive the list of STORED and INDEXED attributes.

Cause: The attribute set was created without default index parameters.

Action: Specify the default index parameters for the attribute set or include a valid PARAMETERS clause for the CREATE INDEX command.

ORA-38442: The ADT "*string*" is not in a valid state.

Cause: An attempt was made to use an ADT that is not in a valid state.

Action: Check the INCOMPLETE field in the user_types catalog view to make sure that the ADT is in a valid state. Drop the invalid ADT and recreate the corresponding attribute set.

ORA-38443: An attribute set should be assigned to the expression set for statistics collection.

Cause: An attempt was made to collect statistics for an expression set with no attribute set assigned to it.

Action: Assign an attribute set to the expression set before collecting the statistics.

ORA-38444: statistics do not exist for the expression set

Cause: An attempt was made to clear the statistics that do not exist.

Action: No action was required.

ORA-38445: TOP clause not allowed with no statistics

Cause: An attempt was made to use the TOP parameters clause with no statistics available for the expression set.

Action: Collect statistics for the expression set and try again.

ORA-38446: Error with embedded ADT "*string*" in the attribute set.

Cause: The embedded ADT has errors.

Action: Set serveroutput ON for additional information.

ORA-38447: Type required for the embedded ADT attribute "*string*" is missing

Cause: Object type required for the embedded ADT was missing.

Action: Set serveroutput ON for additional information.

ORA-38448: Indexing predicates with "*string*" operator is not supported.

Cause: An unsupported operator was used in the `expr` array.

Action: Choose the operators from this list : =, <, >, <=, >=, !=, is null, is not null, nvl, and between.

ORA-38449: table "*string*" does not exist or is not accessible

Cause: An attempt was made to create a table alias for a table that does not exist or is not accessible.

Action: Grant select privileges on the table to the current user.

ORA-38450: error computing a stored attribute for the expression set.

Cause: Either values for one of the attributes was incorrect or a stored attribute was invalid due to broken dependencies.

Action: Correct the input.

ORA-38451: index is in an inconsistent state

Cause: One or more secondary objects used to maintain the index did not exist

Action: Drop the index and recreate it.

ORA-38452: Expression Filter index name may not be longer than 25 characters

Cause: An attempt was made to use a name longer than 25 characters for the Expression Filter index.

Action: Choose a name that has 25 or fewer characters

ORA-38453: ExpFilter index should be created in the same schema as the base table.

Cause: An attempt was made to create the Expression Filter index in a schema other than that of the base table.

Action: Create the index in the same schema as the base table.

ORA-38454: attribute set not defined for the column being indexed

Cause: An attempt was made to create an Expression Filter index on a column with no attribute set association.

Action: Assign an attribute set to the expression set column being indexed.

ORA-38455: Expression Filter index should be created by the owner.

Cause: An attempt was made to create the Expression Filter index by a user who is not the owner of the index.

Action: Create the index using owner's privileges.

ORA-38456: The attribute set "*string*" is in an inconsistent state.

Cause: The attribute set was in an inconsistent state due to broken dependencies.

Action: Set serveroutput ON for more details. The attribute set may not be reused after this error.

ORA-38457: The attribute "*string*" is not a valid XMLType attribute.

Cause: An attempt was made to use a non-XMLType attribute to configure XPath filtering.

-
- Action:** Use an attribute of sys.XMLType datatype to configure XPath filtering.
- ORA-38458: invalid operation "string" for XPATH_FILTER_PARAMETERS**
Cause: An attempt was made to use an invalid operation.
Action: Use one of the following operations : ADD, DROP.
- ORA-38459: XML Tag "string" not found for the XMLType attribute "string"**
Cause: An Attempt was made to use a non-existent XML Tag.
Action: Correct the name of the XML Tag or the XMLType attribute.
- ORA-38460: filtering based on datatype "string" not supported for XML Tags**
Cause: An attempt was made to configure XPath filtering with an XML Tag of unsupported datatype.
Action: Leave the XML Tag out of filter parameters. It will be processed as sparse predicate
- ORA-38461: XML Tag "string" already exists for the XMLType attribute "string"**
Cause: An attempt was made to create a duplicate XML Tag.
Action: Choose a different XML Tag.
- ORA-38462: invalid attribute list**
Cause: The input was missing an attribute list or had null values for the attribute names.
Action: Correct the input.
- ORA-38463: invalid XML Tag list**
Cause: The input was missing a tag list or had null values for the tag names.
Action: Correct the input.
- ORA-38464: expression set is not empty.**
Cause: An attempt was made to assign an attribute set to a non-empty expression set.
Action: Use FORCE = 'TRUE' to validate all the existing expressions.
- ORA-38465: failed to create the privilege checking trigger due to: string**
Cause: Creation of the trigger failed due to the error listed in the message.
Action: Set serveroutput ON for more information.
- ORA-38466: user does not have privileges to CREATE/MODIFY expressions**
Cause: An attempt was made to INSERT or UPDATE a column storing expression without appropriate permissions.
Action: Appropriate privileges on the expression set should be granted by the owner of the expression set.
- ORA-38467: user cannot GRANT/REVOKE privileges to/from himself**
Cause: An attempt was made to GRANT or REVOKE privileges to or from the current user.
Action: The the to_user or from_user field should be different from the user performing the operation.
- ORA-38468: column "string" is not identified as a column storing expressions.**
Cause: An attempt was made to grant permission on a nonexistent expression set.

Action: Make sure that the table and the column exist and an attribute set is associated with the column.

ORA-38469: invalid privilege for an expression set: *string*

Cause: An attempt was made to use an invalid privilege.

Action: See documentation for a valid privilege.

ORA-38470: cannot revoke a privilege that was not granted.

Cause: An attempt was made to revoke a privilege that had not been granted.

Action: Check catalog views to see if the user has the privilege.

ORA-38471: ROWIDs for table aliases cannot be null

Cause: An attempt was made to pass a null value for the table alias attribute in the data item, which is not permitted.

Action: Pass a valid rowid value for the table alias.

ORA-38472: VARCHAR representation of the data item is too long.

Cause: The VARCHAR representation of data item was too long.

Action: Use the EVALUATE operator with AnyData argument instead.

ORA-38473: cannot drop a type used for Expression Filter attribute set

Cause: An attempt was made to drop an ADT that was used to maintain an attribute set for the Expression Filter.

Action: Query USER_EXPFIL_ATTRIBUTE_SETS view to see the dependency.

ORA-38474: attribute set may not have attributes of TABLE COLLECTION type.

Cause: An attempt was made to create an attribute with a TABLE COLLECTION type.

Action: Use VARRAYs instead of table collection, if possible.

ORA-38475: The attribute set and the associated ADT are out of sync.

Cause: The ADT was directly modified by CREATE or ALTER operations.

Action: Drop the attribute set and recreate it from scratch.

ORA-38476: abstract type used for an Attribute set may not be modified.

Cause: An attempt was made to alter a type (ADT) that is used to maintain an attribute set of an Expression set.

Action: Do not modify the ADT directly. Use DBMS_EXPFIL APIs instead.

ORA-38477: attribute set cannot be derived from an evolved type or a subtype.

Cause: An attempt was made to create an attribute set from an evolved ADT or a subtype.

Action: The ADT used for the attribute set cannot be an evolved type or a subtype.

ORA-38478: creation of system trigger EXPFIL_DROPOBJ_MAINT failed

Cause: The creation of the system trigger EXPFIL_DROPOBJ_MAINT failed due to missing Expression Filter dictionary tables.

Action: Try a clean installation again. If this error is ignored, the Expression Filter dictionary could have some stale entries.

ORA-38479: creation of system trigger EXPFIL_RESTRICT_TYPEEVOLVE failed

-
- Cause:** The creation of system trigger EXPFIL_RESTRICT_TYPEEVOLVE failed due to missing Expression Filter dictionary tables.
- Action:** Try a clean installation again. If this error is ignored, the user will be able to evolve ADTs associated with the attribute set, thus causing spurious errors.
- ORA-38480: creation of system trigger EXPFIL_ALTEREXPTAB_MAINT failed.**
- Cause:** The creation of system trigger EXPFIL_ALTEREXPTAB_MAINT failed due to errors in SYS.EXF\$DBMS_EXPFIL_SYSPACK package.
- Action:** Try a clean installation again. If this error is ignored, a RENAME of the expression table may cause the EVALUATE queries to fail.
- ORA-38481: ADT "*string*" is used for a dependent object.**
- Cause:** An attempt was made to create an attribute set from an ADT which is used by one or more dependent objects.
- Action:** Use a new ADT instead.
- ORA-38482: no elementary attributes defined in the attribute set**
- Cause:** An attempt was made to use an empty attribute set.
- Action:** Create one or more elementary attributes for the attribute set.
- ORA-38483: invalid FUNCTION/PACKAGE/TYPE name: "*string*"**
- Cause:** An attempt was made to use an invalid name format.
- Action:** The function/package/type name should be specified in the following format [owner.]object_name
- ORA-38484: FUNCTION/PACKAGE/TYPE *string* does not exist**
- Cause:** Attempt was made to use a object that does not exist.
- Action:** Query ALL_OBJECT view to ensure that the object exists.
- ORA-38485: invalid object type for the user-defined function**
- Cause:** An attempt was made to use an invalid object as a function.
- Action:** Valid object types are FUNCTION / PACKAGE / TYPE
- ORA-38486: FUNCTION/PACKAGE/TYPE already exists for the attribute set**
- Cause:** An attempt was made to add a duplicate function to the list.
- Action:** Use a different object name.
- ORA-38487: FUNCTION/PACKAGE/TYPE "*string*" not allowed in the expression**
- Cause:** An attempt was made to use an un-approved function in the expression.
- Action:** Add the function to the corresponding attribute set
- ORA-38488: attribute set already assigned to the column storing expressions**
- Cause:** An attempt was made to reassign an attribute set to an expression column.
- Action:** Query USER_EXPFIL_EXPRESSION_SETS view to find the attribute set assigned the expression set
- ORA-38489: predicate table creation failed due to: ORA*string***
- Cause:** Predicate table creation failed due to the reported error.
- Action:** Set serveroutput ON for additional information
- ORA-38490: invalid name: quotes do not match**
- Cause:** The quotes in the name did not match.

Action: Correct the name to match the quotes.

ORA-38491: could not evaluate subexpression for rowid "string"

Cause: Either the expression was not in a valid SQL-WHERE clause format or it had references to nonexistent schema objects.

Action: Correct the expression.

ORA-38492: invalid ALTER INDEX parameters clause "string"

Cause: An invalid parameters clause was specified with the ALTER INDEX command.

Action: See documentation for a valid list of parameters.

ORA-38493: feature not enabled : Expression Filter index

Cause: An attempt was made to create an Expression Filter index in Standard Edition.

Action: Do not attempt to use this feature.

ORA-38494: column in the table alias and an attribute have matching names

Cause: One of the attributes in the set has the same name as the name of one of the columns in the table configured for table alias.

Action: If possible, use a different name for the attribute.

ORA-38495: data type for the stored attribute *string* is inconsistent.

Cause: The actual data type for the stored attribute configured for the Expression Filter index object did not match the data type recorded in the Expression Filter dictionary.

Action: Delete the attribute from the default index attributes and recreate it.

ORA-38496: Expression Filter index is not in a valid state

Cause: An attempt was made to REBUILD an Expression Filter index that was not valid.

Action: Use DEFAULT keyword in the parameters clause to rebuild the index from defaults or drop and recreate the index.

ORA-38497: Expression Filter index does not exist

Cause: Index with a matching name does not exist or the index was not created using ExpFilter indextype.

Action: Identify the correct index using the Expression Filter catalog views

ORA-38498: invalid stored attribute for the index object : *string*

Cause: The expression filter index object has a stored or indexed attribute that had broken dependencies.

Action: Make sure that all the identifiers used in the attribute are valid.

ORA-38499: expression set already configured for stored/indexed attributes

Cause: The expression set already had a list of stored and indexed attributes. Additional attributes cannot be specified in the CREATE INDEX parameters clause.

Action: Remove TOP, STOREATTRS and INDEXATTRS clauses from the parameters clause or clear the expression set statistics using DBMS_EXPFIL.INDEX_PARAMETERS API.

ORA-38500: *string*

Cause: There was a generic error

Action: See documentation for further information.

ORA-38501: sub-query not allowed in the expression

Cause: An attempt was made to use a sub-query in the expression.

Action: Do not use sub-queries in the expressions.

ORA-38502: invalid XML tag: *string*

Cause: An attempt was made to use an invalid XML tag for the index.

Action: Correct the XML tag and retry.

ORA-38503: index already defined using the parameters

Cause: An attempt was made to modify the index parameters after the index creation.

Action: Drop the index and retry.

ORA-38504: this operator not allowed with the configured attribute set

Cause: An attempt was made to use the operator binding with an attribute set containing more than one (table alias) attribute. This is not permitted.

Action: Use a different operator binding.

ORA-38505: invalid default value for the attribute

Cause: An attempt was made to use an invalid default value or a default that is larger than 100 characters.

Action: Specify a correct default value.

ORA-38506: invalid attribute type for text predicates

Cause: An attempt was made to use an invalid type for an attribute configured for text predicates.

Action: Use either a VARCHAR or a CLOB attribute instead.

ORA-38507: attributes of *string* data type should be indexed

Cause: An attempt was made to configure an attribute of spatial or text data type as stored predicate group.

Action: Configure them as indexed predicate groups instead.

ORA-38601: FI Not enough memory for frequent itemset counting: *string*

Cause: The memory size did not satisfy the minimum memory requirement.

Action: In workarea_size_policy='manual' mode, set _fic_area_size to a reasonably larger value. Or, In workarea_size_policy='auto' mode, this error should never happen.

ORA-38602: FI invalid input cursor

Cause: The input cursor did not return exactly two columns for transactional input format or the input cursor didn't have consistent data types for horizontal input format

Action: For transactional input format, specify that the input cursor returns exactly two columns: one for transaction-id, one for item-id. For horizontal input format, make sure the input cursor's columns have the same data types.

ORA-38603: FI including & excluding cursor can only return one column

Cause: The including & excluding cursor did not return exactly one column.

Action: Specify that the cursor return only one column: item-id.

ORA-38604: FI including & excluding cursor item-id type must match input cursor item-id type

Cause: The including & excluding cursor item-id type did not match input cursor item-id type

Action: Specify that the item-id type of the cursors match each other.

ORA-38605: FI not enough memory(*string*K) for candidate generation(*string*K)

Cause: There was insufficient available memory for candidate generation.

Action: In workarea_size_policy='manual' mode, set _fic_area_size to a reasonably larger value. Or, in workarea_size_policy='auto' mode, set pga_aggregate_target to a reasonably larger value.

ORA-38606: FI support threshold not between [0, 1]

Cause: The user inputed a support threshold not in the range of [0, 1].

Action: The user should adjust the input value in the range of [0, 1].

ORA-38607: FI minimum and maximum itemset length not between [1, *string*]

Cause: The inputed minimum or maximum itemset length exceed the internal maximum itemset length or less than 1.

Action: The user should adjust the input value not larger than the internal maximum itemset length and not less than 1.

ORA-38608: FI itemset minimum-length(*string*) should not be greater than maximum length(*string*)

Cause: The user inputed minimum length is more than maximum length.

Action: The user should adjust the input values to make the minimum length less than or equal to the maximum length.

ORA-38609: FI Not enough memory for tree counting, requires at least *string*KB

Cause: The memory size did not satisfy the minimum memory requirement for tree counting.

Action: In workarea_size_policy='manual' mode, set _fic_area_size to a reasonably larger value. Or, In workarea_size_policy='auto' mode, this error should never happen.

ORA-38610: FI "*string*" name prefix is reserved for frequent itemset counting

Cause: An error occurred because DBMS_FREQUENT_ITEMSET and prefix ORA_FI are reserved for the DBMS_FREQUENT_ITEMSET package's internal use.

Action: Do not re-define functions with names starting with DBMS_FREQUENT_ITEMSET package or ORA_FI.

ORA-38611: FI input cursor's item type is not supported

Cause: The input cursor's item type is not number or character type

Action: Redefine the input cursor so that item type is number or character type.

ORA-38612: FI item length cannot exceed half of one database block.

Cause: The item's length was more than half of one database block.

Action: Redefine the data type of the item column so that its maximum length is less than half of one database block.

ORA-38613: FI Cursor is returning less than 2 columns.

Cause: Cursor parameter is returning less than 2 columns.

Action: Modify the Cursor argument to return 2 columns.

ORA-38620: DT expressions in input cursor do not have an alias name

Cause: Expressions in input cursor do not have an alias name.

Action: Add an alias name for the expression.

ORA-38621: Decision Tree maximum depth setting not between [2, 20]

Cause: The user specified a max tree depth not in the range of [2, 20].

Action: The user should adjust the input value to be in the range of [2, 20].

ORA-38622: Decision Tree not enough memory, requires at least *string*KB

Cause: The memory size did not satisfy the minimum memory requirement for decision tree building.

Action: In workarea_size_policy='manual' mode, set _dtree_area_size to a reasonably larger value. Or, In workarea_size_policy='auto' mode, please raise pga_aggregate_target to a reasonably larger value.

ORA-38700: Limit of *string* flashback database logs has been exceeded.

Cause: The maximum number of flashback database log files was exceeded.

Action: DB_FLASHBACK_RETENTION_TARGET may be set to high. Modify it to a smaller value.

ORA-38701: Flashback database log *string* seq *string* thread *string*: "*string*"

Cause: This message reports the filename for details of another message.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

ORA-38702: Cannot update flashback database log file header.

Cause: Could not write to the flashback database log file.

Action: Restore access to the file.

ORA-38703: Type *string* in header is not a flashback database log file.

Cause: A corrupt flashback database log file header was read.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38704: Checksum error in flashback database log file header.

Cause: The flashback database log file header contained a checksum that does not match the value calculated from the file header as read from disk. This means the file header was corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38705: Expected block size *string* does not match *string* in log header.

Cause: When the flashback log file header was read, the block size in the control file did not match the block size contained in the header.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38706: Cannot turn on FLASHBACK DATABASE logging.

Cause: An ALTER DATABASE FLASHBACK ON command failed. Other messages in the alert log describe the problem.

Action: Fix the problem and retry.

ORA-38707: Media recovery is not enabled.

Cause: An ALTER DATABASE FLASHBACK ON command failed because media recovery was not enabled.

Action: Turn on media recovery with an ALTER DATABASE ARCHIVELOG command and then retry the command.

ORA-38708: not enough space for first flashback database log file

Cause: An ALTER DATABASE FLASHBACK ON command failed because there was not enough space in the Recovery Area for the first flashback database log file.

Action: Make more space in the Recovery Area. For example, this can be done by increasing the value of DB_RECOVERY_FILE_DEST_SIZE.

ORA-38709: Recovery Area is not enabled.

Cause: An ALTER DATABASE FLASHBACK ON command failed because the Recovery Area was not enabled.

Action: Set DB_RECOVERY_FILE_DEST to a location and retry.

ORA-38710: Flashback log version *string* is incompatible with ORACLE version *string*.

Cause: The flashback database log file was rejected because it appeared to be written by an incompatible version of Oracle.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38711: Corrupt flashback log block header: block *string*

Cause: A corrupt Flashback Database log file block header was read. More information was dumped to the trace file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38712: Corrupt flashback log record header: block *string*, offset *string*.

Cause: A corrupt flashback database log record header was read. Either the record type or length were incorrect. More information was dumped to the trace file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38713: Flashback Database logging is already turned on.

Cause: An ALTER DATABASE FLASHBACK ON command had no effect because flashback database logging was already on.

Action: No action required.

ORA-38714: Instance recovery required.

Cause: An ALTER DATABASE FLASHBACK ON command failed because the database either crashed or was shutdown with the ABORT option.

Action: Open the database and then enter the SHUTDOWN command with the NORMAL or IMMEDIATE option.

ORA-38715: Invalid log number specified in the DUMP FLASHBACK command.

Cause: An invalid log number was used when dumping a flashback database log file.

Action: Specify a valid flashback database log number.

ORA-38716: Must supply an integer for the TYPE option.

Cause: An invalid value was specified for TYPE in the DUMP FLASHBACK command.

Action: Specify an integer value.

ORA-38717: Invalid DUMP FLASHBACK option.

Cause: An invalid option was specified in the DUMP FLASHBACK command. Currently the only options allowed are: DBA, TYPE, and LOGICAL.

Action: Retry the command with the correct options.

ORA-38718: Invalid thread number specified in the DUMP FLASHBACK command.

Cause: An invalid thread number was used in dumping the flashback database log files for a thread.

Action: Specify a valid thread number.

ORA-38719: Invalid DUMP FLASHBACK object.

Cause: An invalid object was specified in a DUMP FLASHBACK command. Currently the only objects allowed are: LOGFILE or THREAD.

Action: Retry the command with the correct options.

ORA-38720: Missing log file name or number.

Cause: A log file name or number was missing in a DUMP FLASHBACK LOGFILE command.

Action: Supply a valid log file name or number.

ORA-38721: Invalid file number.

Cause: An invalid file number was specified in the DBA clause of a DUMP FLASHBACK command.

Action: Supply a valid file number.

ORA-38722: ON or OFF expected.

Cause: The ALTER DATABASE FLASHBACK command was specified without the ON or OFF keyword.

Action: Retry the command with the ON or OFF keyword.

ORA-38723: Invalid SCN expression.

Cause: The SCN keyword was specified in a FLASHBACK DATABASE command but the SCN expression was invalid.

Action: Retry the command using a valid SCN number.

ORA-38724: Invalid option to the FLASHBACK DATABASE command.

Cause: An invalid option was specified to the FLASHBACK DATABASE command. Valid options are: SCN or TIMESTAMP.

Action: Correct the syntax and retry the command.

ORA-38725: specified name "*string*" does not match actual "*string*"

Cause: The database name specified in a FLASHBACK DATABASE command did not match the name of the currently mounted database.

Action: Correct the database name spelling or DISMOUNT the mounted database and mount the correct database.

ORA-38726: Flashback database logging is not on.

Cause: A FLASHBACK DATABASE command was tried but flashback database logging has not been enabled.

Action: Flashback database logging must be enabled via the ALTER DATABASE FLASHBACK ON command before a FLASHBACK DATABASE command can be tried. If the database must be taken back in time then a restore and incomplete recovery must be performed.

ORA-38727: FLASHBACK DATABASE requires a current control file.

Cause: The control file being used is a backup control file.

Action: FLASHBACK DATABASE cannot be used with a backup control file. If the database must be taken back in time then a restore and an incomplete recovery must be performed.

ORA-38728: Cannot FLASHBACK DATABASE to the future.

Cause: An SCN or time stamp provided in a FLASHBACK DATABASE command was in the future.

Action: Supply a proper SCN or time stamp and retry the command.

ORA-38729: Not enough flashback database log data to do FLASHBACK.

Cause: There was not enough flashback database log data to do the FLASHBACK DATABASE.

Action: If the database must be taken back in time then a restore and incomplete recovery must be performed.

ORA-38730: Invalid SCN/TIMESTAMP expression.

Cause: The expression supplied in a FLASHBACK DATABASE command was invalid.

Action: Retry the command using a valid number or time stamp expression.

ORA-38731: Expected version *string* does not match *string* in log header.

Cause: The version of the flashback database log file header was corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38732: Expected file size *string* does not match *string*.

Cause: The file size indicated in the control file did not match the file size contained in the flashback log file header. The flashback database log file was corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38733: Physical size *string* less than needed *string*.

Cause: A flashback database log file shrank in size. This was likely to have been caused by operator or operating system error.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38734: Flashback log is inconsistent; belongs to another database.

Cause: The database ID in the flashback database log file did not match the database ID in the control file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38735: Wrong log number *string* in flashback log file header.

Cause: The log file number in the flashback database log file did not match the control file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38736: Wrong thread number *string* in flashback log file header.

Cause: The thread number in the flashback database log file did not match the control file.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38737: Expected sequence number *string* doesn't match *string*

Cause: The flashback database log is corrupted or is an old version.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38738: Flashback log file is not current copy.

Cause: A check of flashback database log file header at database open found that the flashback database log appeared to be an incorrectly restored backup. Flashback database log files cannot be backed up and restored.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38739: Flashback log file is more recent than control file.

Cause: The control file change sequence number in the flashback database log file was greater than the number in the control file. This implies that the wrong control file was being used. Note that repeatedly causing this error can make it stop happening without correcting the real problem. Every attempt to open the database will advance the control file change sequence number until it is great enough.

Action: FLASHBACK DATABASE can only be used with the current control file. If it is not available, then a restore and an incomplete recovery must be performed instead.

ORA-38740: Usable blocks value *string* is not valid.

Cause: A flashback database log file header contained a usable blocks value greater than the file size. The flashback database log file file is corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38741: Formatted blocks value *string* is not valid.

Cause: The formatted blocks value in the flashback database log file was greater than the file size. The flashback database log file was corrupt.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38742: Flashback log file has incorrect log reset status.

Cause: The flashback database log file header had log reset data that was different than the control file. The log was probably an incorrectly restored backup. Flashback database logs cannot be backed up.

Action: If you are doing a FLASHBACK DATABASE, then the flashback cannot be performed because of the corrupted log. A restore and an incomplete recovery must be performed instead.

ORA-38743: Time/SCN is in the future of the database.

Cause: The Time/SCN provided in a FLASHBACK DATABASE command was in the future of the database.

Action: Retry the command with a correct Time/SCN or RECOVER the database.

ORA-38744: file *string* is not the same file seen at start of flashback

Cause: A different copy of the file was accessed the last time FLASHBACK DATABASE looked at the file header. A backup of the file was restored or the meaning of the file name changed during FLASHBACK DATABASE.

Action: Ensure the correct file is available, then retry FLASHBACK DATABASE.

ORA-38746: error occurred while restoring data block (file# *string*, block# *string*)

Cause: An error occurred during a FLASHBACK DATABASE command. See other errors on error stack.

Action: Investigate why the error occurred. It may be that the flashback database log data is corrupt. If so, a restore and an incomplete recovery must be performed instead.

ORA-38747: corrupt before image (file# *string*, block# *string*)

Cause: A corrupt data block before image was encountered during a FLASHBACK DATABASE command.

Action: The flashback log data is probably corrupt. If so, a restore and an incomplete recovery must be performed instead.

ORA-38748: cannot flashback data file *string* - file is in use or recovery

Cause: An attempt to do FLASHBACK DATABASE found that the file was not available for recovery. Either it was online and the database was open in some

instance, or another process was currently doing media recovery or flashback on the file.

Action: Do not do FLASHBACK DATABASE.

ORA-38749: A media recovery has been started.

Cause: An attempt was made to start a FLASHBACK DATABASE in the same session as a media recovery.

Action: Complete or cancel the first media recovery session.

ORA-38750: FLASHBACK DATABASE may not be performed using a dispatcher.

Cause: An attempt was made to use a dispatcher process for FLASHBACK DATABASE. Memory requirements disallow this recovery method.

Action: Connect to the instance via a dedicated server process to perform FLASHBACK DATABASE.

ORA-38751: Flashback database log: "*string*"

Cause: This message reports the filename for details of another message.

Action: Other messages will accompany this message. See the associated messages for the appropriate action to take.

ORA-38752: file *string* does not exist

Cause: During an RMAN FLASHBACK DATABASE conversation, a file was listed which was not part of the database. The RMAN conversation was aborted.

Action: Retry the conversation with the appropriate file numbers.

ORA-38753: Cannot flashback data file *string*; no flashback log data.

Cause: An attempt to perform a FLASHBACK DATABASE failed because the file does not have enough flashback log data to cover the time to flash back. Either the file did not have flashback generation enabled for it, or had flashback generation turned off for it some time during the time span of the flashback.

Action: The file cannot be flashed back. The file must be taken offline or the tablespace dropped before continuing with the FLASHBACK DATABASE command.

ORA-38754: FLASHBACK DATABASE not started; required redo log is not available

Cause: A FLASHBACK DATABASE command did not start. A redo log needed for the recovery part of FLASHBACK DATABASE could not be found or accessed.

Action: See trace files for details of the problem.

ORA-38755: Flashback is already turned on for this tablespace.

Cause: An attempt was made to turn on flashback database logging for a tablespace that already has flashback turned on.

Action: No action required.

ORA-38756: Flashback is already turned off for this tablespace.

Cause: An attempt was made to turn off flashback database logging for a tablespace that already has flashback off.

Action: No action required.

ORA-38757: Database must be mounted and not open to FLASHBACK.

Cause: An attempt to Flashback a database was made when the database was not mounted or was already open.

Action: Mount the database and retry the FLASHBACK command.

ORA-38758: cannot flashback data file *string*; restored since last recovery

Cause: An attempt to do FLASHBACK DATABASE found that the file was restored since the last standby recovery. The file cannot be flashed back.

Action: The file must be taken offline before continuing with the FLASHBACK DATABASE command.

ORA-38759: Database must be mounted by only one instance and not open.

Cause: An attempt to turn on or off Flashback Database logging was made when the database was open or mounted by more than one instance.

Action: Mount the database in only one instance and retry the command.

ORA-38760: This database instance failed to turn on flashback database

Cause: Database flashback is on but this instance failed to start generating flashback data. Look in alert log for more specific errors.

Action: Correct the error or turn off database flashback.

ORA-38761: redo log sequence *string* in thread *string*, incarnation *string* could not be accessed

Cause: A redo log needed for the recovery portion of FLASHBACK could not be read or opened. The FLASHBACK operation failed.

Action: Restore the log and retry the FLASHBACK command.

ORA-38762: redo logs needed for SCN *string* to SCN *string*

Cause: The FLASHBACK DATABASE operation failed. The recovery portion of FLASHBACK DATABASE needed redo from the first SCN to the second, but one or more of the redo logs in the range could not be read or opened.

Action: Check the FLASHBACK DATABASE command trace file for a description of the inaccessible redo logs, restore access to them, and retry the FLASHBACK DATABASE command.

ORA-38763: flashback not started; enabled threads have changed

Cause: A FLASHBACK DATABASE command did not start. The set of enabled threads changed during the time to flash back.

Action: The flashback cannot be performed. Perform a restore and an incomplete recovery instead.

ORA-38764: flashback not started; datafile *string* enabled threads are different

Cause: A FLASHBACK DATABASE command did not start. The datafile was restored from a backup taken when the enabled threads were different than at the time of the flashback.

Action: The flashback cannot be performed. Perform a restore and an incomplete recovery instead.

ORA-38765: Flashed back database cannot be opened read-only.

Cause: A complete recovery was performed after a database flashback but the database was not opened for read-write access, or a FLASHBACK DATABASE command failed.

Action: If a complete recovery was performed after a database flashback, open the database for read-write access. If a FLASHBACK DATABASE command failed, fix what caused the command to fail and retry the command, or recover and open the database for read-write access.

ORA-38766: cannot flashback data file *string*; file resized smaller

Cause: An attempt to do FLASHBACK DATABASE found that the file was shrunk during the time to flash back.

Action: The file cannot be flashed back. The file must be taken offline or the tablespace dropped before continuing with the FLASHBACK DATABASE command.

ORA-38767: flashback retention target parameter mismatch

Cause: The value of parameters DB_FLASHBACK_RETENTION_TARGET must be same in all instances. All databases must have same flashback retention target parameters.

Action: Check DB_FLASHBACK_RETENTION_TARGET values in all instances.

ORA-38768: resizing datafile *string* failed

Cause: An operating system error occurred when Flashback Database tried to shrink (resize) a datafile. Flashback shrinks a file in order to undo the effects of a file expand, for example, an autoextension of the file.

Action: Recover the database to return it to its previous state, or fix the cause of the operating system error and retry the Flashback. If that is not possible, then the file can be taken offline and the Flashback command retried. The file will have to be restored from a backup and rolled forward.

ORA-38769: FLASHBACK DATABASE failed after modifying data.

Cause: A FLASHBACK DATABASE command failed after modifying the the database. Look in the alert log for more information about the failure.

Action: Recover the database to return it to its previous state, or fix the cause of the error and retry the Flashback.

ORA-38770: FLASHBACK DATABASE failed during recovery.

Cause: A FLASHBACK DATABASE command successfully restored the database but failed during the recovery step. Look in the alert log for more information about the failure.

Action: Fix the error and then recover the database to the same SCN or timestamp used in the FLASHBACK DATABASE command.

ORA-38771: unnamed datafile(s) added to control file by flashback recovery

Cause: The recovery step of FLASHBACK DATABASE encountered the creation of a datafile that could not be added to the control file. An entry has been added to the control file for the new datafile, but with the file name UNNAMEDnnnn, where nnnn is the file number. Related error messages provide the file names that were originally used to create the files.

Action: Rename the file in the control file, or use the ALTER ALTER DATABASE CREATE DATAFILE command to create a file suitable for recovery. If the file is not going to be recovered, then take it offline with the FOR DROP option. The recovery step of Flashback can be resumed by entering a RECOVERY command with the same SCN or timestamp as used in the FLASHBACK DATABASE command. For example, RECOVER AUTOMTAIC DATABASE UNTIL CHANGE <flashback-scen>.

ORA-38772: cannot add datafile '*string*' - file could not be created

Cause: The recovery step of FLASHBACK DATABASE encountered the creation of a datafile and could not recreate the file. The error from the creation attempt is displayed in another message. The control file file entry for the file is 'UNNAMEDnnnnn'.

Action: Use the ALTER DATABASE CREATE DATAFILE statement to create the file.

ORA-38773: cannot add data file '*string*' - file already part of database

Cause: The recovery step of FLASHBACK database encountered the creation of a datafile and could not create the file because the file name is already in use in the database. The control file file entry for the file is 'UNNAMEDnnnnn'.

Action: Use the ALTER DATABASE CREATE DATAFILE statement to create the file with a different name.

ORA-38774: cannot disable media recovery - flashback database is enabled

Cause: An attempt was made to disable media recovery while flashback database was enabled.

Action: Use the ALTER DATABASE FLASHBACK OFF statement to disable flashback database, then disable media recovery.

ORA-38775: cannot disable recovery area - flashback database is enabled

Cause: An attempt was made to set DB_RECOVERY_FILE_DEST to null while flashback database was enabled. Flashback database requires DB_RECOVERY_FILE_DEST to be set.

Action: Use the ALTER DATABASE FLASHBACK OFF statement to disable flashback database, then disable the recovery area.

ORA-38776: cannot begin flashback generation - recovery area is disabled

Cause: During a database mount, the RVWR process discovered that the recovery area was disabled. DB_RECOVERY_FILE_DEST must have been set null or removed from the INIT.ORA file while the database was unmounted.

Action: Flashback database requires the recovery area to be enabled. Either enable the recovery area by setting the DB_RECOVERY_FILE_DEST and DB_RECOVERY_FILE_DEST_SIZE initialization parameters, or turn off flashback database with the ALTER DATABASE FLASHBACK OFF command.

ORA-38777: database must not be started in any other instance

Cause: A command was attempted that required the database to be mounted in this instance and not started in any other instance. ALTER DATABASE OPEN RESETLOGS requires that the database be started in only one instance if flashback database logging is enabled.

Action: Ensure that the no other instances are started. Then retry the command.

ORA-38778: Restore point '*string*' already exists.

Cause: The restore point name of the CREATE RESTORE POINT command already exists. A restore point name must be unique.

Action: Either use a different name or delete the existing restore point with the same name.

ORA-38779: cannot create restore point - too many restore points.

Cause: The maximum number of restore points already have been created.

Action: Delete some existing restore point and retry the operation.

ORA-38780: Restore point '*string*' does not exist.

Cause: The restore point name of the DROP RESTORE POINT command does not exist.

Action: No action required.

ORA-38781: cannot disable media recovery - have guaranteed restore points

Cause: An attempt was made to disable media recovery while there is at least one guaranteed restore point.

Action: Drop all guaranteed restore points and then disable media recovery.

ORA-38782: cannot flashback database to non-guaranteed restore point '*string*'

Cause: An attempt was made to flashback database to a non-guaranteed restore point while flashback database is off. You can only flashback a database to guaranteed restore point when flashback database is not on.

Action: Consider picking a guaranteed restore point to flashback the database to, if there is one.

ORA-38783: Instance recovery required.

Cause: An attempt was made to create a restore point when the database is in mount mode but it was not shutdown cleanly before it was mounted. In order to create a restore point when the database is mounted, the database must be shutdown cleanly before it is mounted.

Action: Consider one of the following:

1. Create the restore point after opening the database.
2. Open the database, shut it down cleanly, mount the database, and retry creating the restore point.

ORA-38784: Cannot create restore point '*string*'.

Cause: An attempt to create a restore point failed. See other errors on the error stack and in the alert log for the specific reason.

Action: Fix the problem and retry.

ORA-38785: Media recovery must be enabled for guaranteed restore point.

Cause: Media recovery is not enabled. Media recovery must be enabled in order to create a guaranteed restore point.

Action: Turn on media recovery with an ALTER DATABASE ARCHIVELOG statement and then retry the command.

ORA-38786: Recovery area is not enabled.

Cause: An attempt was made to perform a command that requires Flash recovery area to be enabled.

Action: Set DB_RECOVERY_FILE_DEST to an appropriate location and retry.

ORA-38787: Creating the first guaranteed restore point requires mount mode when flashback database is off.

Cause: While flashback database is not on, an attempt was made to create the first guaranteed restore point while the database is open.

Action: Mount the database and retry.

ORA-38788: More standby database recovery is needed

Cause: An attempt was made to create a restore point or a guaranteed while a physical standby database is not cleanly checkpointed.

Action: Perform more standby database recovery via managed standby database recovery. Cancel managed recovery and retry the command.

ORA-38789: File name is too long.

Cause: The file name provided in the command was longer than the maximum allowed.

Action: Use a shorter file name.

ORA-38790: BEFORE must be specified with RESETLOGS

Cause: The FLASHBACK DATABASE command included the RESETLOGS parameter but not the BEFORE parameter.

Action: Retry the command with TO BEFORE RESETLOGS.

ORA-38791: flashback did not start because file *string* was not in a valid incarnation

Cause: Flashback could not be started because a file was checkpointed or fuzzy at a point where the file can neither be restored nor recovered to our restore target. In order for a file to be brought to the restore target, the file has to be in one of the incarnations along the ancestral path from the current incarnation to the restore incarnation.

Action: Manually restore or recover the file to a point where it is in one of the incarnations along the ancestral path from the current incarnation to the restore incarnation.

ORA-38792: encountered unknown flashback record from release *string*

Cause: A Flashback Database logfile contains a record written by a future Oracle release and is unknown by this release.

Action: The given release of Oracle must be installed in order to use these flashback database log files.

ORA-38793: cannot FLASHBACK the database to a future SCN/time

Cause: The Flashback Database target SCN/timestamp is greater than the current database SCN/timestamp and the database incarnation is not the last opened incarnation.

Action: If the target SCN/timestamp is in the current incarnation or a child incarnation whose branch point is after the current database SCN then RECOVER DATABASE to the target SCN/time. If the target SCN/timestamp is in a child incarnation whose branch point is prior to the current database SCN then FLASHBACK DATABASE to before the branch point. Next use RMAN to reset the database to the child incarnation. Finally, RECOVER DATABASE to the target SCN/time.

ORA-38794: Flashback target time not in current incarnation

Cause: The Flashback Database target timestamp is not in the database's current incarnation or any of its ancestors.

Action: Use a different target timestamp or use RMAN to reset the database to the appropriate incarnation.

ORA-38795: warning: FLASHBACK succeeded but OPEN RESETLOGS would get error below

Cause: Flashback Database ended without error. However, if the ALTER DATABASE OPEN RESETLOGS command were attempted now, it would fail with the specified error. The most likely cause is that Flashback Database had to add a file back to the control file but could not restore the file's contents.

Action: If a backup is available, restore the backup, online the file, and recover the database to the original flashback target scn or timestamp. If a backup is not available, but the redo from the file creation to the target scn or timestamp is available, then create the file using the ALTER DATABASE CREATE DATAFILE command, bring the file online, and recover the database to the original flashback target scn or timestamp.

ORA-38796: Not enough flashback database log data to undo FLASHBACK.

Cause: There was not enough flashback log data to undo the flashback so a flashback was not started.

Action: It is still possible to get to the restore target by doing a flashback until the resetlogs branch point of the restore target is reached. This can be done by executing multiple "flashback to before resetlogs" commands, or by doing a flashback to the exact time or SCN of the desired resetlogs branch point. Note that this flashback cannot be undone should an error occur. The only option is to complete the flashback.

ORA-38797: Full database recovery required after a database has been flashed back

Cause: An attempt was made to recover some datafiles or tablespaces of a database after the database had been flashed back. In order to recover control file and all datafiles correctly, full database recovery is required after a database has been flashed back.

Action: Recover the whole database instead.

ORA-38798: Cannot perform partial database recovery

Cause: See other other messages on error stack for the cause.

Action: See other other messages on error stack for the action.

ORA-38799: Cannot drop guaranteed restore point internally created for snapshot standby

Cause: An attempt is made to drop the guaranteed restore point Oracle created internally for a snapshot standby.

Action: Use the "alter database convert to physical standby" command to convert the snapshot standby to a normal physical standby. This will automatically flashback the database and drop this guaranteed restore point.

ORA-38800: Cannot start Redo Apply on the open physical standby database

Cause: An attempt was made to start Redo Apply on an open physical standby database instance.

Action: Make sure the primary database is at compatibility 11.0.0 or higher. The redo logs to be recovered on an open physical standby database must be generated at compatibility 11.0.0 or higher. If you have any redo below 11.0.0 to be applied on the standby, you must apply them on a mounted standby before restarting recovery on an open standby when the log format advances to 11.0.0 or higher. If this is a RAC standby database, make sure the ACTIVE_INSTANCE_COUNT parameter is not set.

ORA-38801: improper value for ORA_EDITION

Cause: An improper value was used for ORA_EDITION when trying to specify an edition to use at login time. The value is not understandable as an identifier, or is too long.

Action: Correct the value for ORA_EDITION and try again.

ORA-38802: edition does not exist

Cause: This error occurred because a reference was made to an edition that does not exist or that the current user does not have privileges on.

Action: Check the edition name and verify that the current user has appropriate privileges on the edition.

ORA-38803: edition is unusable

Cause: This error occurred because a reference was made to an unusable edition.

Action: Use another edition.

ORA-38804: not a legal edition name

Cause: This error occurred because an attempt was made to create an edition called ORA\$BASE, DATABASE_DEFAULT, or USER_DEFAULT. These are not legal edition names. Or a value provided as an edition name is not understandable as an identifier, or is too long.

Action: Choose a different name for the edition.

ORA-38805: edition is in use

Cause: An attempt was made to ALTER or DROP an edition that was being used in another session or was the database default edition.

Action: Retry when the edition is not in use and is not the database default edition.

ORA-38806: edition is being altered or dropped

Cause: An attempt was made to use an edition that was in the process of being altered or dropped.

Action: Use a different edition.

ORA-38807: Implementation restriction: an edition can have only one child

Cause: This error occurred because an attempt was made to create more than one child edition for a parent edition.

Action: Create the edition as a child of the leaf edition.

ORA-38808: edition has a usable parent and a usable child

Cause: An attempt was made to make an edition with a usable parent and a usable child edition unusable.

Action: An edition with a usable parent and a usable child edition cannot be made unusable. Retry after either parent or child has been made unusable.

ORA-38809: edition must be unusable

Cause: This error occurred because an attempt was made to drop a usable edition.

Action: Retry after the altering the edition to be unusable.

ORA-38810: Implementation restriction: cannot drop edition that has a parent and a child

Cause: This error occurred because an attempt was made to drop an edition that has a parent and a child edition.

Action: Retry after dropping the parent or child edition.

ORA-38811: need CASCADE option to drop edition that has actual objects

Cause: This error occurred because an attempt was made to drop an edition that has actual objects.

Action: Specify CASCADE option in drop command.

ORA-38812: maximum number of editions reached

Cause: The number of editions has reached the limit.

Action: Drop some editions before creating new ones.

ORA-38813: editions not supported for schema *string*

Cause: The Oracle-supplied schema did not support editions.

Action: Do not attempt to enable editions for the specified Oracle-supplied schema.

ORA-38814: ALTER SESSION SET EDITION must be first statement of transaction

Cause: An attempt was made to execute an edition switch within an open transaction.

Action: Commit or rollback the transaction and re-execute the statement, or use DBMS_SESSION.SET_EDITION_DEFERRED if its deferred effect is appropriate.

ORA-38815: ALTER SESSION SET EDITION must be a top-level SQL statement

Cause: An edition switch failed because it was executed from a PL/SQL block or using recursive SQL.

Action: Execute the statement from a top-level OCI call, or use dbms_session.set_edition if its deferred effect is appropriate.

ORA-38816: edition has a child that inherits objects from the edition

Cause: This error occurred because an attempt was made to drop an edition that a child that inherits objects from the edition.

Action: Retry after the child edition has no inherited objects.

ORA-38817: Insufficient privileges

Cause: You did not have sufficient privileges to execute the subprogram package DBMS_EDITIONS_UTIL.

Action: Obtain the necessary privileges. Please see the package specification for details.

ORA-38818: illegal reference to editioned object *string.string*

Cause: An attempt was made to violate the rule "A noneditioned object may not depend on an editioned object."

Action: Either make this object editioned; or do not make the illegal reference.

ORA-38819: user *string* owns one or more objects whose type is editionable and that have noneditioned dependent objects

Cause: An attempt was made to violate the rule "A noneditioned object may not depend on an editioned object."

Action: Either make sure that those objects owned by this user whose type is editionable have no noneditioned dependent objects; or use the FORCE option.

ORA-38820: user has evolved object type

Cause: User could not be edition enabled if it has evolved object type.

Action: Reset the evolved object type first.

ORA-38821: unsupported DBMS_SQL Edition operation

Cause: Could not bind or define ADT, VARRAY, nested table or REF data type when the specified Edition is different from the current edition.

Action: Use the current Edition.

ORA-38822: referential integrity constraints not allowed on editioned views

Cause: An attempt was made to create a referential integrity constraint to or from an editioned view or enable editions for a user that has views with referential integrity constraints.

Action: Do not attempt to create editioned views with referential integrity constraints.

ORA-38823: Crossedition triggers are not allowed to exist when dropping the root edition

Cause: An attempt was made to drop the root edition when enabled crossedition trigger exists.

Action: Drop or disable all the crossedition triggers before dropping the root edition.

ORA-38850: an enabled thread missing from control file

Cause: A CREATE CONTROLFILE statement was given that did not list all the enabled threads for the database.

Action: Reissue the CREATE CONTROLFILE statement, including all enabled threads.

ORA-38851: cannot mark the current instance (redo thread) as disabled

Cause: The standby switchover or failover operation failed because it needs to mark the current instance (redo thread) as disabled.

Action: Shut down this instance and start up using a different instance name or redo thread number and retry.

ORA-38852: cannot mark the current instance (redo thread) as disabled

Cause: The open resetlogs or standby activation operation failed because it must use a different instance (redo thread) than the current instance (redo thread) to open the database.

Action: Shut down this instance and start up using a different instance name or redo thread number and retry.

ORA-38853: cannot mark instance *string* (redo thread *string*) as disabled

Cause: The standby switchover or failover operation failed because it needs to mark an instance (redo thread) as disabled. That instance was up, which prevented it from being disabled.

Action: Shut down the specified instance and retry this command.

ORA-38854: cannot mark instance *string* (redo thread *string*) as disabled

Cause: The open resetlogs or standby activation operation failed because it needs to mark an instance (redo thread) as disabled. That instance was up, which prevented it from being disabled.

Action: Shut down the specified instance and retry this command.

ORA-38855: cannot mark instance *string* (redo thread *string*) as enabled

Cause: The standby switchover or failover operation failed because it needs to mark an instance (redo thread) as enabled. However, it had less than 2 online redo logs, which prevented it from being enabled.

Action: Add more logfiles to the specified instance and retry the command.

ORA-38856: cannot mark instance *string* (redo thread *string*) as enabled

Cause: The open resetlogs or standby activation operation failed because it needs to mark an instance (redo thread) as enabled. However, it had less than 2 online redo logs, which prevented it from being enabled.

Action: Add more logfiles to the specified instance and retry the command.

ORA-38857: cannot mark redo thread *string* as enabled

Cause: The standby switchover or failover operation failed because it needs to mark a redo thread as enabled. However, the control file was recreated with a MAXINSTANCES value smaller than the thread number of the redo thread.

Action: Recreate the control file with a larger MAXINSTANCES value.

ORA-38858: cannot mark redo thread *string* as enabled

Cause: The open resetlogs or standby activation operation failed because it needs to mark a redo thread as enabled. However, the control file was recreated with a MAXINSTANCES value smaller than the thread number of the redo thread.

Action: Recreate the control file with a larger MAXINSTANCES value.

ORA-38859: instance *string* (thread *string*) is not ready to be disabled

Cause: The command attempted to switch the instance (thread) into a new log before disabling it. The switch attempt failed because all eligible online logs were either being cleared or not completely archived yet.

Action: Wait a few minutes and retry.

ORA-38860: cannot FLASHBACK DATABASE during instantiation of a logical standby

Cause: The command was not permitted because the controlfile indicates the database was in the process of becoming a logical standby database but the controlfile conversion had not completed.

Action: If in the process of creating a logical standby database, perform the remaining instantiation procedures to completion. If this flashback operation followed a Data Guard failure, permit the errant Data Guard operation to successfully complete. Once the instantiation is complete, reissue the flashback operation.

ORA-38861: flashback recovery stopped before reaching recovery target

Cause: Flashback recovery on the standby ended early because the user attempted to flashback to an SCN or time for which there were no redo logs. Most likely, the user is trying to flashback to a future time in the database that the database has never recovered through. Check the alert log to find out which SCN the database recovered to.

Action: Flashback to an older SCN or acquire the necessary redo logs.

ORA-38862: Flashback database logs are in use.

Cause: The command could not be performed because the flashback database logs were locked by another operation, such as FLASHBACK DATABASE or a query of V\$FLASHBACK_DATABASE_LOG.

Action: Wait for the other operation to complete.

ORA-38863: datafile *string* has been restored from an optimized RMAN backup.

Cause: Flashback Database could not flash back the file because it was restored from an RMAN optimized backup with deallocated objects. Flashback cannot revert the file to a time before the last deallocation in the datafile backup.

Action: Restore the file from a backup prior to the Flashback target SCN or time and then retry the command.

ORA-38864: cannot create a guaranteed restore point with user specified SCN or time.

Cause: An SCN or timestamp was specified when creating a guaranteed restore point. This is not supported. You can only create a guaranteed restore point as of the current time.

Action: Avoid this combination of options for creating a restore point.

ORA-38865: cannot create restore point for a future SCN or time.

Cause: An attempt was made to create a restore point with an SCN or timestamp that is in the future.

Action: Revise the SCN or timestamp specified so that it is an SCN or timestamp in the past.

ORA-38866: cannot create restore point for an SCN or time before current database incarnation.

Cause: An attempt was made to create a restore point with an SCN or timestamp that is before the beginning of the current database incarnation.

Action: Revise the SCN or timestamp specified so that it is within current database incarnation.

ORA-38867: database not open: cannot create restore point with the specified timestamp

Cause: An attempt was made to create a restore point with the specified timestamp while the database was not open. The database must be open in order to map the timestamp to an SCN.

Action: Open the database first or pick another way to create the restore point.

ORA-38868: warning: the control file may have incorrect data file structure

Cause: This control file was created or converted based on a control file from a time different from the time of the database.

Action: Open database read-only to synchronize the control file with the database dictionary. You can also force recovery to proceed by invoking recovery again.

ORA-38869: datafile *string* has been restored from an RMAN backup with undo block compression.

Cause: Flashback Database could not flash back the database because a file was restored from an RMAN backup with undo block compression, and the Flashback target was to a time when the missing undo may be needed to open the database.

Action: Restore an earlier backup of the file and retry the command or Flashback to a later time.

ORA-38870: cannot backup a control file that may have incorrect data file structure.

Cause: This control file was created or converted based on a control file from a time different from the time of the database.

Action: Open database read-only to synchronize the control file with the database dictionary to fix the control file.

ORA-38871: cannot enable flashback before open resetlogs after incomplete recovery.

Cause: To enable flashback on a primary database, the database must be clean without requiring open resetlogs.

Action: Open resetlogs first and then enable flashback database.

ORA-38872: Cannot perform backup control file recovery if Flashback Database is enabled.

Cause: RECOVER DATABASE with the BACKUP CONTROLFILE option, or a database recovery that required the control file be made a backup failed because Flashback Database was enabled or there was a guaranteed restore point.

Action: Disable Flashback Database or remove the guaranteed restore point and retry the command.

ORA-38873: missing incarnation information

Cause: Flashback Database failed because incarnation information was not found in the control file. The Flashback target incarnation was not in the control file or had a missing parent incarnation.

Action: Register logs from the missing incarnations and retry the command.

ORA-38874: cannot flashback data file *string* - missing incarnation information

Cause: Flashback Database failed because incarnation information for the start of the offline range for a file was not found in the control file. Flashback could not update the file's header with the missing incarnation's resetlogs information.

Action: Check the trace log for the offline range of the data file. If redo logs from the missing incarnation can be found, register the logs in the control file and retry the command.

ORA-38875: FLASHBACK DATABASE not started; in test mode

Cause: The FLASHBACK DATABASE command was not performed because it was started in test mode.

Action: No action required.

ORA-38876: redo logs not required

Cause: The FLASHBACK DATABASE command was performed in test mode and determined that no redo logs were required to perform the tested FLASHBACK DATABASE command.

Action: No action required.

ORA-38877: required redo logs are available

Cause: The FLASHBACK DATABASE command was performed in test mode and determined that no redo logs required to perform the tested FLASHBACK DATABASE command were missing.

Action: No action required.

ORA-38878: required redo log is not available

Cause: A redo log needed for the recovery part of FLASHBACK DATABASE could not be found or accessed.

Action: See trace files for details of the problem.

ORA-38879: Cannot flashback data file *string*; may not be able to undo all changes.

Cause: A data file was plugged in when there was a guaranteed restore point, but Flashback Database was not enabled. It is possible that some changes to the data file, after it was converted, were not logged to the Flashback Database logs.

Action: If the FLASHBACK DATABASE command was meant to rewind the database to a time before the file was plugged in, take the data file offline and retry the command. If the FLASHBACK DATABASE command was meant to rewind the database to a time after the file was plugged in, restore the original version of the plugged in file and retry the command.

ORA-38880: Cannot advance compatibility from *string* to *string* due to guaranteed restore points

Cause: Flashback database cannot undo the advance of database compatibility. Therefore, one cannot advance the compatibility of the database while there are guaranteed restore points in the database.

Action: Drop all guaranteed restore points first and retry, or delay the advance of database compatibility to a later time.

ORA-38881: Cannot drop tablespace *string* on primary database due to guaranteed restore points.

Cause: An attempt was made to drop a tablespace on a primary database while there are guaranteed restore points. You cannot do this because Flashback database cannot undo dropping of a tablespace.

Action: Drop all guaranteed restore points first and retry, or delay dropping the tablespace until all guaranteed restore points are removed.

ORA-38882: Cannot drop tablespace *string* on standby database due to guaranteed restore points.

Cause: An attempt was made to drop a tablespace on a standby database while there are guaranteed restore points. You cannot do this because Flashback database cannot undo dropping of a tablespace.

Action: Drop all guaranteed restore points and rerun recovery on standby database.

ORA-38883: Cannot shrink data file *string* on primary database due to guaranteed restore points.

Cause: An attempt was made to shrink a data file on a primary database while there are guaranteed restore points. You cannot do this because Flashback database cannot undo the shrinking of a data file.

Action: Drop all guaranteed restore points first and retry, or delay the data file resize until all guaranteed restore points are removed.

ORA-38884: Cannot shrink data file *string* on standby database due to guaranteed restore points.

Cause: An attempt was made to shrink a data file on a standby database while there are guaranteed restore points. You cannot do this because Flashback database cannot undo the shrinking of a data file.

Action: Drop all guaranteed restore points and rerun recovery on standby database.

ORA-38900: missing mandatory column "*string*" of error log table "*string*"

Cause: Mandatory column of error logging table is not present

Action: Add the named column to the error logging table. Consult ORACLE documentation for the correct data type.

ORA-38901: column "string" of table "string" must be one of the first "string" columns

Cause: Mandatory information column of error logging table is present, but must be at the beginning of the row.

Action: Create the error logging table correctly. Consult ORACLE documentation for the correct format of an error logging table.

ORA-38902: errors in array DML exceed string

Cause: The operation failed because the array DML had more errors than can be stored internally for BATCH ERRORS.

Action: Do not use BATCH ERROR mode when array DML has more error rows than the number specified in the error.

ORA-38903: DML error logging is not supported for abstract column "string"

Cause: A DML Error Logging operation was attempted on a table which has an ADT, REF, VARRAY, or nested table column type, and the error logging table referred to the specified column.

Action: Either do not use DML Error Logging on such a table or remove the offending column from the error logging table. The scalar columns can be logged, but not abstract column types.

ORA-38904: DML error logging is not supported for LOB column "string"

Cause: A DML Error Logging operation was attempted on a table which has a CLOB, NCLOB, or BLOB column type, and the error logging table referred to the specified column.

Action: Either do not use DML Error Logging on such table or remove the offending column from the error logging table. The scalar columns can be logged, but not LOB column types.

ORA-38905: DML error logging is not supported for LONG column "string"

Cause: A DML Error Logging operation was attempted on a table which has a LONG, or LONG RAW column type, and the error logging table referred to the specified column.

Action: Either do not use DML Error Logging on such a table or remove the offending column from the error logging table. The scalar columns can be logged, but not long column types.

ORA-38906: insert into DML Error Logging table "string" failed

Cause: An error occurred when attempting to log a DML Error on behalf of the DML Error logging clause. This may be intended if a trigger is defined on the error table (which in turn errors out in certain cases).

Action: Determine root cause of error (in error stack).

ORA-38907: DML error logging is not supported for FILE column "string"

Cause: A DML Error Logging operation was attempted on a table which has a BFILE column and the Error Logging table referred to the specified column.

Action: Either don't use DML Error Logging on such table or remove the offending column from the error logging table. The scalar columns can be logged, but not BFILE column types.

ORA-38908: internal error occurred during DML Error Logging

Cause: An unexpected error occurred while executing recursive SQL to insert a row into the DML Error Logging table.

Action: Report this error to Oracle Support.

ORA-38909: DML Error logging is not supported with BATCH ERROR mode

Cause: A DML Error Logging operation was attempted on a table which has BATCH ERROR mode also specified.

Action: Refrain from using both DML Error Logging and BATCH ERROR mode on the same table.

ORA-38910: BATCH ERROR mode is not supported for this operation

Cause: BATCH ERROR mode specified for this operation.

Action: Refrain from using BATCH ERROR mode with this operation.

ORA-38911: unique constraint (*string.string*) violated

Cause: An INSERT statement with a CHANGE_DUPKEY_ERROR_INDEX hint tried to insert a duplicate key into a table.

Action: Either remove the unique restriction or do not insert the key.

ORA-38912: An index must be specified in the index hint

Cause: Index specification was missing in an IGNORE_ROW_ON_DUPKEY_INDEX or CHANGE_DUPKEY_ERROR_INDEX hint.

Action: In the hint, specify a unique index that exists on the table.

ORA-38913: Index specified in the index hint is invalid

Cause: The index specified in an IGNORE_ROW_ON_DUPKEY_INDEX or CHANGE_DUPKEY_ERROR_INDEX hint could not be found.

Action: Specify a unique index that exists on the table. The index cannot be a non-unique index or a bitmap index.

ORA-38914: Either mutate the error or ignore row on unique violation

Cause: IGNORE_ROW_ON_DUPKEY_INDEX and CHANGE_DUPKEY_ERROR_INDEX were both specified in the same statement.

Action: You cannot specify both hints in the same statement. Remove one of these two hints, or both, from the statement.

ORA-38915: Multiple indexes in change or ignore duplicate key hint

Cause: Multiple indexes were specified in an IGNORE_ROW_ON_DUPKEY_INDEX or CHANGE_DUPKEY_ERROR_INDEX hint.

Action: Only one index must be specified in the hint.

ORA-38916: CHANGE_DUPKEY_ERROR_INDEX hint disallowed for this operation

Cause: CHANGE_DUPKEY_ERROR_INDEX hint was specified for the operation.

Action: You cannot specify this hint for this operation. Remove the hint from the statement.

ORA-38917: IGNORE_ROW_ON_DUPKEY_INDEX hint disallowed for this operation

Cause: IGNORE_ROW_ON_DUPKEY_INDEX hint was specified for the operation.

Action: You cannot specify this hint for this operation. Remove the hint from the statement.

ORA-38918: RETRY_ON_ROW_CHANGE hint disallowed for this operation

Cause: RETRY_ON_ROW_CHANGE hint was specified for the operation.

Action: You cannot specify this hint for this operation. Remove the hint from the statement.

ORA-38919: remote table not supported for DML error logging

Cause: A remote table was specified in the DML error logging clause.

Action: You cannot specify a remote table to which errors will be logged. Specify a local table only.

ORA-38950: Source platform *string* not cross platform compliant

Cause: Cross platform transport was not allowed for this platform.

Action: For a list of supported platforms, query fixed view SYS.V\$TRANSPORTABLE_PLATFORM.

ORA-38951: Target platform *string* not cross platform compliant

Cause: Cross platform transport was not allowed for this platform.

Action: None

ORA-38952: Source database not 10.0.0.0 compatible

Cause: Cross platform transport is not supported unless database compatibility is advanced to 10.0.0.0 or higher

Action: Use the compatible parameter to advance source database compatibility and redo the transport

ORA-38954: Cross platform transport is not supported between source platform identifier *string* and target platform identifier *string*

Cause: The platform identifier in the transported file indicated that the datafile format was different than the target database datafile format.

Action: For a list of supported platforms, query fixed view SYS.V\$TRANSPORTABLE_PLATFORM. If both platforms are present, Contact Oracle support

ORA-38955: Source platform *string* not cross platform compliant

Cause: The platform identifier in the transported file indicated that this platform is not supported for a cross platform transport.

Action: For a list of supported platforms, query fixed view SYS.V\$TRANSPORTABLE_PLATFORM.

ORA-38956: Target platform *string* not cross platform compliant

Cause: Cross platform transport was not allowed for this platform.

Action: For a list of supported platforms, query fixed view SYS.V\$TRANSPORTABLE_PLATFORM.

ORA-38958: Source platform *string* is in different byte order than target platform *string*

Cause: Probably a conversion was not done before the import phase of the transport.

Action: Use RMAN CONVERT functionality to convert endian ordering.

ORA-38959: Failed to update block 0 to new version 10 format

Cause: An attempt was made to update block 0 to version 10 format.

Action: check additional error messages and contact Oracle Support Services.

ORA-38960: File *string* from platform *string* is not compatible with current platform *string*

Cause: The file was directly copied to this platform from a platform with a different endian ordering.

Action: Use RMAN CONVERT functionality to convert endian ordering.

ORA-39000: bad dump file specification

Cause: The user specified a dump file that could not be used in the current job. Subsequent error messages describe the inadequacies of the dump file.

Action: Specify a dump file that is usable for the job.

ORA-39001: invalid argument value

Cause: The user specified API parameters were of the wrong type or value range. Subsequent messages supplied by DBMS_DATAPUMP.GET_STATUS will further describe the error.

Action: Correct the bad argument and retry the API.

ORA-39002: invalid operation

Cause: The current API cannot be executed because of inconsistencies between the API and the current definition of the job. Subsequent messages supplied by DBMS_DATAPUMP.GET_STATUS will further describe the error.

Action: Modify the API call to be consistent with the current job or redefine the job in a manner that will support the specified API.

ORA-39003: unable to get count of total workers alive

Cause: Attempt to get count of total worker processes alive failed.

Action: Check the additional error messages to see what caused the failure. Correct the error, if possible, and try the operation again. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39004: invalid state

Cause: The state of the job precludes the execution of the API.

Action: Rerun the job to specify the API when the job is an appropriate state.

ORA-39005: inconsistent arguments

Cause: The current API cannot be executed because of inconsistencies between arguments of the API call. Subsequent messages supplied by DBMS_DATAPUMP.GET_STATUS will further describe the error.

Action: Modify the API call to be consistent with itself.

ORA-39006: internal error

Cause: An unexpected error occurred while processing a Data Pump job. Subsequent messages supplied by DBMS_DATAPUMP.GET_STATUS will further describe the error.

Action: Contact Oracle Customer Support.

ORA-39012: Client detached before the job started.

-
- Cause:** The client detached or ended their session before the Data Pump job was started.
- Action:** Create new job and remain attached to the job until it is started.
- ORA-39013: Remapping the SYSTEM schema is not supported.**
- Cause:** A remap_schema transform with the SYSTEM schema was specified.
- Action:** Retry the import command without remapping the SYSTEM schema.
- ORA-39014: One or more workers have prematurely exited.**
- Cause:** One or more of the worker processes exited before the job was completed. With no workers, the master process will terminate the job.
- Action:** Rerun the job. If problem persists, contact Oracle Customer Support.
- ORA-39015: job is not running**
- Cause:** An API was executed that required the job to be running, but the job was not active.
- Action:** Retry the API. If problem persists, contact Oracle Customer Support.
- ORA-39016: Operation not supported when job is in *string* state.**
- Cause:** The state of the job precludes the execution of the API.
- Action:** Rerun the job to specify the API when the job is an appropriate state.
- ORA-39017: Worker request not supported when job is in *string* state.**
- Cause:** The state of the job precludes the execution of a worker request. This is an internal error.
- Action:** Contact Oracle Customer Support.
- ORA-39018: master process received invalid message number *string***
- Cause:** Internal Error
- Action:** Contact Oracle Customer Support.
- ORA-39019: invalid operation type *string***
- Cause:** User specified an invalid operation name on an DBMS_DATAPUMP.OPEN API or an invalid operation name was specified in the master table for a restart API.
- Action:** Correct the operation name and recreate the job.
- ORA-39020: invalid mode type *string***
- Cause:** User specified an invalid mode on an DBMS_DATAPUMP.OPEN API or an invalid mode was specified in the master table for a restart API.
- Action:** Correct the mode and recreate the job.
- ORA-39021: Database compatibility version *string* is not supported.**
- Cause:** User selected COMPATIBLE as the version on an DBMS_DATAPUMP.OPEN API, but the current database compatibility version is not supported by the Data Pump API. Database versions before 9.2 are not supported by the Data Pump.
- Action:** Specify a supported version and recreate the job.
- ORA-39022: Database version *string* is not supported.**

Cause: User selected LATEST as the version on an DBMS_DATAPUMP.OPEN API, but the current database version is not supported by the Data Pump API. Database versions before 9.2 are not supported by the Data Pump.

Action: Specify a supported version and recreate the job.

ORA-39023: Version *string* is not supported.

Cause: User specified an explicit version on an DBMS_DATAPUMP.OPEN API, but the current database version is not supported by the Data Pump API. Database versions before 9.2 are not supported by the Data Pump.

Action: Specify a supported version and recreate the job.

ORA-39024: wrong schema specified for job

Cause: Internal error caused by the master process finding inconsistencies between the schemas specified for the job.

Action: Contact Oracle Customer Support.

ORA-39025: jobs of type *string* are not restartable

Cause: Attempt to restart a job which was not restartable.

Action: Recreate the job via the open API.

ORA-39026: master table is inconsistent on validation *string*

Cause: Job cannot be restarted because it failed a validation check. Validation checks are of the form -xx.y where -xx is the value of the PROCESS_ORDER column in the master table where the error was detected and y is the actual validity check for the row.

Action: Recreate the job. If master table has not been modified, but problem persists, contact Oracle Customer Support.

ORA-39027: wrong version of master table

Cause: Job cannot be restarted because the version of the database upon which the job started is different than the current version of the database and the format of the master table has changed between the versions.

Action: Recreate the job.

ORA-39028: cannot restart job from *string* state

Cause: The job was not in a suitable state for restart. Jobs must begin executing before they can be restarted.

Action: Recreate the job.

ORA-39029: worker *string* with process name "*string*" prematurely terminated

Cause: The specified worker process terminated unexpectedly. Subsequent messages describe the reason for the termination.

Action: In many cases, the Data Pump will attempt to automatically restart the worker. If problem persists, contact Oracle Customer Support.

ORA-39030: invalid file type *string*

Cause: An invalid filetype was specified for an DBMS_DATAPUMP.ADD_FILE API call.

Action: Correct the filetype parameter and reissue the API request.

ORA-39031: invalid filter name *string*

Cause: An invalid filter name was specified on a DBMS_DATAPUMP.DATA_FILTER

Action: Correct the filter name parameter and reissue the API request.

ORA-39032: function *string* is not supported in *string* jobs

Cause: The specified API is not supported for the specified class of jobs.

Action: Recreate the job with the appropriate mode or operation type.

ORA-39033: Data cannot be filtered under the direct path access method.

Cause: The user specified that the data access method for the job was direct which precludes the use of certain data filters.

Action: Use the SUBQUERY or the SAMPLE data filter with the automatic data access method.

ORA-39034: Table *string* does not exist.

Cause: The user referenced a table in an API that did not exist.

Action: Correct table name and retry API.

ORA-39035: Data filter *string* has already been specified.

Cause: The user has already specified a data filter that matches on the filter name, schema name, and table.

Action: Specify a different data filter.

ORA-39036: invalid metadata filter name *string*

Cause: An invalid metadata filter name was specified on a DBMS_DATAPUMP.METADATA_FILTER API call.

Action: Correct the metadata filter name parameter and reissue the API request.

ORA-39037: Object type path not supported for *string* metadata filter.

Cause: An object type path was specified for the filter, but the filter does not support the object type path parameter.

Action: Remove the object type path parameter.

ORA-39038: Object path "*string*" is not supported for *string* jobs.

Cause: The specified object type path is invalid for the job mode.

Action: Correct the object type path.

ORA-39039: Schema expression "*string*" contains no valid schemas.

Cause: The specified SCHEMA_EXPR filter resulted in no schemas being selected.

Action: Correct the the SCHEMA_EXPR filter specification.

ORA-39040: Schema expression "*string*" must identify exactly one schema.

Cause: For TABLE mode jobs, the SCHEMA_EXPR filter must identify exactly one schema.

Action: Correct the the SCHEMA_EXPR filter specification.

ORA-39041: Filter "*string*" either identifies all object types or no object types.

Cause: A Metadata filter specifying path names either returned all objects or no objects in the job.

Action: Correct the the metadata filter specification.

ORA-39042: invalid transform name *string*

Cause: An invalid transform name was specified on a DBMS_DATAPUMP.METADATA_TRANSFORM API call.

Action: Correct the transform name parameter and reissue the API request.

ORA-39043: Object type *string* is not supported for *string*.

Cause: The specified object type is invalid for the specified transform or remap.

Action: Correct the object type.

ORA-39044: Metadata transform *string* has already been specified.

Cause: The user has already specified the metadata transform for the same class of object types.

Action: Specify a different object_type for the transform.

ORA-39045: invalid metadata remap name *string*

Cause: An invalid metadata remap name was specified on a DBMS_DATAPUMP.METADATA_REMAP API call.

Action: Correct the metadata remap name parameter and reissue the API request.

ORA-39046: Metadata remap *string* has already been specified.

Cause: The user has already specified a metadata remap that matches on the remap name and original value.

Action: Specify a different original value.

ORA-39047: Jobs of type *string* cannot use multiple execution streams.

Cause: The user specified a value of parallelism that is precluded by the operation type or mode of the job.

Action: Specify only a parallelism of 1 for this type of job.

ORA-39048: Unable to start all workers; only *string* worker(s) available.

Cause: The full degree of parallelism could not be honored due process limits, resource limits, or other internal errors.

Action: Increase process/resource limits for the job.

ORA-39049: invalid parameter name *string*

Cause: An invalid parameter name was specified on a DBMS_DATAPUMP.SET_PARAMETER API call.

Action: Correct the parameter name and reissue the API request.

ORA-39050: parameter *string* is incompatible with parameter *string*

Cause: Two parameters were set that were incompatible with each other. Only the first parameter setting will be used.

Action: Decide which parameter is to be used and stick to it.

ORA-39051: parameter *string* specified multiple times

Cause: The user has already specified a parameter that matches on the name and the specific parameter doesn't support duplicate definitions.

Action: Specify non-repeatable parameters only once.

ORA-39052: cannot specify SKIP_CURRENT on initial start of a job.

Cause: The user has already specified SKIP_CURRENT for a job that has never executed.

Action: Only specify SKIP_CURRENT when restarting a job.

ORA-39053: parameter or attribute *string* must be defined for a *string* job

Cause: The job being defined cannot be started because it is missing the specified definition.

Action: Specify the omitted parameter or attribute before starting the job.

ORA-39054: missing or invalid definition of the SQL output file.

Cause: The job being defined cannot be started because it is missing the file to receive the SQL output of the job or the definition is unusable.

Action: Specify a valid directory name and file name for the SQL file.

ORA-39055: The *string* feature is not supported in version *string*.

Cause: The user attempted to use a feature that was not enabled in the database version specified for the current job. Typically, this error occurs if the compatibility level of the database is below the current version of the database or if the user explicitly specifies a version for a Data Pump job.

Action: Specify the current database version as a version parameter for the the job.

ORA-39056: invalid log file specification.

Cause: The log file for the job was incorrectly specified.

Action: Specify a valid directory name and file name for the log file.

ORA-39057: invalid worker request *string* for *string* jobs.

Cause: The worker process sent a message that wasn't supported for the current job.

Action: Internal error -- contact Oracle Customer Support and report the error.

ORA-39058: current object skipped: *string* of type *string*

Cause: The user specified SKIP_CURRENT when restarting a job. This message is a confirmation that the object will not be imported.

Action: User must manually define the object in the target database.

ORA-39059: dump file set is incomplete

Cause: An IMPORT or SQL_FILE operation was being performed but not all of the files from the EXPORT dump file set were included.

Action: Check the export log file and make sure all of the files that were exported are included in the current job.

ORA-39060: table(s) dropped because of conflict with master table

Cause: A table specified by a job was not included because its definition would collide with the master table definition for the current job.

Action: After the job completes. Import the conflicting tables using a unique job name to avoid conflicts with normal user tables.

ORA-39061: import mode *string* conflicts with export mode *string*

Cause: The mode used for import cannot be used with a dump file set of specified mode. Transportable jobs are not compatible with other modes.

Action: Perform the import using a mode compatible with the export.

ORA-39062: error creating master process *string*

Cause: An attempt to create the listed master process failed.

Action: Refer to any following error messages for possible actions. Check the trace log for the failed process to see if there is any information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39064: unable to write to the log file

Cause: Errors were detecting while writing to the log file. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39065: unexpected master process exception in *string*

Cause: An unhandled exception was detected internally within the master control process for the Data Pump job. This is an internal error. messages will detail the problems.

Action: If problem persists, contact Oracle Customer Support.

ORA-39067: Unable to close the log file.

Cause: Errors were detecting while closing the log file. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39068: invalid master table data in row with `PROCESS_ORDER=string`

Cause: A corruption was detected in the master table in the specified row(s). Either the row wasn't found, it was missing columns or had illegal values in its columns.

Action: Rerun the job with an uncorrupted master table.

ORA-39070: Unable to open the log file.

Cause: Errors were detecting while opening the log file. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39071: Value for *string* is badly formed.

Cause: The value of the user specified filter did not contain a legitimate SQL clause. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39076: cannot delete job *string* for user *string*

Cause: Unable to delete a job. Refer to the any following or prior error messages for clarification.

Action: Eliminate the problems indicated.

ORA-39077: unable to subscribe agent *string* to queue "*string*"

Cause: The Data Pump's communication layer was unable to attach one of its processes to the control or status queue. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Customer Support.

ORA-39078: unable to dequeue message for agent *string* from queue "*string*"

Cause: The Data Pump's communication layer was unable to retrieve a message from the control or status queue. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Customer Support.

ORA-39079: unable to enqueue message *string*

Cause: The Data Pump's communication layer was unable to send the specified message on the control or status queue. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Customer Support.

ORA-39080: failed to create queues "*string*" and "*string*" for Data Pump job

Cause: The Data Pump's communication layer was unable to create the status and control queues required for interprocess communication. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Support.

ORA-39081: failed to unsubscribe agent *string* from queue "*string*"

Cause: The Data Pump's communication layer was unable to unsubscribe a process from the control or status queue. Subsequent messages will detail the problem.

Action: Fix the problem if possible, or contact Oracle Customer Support.

ORA-39082: Object type *string* created with compilation warnings

Cause: The object in the SQL statement following this error was created with compilation errors. If this error occurred for a view, it is possible that the base table of the view was missing.

Action: This is a warning. The object may have to be recompiled before being used.

ORA-39083: Object type *string* failed to create with error: *string* Failing sql is: *string*

Cause: Examine original error code to determine actual cause

Action: Original error code will contain more information

ORA-39084: cannot detach job *string* for user *string*

Cause: Unable to detach a job from the session. Refer to any following error messages for clarification.

Action: Eliminate the problems indicated.

ORA-39085: cannot update job *string* for user *string*

Cause: Unable to update the fixed table information for a job. Refer to any following or prior error messages for clarification.

Action: Eliminate the problems indicated.

ORA-39086: cannot retrieve job information

Cause: Unable to retrieve fixed table information for a job. Refer to the secondary error messages that follow this one for clarification.

Action: Eliminate the problems indicated by the secondary errors.

ORA-39087: directory name *string* is invalid

Cause: A corresponding directory object does not exist.

Action: Correct the directory object parameter, or create a corresponding directory object with the CREATE DIRECTORY command.

ORA-39088: file name cannot contain a path specification

Cause: The name of a dump file, log file, or sql file contains a path specification.

Action: Use the name of a directory object to indicate where the file should be stored.

ORA-39090: Cannot add devices to file oriented job.

Cause: Attempt to add a device to a job that already contains more than one disk file.

Action: Only specify one file for jobs that contain sequential devices.

ORA-39091: unable to determine logical standby and streams status

Cause: An error occurred when determining if the Data Pump job needed to support logical standby or streams.

Action: The subsequent message describes the error that was detected. Correct the specified problem and restart the job.

ORA-39092: unable to set SCN metadata for object "*string.string*" of type *string*

Cause: An error occurred when applying a SCN to the specified object to support logical standby or streams.

Action: The subsequent message describes the error that was detected. Correct the specified problem and restart the job.

ORA-39093: FLASHBACK automatically enabled to preserve database integrity.

Cause: A Data Pump job was required to enable flashback support to specific SCNs in order to preserve the consistency of a logical standby or streams instantiation.

Action: None

ORA-39094: Parallel execution not supported in this database edition.

Cause: Parallel execution of Data Pump jobs is not supported for this database edition.

Action: Specify a parallelism of 1 for jobs not running on Enterprise Edition databases.

ORA-39095: Dump file space has been exhausted: Unable to allocate *string* bytes

Cause: The Export job ran out of dump file space before the job was completed.

Action: Reattach to the job and add additional dump files to the job restarting the job.

ORA-39096: invalid input value *string* for parameter *string*

Cause: A NULL or invalid value was supplied for the parameter.

Action: Correct the input value and try the call again.

ORA-39097: Data Pump job encountered unexpected error *string*

Cause: An unexpected, potentially non-fatal error occurred while processing a Data Pump job.

Action: Contact Oracle Customer Support.

ORA-39098: Worker process received data objects while loading metadata. Invalid process order range is *string..string*

Cause: This is an internal error. Messages will detail the problem.

Action: If problem persists, contact Oracle Customer Support.

ORA-39099: cannot create index for "*string*" on master table *string*

Cause: One or more indexes couldn't be created on the master table. subsequent error messages describe the failure.

Action: Correct the condition that is preventing the indexes from being created.

ORA-39102: Timeout before master process *string* finished initialization. Master error:

Cause: The master process whose name is listed started up but did not finish its initialization within the allowed time limit.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39103: Timeout before worker process *string* finished initialization. Worker error:

Cause: The worker process whose name is listed started up but did not finish its initialization within the allowed time limit.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39104: cannot call this function from a SQL parallel query slave process

Cause: Called a Data Pump process model function from a process which is a SQL parallel query slave process

Action: A SQL parallel query slave process cannot create a Data Pump master process. This is not supported. If this error occurs from a Data Pump client (for example, expdp or impdp), contact Oracle Customer Support and report the error.

ORA-39105: Master process *string* failed during startup. Master error:

Cause: The master process whose name is listed failed during startup.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39106: Worker process *string* failed during startup. Worker error:

Cause: The worker process whose name is listed failed during startup.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39107: Master process *string* violated startup protocol. Master error:

Cause: The master process whose name is listed started up but then exited before notifying the creating process that it was finished with initialization.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation

again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39108: Worker process *string* violated startup protocol. Worker error:

Cause: The worker process whose name is listed started up but then exited before notifying the creating process that it was finished with initialization.

Action: Refer to any following error messages for possible actions. Also, check the trace log for the failed process, if one was created, to see if there is any additional information about the failure. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39109: Unprivileged users may not operate upon other users' schemas

Cause: An unprivileged user attempted to reference another user's schema during a Data Pump operation. Because of this, no schemas were selected for the job.

Action: Retry the operation under a username owning the schema.

ORA-39110: error deleting worker processes

Cause: An attempt to delete the worker processes failed.

Action: Refer to any following error messages for possible actions. Correct the error, if possible, and try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39111: Dependent object type *string* skipped, base object type *string* already exists

Cause: During a Data Pump import job, a dependent object is being skipped because its base object already existed.

Action: If the object from the dump file is wanted, drop the base and dependent objects and try to import again using desired filters.

ORA-39112: Dependent object type *string* skipped, base object type *string* creation failed

Cause: During a Data Pump import job, a dependent object is being skipped because its base object creation failed.

Action: If the object from the dump file is wanted, drop the base and dependent objects and try to import again using desired filters

ORA-39113: Unable to determine database version

Cause: The Data Pump was unable to determine the compatibility level and version of the current database using SYS.DBMS_UTILITY.DB_VERSION.

Action: Make sure access to the DBMS_UTILITY package is granted to you. If this is a network job, be sure that access to the DBMS_UTILITY package is granted to you on the remote instance.

ORA-39114: Dump files are not supported for network jobs.

Cause: An attempt was made to add a dumpfile to an Import job that is using a network link to the source database.

Action: Do not specify a dumpfile for jobs that do not require dumpfiles.

ORA-39115: *string* is not supported over a network link

Cause: An attempt was made to use an option that is not supported over network links such as the PARTITION_LIST filter.

Action: Do not attempt to use Data Pump features on network jobs if they are not compatible with jobs over the network.

ORA-39116: invalid trigger operation on mutating table *string.string*

Cause: A Data Pump load operation failed because a trigger attempted to fire on the table while it was mutating.

Action: Disable trigger(s) on the specified table. Also see ORA-004091.

ORA-39117: Type needed to create table is not included in this operation. Failing sql is: *string*

Cause: A create table was attempted and a dependent type does not exist in the dumpfile or on the target database. Either the export or the import Data Pump job was a table mode job and types are not included in table mode jobs.

Action: Determine which type(s) are missing and create them on the target system and run the Data Pump import job again.

ORA-39119: worker process interrupt for delete worker processes call by master process

Cause: The master process that created this worker process called delete worker processes to abort the current operation.

Action: No action is necessary. This is an informational error message.

ORA-39120: Table *string* can't be truncated, data will be skipped. Failing error is: *string*

Cause: Table data was about to be loaded into a table that already existed and the table_exists_action parameter is truncate, but the table could not be truncated.

Action: Determine actual cause by looking at base error.

ORA-39121: Table *string* can't be replaced, data will be skipped. Failing error is: *string*

Cause: Table data was about to be loaded into a table that already existed and the table_exists_action parameter is replace, but the table could not be dropped.

Action: Determine actual cause by looking at base error.

ORA-39122: Unprivileged users may not perform *string* remappings.

Cause: A user attempted to remap objects during an import but lacked the IMPORT_FULL_DATABASE privilege.

Action: Retry the job from a schema that owns the IMPORT_FULL_DATABASE privilege.

ORA-39123: Data Pump transportable tablespace job aborted *string*

Cause: A DBMS_PLUGTS procedure failed and the Data Pump operation could not continue so it was aborted. The DBMS_PLUGTS failure listed describes the original error.

Action: Look at the DBMS_PLUGTS error to determine actual cause.

ORA-39124: dump file name "*string*" contains an invalid substitution variable

Cause: The substitution variable '%' must be followed by '%','u', or 'U'.

Action: Correct the substitution variable in the dump file name and re-enter the command.

ORA-39125: Worker unexpected fatal error in *string* while calling *string* [*string*]

Cause: An unhandled exception was detected internally within the worker process for the Data Pump job while calling the specified external routine. This is an internal error. Additional information may be supplied.

Action: If problem persists, contact Oracle Customer Support.

ORA-39126: Worker unexpected fatal error in *string* [*string*] *string*

Cause: An unhandled exception was detected internally within the worker process for the Data Pump job. This is an internal error. Additional information may be supplied.

Action: If problem persists, contact Oracle Customer Support.

ORA-39127: unexpected error from call to *string string*

Cause: The exception was raised by the function invocation, a procedural action extension of export.

Action: Record the accompanying messages and report this as a Data Pump internal error to customer support.

ORA-39128: unexpected DbmsJava error *number* from statement *string*

Cause: The error was returned from a call to a DbmsJava procedure.

Action: Record the accompanying messages and report this as a Data Pump internal error to customer support.

ORA-39129: Object type *string* not imported. Name conflicts with the master table

Cause: The table being imported from the remote instance has the same name as the master table running this Data Pump job.

Action: Rerun the Data Pump job with a nonconflicting name.

ORA-39130: Object type *string* not imported. Base object name conflicts with the master table

Cause: The object being imported from the remote instance is dependent on an object that has the same name as the master table running this Data Pump job.

Action: Rerun the Data Pump job with a nonconflicting name.

ORA-39132: object type "*string*"."*string*" already exists with different hashcode

Cause: An object type could not be created because there was already a type with the same name but a different hashcode on the target system. Tables in the transportable tablespace set that use this object type cannot be read.

Action: Drop the object type from the target system and retry the operation.

ORA-39133: object type "*string*"."*string*" already exists with different typeid

Cause: An object type in a transportable tablespace set already exists on the target system, but with a different typeid. The typeid could not be changed because the type is used by an existing table. Tables in the transportable tablespace set that use this object type cannot be read.

Action: Drop the object type from the target system and retry the operation.

ORA-39134: Cannot include "*string*" tablespace as a Transportable Tablespace

Cause: The user attempt to specify the SYSAUX or SYSTEM tablespace as a member of the transportable tablespace list in the current job. These tablespaces may not be transported between databases.

Action: Specify different tablespaces to be transported.

ORA-39135: File "*string*" is already a member of this dump set

Cause: An attempt was made to add a new file to an export job but a file with the same name already exists in the dump set for the job.

Action: Reenter the new file information using a different file name.

ORA-39136: cannot specify an SCN on a transportable job

Cause: A target SCN was specified for a table in a transportable job by the streams or logical standby components which was not the defaulted SCN for the table.

Action: This is an internal error. Please report it to Oracle support.

ORA-39137: cannot specify a TABLE_EXISTS_ACTION of *string* for a job with no metadata

Cause: A job was defined with the TABLE_EXISTS_ACTION parameter set to REPLACE or SKIP, but without metadata. Without metadata, data could not be loaded for the requested table actions.

Action: Change the setting of the TABLE_EXISTS_ACTION parameter to APPEND or TRUNCATE or supply Metadata with the data.

ORA-39138: Insufficient privileges to load data not in your schema

Cause: An unprivileged user attempted to load data into a different schema.

Action: Use a privileged account if you must load data not in your schema

ORA-39139: Data Pump does not support XMLType objects in version *string*. *string* will be skipped.

Cause: Object had an XMLType column using either an object relational or binary storage format, which is unsupported by Data Pump in the target version.

Action: Use the original export and import utilities to move this object.

ORA-39140: dump file "*string*" belongs to job *string*

Cause: When a dump file set consists of multiple files, all files in the set must be specified for an import operation, and all files must have been produced by the same export job. One of the files provided does not belong to the original dump file set. For instance, it was created by a different export job than the other files.

Action: Remove the dump file indicated in the message and retry the import operation providing only the complete set of dump files created by a specific export job.

ORA-39141: dump file "*string*" is a duplicate of dump file "*string*"

Cause: When a dump file set consists of multiple files, all files in the set must be specified for an import operation. One of the files provided to import was found to be a duplicate of another dump file in the set. This can occur if the files in the dump set were copied or renamed using operating system utilities and the same dump file was inadvertently copied more than once with different destination names.

Action: Remove the dump file indicated in the message and retry the import operation providing only the complete set of dump files created by a specific export job.

ORA-39142: incompatible version number *string* in dump file "*string*"

Cause: A dump file was specified for an import operation whose version number is incompatible with the dump file version of the Data Pump product currently running on the system. Usually this message indicates that the dump file was produced by a newer version of the Data Pump export utility.

Action: Import this dump file using the Data Pump import utility with the same version as the export which created the file.

ORA-39143: dump file "*string*" may be an original export dump file

Cause: A dump file was specified for an import operation which appears to have been created using the original export utility. These dump files cannot be processed by the Data Pump import utility.

Action: Try using the original import utility to process this dump file.

ORA-39144: file name parameter must be specified and non-null

Cause: No file name was provided in an DBMS_DATAPUMP.ADD_FILE API call.

Action: Correct the file name parameter and reissue the API request.

ORA-39145: directory object parameter must be specified and non-null

Cause: No directory object was provided in either an DBMS_DATAPUMP.ADD_FILE API call or to the directory parameter used by the Data Pump command line clients.

Action: Correct the directory object parameter and retry the operation.

ORA-39146: schema "*string*" does not exist

Cause: The specified schema was referenced as the source of a REMAP_SCHEMA parameter, but did not exist in the dump file (for

Action: Specify the correct name of the schema to be remapped.

ORA-39147: cannot migrate Data Pump queue table ownership to this instance

Cause: There are active Data Pump jobs running on another instance in a RAC. All concurrent, active Data Pump jobs must be run on the same instance.

Action: Start this job on the same instance where other active Data Pump jobs are running, or wait until they finish.

ORA-39148: unable to import data into pre-existing queue table *string*. Table_ exists_action of *string* being ignored for this table

Cause: A Data Pump import detected that a queue table that was to be imported already exists. Importing data into pre-existing queue tables is not supported.

Action: If the data from the dump file is desired, then drop the queue table and perform the import again, or use the import parameter table_exists_action=replace.

ORA-39149: cannot link privileged user to non-privileged user

Cause: A Data Pump job initiated by a user with EXPORT_FULL_DATABASE/IMPORT_FULL_DATABASE roles specified a network link that did not correspond to a user with equivalent roles on the remote database.

Action: Specify a network link that maps users to identically privileged users in the remote database.

ORA-39150: bad flashback time

Cause: A flashback time was specified for the Data Pump job which either could not be parsed or else could not be translated into a system change number (SCN). This typically occurs when

Action: Specify an explicit SCN for the desired flashback rather than a time.

ORA-39154: Objects from foreign schemas have been removed from import

Cause: An non-privileged user attempted to import objects into a schema other than their own.

Action: Either perform the import from a privileged schema or else remap all schemas that were exported into the username running the import.

ORA-39155: error expanding dump file name "*string*"

Cause: Export was unable to expand the directory object and dump file name into a full file name. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39156: error parsing dump file name "*string*"

Cause: Export was unable to parse the dump file name. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39157: error appending extension to file "*string*"

Cause: Export or Import was unable to append the default extension to create the file name. The given file name could be too long or contain illegal characters. Subsequent messages will detail the problems.

Action: Fix the problems outlined in the secondary messages.

ORA-39159: cannot call this function from a non-Data Pump process

Cause: Called a Data Pump process model function from a process which is not a Data Pump process.

Action: Refer to any other error messages for additional information. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39160: error on what's my name call

Cause: Attempt to get the Data Pump process name failed.

Action: Refer to any following error messages for additional information. If this error occurs from a Data Pump client (e.g. expdp or impdp), try the operation again. If the error occurs again, contact Oracle Customer Support and report the error.

ORA-39161: Full database jobs require privileges

Cause: Either an attempt to perform a full database export without the EXP_FULL_DATABASE role or an attempt to perform a full database import over a network link without the IMP_FULL_DATABASE role.

Action: Retry the operation in a schema that has the required roles.

ORA-39162: Transportable tablespace job require privileges

Cause: User attempted to perform a transportable tablespace job without being having the proper EXP_FULL_DATABASE or IMP_FULL_DATABASE role.

Action: Retry the operation in a schema that has the required roles.

ORA-39163: A sample size of *string* is invalid.

Cause: An attempt was made to do data sampling on a table with a value outside of the range of 0 - 100.

Action: Retry the filtering using a sampling number greater than 0 and less than 100.

ORA-39164: Partition *string* was not found.

Cause: If exporting or importing over the network, the user specified a partition name that was not found in the source database. For importing from files, the user specified a partition name not found in the dump file set.

Action: Retry the operation using the correct partition name.

ORA-39165: Schema *string* was not found.

Cause: If exporting or importing over the network, either the user specified a schema name that was not found in the source database or else the user lacked the proper EXP_FULL_DATABASE or IMP_FULL_DATABASE role that would allow them to access another schema. For importing from files, the user specified a schema name not found in the dump file set.

Action: Retry the operation using the correct schema name.

ORA-39166: Object *string* was not found.

Cause: If exporting or importing over the network, either the user specified an object name that was not found in the source database or else the user lacked the proper EXP_FULL_DATABASE or IMP_FULL_DATABASE role that would allow them to access the object another in another schema. For importing from files, the user specified an object name not found in the dump file set.

Action: Retry the operation using the correct object name.

ORA-39168: Object path *string* was not found.

Cause: If exporting or importing over the network, the user specified an object type path name that was not found in the source database. For importing from files, the user specified an object type path name not found in the dump file set.

Action: Retry the operation using the correct object type path name.

ORA-39169: Local version of *string* cannot work with remote version of *string*.

Cause: A Data Pump job specified a network link, but the version on the remote database cannot interoperate with the version on the local database.

Action: Do not specify network links between instance running different versions of the database.

ORA-39170: Schema expression *string* does not correspond to any schemas.

Cause: A schema expression or schema list was supplied for a Data Pump job that did not identify any schemas in the source database.

Action: Correct the schema specifications and retry the job.

ORA-39171: Job is experiencing a resumable wait. *string*

Cause: The Data Pump job is stalled with one or more of its sessions having a resumable wait. Resumable waits are typically caused by a non-expandable tablespace running out of space. The follow-on message describes the nature of the wait.

Action: Correct the condition causing the wait. This will typically involve adding datafiles to the tablespace that is full.

ORA-39172: Cannot remap transportable tablespace names with compatibility of *string*.

Cause: The user attempted to remap a tablespace name in a transportable tablespace job when the compatibility level was set below 10.1.

Action: Reset the compatibility level of the database to a more recent version.

ORA-39173: Encrypted data has been stored unencrypted in dump file set.

Cause: No encryption password was specified for an export job that involved data that was encrypted in the database.

Action: No specific user action is required. This is only a warning that secure data may be readable from within the dump file set.

ORA-39174: Encryption password must be supplied.

Cause: No encryption password was supplied to import a dump file set that was created using an encryption password.

Action: Specify the encryption password for the dump file set.

ORA-39175: Encryption password is not needed.

Cause: An encryption password was supplied to import a dump file set that was not created using an encryption password.

Action: No user action is required. This is merely a warning message.

ORA-39176: Encryption password is incorrect.

Cause: The wrong encryption password was supplied to import a dump file set.

Action: Resubmit the job using the correct encryption password for the dump file set.

ORA-39177: invalid compression value *string*

Cause: An invalid value was specified for compression.

Action: Correct the value and recreate the job.

ORA-39178: cannot perform estimate on metadata only jobs

Cause: An estimate was requested for a job by specifying the ESTIMATE or ESTIMATE_ONLY parameter. However, the job was also defined to have no data. These specifications conflict with each other.

Action: Remove one of the conflicting specifications for the job.

ORA-39179: unable to load table "*string*"."*string*" because of OID transform

Cause: The OID transform for the job was set to false and the identified table contained either VARRAYs with non-final types or unscoped REF columns. Both of these column types have embedded OIDs so they

Action: You must manually move the data with the specified tables when OIDs are not preserved.

ORA-39180: unable to encrypt ENCRYPTION_PASSWORD

Cause: The specified encryption password was unable to be encrypted for placement within the master table or decrypted when it was to be restored from the master table. Subsequent messages will describe the actual error that caused the encryption to fail.

Action: Fix the problems referenced by the subsequent messages. The most common reason for the encryption to fail is the lack of a security wallet.

ORA-39181: Only partial table data may be exported due to fine grain access control on *string*

Cause: An unprivileged user has tried to export a table that has fine grain access control. The table owner is subjected to access control and may not be able to export all rows in the table. Only the rows that can be seen by that user will be exported. In order to preserve integrity of the table, the user importing the table

should have enough privilege to recreate the table with the security policies at import time.

Action: It is strongly recommended that the database administrator handle exporting of this table.

ORA-39182: internal error *string* occurred during compression phase *string*

Cause: An unexpected error occurred while compressing data buffers.

Action: Contact Oracle Customer Support.

ORA-39183: internal error *string* occurred during decompression phase *string*

Cause: An unexpected error occurred while decompressing data buffers.

Action: Contact Oracle Customer Support.

ORA-39184: Transportable Data Pump jobs cannot exclude PLUGTS objects

Cause: A Transportable Data Pump job requires all PLUGTS% objects, but the user-supplied exclude filters were excluding these objects.

Action: Reenter command without excluding PLUGTS% objects.

ORA-39185: The transportable tablespace failure list is

Cause: Some of the tablespaces specified for this job could not be exported.

Action: See specific errors for each tablespace, correct the problem, and try again.

ORA-39186: No tablespaces in the specified list exist.

Cause: The tablespaces specified on the EXPORT command did not exist.

Action: Check the list of tablespaces and reenter command with correct set of tablespaces.

ORA-39187: The transportable set is not self-contained, violation list is

Cause: The tablespaces specified for this job did not satisfy the closure checking. The list of violations specified each closure violation.

Action: See specific errors for violation and correct the problem or change the tablespaces on the command line and try again.

ORA-39188: unable to encrypt dump file set

Cause: Data Pump could not create an encrypted dump file set. This message will be accompanied by other messages that give more details about why the encrypted dump file set could not be created. The most common reason for this message is that you are trying to create a dump file set that can be transparently decrypted, and the database external security device is not open.

Action: If the external security device is not open, then open it. If the external security device is not configured, then the only type of encrypted dump file set that you can create is a password-based dump file set.

ORA-39189: unable to decrypt dump file set

Cause: The dump file set could not be decrypted. The reason could be either that an invalid password was entered, or that, when using transparent decryption, the database external security device was not open.

Action: If password-based import was enabled for this dump file set, then supply the correct password. If transparent import was enabled for this dump file set, then ensure that the database external security device is open.

ORA-39190: internal error occurred during encryption phase *string*

-
- Cause:** An unexpected error occurred while encrypting data buffers.
Action: See the secondary error for more information and contact Oracle Customer Support.
- ORA-39191: internal error occurred during decryption phase *string***
Cause: An unexpected error occurred while decrypting data buffers.
Action: See the secondary error for more information and contact Oracle Customer Support.
- ORA-39192: table mode jobs with transportable=always and partition filters only allow objects from one table**
Cause: Multiple tables are not supported when specifying partitions while using transportable table mode.
Action: Retry the job specifying only one table.
- ORA-39193: Table mode jobs do not allow the schema to be wild carded.**
Cause: The table filter included a schema expression with the % wild card.
Action: Retry the job specifying actual schemas.
- ORA-39194: Table mode jobs require the tables to be comma separated.**
Cause: The string describing tables in a table mode job was not comma separated.
Action: Retry the job specifying the tables separated by commas.
- ORA-39195: At least one schema in the TABLE_FILTER does not exist.**
Cause: The TABLE_FILTER specified contains a schema that does not exist.
Action: Retry the job specifying only schemas that exist.
- ORA-39200: Link name "*string*" is invalid.**
Cause: The name of the network link supplied for a Data Pump job was not usable. Secondary messages identify the problem.
Action: Rerun the job using a valid network link.
- ORA-39201: Dump files are not supported for estimate only jobs.**
Cause: An attempt was made to add a dumpfile to an Export job that only requested file estimates.
Action: Do not specify a dumpfile for jobs that do not require dumpfiles.
- ORA-39202: Data cannot be filtered or selected in *string* jobs.**
Cause: A data filter was supplied for the specified type of job, but is not supported in the specified job type. From the command line, data filters can be specified by the CONTENT, TABLES (partition specifications), SAMPLE and QUERY parameters.
Action: Do not restrict data handling on jobs that cannot support data filtering.
- ORA-39203: Partition selection is not supported over a network link.**
Cause: Specific partitions were selected for a job operating over a network link.
Action: Remove the partition specifications and rerun the job.
- ORA-39204: No subsetting of tablespaces is allowed for transportable import.**
Cause: A tablespace filter was applied to a transportable import job that was not performed over a network link. In this case, the tablespace may not be changed from its specification at export time.

Action: Rerun the job without specifying a tablespace filter.

ORA-39205: Transforms are not supported in transportable jobs.

Cause: A metadata transformation such as STORAGE or SEGMENT_ATTRIBUTES has been specified for a transportable Data Pump job.

Action: Rerun the job without specifying a transform.

ORA-39206: A parallel degree of *string* is invalid.

Cause: A bad numeric was supplied for specifying the parallelism to be used within a Data Pump job. The degree of parallelism must be an integer great than 0.

Action: The the degree specifying and retry the parallelism setting.

ORA-39207: Value *string* is invalid for parameter *string*.

Cause: A parameter for a Data Pump job was set with a NULL or invalid value.

Action: Refer to the documentation to identify the legal values for each parameter. Retry the operation with a valid value.

ORA-39208: Parameter *string* is invalid for *string* jobs.

Cause: The a parameter has been specified that is not supported for the specified type of Data Pump.

Action: Remove the parameter specification and retry the operation.

ORA-39209: Parameter *string* requires privileges.

Cause: Use of the specified privileges requires the user to have the IMP_FULL_DATABASE role for import jobs or the EXP_FULL_DATABASE role for export jobs.

Action: Remove the parameter specification and retry the operation.

ORA-39210: A PCTSPACE adjustment of *string* is invalid.

Cause: User specified a storage space transformation that was out of range. Values for PCTSPACE must be greater than zero.

Action: Retry the operation with a valid PCTSPACE value.

ORA-39211: unable to retrieve dumpfile information as specified

Cause: User specified an invalid or inaccessible file with the specified filename and directory object.

Action: Retry the operation with a valid directory object and filename.

ORA-39212: installation error: XSL stylesheets not loaded correctly

Cause: The XSL stylesheets used by the Data Pump Metadata API were not loaded correctly into the Oracle dictionary table "sys.metastylesheet." Either the stylesheets were not loaded at all, or they were not converted to the database character set.

Action: Connect AS SYSDBA and execute dbms_metadata_util.load_stylesheets to reload the stylesheets.

ORA-39213: Metadata processing is not available

Cause: The Data Pump could not use the Metadata API. Typically, this is caused by the XSL stylesheets not being set up properly.

Action: Connect AS SYSDBA and execute dbms_metadata_util.load_stylesheets to reload the stylesheets.

**ORA-39214: Data Pump does not support external tables with encrypted columns.
string will not be exported**

Cause: The object is an external table with encrypted columns and this is unsupported with Data Pump.

Action: External table must be manually recreated on the target system.

ORA-39216: object type "*string*"."*string*" hashcode mismatch

Cause: An object type in a transportable tablespace set could not be used because there was a type with the same name but a different hashcode (and type definition) on the target system. Tables in the transportable tablespace set that use this object type cannot be created.

Action: Drop the object type and dependent objects from the target system if possible and retry the operation.

ORA-39217: object type "*string*"."*string*" typeid mismatch

Cause: An object type in a transportable tablespace set already exists on the target system, but with a different typeid. The typeid could not be changed because the type or a dependent type is used by an existing table. Tables in the transportable tablespace set that use this object be created.

Action: Drop the object type and dependent objects from the target system if possible and retry the operation.

ORA-39218: type check on object type "*string*"."*string*" failed

Cause: The type check on a type failed. Therefore, the table create for the table which uses the type also fails.

Action: Refer to any following error messages for additional information. Correct the error, if possible, and try the action again.

ORA-39219: directory object name is too long

Cause: The directory object name provided to the Data Pump Job was invalid because its length was greater than 30 characters.

Action: Retry the operation with a valid directory object name.

ORA-39220: file name is too long

Cause: The file name provided to the Data Pump Job was invalid because its length was greater than 4000 characters.

Action: Retry the operation with a valid file name.

ORA-39221: Specifying data filters is invalid when dumpfiles do not contain table data.

Cause: A data filter was supplied for an import job, but the dumpfile does not contain any table data. The export command created a dumpfile with metadata only. No table data was included. From the command line, data filters can be specified by the CONTENT, SAMPLE and QUERY parameters.

Action: Do not restrict data handling on jobs that cannot support data filtering.

ORA-39222: Unable to create global temporary master table *string*

Cause: Data Pump tried to create a global temporary master table but could not. The errors that follow describe why the table could not be created.

Action: Examine and fix the problems described in the additional errors.

ORA-39223: Internal Data Pump error. Master table information for version *string* not found.

Cause: An unexpected error occurred while processing the job. The data in an internal table could not be found.

Action: Contact Oracle Support Services.

ORA-39224: *string* row(s) were rejected with the following error: *string*

Cause: These rows were not loaded due to constraint or index violations.

Action: Retry the operation when row data is fixed.

ORA-39228: Unable to construct a unique departitioned object name for *string string.string:string* when defaulted.

Cause: All (sub)partitions in the job were to be created as individual objects and the renaming was defaulted. The job will attempt to create unique object names, but the name creation algorithm was unable to find a unique object name for the specified (sub)partition.

Action: Specify a rename_table transform to use or delete some of the existing objects causing the name conflicts.

ORA-39230: Service name *string* is not available

Cause: The specified resource service name for the Data Pump job

Action: Pick a service name that the user is authorized to use.

ORA-39231: invalid data remap name: *string*

Cause: The specified type of data remapping was not supported.

Action: Only COLUMN_FUNCTION data remaps are supported. Retry the operation using a supported data remap name.

ORA-39232: invalid remap function: *string*

Cause: The specified package function for performing data remapping was not found.

Action: Either create the specified package function or else grant the user access to the function.

ORA-39233: invalid remap column name: *string*

Cause: The column name specified for the data remapping does not exist in the specified table.

Action: Specify a scalar column name within the table to be remapped.

ORA-39234: Data cannot be remapped under the direct path access method.

Cause: Data remapping was requested on a job that requires the direct path access method. Data remapping can only be performed using the external table access method.

Action: Retry the job without specifying any access method.

ORA-39235: data remap *string* has already been specified

Cause: A data remap has already been specified for the indicated column. Only one data remap may be defined for a column.

Action: Remove one of the data remap specifications for the job.

ORA-39237: Failed to load XML document *string*. Compare process aborted.

Cause: An error occurred while performing XML difference parse.

Action: Resubmit XML compare request with valid document.

-
- ORA-39238: XML node attribute differences are not supported.**
Cause: MDAPI XML difference parsing did not support node attributes.
Action: Resubmit XML compare request with valid document.
- ORA-39239: No differences found.**
Cause: XML documents compared were identical.
Action: No action required.
- ORA-39240: Error while processing difference document.**
Cause: Error occurred in the MDAPI difference writer.
Action: Refer to any following error messages for additional information. Correct the error, if possible, and try the action again.
- ORA-39242: Unable to export/import *string* due to table attributes.**
Cause: See the Data Pump documentation for an explanation of what table attributes prevent an export or import from succeeding.
Action: Resolve conflicting table attributes.
- ORA-39243: Import job requires 'TRANSPORT_DATAFILES' parameter.**
Cause: The export job used 'TRANSPORTABLE=ALWAYS' and the import job requires TRANSPORT_DATAFILES to be specified.
Action: Specify the transport datafiles associated with this job.
- ORA-39245: import job requires export dump file "*string*"**
Cause: A Data Pump IMPORT or SQL_FILE operation was being performed but not all of the files from the Data Pump export dump file set were included.
Action: Check the export log file and make sure all of the files that were exported are included in the current job. The import log file also lists the export names of the missing files.
- ORA-39246: cannot locate master table within provided dump files**
Cause: A Data Pump IMPORT or SQL_FILE operation was being performed but not all of the files from the Data Pump export dump file set were included. In particular, the dump file containing the export job's master table was not provided.
Action: Check the export log file and make sure all of the files that were exported are included in the current job.
- ORA-39251: Importing a SecureFile LOB with metadata into a scalar, column *string*, is not allowed.**
Cause: An import of a SecureFile LOB with metadata into a scalar column was attempted.
Action: Change the scalar column to a SecureFile LOB.
- ORA-39252: Importing a SecureFile LOB with metadata or archived SecureFile LOB into a BasicFile LOB is not allowed**
Cause: An attempt was made to import a SecureFile LOB that contained metadata or was archived at the time of export into a BasicFile LOB.
Action: Perform the import into a different table, perform DBMS_LOB.ARCHIVE_GET on any archived SecureFile LOBs, and then use INSERT AS SELECT to migrate the SecureFile LOB data to the BasicFile LOB.
- ORA-39253: Specified tables do not exist.**

Cause: The tables specified for this export job did not exist.

Action: Check the specified table list and make sure the tables listed exist.

ORA-39254: direct path load not possible into preexisting table with column that has a default value and is not being loaded; table *string*, column *string*

Cause: The direct path access method could not be used to load into a pre-existing table that has a column with a default value and that column is not being loaded into.

Action: Remove the ACCESS_METHOD parameter from the import command line.

ORA-39255: Failed to fetch PLUGTS_BLKs.

Cause: The Data Pump expected a PLUGTS_BLK object to be exported but none were.

Action: Contact Oracle Support Services.

ORA-39256: Transportable tablespace Data Pump jobs from read-only databases not supported.

Cause: The remote database was read-only and Data Pump export jobs using transportable tablespace over a network link require the remote database to be read/write.

Action: Use Data Pump without transportable tablespace or make the remote database read/write.

ORA-39257: Data cannot be remapped for more than 10 columns.

Cause: An attempt was made to use REMAP_DATA to remap more than 10 columns.

Action: Do not use the REMAP_DATA to remap more than 10 columns.

ORA-39258: Cannot rename cluster.

Cause: DBMS_METADATA_DIFF was comparing two clusters with different names. There is no SQL ALTER statement to rename a cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39259: Cannot add column to cluster.

Cause: DBMS_METADATA_DIFF was comparing two clusters with different column lists. There is no SQL ALTER statement to add a column to a cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39260: Cannot delete column from cluster.

Cause: DBMS_METADATA_DIFF was comparing two clusters with different column lists. There is no SQL ALTER statement to delete a column from a cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39261: Cannot modify column in cluster.

Cause: DBMS_METADATA_DIFF was comparing two clusters with different column lists. There is no SQL ALTER statement to modify a column in a cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39262: Cannot alter size for hash cluster.

Cause: DBMS_METADATA_DIFF was comparing two hash clusters with different sizes. There is no SQL ALTER statement to modify the size of a hash cluster.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39263: Cannot alter PARALLEL INSTANCES.

Cause: DBMS_METADATA_DIFF was comparing two objects, both with PARALLEL but with different INSTANCES values. There is no SQL ALTER statement to modify PARALLEL INSTANCES.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39264: Cannot alter type of table: *string*

Cause: DBMS_METADATA_DIFF was comparing tables of different types: relational table, object table or XMLType table. There is no SQL ALTER statement to change a table's type.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39265: Cannot alter object_type of object table: *string*

Cause: DBMS_METADATA_DIFF was comparing object tables based on different object types. There is no SQL ALTER statement to change an object table's object type.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39266: Cannot alter unpartitioned table to partitioned.

Cause: DBMS_METADATA_DIFF was comparing two tables, one unpartitioned, the other partitioned. There is no SQL ALTER statement to partition an unpartitioned table.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39267: Cannot remove default from table column.

Cause: DBMS_METADATA_DIFF was comparing two table columns, one with a default value, one without. There is no SQL ALTER syntax to remove a column default.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39268: Cannot alter a real column to make it virtual or vice versa.

Cause: DBMS_METADATA_DIFF was comparing two table columns, one virtual, one real. There is no SQL ALTER statement to make a virtual column real or vice versa.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39269: Cannot alter a column of type LONG to anything other than LOB.

Cause: DBMS_METADATA_DIFF was comparing two table columns, the first of type LONG, the second of a data type other than LOB. There is no SQL ALTER statement to modify a long data type to anything other than a CLOB or NCLOB.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39270: Cannot alter a LOB column to another data type.

Cause: DBMS_METADATA_DIFF was comparing two table columns, the first of type CLOB, NCLOB or BLOB, the second of some other data type. There is no SQL ALTER statement to change the data type of a LOB column.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39271: Cannot alter substitutability of column: *string*

Cause: DBMS_METADATA_DIFF was comparing two table columns. This error may occur because the first column is substitutable and the second column is not, or because the first column is OF TYPE and the second column is substitutable.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39272: Cannot alter organization of nested table column: *string*

Cause: DBMS_METADATA_DIFF was comparing two nested table columns. One was a heap table, the other an index-organized table. There is no SQL ALTER statement to change the organization of a nested table.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39273: Cannot alter storage type of XMLType column: *string*

Cause: DBMS_METADATA_DIFF was comparing two XMLType columns with different storage types (CLOB, BINARY, OBJECT RELATIONAL). There is no SQL ALTER statement to change the storage type of an XMLType column.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39274: Cannot alter physical organization of table.

Cause: DBMS_METADATA_DIFF was comparing two tables with different physical organizations (heap, index organized, external, or cluster). There is no SQL ALTER statement to change the physical organization of a table.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39275: Cannot alter INITIAL storage option.

Cause: DBMS_METADATA_DIFF was comparing two tables with different FREELIST GROUPS storage options. There is no SQL ALTER statement to change a table's INITIAL storage option.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39276: Cannot alter MINEXTENTS storage option.

Cause: DBMS_METADATA_DIFF was comparing two tables with different MINEXTENTS storage options. There is no SQL ALTER statement to change a table's MINEXTENTS storage option.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39277: Cannot alter FREELIST GROUPS storage option.

Cause: DBMS_METADATA_DIFF was comparing two tables with different FREELIST GROUPS storage options. There is no SQL ALTER statement to change a table's FREELIST GROUPS storage option.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39278: Cannot alter table with segments to segment creation deferred.

Cause: DBMS_METADATA_DIFF was comparing two tables, the first with allocated segments, the second with deferred segments. There is no SQL ALTER statement to change a table which already has segments to segment creation deferred.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39279: Cannot alter tablespace of overflow segment.

Cause: DBMS_METADATA_DIFF was comparing two index organized tables whose overflow segments have different tablespaces. There is no SQL ALTER statement to change an overflow segment's tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39280: Cannot drop overflow segment.

Cause: DBMS_METADATA_DIFF was comparing two index organized tables, the first with an overflow segment, the second without. There is no SQL ALTER statement to drop an overflow segment.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39281: Cannot alter COMPRESS in index-organized materialized view.

Cause: DBMS_METADATA_DIFF was comparing two index organized materialized views with different key compression values. There is no SQL ALTER statement to modify the key compression of an index organized materialized view.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39282: Cannot alter default tablespace of partitions in partitioned table.

Cause: DBMS_METADATA_DIFF was comparing two partitioned tables with different default tablespaces. There is no SQL ALTER statement to change the default tablespace of a partitioned table.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39283: Cannot drop, split or merge hash partition: *string*

Cause: DBMS_METADATA_DIFF was comparing two tables or indexes partitioned or subpartitioned by hash, and a (sub)partition in the first object was not present in the second object. Partition maintenance operations such as drop, split or merge can only be performed on list or range (sub)partitioned objects.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39284: Cannot alter the list values of a list subpartition: *string*

Cause: DBMS_METADATA_DIFF was comparing two tables subpartitioned by list, one of which has a subpartition with the same name but a different values list as a subpartition in the other. There is no SQL ALTER statement to change the list values of a list subpartition.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39285: Cannot alter index key compression.

Cause: DBMS_METADATA_DIFF was comparing two indexes with different values of key compression. There is no SQL ALTER statement to change index key compression.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39286: Cannot convert between types of index.

Cause: DBMS_METADATA_DIFF was comparing two indexes of different types, for example, a table index, a domain index, a cluster index, a bitmap index or a bitmap join index. There is no SQL ALTER statement to change the type of an index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39287: Cannot alter index column list.

Cause: DBMS_METADATA_DIFF was comparing two indexes with different column lists. There is no SQL ALTER statement to change the columns of an index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39288: Cannot alter index base table.

Cause: DBMS_METADATA_DIFF was comparing two table indexes defined on different tables. There is no SQL ALTER statement to change the base table of an index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39289: Cannot add or drop local index partition or subpartition: *string*

Cause: DBMS_METADATA_DIFF was comparing two locally partitioned indexes with different partitions or subpartitions. There is no SQL ALTER statement to add or drop a partition or subpartition of a locally partitioned index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39290: Cannot drop a partition of a globally partitioned index.

Cause: DBMS_METADATA_DIFF was comparing two globally partitioned indexes and a partition in the first index does not exist in the second index. There is no SQL ALTER statement to drop a partition of a globally partitioned index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39291: Cannot alter index storage option: *string*

Cause: DBMS_METADATA_DIFF was comparing two indexes with different values for the specified storage option. There is no SQL ALTER statement to change this storage option.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39292: Cannot alter join table of bitmap join index.

Cause: DBMS_METADATA_DIFF was comparing two bitmap join indexes with different join tables. There is no SQL ALTER statement to alter the join tables of a bitmap join index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39293: Cannot alter join condition of bitmap join index.

Cause: DBMS_METADATA_DIFF was comparing two bitmap join indexes with different join conditions. There is no SQL ALTER statement to alter the join condition of a bitmap join index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39294: Cannot alter indextype of domain index.

Cause: DBMS_METADATA_DIFF was comparing two bitmap domain indexes with different indextypes. There is no SQL ALTER statement to alter the indextype of a domain index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39295: Cannot alter index base cluster.

Cause: DBMS_METADATA_DIFF was comparing two cluster indexes defined on different clusters. There is no SQL ALTER statement to change the base cluster of a cluster index.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39296: Cannot alter index partitioning type or partitioning columns.

Cause: DBMS_METADATA_DIFF was comparing two indexes with incompatible partitioning: (1) one is partitioned and one is not (2) both are partitioned but in different ways (locally vs. globally, hash vs. range) (3) both are partitioned but on different columns. There is no SQL ALTER statement to change the way an index is partitioned.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39297: Cannot alter materialized view attribute: *string*

Cause: DBMS_METADATA_DIFF was comparing two materialized views with incompatible attributes. There is no SQL ALTER statement to change this attribute of a materialized view.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39298: Cannot alter materialized view partitioning type or partitioning columns.

Cause: DBMS_METADATA_DIFF was comparing two materialized views with incompatible partitioning: (1) one is partitioned and one is not (2) both are partitioned but in different ways (locally vs. globally, hash vs. range) (3) both are partitioned but on different columns. There is no SQL ALTER statement to change the way a materialized view is partitioned.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39299: Cannot alter materialized view physical organization.

Cause: DBMS_METADATA_DIFF was comparing two materialized views with different physical organizations: heap, index organized, etc. There is no SQL ALTER statement to change the index organization of a materialized view.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39300: Cannot alter materialized view log partitioning type or partitioning columns.

Cause: DBMS_METADATA_DIFF was comparing two materialized view logs with incompatible partitioning: (1) one is partitioned and one is not (2) both are partitioned but in different ways (locally vs. globally, hash vs. range) (3) both are partitioned but on different columns. There is no SQL ALTER statement to change the way a materialized view log is partitioned.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39301: Cannot alter values recorded in materialized view log: *string*

Cause: DBMS_METADATA_DIFF was comparing two materialized view logs that are recording different values, and the set of values in the first materialized view log cannot be changed to that in the second materialized view log. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39302: Cannot alter tablespace of materialized view log.

Cause: DBMS_METADATA_DIFF was comparing two materialized view logs which have different tablespaces. There is no SQL ALTER statement to change the tablespace of a materialized view log.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39303: Cannot alter attribute of queue: *string*

Cause: DBMS_METADATA_DIFF was comparing two advanced queues with attribute differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39304: Cannot alter attribute of queue table: *string*

Cause: DBMS_METADATA_DIFF was comparing two AQ queue tablespaces with attribute differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39305: Cannot alter attribute of sequence: *string*

Cause: DBMS_METADATA_DIFF was comparing two sequences with attribute differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39306: Cannot alter attribute of trigger: *string*

Cause: DBMS_METADATA_DIFF was comparing two triggers with differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39307: Cannot alter attribute of type: *string*

Cause: DBMS_METADATA_DIFF was comparing two types with differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39308: Cannot alter attribute of view: *string*

Cause: DBMS_METADATA_DIFF was comparing two views with differences that cannot be reconciled. The error message identifies the specific problem.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39309: Cannot alter tablespace between bigfile and smallfile.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces, one bigfile, one smallfile. There is no SQL ALTER statement to change a tablespace from smallfile to bigfile or vice versa.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39310: Cannot alter tablespace type.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces of different types: permanent, temporary or undo. There is no SQL ALTER statement to change the type of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39311: Cannot alter tablespace blocksize.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces with different block sizes. There is no SQL ALTER statement to change the block size of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39312: Cannot alter tablespace encryption.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces, one encrypted, one not. There is no SQL ALTER statement to change the encryption property of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39313: Cannot alter tablespace flashback mode.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces, one in flashback mode, one not. There is no SQL ALTER statement to alter the flashback mode of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39314: Cannot alter tablespace extent_management.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces with different extent management properties. There is no SQL ALTER statement to alter the extent management properties of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39315: Cannot drop the first data file from a permanent or undo tablespace.

Cause: DBMS_METADATA_DIFF was comparing two permanent or undo tablespaces. The first data file in the first tablespace is missing from the second tablespace. There is no SQL ALTER statement to drop the first data file from a permanent or undo tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39316: Cannot resize a data file in a smallfile tablespace.

Cause: DBMS_METADATA_DIFF was comparing two smallfile tablespaces. A data file in the first tablespace is of a different size from the corresponding data file in the second tablespace. There is no SQL ALTER statement to resize a data file in a smallfile tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39317: Cannot change the segment space management of a tablespace.

Cause: DBMS_METADATA_DIFF was comparing two tablespaces with different segment space management. There is no SQL ALTER statement to change the segment space management of a tablespace.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39318: Cannot alter user name.

Cause: DBMS_METADATA_DIFF was comparing two users with different names. There is no SQL ALTER statement to change the name of a user.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39319: Cannot undo password expiration.

Cause: DBMS_METADATA_DIFF was comparing two users and the first user had an expired password. There is no SQL ALTER statement to undo the expiration of a user password.

Action: The difference cannot be eliminated with an SQL ALTER statement.

ORA-39320: Column names do not match between export and import databases.

Cause: The column names of the table being imported did not match the column names of the preexisting table.

Action: Ensure the column names match between export and import database.

ORA-39321: Cannot alter functional index or virtual expression column: *string*

Cause: Altered column was referenced in a virtual column or functional index expression. There is no SQL ALTER statement to change a column which is referenced in one of these types of expressions.

Action: The difference cannot be eliminated with a SQL ALTER statement.

ORA-39322: Cannot use transportable tablespace with TIMESTAMP WITH TIME ZONE columns and different time zone version.

Cause: The source database was at a different time zone version than the target database and there were tables in the dumpfile with TIMESTAMP WITH TIME ZONE columns.

Action: Convert the target database to the same time zone version as the source database or use Data Pump without transportable tablespace.

ORA-39323: cannot load data from external table dump file "*string*"

Cause: A dump file was specified for an import operation that had been created with external tables using the ORACLE_DATAPUMP access driver. This type of dump file cannot be processed using the Data Pump import utility.

Action: Access the data in this dump file with external tables using the ORACLE_DATAPUMP access driver.

ORA-39324: cannot load data from Data Pump dump file "*string*"

Cause: A dump file was specified for a load operation that had been created using the Data Pump. This type of dump file cannot be processed by external tables using the ORACLE_DATAPUMP access driver.

Action: Access the data in this dump file using the Data Pump.

ORA-39325: TABLE_EXISTS_ACTION cannot be applied to *string*.

Cause: An object was already in existence that uses a name in common with this table. The name collision could be the table name, a constraint, a LOB storage table, or something else in the table definition.

Action: Drop the existing object before running Data Pump.

ORA-39328: encryption password is too long

Cause: The encryption password provided to the Data Pump job was invalid because its length was greater than the maximum allowed. When using the password to encrypt the dump file set, the maximum length is 1000 bytes. When using the password to re-encrypt encrypted columns only, the maximum length is 30 bytes.

Action: Retry the operation with a valid encryption password.

ORA-39329: Tablespace *string* needs to be locally managed.

Cause: An attempt was made to run an Oracle Data Pump job with the TRANSPORTABLE=ALWAYS parameter. Tablespaces that contain data for EARLY_OPTIONS in an Oracle Data Pump job run with FULL=Y and TRANSPORTABLE=ALWAYS parameter need to be locally managed.

Action: Run the Oracle Data Pump job without the TRANSPORTABLE parameter set to ALWAYS.

ORA-39331: Wallet is not open on remote node

Cause: The security module wallet has not been opened on the remote node.

Action: Open the wallet on the remote node.

ORA-39339: Table *string* was skipped due to transportable import and TSTZ issues resulting from time zone version mismatch.

Cause: The source database is at a different time zone version than the target database and this table contains TIMESTAMP WITH TIME ZONE data.

Action: Convert the target database to the same time zone version as the source database or use Oracle Data Pump with conventional data movement to export then import this table.

ORA-39353: Data was not imported for *string*. Cannot locate the time zone version *string* file.

Cause: This table contains TIMESTAMP WITH TIME ZONE data and Oracle Data Pump needed to load the source version of the time zone file. This version cannot be located.

Action: Install the latest time zone version files.

ORA-39359: Source time zone version is *string* and target time zone version is *string*.

Cause: The time zone version of the source database is not the same as the time zone version of the target database.

Action: Tables containing TIMESTAMP WITH TIME ZONE data cannot be imported with transportable tablespace technology when time zone versions are different between the export and target databases. All affected tables will be reported during the import job and will not be created. If any are reported, convert the target database to the same time zone version as the source or use Oracle Data Pump with conventional data movement to export then import the affected tables.

ORA-39360: Table *string* was skipped due to transportable import and TSLTZ issues resulting from time zone mismatch.

Cause: The time zone of the source database is different than the time zone of the target database and this table contains TIMESTAMP WITH LOCAL TIME ZONE data.

Action: Convert the target database to the same time zone as the source database or use Oracle Data Pump with conventional data movement to export then import this table.

ORA-39361: Source time zone is *string* and target time zone is *string*.

Cause: The time zone of the source database is different than the time zone of the target database.

Action: Tables containing TIMESTAMP WITH LOCAL TIME ZONE data cannot be imported with transportable tablespace technology when time zones are different between the export and target databases. All affected tables will be reported during the import job and will not be created. If any are reported, convert the target database to the same time zone as the source or use Oracle Data Pump with conventional data movement to export then import the affected tables.

ORA-39363: Type evolution could not be preserved for *string*

Cause: Trying to apply each version of the type during import resulted in compilation warnings. The type was successfully re-created to the latest version only.

Action: Export dump files, as well as transportable tablespaces that contain earlier versions of this type, cannot be imported on top of this type definition.

ORA-39500: failed to notify CRS of a Startup/Shutdown event for database "*string*", instance "*string*" (ignored)

Cause: The instance was unable to obtain the context or information required to notify the CRS framework.

Action: None Required. The error is ignored.

ORA-39501: failed to notify CRS of a Startup/Shutdown event [string] (ignored)

Cause: The instance was unable to communicate with the CRS framework.

Action: None Required. The error is ignored.

ORA-39502: failed to notify CRS of a Startup/Shutdown event [string] (ignored)

Cause: The instance was unable to create an environment context.

Action: None Required. The error is ignored.

ORA-39503: failed to notify CRS of a Startup/Shutdown event [string] (ignored)

Cause: The instance was unable to populate the environment context.

Action: None Required. The error is ignored.

ORA-39504: failed to notify CRS of a Startup/Shutdown event [string] (ignored)

Cause: The instance was unable to find the location of the alert file.

Action: None Required. The error is ignored.

ORA-39510: CRS error performing string on string 'string' on 'string' string

Cause: Unable to perform action on associated CRS resource.

Action: See following error messages for additional information. Fix error and retry.

ORA-39600: Queue keys needs to be a suffix of cluster key.

Cause: Attempt to specify queue key columns that don't form a suffix of the cluster key.

Action: Only specify queue key columns as a suffix of cluster key.

ORA-39601: Hash key is required.

Cause: Missing hash key in the cluster key specification.

Action: Specify one or more hash key columns.

ORA-39700: database must be opened with UPGRADE option

Cause: A normal database open was attempted, but the database has not been upgraded to the current server version.

Action: Use the UPGRADE option when opening the database to run catupgrd.sql (for database upgrade), or to run catalog.sql and catproc.sql (after initial database creation).

ORA-39701: database must be mounted EXCLUSIVE for UPGRADE or DOWNGRADE

Cause: The database was mounted for SHARED cluster access.

Action: Set the CLUSTER_DATABASE initialization parameter to FALSE and restart the server with the UPGRADE or DOWNGRADE option.

ORA-39702: database not open for UPGRADE or DOWNGRADE

Cause: An upgrade, downgrade, reload, or patch script was invoked when the database was not open for UPGRADE or DOWNGRADE.

Action: Use STARTUP UPGRADE to open the database for upgrade or to apply a patch set. Use STARTUP DOWNGRADE for running a downgrade script or the reload script.

ORA-39703: server version and script version do not match

Cause: An upgrade, downgrade, reload, or patch script was invoked, but the database instance version was not the version for which the script was intended.

Action: Check that the correct ORACLE_HOME and ORACLE_SID environment variables are set. Also check that the SQL script is being invoked from the correct ORACLE_HOME.

ORA-39704: permission to modify component registry entry denied

Cause: An attempt was made to modify an entry in the component registry, but the session user was not authorized; only the CONTROL or SCHEMA user for the component are authorized to modify the component registry entry.

Action: Connect as either the CONTROL or SCHEMA user for the component.

ORA-39705: component '*string*' not found in registry

Cause: No entry in the component registry was found for the specified component.

Action: Check the spelling of the component ID and use the DBA_REGISTRY view to list the existing components.

ORA-39706: schema '*string*' not found

Cause: The schema name specified was not found in the database.

Action: Create the schema before loading the component.

ORA-39707: compatible parameter *string* too high for downgrade to *string*

Cause: A downgrade was attempted, but the compatible initialization parameter value was greater than the downgrade release version.

Action: Once the compatible value has been raised, downgrade to earlier releases is not supported.

ORA-39708: component '*string*' not a *string* component

Cause: The component was not a component for the specified namespace.

Action: Either enter a valid component identifier for the namespace or set the session namespace to the correct component namespace.

ORA-39709: incomplete component downgrade; *string* downgrade aborted

Cause: One or more components did not have a status of DOWNGRADED.

Action: Correct the component problem and re-run the downgrade script.

ORA-39710: only connect AS SYSDBA is allowed when OPEN in UPGRADE mode

Cause: An attempt was made to connect to a database when the database was OPEN for UPGRADE or DOWNGRADE.

Action: Try to connect again after the database upgrade or downgrade is complete.

ORA-39711: critical patch number less than last installed CPU number

Cause: A Critical Patch Update (CPU) script was invoked that had a number that was less than the last CPU installed in the database.

Action: Check the DBA_REGISTRY_HISTORY view to identify the last CPU for the database, and install the most recent CPU.

ORA-39712: XE edition server cannot open database

Cause: An attempt was made to open a Standard Edition or Enterprise Edition database with the Express Edition of the server.

Action: Use the Express Edition server only with Express Edition databases.

ORA-39714: upgrade script utlmmig.sql failed

Cause: A normal database open was attempted, but the upgrade script utlmmig.sql failed to complete.

Action: Use the UPGRADE option when opening the database and then run utlmmig.sql.

ORA-39726: unsupported add/drop column operation on compressed tables

Cause: An unsupported add/drop column operation for compressed table was attempted.

Action: When adding a column, do not specify a default value. DROP column is only supported in the form of SET UNUSED column (meta-data drop column).

ORA-39727: COMPATIBLE must be set to 10.0.0.0 or higher

Cause: An add/drop column operation for compressed table has been performed on the database. This requires COMPATIBLE to be set to 10.0.0.0 or higher during upgrade from 9.2 to a 10i or higher release.

Action: Set COMPATIBLE to 10.0.0.0 and retry the upgrade.

ORA-39751: partitioned table on both sides of PARTITIONED OUTER JOIN is not supported

Cause: An attempt was made to partition both sides of PARTITIONED OUTER JOIN.

Action: Specify partitioned table on one side of PARTITIONED OUTER JOIN only.

ORA-39752: redundant column in partitioning and join columns is not allowed

Cause: An attempt was made to specify redundant columns in partitioning and join columns for NATURAL or named column PARTITIONED OUTER JOIN.

Action: Do not specify redundant column in partitioning and join columns.

ORA-39753: unsupported use of subquery in PARTITIONED OUTER JOIN condition

Cause: An attempt was made to use subquery in PARTITIONED OUTER JOIN condition.

Action: Remove subquery from the join condition.

ORA-39754: FULL PARTITIONED OUTER JOIN is not supported

Cause: An attempt was made to use FULL PARTITIONED OUTER JOIN.

Action: Specify FULL PARTITIONED OUTER JOIN through UNION of LEFT and RIGHT PARTITION OUTER JOIN.

ORA-39761: stream reset required before loading this stream again

Cause: An attempt was made to load a stream that was previously loaded but has not been reset yet.

Action: Reset the specified stream and convert column array data to it before attempting to load it again.

ORA-39762: streams must be loaded in conversion order

Cause: An attempt was made to load a stream out of conversion order.

Action: Load streams in the same order they were converted.

ORA-39763: stream must be completely loaded before it is reset

Cause: An attempt was made to reset a stream that contains converted column array data and hasn't been completely loaded yet.

Action: Before resetting a stream, load it until a status of OCI_SUCCESS, OCI_NO_DATA, or OCI_NEED_DATA is returned.

ORA-39764: specified stream is not in the specified direct path context

Cause: A direct path operation was attempted using a stream that was not created in the specified direct path context.

Action: Only use streams created in the specified direct path context.

ORA-39765: stream must be reset before used in a column array conversion

Cause: The stream was completely loaded, but has not been reset yet.

Action: Reset loaded streams after load returns OCI_SUCCESS, OCI_NO_DATA, or OCI_NEED_DATA. The stream can then be used in a column array to stream conversion.

ORA-39766: invalid stream specified for column array conversion

Cause: A stream must be loaded and reset before used again in a column-array-to-stream conversion. This error is issued if another stream has subsequently been converted before the specified stream has been loaded, or if the latest load of this stream returned OCI_ERROR.

Action: Don't convert into a previous stream before it is loaded. Also, when load stream returns OCI_ERROR, the stream must be loaded again to insure any remaining information in the stream is loaded. The stream must be loaded even if the last or only row was in error. There may be error information in the stream that needs to be sent to the server.

ORA-39767: finish is not allowed when unloaded stream data exists

Cause: A direct path finish was attempted when at least one stream buffer has not been completely loaded.

Action: All streams must be loaded after a column array to stream conversion until load stream returns a status of OCI_SUCCESS or OCI_NO_DATA. The load can then be finished.

ORA-39768: only one direct path context top level column array is allowed

Cause: Attempt to create multiple top level column arrays in a direct path context, when only one is allowed.

Action: Create another direct path context if additional top level column arrays are required.

ORA-39769: finish is not allowed with an incompletely loaded last row

Cause: Part of a row has been loaded, but it is not complete.

Action: Finish loading the current row when load stream returns OCI_ERROR or OCI_NEED_DATA.

ORA-39771: stream must be loaded before its handle is freed

Cause: An attempt was made to free a stream handle after conversion but before the stream was loaded.

Action: Load the stream until OCI_SUCCESS, OCI_NEED_DATA or OCI_NO_DATA is returned before attempting to free the stream handle. If OCI_NEED_DATA is returned, another stream must be loaded to complete last row.

ORA-39772: column array reset disallowed after OCI_CONTINUE or OCI_NEED_DATA

Cause: An attempt was made to reset a column array when a row conversion is still in progress.

Action: Complete the current row before resetting the column array. To ignore the current row when conversion returned OCI_NEED_DATA, set the current column flag to OCI_DIRPATH_COL_ERROR. This should be followed by a conversion, which will undo and ignore the row. The column array(s) can then be reset.

ORA-39773: parse of metadata stream failed

Cause: An unexpected error occurred while attempting to parse the metadata // stream for a table being loaded.

Action: Call Oracle support.

ORA-39774: parse of metadata stream failed with the following error: *string*

Cause: An unexpected error occurred while parsing the metadata stream.

Action: See the secondary error for more information.

ORA-39775: direct path API commit not allowed due to previous fatal error

Cause: An attempt was made to commit a Direct Path context after a fatal error.

Action: Correct the error and retry.

ORA-39776: fatal Direct Path API error loading table *string*

Cause: A fatal error was detected loading the specified or previous table.

Action: Correct the error and retry.

ORA-39777: data saves are not allowed when loading lob columns

Cause: An attempt was made to save data when loading lob columns or columns stored as lobs (such as varrays and xml types).

Action: Do not attempt to do a data save or partial save when loading lob columns. A finish save is allowed.

ORA-39778: the parallel load option is not allowed when loading lob columns

Cause: An attempt was made to load lob columns using the attribute OCI_ATTR_DIRPATH_PARALLEL. This error will also be issued when loading any columns that are stored as lobs (such as varrays and xml types).

Action: Do not use the parallel attribute when loading lob columns.

ORA-39779: type "*string*"."*string*" not found or conversion to latest version is not possible

Cause: Unable to import table data using the specified type. The type was nonexistent in the database or the input type could not be converted to the existing type. The reasons why a conversion was not possible are:

1. The version of the type in the database was greater than the version of the type at export time because 1 or more attributes have been added or dropped from the type.

2. If the type existed in the database prior to the import operation, then its internal identifier may not match the internal identifier of the type from the export database. The identifiers must match for an import to succeed.

Action: Ensure the types in the database match those at export time.

-
- ORA-39780: Direct path context operations are not allowed after the context is aborted or finished**
Cause: The specified direct path context was aborted or finished.
Action: Do not pass a direct path context that has ended to any direct path functions.
- ORA-39781: Direct path stream loads are not allowed after another context loading the same table has ended**
Cause: Attempt to load a stream in one context after another loading the same table has ended.
Action: Close all contexts before trying to create another that loads the same table as a previous context in the same session.
- ORA-39782: Direct path prepare is not allowed after another context loading the same table has ended**
Cause: Direct path prepare called after a context loading the same table has ended.
Action: Close all contexts before trying to create another that loads the same table as a previous context in the same session.
- ORA-39783: Invalid direct path transaction active**
Cause: Direct path operations were not performed in the transaction started by the first OCIDirPathPrepare call.
Action: Ensure the correct transaction is active prior to calling Direct Path API operations.
- ORA-39784: This direct path operation is not allowed while another is in progress**
Cause: Another direct path operation was active.
Action: Complete any direct path operations in progress before attempting this operation.
- ORA-39785: SQL expressions returning ADT objects are not allowed in direct path**
Cause: The passed SQL expression returned a user-defined ADT which was not supported.
Action: Remove the SQL expression.
- ORA-39786: Number of columns does not match between export and import databases**
Cause: External tables could not import into a table with mismatched columns.
Action: Ensure the number of columns matches between export and import database.
- ORA-39787: Column *string* subtype "*string*".*string* is not instantiable.**
Cause: Subtype specified was not instantiable.
Action: Ensure all subtypes specified are instantiable.
- ORA-39788: Subtype "*string*".*string* is specified multiple times for column *string*.**
Cause: Subtype specified was not unique.
Action: Ensure all subtypes specified are unique.
- ORA-39789: "*string*".*string* is not a valid type for column *string*.**
Cause: Subtype specified was not a valid type for the column being loaded.

-
- Action:** Ensure all subtypes specified are valid types for the column being loaded.
- ORA-39790: Attribute "*string*" specified multiple times for column *string*.**
Cause: Attribute specified multiple times.
Action: Ensure all attributes specified are unique.
- ORA-39791: Attribute "*string*" for column *string* is not in subtype "*string*".*string*".**
Cause: Attribute was not included in the subtype indicated.
Action: Ensure the attribute is included in the subtype indicated by the specified subtype index.
- ORA-39792: Attribute "*string*" is not valid for subtype(s) loaded into column *string*.**
Cause: Attribute specified was not included in any subtypes specified for the column or the declared subtype of the column.
Action: Ensure the attribute is included in at least one of the subtypes loaded into the column.
- ORA-39793: Attribute "*string*" is not unique within the hierarchy being loaded.**
Cause: The attribute was defined in multiple lines of descent in the hierarchy being loaded.
Action: When describing the attribute, a subtype index must be specified to uniquely identify the attribute being loaded.
- ORA-39794: No attributes loaded for subtype "*string*".*string*".**
Cause: None of the attributes loaded were included in the type shown.
Action: At least one attribute must be loaded for each subtype specified.
- ORA-39795: Subtype index is not first attribute for object table or column, *string*.**
Cause: The subtype index was not the first attribute when describing the attributes of an object column or object table with multiple subtypes.
Action: Describe the subtype index as the first attribute for this object column or object table.
- ORA-39796: column array entry for *string* is not valid for the current subtype**
Cause: This column was not part of the current subtype being loaded for this object column or table. Therefore, its entry must be null in the column array.
Action: Set the column array entry to null.
- ORA-39797: The subtype index value is not valid.**
Cause: The subtype index value in the column array was not valid for the object column or object table.
Action: Set a valid subtype index value in the column array for this table or column.
- ORA-39798: The column array row offset *number* is out of range (max: *number*).**
Cause: The specified row offset was too large for the column array.
Action: Ensure the row offset is in range.
- ORA-39799: The column index *number* is out of range (max: *number*).**
Cause: The specified column index was too large for the column array.
Action: Ensure the column index is in range.

-
- ORA-39800: Database version *number* does not support the load of multiple subtypes.**
Cause: Direct Path API support for loading multiple subtypes of an object table or column was only present in the Oracle 11 release and higher.
Action: Upgrade database to Oracle 11 or higher.
- ORA-39801: Subtype "*string*"."*string*" is not a valid subtype for column *string*.**
Cause: Subtype specified was not the declared type nor was it derived from the declared type.
Action: Ensure all subtypes specified are either the declared type or derived from the declared type.
- ORA-39802: ADT object column *string* specified a SQL expression which is not allowed in direct path mode.**
Cause: The ADT column reported in the error specified a SQL expression which returned the ADT. This is not supported.
Action: Remove the SQL expression.
- ORA-39803: Data saves are not allowed on tables with partitioning referential constraints.**
Cause: Data saves (and the `sqlldr ROWS` parameter) are not allowed when loading both the parent and child tables of a partitioning referential constraint.
Action: Do not attempt data saves when loading both the parent and child tables of a partitioning referential constraint.
- ORA-39804: The load was aborted due to an error loading parent *string* while also loading child *string*.**
Cause: An error occurred while loading the child and parent table of a partitioning referential constraint. The load was aborted to ensure the partitioning referential constraint was not violated.
Action: Fix the error that caused the load to abort and retry.
- ORA-39805: Parallel loads are not allowed when loading child and parent.**
Cause: A parallel load was requested when loading the child and parent of a partitioning referential constraint. This is not allowed.
Action: Remove the parallel option.
- ORA-39806: The attempt to lock *string* parent table *string string string* failed.**
Cause: While loading the child table of a partitioning referential constraint, the parent table must be locked in SHARE mode.
Action: Determine why the parent table could not be locked and retry.
- ORA-39807: Partial data save on child *string* was ignored.**
Cause: An attempt was made to partially save data when loading both the child and parent of a partitioning referential constraint or when loading a table with a domain index.
Action: Fix the error that caused the partial load and retry.
- ORA-39808: The SINGLEROW option must be specified for parent table *string*.**
Cause: The SINGLEROW option was not specified when loading both the parent and child table of a partitioning referential constraint.

Action: Ensure the SINGLEROW option is specified for the parent when loading the parent and child of a partitioning referential constraint.

ORA-39809: Data saves are not allowed on tables with domain indexes.

Cause: Data saves (and the sqlldr ROWS parameter) could not be allowed when loading a table with domain indexes.

Action: Do not attempt data saves when loading a table with domain indexes.

ORA-39810: Data saves are not allowed when NO_INDEX_ERRORS is specified.

Cause: Data saves (and the sqlldr ROWS parameter) could not be allowed when loading with the NO_INDEX_ERRORS option.

Action: Do not attempt data saves when loading a table with the NO_INDEX_ERRORS option.

ORA-39811: index *string.string* had the following error:

Cause: An error occurred on the index; error follows.

Action: Fix the error and retry.

ORA-39812: index *string.string* partition *string* had the following error:

Cause: An error occurred on the index; error follows.

Action: Fix the error and retry.

ORA-39813: index *string.string* had *string* partition errors:

Cause: A logical index error occurred on a partitioned index which affected one or more index partitions, which are listed below this message.

Action: Fix the error(s) and retry.

ORA-39814: The SKIP_INDEX_MAINTENANCE option is not allowed with NO_INDEX_ERRORS.

Cause: The SKIP_INDEX_MAINTENANCE option was used with the NO_INDEX_ERRORS option.

Action: Do not use SKIP_INDEX_MAINTENANCE with NO_INDEX_ERRORS.

ORA-39815: Direct Path Unload of an external table is not allowed.

Cause: An attempt was made to use Direct Path API Unload to unload an external table.

Action: Do not use Direct Path Unload to unload an external table.

ORA-39816: Direct Path Unload of tables with encrypted column(*string.string*) is not allowed.

Cause: An attempt was made to use Direct Path API Unload to unload a table with encrypted columns.

Action: Do not use Direct Path Unload to unload a table with encrypted columns.

ORA-39817: index *string.string* was ignored due to:

Cause: Index was unusable at the start of the load and it was requested that unusable indexes be skipped.

Action: No action required.

ORA-39818: index *string.string* partition *string* was ignored due to:

Cause: Index was unusable at the start of the load and it was requested that unusable indexes be skipped.

Action: No action required.

ORA-39819: The OCI_ATTR_DIRPATH_NO_INDEX_ERRORS attribute cannot be set to TRUE in direct path parallel loads.

Cause: An attempt was made to set the OCI_ATTR_DIRPATH_NO_INDEX_ERRORS attribute to TRUE in a direct path parallel load.

Action: Do not set the OCI_ATTR_DIRPATH_NO_INDEX_ERRORS to TRUE for direct path parallel loads.

ORA-39820: Zero length LONG piece detected for column *string* row *string*.

Cause: A zero length piece was detected for a LONG column.

Action: Do not use a length of zero when loading LONG columns.

ORA-39822: A new direct path operation is not allowed in the current transaction.

Cause: All previous direct path contexts ended and the current transaction was ready for a commit or abort of those changes.

Action: Commit or abort the current transaction, and start a new transaction for the next direct path context.

ORA-39823: The attribute OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS is only allowed for load operations.

Cause: The attribute OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS was set for a nonload operation.

Action: Use OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS for load operations only.

ORA-39824: The OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS attribute was set when no transaction was active.

Cause: There was no active transaction to use.

Action: Start a transaction or do not set the attribute OCI_ATTR_DIRPATH_USE_ACTIVE_TRANS to TRUE.

ORA-39825: Direct path load of view or synonym (*string.string*) with multiple dependencies not permitted.

Cause: An attempt was made to load a view or synonym which has more than a single dependency.

Action: A view or synonym being loaded by the direct path API must resolve to a single object.

ORA-39826: Direct path load of view or synonym (*string.string*) could not be resolved.

Cause: A synonym or view could not be translated.

Action: Verify that the view or synonym is valid.

ORA-39827: Direct path load of PL/SQL function not permitted.

Cause: An attempt was made to load a PL/SQL function with the direct path API.

Action: Remove PL/SQL function the direct path load.

ORA-39828: Constraint *string* was disabled because of index *string.string* error.

Cause: The index used for the constraint was set as unusable.

Action: Fix the error that caused the index to be set unusable.

ORA-39829: function-based index on columnar data made unusable

Cause: An attempt was made to load a columnar table with a function-based index using SQL*Loader direct path load.

Action: Rebuild the function-based index after the load completes.

ORA-39830: XML parsing failed *string*

Cause: XML parser returned an error while trying to parse the document.

Action: Fix the error that caused the document to be invalid.

ORA-39901: Partitioned table *string.string* is partially contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Check table partitions by querying SYS.DBA_TAB_PARTITIONS.

ORA-39902: Subpartitioned table *string.string* is partially contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Check table subpartitions by querying SYS.DBA_TAB_SUBPARTITIONS.

ORA-39903: IOT Partition *string.string* is partially contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Check table partitions by querying SYS.DBA_IND_PARTITIONS.

ORA-39904: Partitioned object *string.string* is partially contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Check partitions and overflow segments by querying SYS.DBA_IND_PARTITIONS and SYS.DBA_TAB_PARTITIONS.

ORA-39905: Table *string.string* in tablespace *string* points to LOB segment *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39906: Constraint *string* between table *string.string* in tablespace *string* and table *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39907: Index *string.string* in tablespace *string* points to table *string.string* in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

-
- ORA-39908: Index *string.string* in tablespace *string* enforces primary constraints *string* of table *string.string* in tablespace *string*.**
Cause: Informational message to describe a failure during transportable containment checking.
Action: None required.
- ORA-39909: Index *string.string* in tablespace *string* points to table/cluster *string.string* in tablespace *string*.**
Cause: Informational message to describe a failure during transportable containment checking.
Action: None required.
- ORA-39910: Partitioned Global index *string.string* in tablespace *string* points to partition *string* of table *string.string* in tablespace *string* outside of transportable set.**
Cause: Informational message to describe a failure during transportable containment checking.
Action: None required.
- ORA-39911: Index *string.string* in tablespace *string* points to partition *string* of table *string.string* in tablespace *string* outside of transportable set.**
Cause: Informational message to describe a failure during transportable containment checking.
Action: None required.
- ORA-39912: Partitioned index *string.string* in tablespace *string* points to table *string.string* in tablespace *string* outside of transportable set.**
Cause: Informational message to describe a failure during transportable containment checking.
Action: None required.
- ORA-39913: *string string.string* in tablespace *string* not allowed in transportable set.**
Cause: Informational message to describe a failure during transportable containment checking.
Action: None required.
- ORA-39914: Index *string.string* in tablespace *string* points to subpartition *string* of table *string.string* in tablespace *string* outside of transportable set.**
Cause: Informational message to describe a failure during transportable containment checking.
Action: None required.
- ORA-39915: Partition *string* of table *string.string* in tablespace *string* points to LOB segment *string.string* in tablespace *string*.**
Cause: Informational message to describe a failure during transportable containment checking.
Action: None required.
- ORA-39916: Subpartition *string* of table *string.string* in tablespace *string* points to LOB segment *string.string* in tablespace *string*.**
Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39917: SYS owned object *string* in tablespace *string* not allowed in pluggable set

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39918: PLSQL Functional Index *string.string* in tablespace *string* not allowed in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39919: Object *string.string* in tablespace *string* not contained within transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Check SYS.DBA_OBJECTS.

ORA-39920: Rollback segment *string* in tablespace *string* not allowed in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39921: Default Partition (Table) Tablespace *string* for *string* not contained in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39922: Default Partition (Index) Tablespace *string* for *string* not contained in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39923: Default Composite Partition (Table) Tablespace *string* for *string* not contained in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39924: Default Composite Partition (Index) Tablespace *string* for *string* not contained in transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39925: LOB segment *string.string* in tablespace *string* points to table *string.string* in tablespace *string*.

-
- Cause:** Informational message to describe a failure during transportable containment checking.
- Action:** None required.
- ORA-39926: Join index between table *string.string* in tablespace *string* and table *string.string* in tablespace *string*.**
- Cause:** Informational message to describe a failure during transportable containment checking.
- Action:** None required.
- ORA-39927: Scoped REF constraint between table *string.string* in tablespace *string* and table *string.string* in tablespace *string*.**
- Cause:** Informational message to describe a failure during transportable containment checking.
- Action:** None required.
- ORA-39928: *string string.string* in tablespace *string* contains evolved type data that have not been upgraded.**
- Cause:** Informational message to describe a failure during transportable containment checking.
- Action:** None required.
- ORA-39929: Table *string.string* in tablespace *string* has encrypted columns which are not supported.**
- Cause:** Informational message to describe a failure during transportable containment checking.
- Action:** None required.
- ORA-39930: Violation *string*.**
- Cause:** Informational message to describe a failure during transportable containment checking.
- Action:** Contact Oracle Support Services.
- ORA-39931: XML Schema *string* Owner: *string* not fully contained in the transportable set.**
- Cause:** Informational message to describe a failure during transportable containment checking.
- Action:** Identify the associated elements and resolve self containment.
- ORA-39932: Extensible Index *string.string* not fully contained in the transportable set.**
- Cause:** Informational message to describe a failure during transportable containment checking.
- Action:** Identify the associated table and list of secondary objects and resolve self containment.
- ORA-39933: Parent table *string.string* and its nested table columns are not fully contained in the transportable set.**
- Cause:** Informational message to describe a failure during transportable containment checking.
- Action:** Identify the nested tables using view `DBA_NESTED_TABLES` and resolve self containment.

ORA-39934: Materialized view log *string.string* in tablespace *string* and master table *string.string* in tablespace *string* are not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39935: Updatable materialized view log *string.string* in tablespace *string* and materialized view *string.string* in tablespace *string* are not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39936: Token manager for the CSX tablespace *string* not fully contained in the transportable set.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Include the specified tablespace into the transportable set.

ORA-39937: Unsupported operation, default token tables used for binary XML data.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Copy default token tables into a new token table set using DBMS_CSX_ADMIN package.

ORA-39938: Operation not supported, tablespace *string* contains binary XML data.

Cause: Informational message to describe a failure during transportable containment checking.

Action: None required.

ORA-39939: More than one set of token tables are used in tablespace *string*.

Cause: Informational message to describe a failure during transportable containment checking.

Action: Remap tables in the specified tablespace to use same token tables.

ORA-39940: Child reference partitioned table *string.string* in tablespace *string* or parent table *string.string* in tablespace *string* is included but not both.

Cause: Informational message to describe a failure during transportable containment checking. Both parent and child reference partition tables must be included.

Action: Check reference partitioned tables.

ORA-39945: Token conflicting with existing tokens.

Cause: The binary XML tokens contained in the imported tablespace conflicted with the existing tokens.

Action: Use the dump file export or import instead of transportable tablespace.

ORA-39946: Nondefault token table encountered.

Cause: During transportable tablespace import, a nondefault token table was encountered.

Action: Use the dump file export or import instead of transportable tablespace.

ORA-39950: invalid parameter for PLSQL warnings flag

Cause: The user either entered invalid value for the PLSQL_WARNINGS flag or the value of the flag conflicts with other values.

Action: Enter correct values for the switch.

ORA-39951: incomplete values specified for PL/SQL warning settings

Cause: The user either did not enter the value for the settings or entered incomplete values.

Action: Enter correct syntax for the switch.

ORA-39952: only numbers can be specified as range values

Cause: The range values did not have numerical values only.

Action: Enter only numerical values.

ORA-39953: the range value specified is beyond allowed range

Cause: The range values were either too low or too high.

Action: Specify only the allowed range values.

ORA-39954: DEFERRED is required for this system parameter

Cause: The ALTER SYSTEM command for PLSQL_WARNINGS did not include the keyword, DEFERRED.

Action: Change the command to use the keyword, DEFERRED.

ORA-39955: invalid PL/SQL warning message number

Cause: The PL/SQL message number specified was not in a valid range.

Action: Specify PL/SQL warning message numbers within the valid range.

ORA-39956: duplicate setting for PL/SQL compiler parameter *string*

Cause: A PL/SQL compiler parameter was set more than once.

Action: Remove the duplicate PL/SQL compiler setting.

ORA-39957: invalid warning category

Cause: The category of the message was incorrect.

Action: Specify a valid category

ORA-39958: invalid warning category qualifier

Cause: The category qualifier was incorrect.

Action: Specify a valid category qualifier.

ORA-39959: invalid warning number (*string*)

Cause: The warning number was incorrect.

Action: Specify a valid warning number.

ORA-39960: scope can only be SYSTEM or SESSION

Cause: The scope specified was not set.

Action: Specify a valid scope, either SESSION or SYSTEM.

ORA-39961: message specified was not found

Cause: The message number specified was not set.

Action: specify the message number whose settings have been set in the given scope.

ORA-39962: invalid parameter for PLSQL_CCFLAGS

Cause: The value for the PLSQL_CCFLAGS parameter was not valid.

Action: Specify a valid value for the PLSQL_CCFLAGS parameter.

ORA-39964: Specified value for _PLSQL_MAX_STACK_SIZE (*string*) is larger than available memory (*string*)

Cause: The value specified for the _PLSQL_MAX_STACK_SIZE parameter was larger than the amount of stack size available to the process.

Action: Specify a smaller value for the _PLSQL_MAX_STACK_SIZE parameter.

ORA-40001 to ORA-40392

ORA-40001: value for *string* must be greater than zero

Cause: The input parameter in question has a value of zero or less.

Action: Provide a value greater than zero for the relevant parameter.

ORA-40002: wordsize must be *string* or greater

Cause: The input wordsize is less than the prescribed limit for the BLAST Match or Align algorithm.

Action: Provide a wordsize greater than or equal to the prescribed value.

ORA-40003: wordsize must be in the range *string* - *string* for BLAST-P

Cause: The input wordsize has a value out of the prescribed range.

Action: Provide a wordsize value within the prescribed range for BLAST-P.

ORA-40004: penalty must be negative for BLAST-N

Cause: The input value provided for penalty is zero or greater.

Action: Provide a negative penalty value.

ORA-40021: no column named *string* in training table *string*

Cause: The training table does not contain the specified column

Action: Provide a case-id/target column that exists in the training table

ORA-40022: null case ID column - cannot provide row diagnostics in *string*

Cause: A row diagnostics table name was provided, but without a corresponding case or row identifier column in the build data.

Action: Provide a non-null case identifier column in the build data to identify rows in the row diagnostics table.

ORA-40023: sufficient memory could not be allocated given the number of attributes

Cause: Unable to allocate sufficient memory to create a model capable of producing confidence bounds on predictions because there were too many attributes or there were high cardinality categorical attributes, or both, in the build data.

Action: Reduce the number of attributes, especially high cardinality categoricals, or enable ridge regression.

ORA-40024: solution to least squares problem could not be found

Cause: Unable to find solution because the predictor covariance matrix was singular.

Action: Enable ridge regression or remove exact multicollinearities from the build data.

ORA-40025: reference class name not found in build data

Cause: The provided reference class name was not found in the build data.

Action: Provide an existing target value as the reference class name.

ORA-40026: reference class name not found in the weights table

Cause: The provided reference class name did not correspond to any of the entries in the weights table.

Action: Provide consistent specification for reference class name and weights table.

ORA-40027: Target attribute has more than two distinct values

Cause: Generalized Linear Models only support binary classification.

Action: Consolidate target values into two distinct categories.

ORA-40028: solution to least squares problem could not be found

Cause: Unable to find solution because the predictor build data were not properly scaled.

Action: Standardize the predictor build data by enabling auto prep.

ORA-40029: Specified diagnostics table name already exists

Cause: A diagnostics table name matching an existing table was specified.

Action: Choose a table name that does not match any existing user table.

ORA-40101: Data Mining System Error *string-string-string*

Cause: An internal system error occurred during a data mining operation.

Action: Contact Oracle Support Services.

ORA-40102: invalid input *string* for data mining operation *string*

Cause: The input parameter is either null or invalid for the given operation.

Action: Provide a valid value. Check range for NUMBER parameters.

ORA-40103: invalid case-id column: *string*

Cause: The case-id column was invalid. If a case-id column is specified, it must be present in the input data source. The case-id column cannot be the same as the target column, and the column's data type is restricted to NUMBER, CHAR, and VARCHAR2 when building a GLM model with a diagnostics table.

Action: Change the schema of your input data to supply a case-id column of appropriate data type.

ORA-40104: invalid training data for model build

Cause: The training data provided in the reported table is unsuitable for build, either because it is empty, has unsuitable data, or the schema of the table does not match the input specifications.

Action: Inspect the training data and correct the contents/schema as appropriate.

ORA-40105: input data incompatible with model signature

Cause: The data provided for this post-build operation is in format different from that used for model build.

Action: Provide data whose attribute data types match the build data. Input data attributes must have the same data types as those described in the model signature for the model.

ORA-40106: positive target value not specified for computing Lift

Cause: Positive target value has not been specified for Lift.

Action: Provide a positive target value for the Lift operation.

ORA-40107: operation requires *string* option to be installed

Cause: The specified option has not been installed with the RDBMS.

Action: Install the reported option and retry the operation.

ORA-40108: input data contains too few distinct target (*string*) values

Cause: At least two distinct target values are required for Build.

Action: Provide counter-example target values in the input data.

ORA-40109: inconsistent logical data record

Cause: Repeated instances of a record identifier or repeated attribute(s) in a nested column.

Action: Remove or re-label repeated instances to resolve inconsistencies.

ORA-40110: Duplicate model tables found for table type *string*

Cause: Operation would result in duplicate model table types which is not supported.

Action: Remove the duplicate entry.

ORA-40111: no mining attributes found in build data

Cause: Could not build a model when only special or empty columns were present. Special columns include target, row weight, and case ID columns.

Action: Provide mining attribute data.

ORA-40112: insufficient number of valid data rows

Cause: Fewer than two valid data rows were found in the build data.

Action: Provide at least two valid build data rows. If the model is either a classification or regression model, then valid rows must have non-NULL targets. If a weight column was provided, then valid rows must have positive row weights. In addition, if DELETE_ROW missing value treatment was used, consider disabling it.

ORA-40113: insufficient number of distinct target values

Cause: Less than two distinct target values were found in the build data.

Action: Provide the classification build data with valid rows containing at least two distinct target values. Valid rows must have non-NULL targets. If a weight column was provided, then valid rows must have positive row weights. In addition, if DELETE_ROW missing value treatment was used, consider disabling it.

ORA-40114: weights table target values mismatched with build data

Cause: The entries in the weights table did not correspond to the target values in the build data.

Action: Verify the entries in the weights table.

ORA-40115: weights table schema is incorrect

Cause: The weights table did not have the required schema.

Action: Provide a weights table with schema: (target_value, weight), where the type of the first column corresponds to the type of the target column (CHAR, VARCHAR2 or NUMBER) and the type of the second column is NUMBER.

ORA-40116: NULL values found in weights table

Cause: The weights table had NULL entries.

Action: Replace or eliminate all NULL entries in the weights table.

ORA-40117: repeated target values found in weights table

Cause: The weights table had repeated target values.

Action: Remove the repeated target values from the weights table.

ORA-40118: insufficient number of target values in weights table

Cause: The weights table had less than 2 target values.

Action: Provide at least two target values in the weights table.

ORA-40119: nested columns incompatible with missing value treatment

Cause: delete_row missing value treatment is not supported for nested columns.

Action: Use 2D (non-nested) data representation or manually delete the rows with NULL values and disable the delete_row missing value treatment.

ORA-40120: invalid weight value in the weights table

Cause: Negative or zero weight values were found in the weights table.

Action: Ensure that weight values in the weights table are positive.

ORA-40121: force option not allowed for drop model in different schema

Cause: The force option was specified, but the model is in a different schema.

Action: If the force option is necessary, run the drop model from the owning schema. If the force option is not necessary, set the force parameter to FALSE.

ORA-40122: invalid data type for row weights column *string*.

Cause: Row weights column was not assigned one of the allowed data types.

Action: Choose a row weight column of type NUMBER or FLOAT.

ORA-40181: invalid transformation definition for column *string*

Cause: Transformation definition has duplicate or NULL columns.

Action: Provide a valid transformation definition specification.

ORA-40182: invalid column reference

Cause: Transformation expression has no column references or more than one reference or the reference is qualified.

Action: Provide a valid expression.

ORA-40183: invalid stack definition for attribute *string*

Cause: Stack definition expression or reverse expression has syntax errors or it does not match the transformation definition.

Action: Provide a valid expression.

ORA-40184: transformation definition does not match the data

Cause: Transformation definition specifies nested transformation for non-nested data or it removes all of the columns.

Action: Provide a valid data.

ORA-40201: invalid input parameter *string*

Cause: The input parameter was either null or invalid.

Action: Provide a valid value for the input parameter.

ORA-40202: column *string* does not exist in the input table *string*

Cause: The column was missing from the table.

Action: Correct the table schema and/or provide the correct column name.

ORA-40203: model *string* does not exist

Cause: The model did not exist.

Action: Supply a valid model name.

ORA-40204: model *string* already exists

Cause: A model by the same name exists.

Action: Provide a different, unique name for the model.

ORA-40205: invalid setting name *string*

Cause: The input setting name was invalid.

Action: Consult the documentation for the settings table and provide a valid setting name.

ORA-40206: invalid setting value for setting name *string*

Cause: The input value for the given setting name was invalid.

Action: Consult the documentation for the settings table and provide a valid setting value.

ORA-40207: duplicate or multiple function settings

Cause: The input settings table contained settings for multiple mining functions.

Action: Provide setting(s) for a single function in the settings table.

ORA-40208: duplicate or multiple algorithm settings for function *string*

Cause: The input settings table had duplicate or multiple algorithm settings for a mining function.

Action: Provide only one appropriate algorithm setting for the mining function.

ORA-40209: setting *string* is invalid for *string* function

Cause: The specified setting was not supported for the mining function supplied.

Action: Provide appropriate combination of function and algorithm settings.

ORA-40210: invalid score criterion type when cost matrix is specified

Cause: The score criterion type may not be 'PROBABILITY' when a cost matrix is specified.

Action: Set score criterion type to 'COST' or don't specify a cost matrix.

ORA-40211: algorithm name *string* is invalid

Cause: Algorithm name for the model was invalid or the operation was not valid for the algorithm.

Action: Check the algorithm name for the model and verify that the operation is valid.

ORA-40212: invalid target data type in input data for *string* function

Cause: Target data type was invalid.

Action: Classification function accepts CHAR, VARCHAR2, and NUMBER targets. Regression function accepts NUMBER targets only.

ORA-40213: contradictory values for settings: *string*, *string*

Cause: The settings values were not compatible.

Action: Check the documentation and change the setting value(s).

ORA-40214: duplicate setting: *string*

Cause: Duplicate setting in the settings table.

Action: Remove the duplicate setting from the settings table.

ORA-40215: model *string* is incompatible with current operation

Cause: The current operation was not supported for the mining function the model corresponds to.

Action: Provide the model name suitable for current operation.

ORA-40216: feature not supported

Cause: The feature was not supported in the API.

Action: Modify the code to avoid usage of the feature.

ORA-40217: priors table mismatched with training data

Cause: The entries in the priors table do not correspond to the targets in the training data.

Action: Verify the entries in the priors table.

ORA-40218: Both priors table and weights table are specified

Cause: Both a priors table and a weights table are specified for SVM model build.

Action: Priors table is the old (pre 11g) mechanism for specifying class weights, and class weights table is the new (and correct) way to specify class weights. Remove the priors table entry from the settings table (after transferring class weight settings, if appropriate). Going forward, priors table will be valid only for NB models. Use class weights for SVM.

ORA-40219: apply result table *string* is incompatible with current operation

Cause: The current operation was not allowed for the apply result table supplied.

Action: Make sure the operation being performed is valid for the mining function used to build the model (using which the apply result table was created).

ORA-40220: maximum number of attributes exceeded

Cause: The data had too many attributes.

Action: Reduce the dimensionality of the data.

ORA-40221: maximum target cardinality exceeded

Cause: The target cardinality of the training data was too high.

Action: Reduce the target cardinality.

ORA-40222: data mining model export failed, job name=*string*, error=*string*

-
- Cause:** The model export job failed.
- Action:** Check export job settings as required by DataPump.
- ORA-40223: data mining model import failed, job name=*string*, error=*string***
- Cause:** The model import job failed.
- Action:** Check import job settings as required by DataPump.
- ORA-40224: transactional input - no matching id for value column *string***
- Cause:** The training data is transactional - and a value column is specified without a matching id specification.
- Action:** Specify a valid id column name as input
- ORA-40225: model is currently in use by another process**
- Cause:** The model is currently in use by another process.
- Action:** Retry if necessary.
- ORA-40226: model upgrade/downgrade must be performed by SYS**
- Cause:** Upgrade/Downgrade routines are being invoked by a user with insufficient privileges.
- Action:** Run the routines as SYS during migration.
- ORA-40227: invalid transformation attribute**
- Cause:** Transformation list provided to CREATE_MODEL has duplicate or NULL attributes. Case ID or target attribute has attribute_subname that is not NULL. Attribute provided to ALTER_REVERSE_EXPRESSION does not exist in the model.
- Action:** Remove NULLs and duplicates and fix case ID and target attributes or provide a valid attribute for a given model.
- ORA-40228: scoring cost matrix already exists**
- Cause:** The model already has a scoring cost matrix.
- Action:** To add a new scoring cost matrix the existing one should be removed first.
- ORA-40229: scoring cost matrix not found**
- Cause:** The model does not have a scoring cost matrix.
- Action:** To remove a scoring cost matrix the model should have one.
- ORA-40230: invalid transformation expression**
- Cause:** Expression has syntax or semantic errors.
- Action:** Provide a valid expression.
- ORA-40231: transactional input incompatible with specified algorithm**
- Cause:** Training data in transactional format is not accepted for model creation using the specified mining algorithm.
- Action:** Pivot the data into 2D tabular format, or provide the transactional input through a nested table column.
- ORA-40232: transactional input - incompatible datatype for column *string***
- Cause:** The data type of the column in the input training data is not supported.
- Action:** Cast or change the type of the column to one of CHAR, VARCHAR, NUMBER or FLOAT

-
- ORA-40233: transactional input - case id should be provided with id *string***
Cause: The training data is transactional by virtue of presence of a and item id - but does not have a case id specification.
Action: Specify a valid case id column name as input
- ORA-40251: no support vectors were found**
Cause: The input data is non-predictive in nature, or one of the input settings is incorrect/incompatible with respect to the input data.
Action: Provide additional data or change model setting value.
- ORA-40252: no target values were found**
Cause: No target values were identified during load.
Action: Validate that the target is correctly specified.
- ORA-40253: no target counter examples were found**
Cause: One or more of the target classes have only positive examples.
Action: Provide counter examples or remove that target class.
- ORA-40254: priors cannot be specified for one-class models**
Cause: Priors were specified.
Action: Do NOT provide priors for one-class models.
- ORA-40255: specified priors or weights table has an incorrect schema**
Cause: The priors or class weights table whose name is specified in in the settings does not have the prescribed schema. A priors table should have the schema (target_value, prior_probability) and a class weights table should have the schema (target_value, class_weight)
Action: Modify the schema of the input priors or class weights table to match the ones provided above (also in the documentation).
- ORA-40261: input data for model build contains negative values**
Cause: The input data contains negative values, which is not acceptable for a Non-negative Matrix Factorization model.
Action: Provide clean data for build without any negative values.
- ORA-40262: NMF: number of features not between [1, *string*]**
Cause: The number of requested features must be greater than 1, and less than the smaller of the number of attributes and the number of cases in the dataset.
Action: Specify the desired number of features within the acceptable range.
- ORA-40263: no meaningful matrix factorization found**
Cause: Input data was not significantly different from 0.
Action: Check your data for problems or add a positive constant to all the numeric attributes.
- ORA-40264: number of mining attributes (*string*) exceeds maximum (*string*)**
Cause: Input data was found to contain a number of mining attributes exceeding the maximum allowed.
Action: Check the input data for categorical fields with high cardinality.
- ORA-40271: no statistically significant features were found**

Cause: Input data inadequate in volume and/or quality to derive statistically significant predictors for building a data mining model.

Action: Provide a well-prepared training data set.

ORA-40272: apply rules prohibited for this model mode

Cause: Adaptive Bayes Network rules are only generated for SingleFeature ABN models

Action: Rebuild model in SingleFeature mode and then apply with rules.

ORA-40273: invalid model type *string* for Adaptive Bayes Network algorithm

Cause: The valid values for the `abns_model_type` settings are: `abns_multi_feature`, `abns_single_feature`, `abns_naive_bayes`.

Action: Use a valid value for the `abns_model_type` setting.

ORA-40281: invalid model name

Cause: A model name is invalid or does not exist.

Action: Check spelling. A valid model name must begin with a letter and may contain only alphanumeric characters and the special characters `$`, `_`, and `#`. The name must be less than or equal to 30 characters and cannot be a reserved word.

ORA-40282: invalid cost matrix

Cause: Cost matrix specification is invalid.

Action: Provide valid cost matrix specification. Check syntax for data mining functions.

ORA-40283: missing cost matrix

Cause: Cost matrix specification is missing.

Action: Provide valid cost matrix specification. Check syntax for data mining functions.

ORA-40284: model does not exist

Cause: The model entered does not exist.

Action: Check spelling.

ORA-40285: label not in the model

Cause: The user-specified label was not present in the model.

Action: Provide a valid label. The set of valid labels can be retrieved from a classification model by invoking `PREDICTION_SET`, from a clustering model by invoking `CLUSTER_SET`, and from a feature extraction model by invoking `FEATURE_SET`.

ORA-40286: remote operations not permitted on mining models

Cause: An attempt was made to perform queries or DML operations on remote tables using local mining models.

Action: Remove the reference to remote tables in the statement.

ORA-40287: invalid data for model - cosine distance out of bounds

Cause: The norm computed using attribute values from the incoming row for the cosine model is outside the range 0-1.

Action: Remove or correct the data in the offending row.

ORA-40289: duplicate attributes provided for data mining function

Cause: A duplicate, non-nested attribute was provided as input to the data mining function. A duplicate attribute is one which is present in the model signature, occurs more than once in the USING clause after tablename expansion, and is not a collection element in a nested table column.

Action: Eliminate the duplicate attribute(s).

ORA-40290: model incompatible with data mining function

Cause: The supplied model cannot be operated upon by the data mining function because the model is built for a mining function and/ or based on an algorithm that is incompatible with function.

Action: Provide the name of the model suitable for the function.

ORA-40291: model cost not available

Cause: The supplied model was assumed to have been built with a cost matrix specification, when in reality, it was not.

Action: Provide a model name that corresponds to a model that was built with an appropriate cost matrix specification.

ORA-40292: confidence level must be greater than 0 and less than 1

Cause: The specified value for confidence level is out of range.

Action: Specify a value for confidence level in the range $0 < \text{level} < 1$

ORA-40293: input class is invalid for the specified predictive model

Cause: The specified model is either not a classification model, or does not have the input class label as one of its target values.

Action: Provide the correct target value (class label) or provide the appropriate classification model with the target attribute that has the specified class label as one of its values.

ORA-40301: invalid cost matrix specification

Cause: A valid cost matrix is not specified.

Action: Consult documentation for valid cost matrix specification.

ORA-40302: invalid classname *string* in cost matrix specification

Cause: Actual or predicted classname specified is not present in training data

Action: Provide valid classname(s) in cost matrix specification

ORA-40303: invalid prior probability specification

Cause: Valid prior probabilities not specified. Valid probabilities should be between 0 and 1.

Action: Consult documentation for valid prior probability specification.

ORA-40304: invalid classname *string* in prior probability specification

Cause: Actual or predicted classname specified is not present in training data.

Action: Provide valid classname(s) in prior probability specification.

ORA-40305: invalid impurity metric specified

Cause: Impurity metric specified is not valid. Examples of valid metrics are TREE_IMPURITY_GINI, TREE_IMPURITY_ENTROPY.

Action: Consult documentation for valid impurity metrics and specification.

ORA-40306: dm_nested types not supported by this algorithm

Cause: The training input to the CREATE_MODEL routine contains one or more columns of dm_nested type (DM_NESTED_NUMERICALS and/or DM_NESTED_CATEGORICALS). These columns are currently not supported for Decision Tree, O-Cluster, and Adaptive Bayes Network algorithms.

Action: Remove columns of these data types from the input data source.

ORA-40321: invalid bin number, is zero or negative value

Cause: Input bin number has zero or negative values.

Action: Provide positive bin numbers starting from 1.

ORA-40322: bin number too large

Cause: Bin number is too large.

Action: Reprocess build data by choosing smaller bin numbers.

ORA-40323: Attribute *string* has too many distinct values (*string*)

Cause: Exceeded maximum number of distinct values allowed in an attribute.

Action: Bin numerical data with fewer than 1024 bins or recode categorical data with fewer than 1024 unique values.

ORA-40324: All rows contain the same data

Cause: All rows contained the same data and could not be clustered using k-Means with cosine distance metric.

Action: Use Euclidean distance metric.

ORA-40341: access violation on model storage object

Cause: An attempt was made to directly access/modify a schema object that stores model metadata and content.

Action: Perform all mining operations (create,drop,alter, and select using data mining functions) against named model objects. Contact your DBA or Oracle Support if you suspect that an orphaned schema object.

ORA-40350: One or more 11g models exist

Cause: There are 11g data mining models existing in the database.

Action: Drop 11g data mining models prior to downgrade to 10g.

ORA-40361: only SELECT and ALTER are valid for mining models

Cause: An attempt was made to grant or revoke an invalid privilege on a mining model.

Action: Do not attempt to grant or revoke any privilege besides SELECT or ALTER on mining models.

ORA-40381: Invalid field specification for: *string*

Cause: The derived field was incorrectly defined.

Action: Make sure the field is correctly defined in the PMML document.

ORA-40382: More than one linear regression equation in the model

Cause: More than one linear regression equation was in the model.

Action: Make sure there is only one linear regression equation in the model.

ORA-40383: No model found in PMML document

Cause: There was no model found in the PMML document.

Action: Make sure the PMML document contains a model section.

ORA-40384: Only one model allowed in PMML document

Cause: More than one model existed in the PMML document.

Action: PMML model import only supports one model per PMML document. Make sure only one model exists in the PMML document.

ORA-40385: Target has more than two categories

Cause: The target contained more than two categories.

Action: PMML model import supports only binary logistic regression. Make sure the target contains no more than two categories.

ORA-40386: NormContinuous must include at least two LinearNorm elements

Cause: NormContinuous included less than two LinearNorm elements.

Action: NormContinuous must include at least two LinearNorm elements. Make sure at least two LinearNorm elements are included.

ORA-40387: Invalid interval for Discretize field: *string*

Cause: The intervals were incorrect.

Action: Make sure that both margins are not missing.

ORA-40388: Unsupported feature in PMML document: *string*

Cause: The feature was not supported by PMML model import.

Action: Please make sure to use supported features.

ORA-40389: Unsupported PMML transformation: *string*

Cause: The transformation was not supported.

Action: Make sure to use supported transformations.

ORA-40390: PMML DerivedField must have a unique name specified: *string*

Cause: A DerivedField did not reference another defined field.

Action: A DerivedField did not have a unique name specified. Make sure to specify a unique name for each DerivedField.

ORA-40391: PMML DerivedField depends on a undefined field: *string*

Cause: A DerivedField may only reference other defined fields.

Action: Make sure DerivedFields reference other defined fields.

ORA-40392: PMML regression equation references an undefined field: *string*

Cause: Regression equation did not reference defined fields.

Action: Regression equation may only reference defined fields. Make sure all fields are defined.

ORA-41001 to ORA-42803

ORA-41001: session id list not specified

Cause: An attempt to migrate was made, which failed because the session id list specified was null.

Action: Check the session id list, and try again with a valid value.

ORA-41002: destination instance not specified

Cause: An attempt to migrate was made, which failed because the destination instance specified was null.

Action: Check the destination instance , and try again with a valid value.

ORA-41003: client id not specified

Cause: An attempt to migrate was made, which failed because the client id specified was null.

Action: Check the client id, and try again with a valid value.

ORA-41004: percentage not specified

Cause: An attempt to migrate was made, which failed because the percentage specified was null.

Action: Check the percentage, and try again with a valid value.

ORA-41005: session id list not specified

Cause: An attempt to cancel migration was made, which failed because the session id list specified was null.

Action: Check the session id list, and try again with a valid value.

ORA-41006: session id not specified

Cause: An attempt to get migration status was made, which failed because the session id specified was null.

Action: Check the session id, and try again with a valid value.

ORA-41007: sid field is null

Cause: A session id instance passed into a dbms_tsm procedure or function had a null sid field.

Action: Check the session id, and try again with a valid value.

ORA-41008: serial# field is null

Cause: A session id instance passed into a dbms_tsm procedure or function had a null serial# field.

Action: Check the session id, and try again with a valid value.

-
- ORA-41009: Session with session number *string*, serial number *string* does not exist**
Cause: An attempt to migrate was made, which failed because of invalid session number and/or serial number.
Action: Check the session number and serial number and try again.
- ORA-41010: No more memory to hold connection state information**
Cause: An attempt to reference more connections than configured
Action: Check the connection information and try again.
- ORA-41011: Operation failed for session id *string*, serial number *string***
Cause: An migration related operation failed because of contention between sessions.
Action: Check the additional error codes for more information, and retry operation later.
- ORA-41012: Migration not allowed for session number *string*, serial number *string***
Cause: An attempt to migrate was made, which failed because the session specified cannot be migrated.
Action: Check the session number and serial number and try again.
- ORA-41013: instance name not specified**
Cause: An attempt to migrate was made, which failed because the instance name specified was null.
Action: Check the instance name, and try again with a valid value.
- ORA-41014: Session number *string*, serial number *string* currently being migrated**
Cause: An attempt to migrate was made, which failed because the session specified is currently being migrated.
Action: Check the session number and serial number and try again.
- ORA-41015: destination connect string not specified**
Cause: A migration attempt was made, which failed because the connect string specified was null.
Action: Check the connect string and try again.
- ORA-41016: Session recreation failed**
Cause: Session recreation failed at the destination instance.
Action: Check session state and try migration again
- ORA-41017: Session prepare failed for session number *string*, serial number *string***
Cause: A migration attempt was made, which failed because session prepare failed.
Action: Retry migration again after checking all arguments.
- ORA-41019: Session begin at the destination instance failed**
Cause: Session begin failed at the destination instance because the shadow connection could not be established.
Action: Check the connect string and try beginning the session again.
- ORA-41020: invalid value "*string*" specified for parameter "*string*"**
Cause: An invalid value was specified for the the given parameter.

Action: Correct the value being specified for the parameter.

ORA-41021: OCI error during transparent session migration

Cause: An OCI operation failed during transparent session migration.

Action: Check the OCI error signalled, and take corrective action.

ORA-41022: instance name not specified

Cause: An attempt to recover after instance death was made, which failed because the instance name specified was null.

Action: Check the instance name, and try again with a valid value.

ORA-41023: death time not specified

Cause: An attempt to recover after instance death was made, which failed because the death time specified was null.

Action: Check the death time, and try again with a valid value.

ORA-41024: Cursor needs to be parsed again

Cause: An SQL operation failed because the cursor state was lost.

Action: Reissue all operations starting from parse.

ORA-41025: sid field *string* is invalid

Cause: A session id instance passed into a dbms_tsm procedure or function had an invalid sid field.

Action: Check the session id, and try again with a valid value.

ORA-41026: serial# field *string* is invalid

Cause: A session id instance passed into a dbms_tsm procedure or function had an invalid serial# field.

Action: Check the serial#, and try again with a valid value.

ORA-41027: Error status *string* during OCI operation at *string*

Cause: An OCI operation failed during transparent session migration.

Action: Check the OCI error signalled, and take corrective action.

ORA-41028: Session id not specified

Cause: An attempt to migrate was made, which failed during migration because the session id specified by the client was null.

Action: Check the session id, and try again with a valid value.

ORA-41029: Destination session id not specified for sid *string* serial# *string*

Cause: An attempt to migrate was made, which failed during migration because the destination session id specified by the client was null.

Action: Check the session id, and try again with a valid value.

ORA-41030: Session id not specified

Cause: An attempt to migrate was made, which failed during migration because the session id specified by the client was null.

Action: Check the session id, and try again with a valid value.

ORA-41031: Destination session key not specified for sid *string* serial# *string*

Cause: An attempt to migrate was made, which failed during migration because the destination session key specified by the client was null.

Action: Check the session id, and try again with a valid value.

ORA-41100: Oracle Cluster Registry operation failed with event *string*.

Cause: The Portable Clusterware/Oracle Cluster Registry stack returned an error.

Action: Check if the Portable Clusterware stack is properly brought up.

ORA-41101: The database: *string* has already been designated as Cluster Director.

Cause: An attempt was made to designate multiple databases as the Cluster Director.

Action: Undesignate the existing Cluster Director before Designating a new one.

ORA-41102: No database has currently been designated as Cluster Director.

Cause: An attempt was made to query/undesignate a Cluster Director when no database has been designated as Cluster Director.

Action: None

ORA-41103: Only the designated Cluster Director: *string* can undesignate itself.

Cause: An attempt was made to undesignate the current Cluster Director by a database that is not the Cluster Director.

Action: Login to the currently designated Cluster Director to perform the undesignation.

ORA-41104: The database: *string* is the Cluster Director.

Cause: An attempt was made to control the Cluster Director on a database that is not the Cluster Director.

Action: Log in to the currently designated Cluster Director to perform the control operation.

ORA-41105: The Cluster Director is not stopped.

Cause: An attempt was made to control the Cluster Director before the Cluster Director was stopped.

Action: Use `dbms_cluster_director.stop` to stop the Cluster Director and retry the control operation.

ORA-41106: invalid argument *string*: value is null

Cause: An attempt to read the scan hostname or port failed

Action: Verify pcw is running and scan is configured. Run `grdcsan read_config` to verify or `grdcsan set_config host:port` to set scan name and port.

ORA-41107: invalid argument: service *string* cannot be found

Cause: The program attempted to access a nonexistent or deleted service.

Action: Check to make sure the service has been properly created.

ORA-41108: Posting system alert with reason_id *string* failed with code [*string*] [*string*]

Cause: Internal Error: An attempt to post a system alert failed.

Action: If this condition repeats, please contact Oracle Support.

ORA-41109: Updating system alert with reason_id *string* failed; previous alert not found

Cause: System Error: An attempt to update a system alert failed. The alert was improperly cleared from `WRI$_ALERT_OUTSTANDING`.

Action: Do not delete from WRI\$_ALERT_OUTSTANDING. If this condition repeats, please contact Oracle Support.

ORA-41110: The Director has blocked this instance. Cannot start [string]

Cause: An attempt to start services on an instance that will be shutdown

Action: Start the services on another available instance

ORA-41201: Session state not capturable due to reason (string, string)

Cause: Session state capture was initiated when session state could not be captured.

Action: Check session state status and make sure session state can be captured.

ORA-41202: Session state capture or restore failed

Cause: Capture or restore operation failed.

Action: Check session state status and failure reason for details.

ORA-41203: Invalid session state operation

Cause: Invalid session state operation was issued.

Action: Check if session status was valid for the current operation.

ORA-41204: Session capture in progress

Cause: Session state capture was initiated and could not perform the requested operation.

Action: Wait for the current capture to complete or abort it.

ORA-41205: Invalid parameter for session state capture or restore

Cause: Invalid parameter was passed to session state capture or restore interface.

Action: Correct the invalid parameter(s).

ORA-41206: Session capture or restore internal error KPCSFR-string

Cause: Internal operation error was encountered.

Action: Turn on related trace for details and report it as a bug.

ORA-41207: Cannot restore session state due to reason (string, string)

Cause: Session state restore was initiated when session was not ready for state restore.

Action: Restore session state immediately after logging into a session or perform necessary operations to make the session ready for restore; for example, commit current transaction, or close BFiles.

ORA-41208: OCI error during session state capture and restore

Cause: An OCI operation failed during an internal operation of session state capture and restore.

Action: Check the OCI error signaled and take corrective action.

ORA-41209: OCI operation failed at string due to ORA-string

Cause: An OCI operation failed during an internal operation of session state capture and restore.

Action: Check the OCI error signaled and take corrective action.

ORA-41210: Failed to resolve session state directory object

Cause: Session state directory object passed to capture or restore was incorrect.

Action: Verify session state directory object and retry.

ORA-41211: Failed to insert capture or restore record

Cause: An error occurred while capture or restore record was being stored into the database.

Action: Check the error signaled and take corrective action.

ORA-41251: Failed to restore session state from a file (error code *number*)

Cause: Session state file may be corrupted.

Action: Ensure that the file is a session state file.

ORA-41252: Failed to switch to new session in SSCR

Cause: This is the generic internal error number for the SSCR exceptions. This indicates that the SSCR has encountered an exceptional condition.

Action: Report as a bug.

ORA-41253: Failed to access session state file

Cause: An error was encountered while reading from or writing to session state capture file.

Action: Check the error stack for the actual error number and turn on tracing if necessary.

ORA-41254: Invalid session state file: *string*

Cause: An invalid session state file was used in session state restore operation.

Action: Check if the session state file is a valid file created by session capture.

ORA-41255: Package not supported: *string*

Cause: The specified package is not supported.

Action: Do not call the package functions and procedures.

ORA-41300: File driver is not initialized

Cause: An attempt was made to operate on the uninitialized file driver.

Action: Initialize the file driver using the OCIServerAttach function.

ORA-41301: failed to write data to file

Cause: You may not have sufficient privileges or quotas for this action.

Action: Ensure that you have sufficient privileges and quotas for this action.

ORA-41302: failed to read data from file

Cause: The file may not exist or you do not have privileges for this action.

Action: Ensure that the file exists and that you have sufficient privileges for this action.

ORA-41303: Received partial data from file

Cause: This is the generic internal error number for file driver exceptions. This indicated that file driver encountered an exception condition.

Action: Report as a bug.

ORA-41304: Failed to connect to file driver

Cause: The connect string may be incorrect.

Action: Ensure that the connect string is correct.

ORA-41305: Failed to open file

Cause: You may not have sufficient privileges for this action.

Action: Ensure that the file exists and that you have sufficient privileges for this action.

ORA-41400: Bind character set (*string*) does not match database character set (*string*)

Cause: In this recursive OCI call, the bind character set was different from the current database character set. This is usually caused by database character set change.

Action: Be sure to obtain bind data in database character set and do rebind in the current environment.

ORA-41401: Define character set (*string*) does not match database character set (*string*)

Cause: In this recursive OCI call, the define character set was different from the current database character set. This is usually caused by database character set change.

Action: Be sure to do redefine in the current environment.

ORA-41601: invalid property for the rule class

Cause: An invalid property was specified for the rule class.

Action: Correct the rule class properties and try again.

ORA-41602: insufficient privileges

Cause: The user does not have required privileges on the object.

Action: Obtain the required privileges and try again.

ORA-41603: invalid privilege type

Cause: An attempt was made to grant an invalid privilege on a rule class.

Action: Correct the privilege name and try again.

ORA-41604: cannot revoke a privilege that was not granted

Cause: An attempt was made to revoke a privilege that was never granted.

Action: None

ORA-41605: schema extended name not allowed: *string*

Cause: An attempt was made to specify a schema extended name for an event structure, a rule class, or an action call-back procedure.

Action: Specify the object name with out a schema extension.

ORA-41606: rule class name already used by an existing object

Cause: An attempt was made to create a rule class with a name that is already used by an existing object.

Action: Specify a different name for the rule class and try again.

ORA-41607: rule class creation failed with *string*

Cause: rule class creation failed with a recursive error.

Action: Correct the rule class specification and try again.

ORA-41608: rule class does not exist

Cause: An attempt was made to access a rule class that does not exist or is not accessible.

Action: Correct the rule class name and try again.

ORA-41609: invalid name for the rule class

Cause: An invalid name was specified for the rule class.

Action: Correct the rule class name and try again.

ORA-41610: callback procedure name already used for an existing object

Cause: An attempt was made to create a callback procedure with a name that is already used for an existing object.

Action: Choose another name for the callback procedure.

ORA-41611: rule identifier "*string*" not unique in the rule class

Cause: An attempt was made to use a duplicate rule identifier.

Action: Choose a unique identifier for the rule and try again.

ORA-41612: scalar values expected for action preferences

Cause: Incorrect values were specified for the action preferences.

Action: Correct the action preferences values and try again.

ORA-41613: invalid action preference for rule class: *string*

Cause: An attempt was made to use an invalid action preference.

Action: Correct the input and try again.

ORA-41614: missing action preference value

Cause: Values for one or more action preferences were not specified.

Action: Specify values for all relevant action preferences.

ORA-41615: too many values in action preference list

Cause: Too many entries were specified in the action preference values list. The action preference values list should not have more entries than the action preference names list.

Action: Correct the input and try again.

ORA-41616: rule class's action callback procedure may have errors

Cause: The operation failed because the action callback procedure associated with the rule class has compilation errors.

Action: Recompile the action callback procedure and try the operation again.

ORA-41617: action preference name "*string*" collides with an event attribute name

Cause: An attempt was made to create an action preference with the same name as an attribute in the event structure.

Action: Choose a different name for action preference and try again.

ORA-41618: specified rule does not exist

Cause: Invalid rule identifier was used to operate on a rule definition.

Action: Use a valid rule identifier.

ORA-41619: rule manager feature currently not supported

Cause: An attempt was made to use a rule manager feature that is currently not supported.

Action: No action necessary. This is an informational message only.

ORA-41620: invalid ordering property for the rule class

Cause: An attempt was made to specify an invalid ordering property for the rule class.

Action: Make sure that the attributes listed in the ordering property are all part of the rule class/event structure definition with appropriate extended names.

ORA-41621: error in ordering property :*string*

Cause: An attempt was made to specify an invalid ordering property for the rule class.

Action: Make sure that the attributes listed in the ordering property are all part of the rule class/event structure definition with appropriate extended names.

ORA-41622: invalid primitive event object in rule class properties : *string*

Cause: In the rule class properties, the name used for one or the primitive event objects was not found in the corresponding composite event structure.

Action: Correct the name of the primitive event object in the rule class properties and try again.

ORA-41623: conflicting values for autocommit and duration properties

Cause: An attempt was made to create a rule class with autocommit enabled when the duration of events is set to TRANSACTION.

Action: Turn autocommit off or choose a different duration policy.

ORA-41624: invalid duration policy for primitive object in a composite event

Cause: An attempt was made to specify a SESSION or TRANSACTION duration policy for the primitive objects.

Action: Correct the rule class properties and try again.

ORA-41625: event structure *string* does not exist

Cause: The object type that represents the event structure was not created in the user's schema.

Action: Create the object type with the event structure's name and try again.

ORA-41626: invalid XML element "*string*" in rule class properties

Cause: An invalid XML element was used in the properties specification for the rule class.

Action: Use the correct (case-sensitive) tags in the properties.

ORA-41627: event structure object type in inconsistent state

Cause: The object type specified for the event structure was in an inconsistent state.

Action: Fix the object type and try again.

ORA-41628: invalid usage of "*string*" attribute in "*string*" element

Cause: An invalid or unsupported XML attribute was used in the rule class properties.

Action: Use the correct (case-sensitive) tags in the properties.

ORA-41629: event structure for simple events cannot be reused for composite events

Cause: An attempt was made to reuse an object type (event structure) for composite events when it is already configured for simple events.

Action: Drop the attribute set associated with the object and try again.

ORA-41630: invalid value for "string" attribute in the rule class properties

Cause: An invalid value was specified for an attribute in the rule class properties.

Action: Correct the value and try again.

ORA-41631: invalid text node or child element for "string" element in properties

Cause: An attempt was made to specify a child element or a text node in invalid position in the rule class properties specification.

Action: Correct the rule class properties and try again.

ORA-41632: invalid value for the "string" attribute

Cause: An attempt was made to assign an invalid value for an attribute in the rule class properties.

Action: See the documentation.

ORA-41633: specified rule class configuration not supported: "string"

Cause: An attempt was made to use an unsupported configuration for the rule class.

Action: Remove the specified tag in the properties and try again.

ORA-41634: invalid duration specification in rule properties: "string"

Cause: Invalid value was specified for the duration attribute in the rule class properties.

Action: Correct the value and try again.

ORA-41635: invalid unit of time used in duration specification

Cause: An attempt was made to use an invalid unit of time for the rule class's duration specification. Valid units are : minutes, hours, and days.

Action: Correct the duration specification and try again.

ORA-41636: invalid duration specification at the primitive event level

Cause: An attempt was made to specify a duration policy for the primitive events when the composite event was configured with TRANSACTION or SESSION duration policy.

Action: Correct the rule class properties and try again.

ORA-41637: missing primitive event name

Cause: The name attribute of the object element in the rule class properties was not specified. This is a required value.

Action: Specify the name of the primitive event and try again.

ORA-41638: invalid attribute for "string" element in rule condition

Cause: An attempt was made to specify an invalid attribute for an XML element in the rule condition.

Action: Correct the rule condition and try again.

ORA-41639: invalid child node in "string" element

Cause: An attempt was made to specify an invalid child element or text node for an XML element in the rule condition.

Action: Correct the rule condition and try again.

ORA-41640: invalid element "*string*" in the rule condition

Cause: An attempt was made to use an invalid element or a valid element in invalid position in the rule condition.

Action: Correct the rule condition and try again.

ORA-41641: invalid or empty rule condition

Cause: An attempt was made to specify an invalid or empty rule condition.

Action: Correct the input and try again.

ORA-41642: Missing "*string*" element in the rule condition

Cause: The rule condition was specified without a required element.

Action: Correct the rule condition and try again.

ORA-41643: invalid attribute for the "*string*" element in the rule condition

Cause: An attempt was made to specify an invalid attribute for an element in the rule condition.

Action: Correct the rule condition and try again.

ORA-41644: invalid use of "*string*" attribute in rule condition

Cause: An attempt was made to specify an invalid attribute for an element in the rule condition.

Action: Correct the rule condition and try again.

ORA-41645: duplicate tag "*string*" in rule condition

Cause: An attempt was made to specify the same XML tag in more than one positions within a single rule condition.

Action: Remove the duplicate reference to the tag and try again.

ORA-41646: missing "*string*" attribute for "*string*" element in the rule condition

Cause: One of the required attributes was not specified in the rule condition.

Action: Correct the rule condition and try again.

ORA-41647: negation not allowed in rule conditions with "*any*" semantics

Cause: An attempt was made to specify a "*not*" element within an "*any*" element in the rule condition.

Action: Correct the rule condition and try again.

ORA-41648: invalid sequence of child elements in "*string*" element

Cause: An attempt was made to specify an invalid sequence of elements within a parent element.

Action: Correct the rule condition and try again.

ORA-41649: invalid rule condition for a rule class involving composite events

Cause: An attempt was made to add an invalid rule condition to a rule set defined for composite events.

Action: Correct the input and try again.

ORA-41650: invalid composite event structure

Cause: A composite event structure may only have attributes that are either table aliases or of an object type that is defined in the owner's schema.

Action: Ensure that the event structure has no scalar attributes and all the embedded types in it are defined in the owner's schema.

ORA-41651: Event structure object type has one or more dependent objects

Cause: An attempt was made to configure an object type that has one or more dependents as a event structure. The object type cannot be modified due to the dependent objects.

Action: Create a new object type for the event structure and try again.

ORA-41652: invalid value for the equal attribute in the rule condition

Cause: An invalid value is assigned to the equal attribute in the rule condition.

Action: Correct the input and try again.

ORA-41653: inconsistent value for the "count" attribute of the "any" element

Cause: The value specified for the "count" attribute of the "any" element is greater than or equal to the the number of primitive events appearing in the rule condition.

Action: Specify a smaller value for the "any" element's "count" attribute.

ORA-41654: insufficient number of primitive events for the use of "sequence"

Cause: An attempt was made to use "sequence" attribute when there is an insufficient number of primitive events in the rule conditions.

Action: Remove the sequence specification.

ORA-41655: rule condition construct not supported: *string*

Cause: An attempt was made to use a rule condition construct that is not supported in the current release.

Action: Modify the rule condition.

ORA-41656: insufficient number of child elements in "*string*" element.

Cause: An attempt was made to use fewer than two elements within an "and" or "notany" element.

Action: Specify at least two elements within the parent element.

ORA-41657: rule class internal objects cannot be dropped

Cause: An attempt was made to drop an internal object that is required for a rule class.

Action: Drop the rule class associated with this object.

ORA-41658: invalid value for the "count" attribute in the "any" element

Cause: An invalid value is assigned to the count attribute in the rule condition. The values should be a positive integer that is smaller than the number of object elements within the "any" element.

Action: Correct the input and try again.

ORA-41659: invalid primitive event "*string*" for the rule class

Cause: An attempt was made to use an invalid primitive event in a rule condition.

Action: Correct the input and try again.

ORA-41660: ordering property for the rule class is too long

Cause: An attempt was made to configure the rule class with an ordering property that is longer than 240 characters.

Action: Correct the input and try again.

ORA-41661: the system generated rule class package has errors

Cause: An attempt was made to use a rule class configuration that was not supported.

Action: File a bug.

ORA-41662: number of primitive events in the composite event exceeds maximum limit

Cause: An attempt was made to create a composite event structure with more than 32 primitive events.

Action: Use a composite event that consists of fewer primitive events.

ORA-41663: invalid use of "equal" or "sequence" attribute with a single event

Cause: An attempt was made to use "equal" or "sequence" attribute when the "count". attribute in a rule condition with "any" semantics is set to 1.

Action: Remove the "equal" and "sequence" specifications.

ORA-41664: invalid consumption policy for the primitive event

Cause: An attempt was made to use EXCLUSIVE consumption policy for a primitive event when the composite event is configured for RULE consumption policy.

Action: Correct the rule class properties and try again.

ORA-41665: conflicting values for duration, consumption, and autocommit policies

Cause: An attempt was made to use an EXCLUSIVE consumption policy with no autocommit and a duration other than TRANSACTION or SESSION.

Action: Modify the rule class properties and try again. Autocommit should be set to YES when the consumption policy is EXCLUSIVE.

ORA-41666: XML schema validation failed when validating against *string*

Cause: The user input has undefined element or attribute according to the provided XML schema definition.

Action: Correct the user inputs and try again.

ORA-41667: rule class results view name already used for an existing object

Cause: An attempt was made to use a duplicate name for the rule class results view.

Action: Use a different name for the rule class results view.

ORA-41668: invalid operation for the rule class

Cause: An attempt was made to use an invalid operation for the rule class.

Action: No action necessary. This is an informational message only.

ORA-41669: invalid list of primitive event identifiers

Cause: An attempt was made to pass an empty list of primitive event identifiers to the CONSUME_PRIM_EVENTS API.

Action: Correct the input and try again.

ORA-41670: duplicate or invalid event name in equal specification

Cause: An attempt was made to specify a duplicate or invalid primitive event for the rule class's equal property.

Action: Correct the input and try again.

ORA-41671: duplicate table names in the event structure with table aliases

Cause: The table used for an event structure has the same name as another table or a primitive event type in the event structure.

Action: Use an event structure with distinct table names for table aliases.

ORA-41672: invalid rowid passed in for "string" table

Cause: An attempt was made to pass a NULL or invalid rowid for a table in the event structure.

Action: Correct the input and try again.

ORA-41673: sequence attribute not allowed in rule conditions using table aliases

Cause: An attempt was made to use sequence attribute in a rule condition that is defined using table aliases. Sequence usage is not permitted for the lack of timestamp attribute.

Action: Correct the input and try again.

ORA-41674: dmlevents policy allowed only for event structures with table aliases

Cause: An attempt was made to use the dmlevents policy for an event structure with no table alias constructs.

Action: Correct the rule class properties and try again.

ORA-41675: schema for data tables does not match that of the rule class

Cause: An attempt was made to use the dmlevents policy for a rule class that refers to table residing in different schema. To use the dmlevents policy, the table associated with table aliases in the event structure and the rule class should exist in the same schema.

Action: Remove dmlevents specification from rule class properties.

ORA-41676: invalid use of dmlevents policy for primitive event

Cause: An attempt was made to use the dmlevents policy for a primitive event defined with more than one table alias attribute.

Action: Remove the dmlevents specification from the rule class properties.

ORA-41677: DML event trigger creation failed with *string*

Cause: Triggers could not be created on the data table to track DML events.

Action: Remove the dmlevents specification from the rule class properties.

ORA-41678: conflicting values for the autocommit and dmlevents policies

Cause: An attempt was made to use dmlevents policy in combination with autocommit set to YES. This combination is not allowed.

Action: Set autocommit to NO and try again.

ORA-41679: dmlevents specification only allowed with table alias attributes

Cause: An attempt was made to use the dmlevents policy for an event structure not containing any table alias attributes.

Action: Remove the dmlevents specification from the rule class properties.

ORA-41680: Rules Manager background process *string* does not exist

Cause: An attempt was made to use a Scheduler process that does not exist.

Action: Execute EXFSYS.RLM\$CREATE_SCHEDULER_JOBS procedure as a privileged user.

ORA-41681: clean up of expired events failed

Cause: The background process that cleans up the expired events failed for a rule class.

Action: Invoke EXFSYS.DBMS_RLMGR_UTL.CLEANUP_EVENTS API for the exact nature of the problem.

ORA-41682: invalid rule class package

Cause: An attempt was made to use a rule class package with invalid signature or permissions.

Action: Drop the rule class and recreate it.

ORA-41683: unable to lock a rule in the rule class

Cause: A rule matching the current event is locked by another session.

Action: Reissue the command after committing the other sessions.

ORA-41684: invalid value for the RLM\$ENABLED column

Cause: An attempt was made to insert or update a value other than 'Y' or 'N' into the RLM\$ENABLED column of a rule class table.

Action: Retry the DML statement with a value of 'Y' or 'N' for the RLM\$ENABLED column.

ORA-41685: invalid window specification for the collection element

Cause: An invalid attribute value was specified for the "windowlen" or the "windowsize" attribute. The value specified for the "windowlen" attribute should be a number indicating the number of days or a fraction of a day. The value specified for the "windowsize" attribute should be an integer which indicates number of items in the collection. The maximum value allowed for the window specification is 64000.

Action: Correct the input and try again.

ORA-41686: use of "collection" invalid for the primitive event

Cause: An attempt was made to define a rule condition with "collection" element when the corresponding event was not configured for collections of events.

Action: Correct the rule condition and try again.

ORA-41687: attribute "string" not allowed in the "groupby" specification

Cause: The attributes listed in the "groupby" specification in a rule condition were not a subset of the attributes specified in the rule class properties.

Action: Correct the "groupby" specification for the rule condition and try again.

ORA-41688: invalid value for the "groupby" attribute

Cause: An invalid value was specified for the "groupby" attribute.

Action: Correct the input and try again.

ORA-41689: invalid collection specification in the rule condition

Cause: An attempt was made to insert a rule condition with invalid collection element specification.

Action: Correct the input and try again.

-
- ORA-41690: maximum number of grouping expressions for a rule class exceeded**
Cause: An attempt was made to specify more than 32 expressions for the "groupby" clause in rule class properties.
Action: Use fewer than 32 expressions for the "groupby" clause.
- ORA-41691: invalid aggregate specification: *string***
Cause: The aggregate operation specified in the rule condition was invalid.
Action: Correct the input and try again.
- ORA-41692: unsupported aggregate operator in the having/compute clause: *string***
Cause: An attempt was made to use an unsupported aggregate operator in the having or the compute clause in the rule condition.
Action: Correct the input and try again.
- ORA-41693: invalid attribute or data type for an aggregate operator: *string***
Cause: An attempt was made to apply an aggregate operator on an invalid attribute or an attribute with invalid or unsupported data type in the aggregate operator. Only NUMBER and DATE attributes are allowed in the aggregate operators.
Action: Correct the input and try again.
- ORA-41694: invalid equal specification around: *string***
Cause: An attempt was made to specify an invalid equal clause for a rule condition or the rule class properties.
Action: Correct the input and try again.
- ORA-41695: equal specification should have a minimum of two elements**
Cause: An attempt was made to specify fewer than two elements in the equal clause for a rule condition or the rule class properties.
Action: Correct the input and try again.
- ORA-41696: invalid operator in the having clause: *string***
Cause: An attempt was made to use an invalid relational operator in the having clause of the rule condition.
Action: Correct the input and try again.
- ORA-41697: attribute prefix missing in aggregate specification: *string***
Cause: An attempt was made to specify an aggregate predicate across multiple primitive event types with no attribute prefix.
Action: Correct the input and try again.
- ORA-41698: invalid use of "*string*" attribute in aggregate predicate**
Cause: An attempt was made to use an attribute where a literal is expected in the aggregate predicate in the rule condition.
Action: Correct the input and try again.
- ORA-41699: maximum number of aggregate operations per rule condition exceeded**
Cause: An attempt was made to specify more than 5 aggregate operations in a rule condition.
Action: Correct the input an try again.
- ORA-41700: a conditions table already exists for the event structure**

Cause: A table storing the primitive rule conditions was already assigned to the event structure.

Action: No action necessary. This is an informational message only.

ORA-41701: conditions table with a rule class association cannot be truncated or dropped

Cause: An attempt was made to truncate or drop a conditions table when one or more rule classes are associated to it through the event structure.

Action: Drop the rule class before truncating or dropping the conditions table.

ORA-41702: invalid conditions table

Cause: An attempt was made to use an invalid conditions table.

Action: Correct the input and try again.

ORA-41703: invalid child node in "object" element with "ref" attribute

Cause: An attempt was made to use both a condition and a "ref" attribute in the "object" element.

Action: Remove the "ref" attribute.

ORA-41704: invalid condition reference: "string"

Cause: An attempt was made to use a reference to a nonexistent conditions table or a condition.

Action: Ensure that the conditions table exists for the primitive event and the value specified for the "ref" attribute of the "object" element is valid.

ORA-41705: conditions table cannot be dropped with DROP TABLE command

Cause: An attempt was made to drop a conditions table with a DROP TABLE command.

Action: Use DBMS_RLMGR.DROP_CONDITIONS_TABLE instead.

ORA-41706: a condition referenced in rule conditions may not be deleted

Cause: An attempt was made to delete a condition when one or more rule conditions refer to it.

Action: Delete the rules before deleting the conditions.

ORA-41707: unsupported construct with collection events: "string"

Cause: An attempt was made to define a collection rule condition with unsupported constructs.

Action: Correct the input and try again.

ORA-41708: the identifier for the shared condition may not be modified

Cause: An attempt was made to update the identifier of a row stored in the conditions table.

Action: Insert a row with the new identifier instead.

ORA-41710: invalid use of aggregate operator for a noncollection event

Cause: An attempt was made to specify an aggregate operator on an event that is not identified as collection.

Action: Correct the input and try again.

ORA-41711: invalid attribute in the rule condition's having clause

Cause: An invalid attribute is used in the specification for the having clause of the rule condition.

Action: Correct the input and try again.

ORA-41712: missing groupby specification for the collection "string"

Cause: An attempt was made to use a collection element with no groupby specification in the rule condition.

Action: Correct the input and try again.

ORA-41713: invalid use of "windowlen" and "windowsize" attributes

Cause: An attempt was made to use the windowlen and windowsize attributes within the same collection element.

Action: Correct the input and try again.

ORA-41714: invalid use of window specification with SESSION/TRANSACTION duration

Cause: An attempt was made to use the windowlen or windowsize attributes when the events are configured for SESSION or TRANSACTION duration.

Action: Remove the window specification and try again.

ORA-41721: invalid use of DMLEVENTS and CNFEVENTS in rule class properties

Cause: An attempt was made to specify both the DMLEVENTS and CNFEVENTS for the same rule class.

Action: Remove either the DMLEVENTS or the CNFEVENTS specification.

ORA-41722: insufficient privileges for database change notification

Cause: An attempt was made to use CNFEVENTS property with insufficient privileges.

Action: Grant CHANGE NOTIFICATION privilege and EXECUTE privilege on DBMS_CHANGE_NOTIFICATION to the user and try again.

ORA-42000: invalid online redefinition column mapping for table "string"."string"

Cause: An attempt was made to change the logical structure of a materialized view log, queue table, or a partition by specifying a non-NULL column mapping during online redefinition.

Action: Pass a NULL column mapping parameter.

ORA-42001: online redefinition options require COMPATIBLE parameter to be *string* or greater

Cause: The following types of redefinition require a 10.2 or higher compatibility setting:

- o redefining a materialized view log

- o redefining a table with objects

- o redefining a clustered table

- o redefining an AQ queue table

- o redefining a table partition The following types of redefinition require an 11.0 or higher compatibility setting:

- o redefining a table with a materialized view log

- o redefining a table with dependent materialized views

Action: Shut down and restart with an appropriate compatibility setting.

ORA-42002: partition "*string*" of table "*string*"."*string*" not being redefined

Cause: An attempt was made to redefine a partition which is not involved in this redefinition.

Action: Pass a valid partition name.

ORA-42003: partition must be specified for this redefinition

Cause: A partition was involved in this redefinition but was not specified.

Action: Specify the partition involved in this redefinition.

ORA-42004: redefinition not instantiated

Cause: An attempt was made to complete an instantiation-deferred redefinition without invoking `dbms_redefinition.sync_interim_table`.

Action: Invoke `dbms_redefinition.sync_interim_table` to instantiate this redefinition.

ORA-42005: invalid type of redefinition method

Cause: An unknown redefinition method was used.

Action: Use one of the supported redefinition methods: `o dbms_redefinition.cons_use_pk` `o dbms_redefinition.cons_use_rowid`

ORA-42006: dependent object registration not supported during a partition redefinition

Cause: An attempt was made to register dependent objects when redefining a partition.

Action: Do not invoke `dbms_redefinition.register_dependent_object` during a partition redefinition.

ORA-42007: dependent object unregistration not supported during a partition redefinition

Cause: An attempt was made to unregister dependent objects when redefining a partition.

Action: Do not invoke `dbms_redefinition.unregister_dependent_object` during a partition redefinition.

ORA-42008: error occurred while instantiating the redefinition

Cause: An error occurred while instantiating the online redefinition which requires aborting the redefinition.

Action: Correct the error, abort, and restart the online redefinition.

ORA-42009: error occurred while synchronizing the redefinition

Cause: An error occurred while synchronizing the online redefinition.

Action: Correct the error and continue the online redefinition.

ORA-42010: error occurred while synchronizing the redefinition

Cause: An error occurred while synchronizing the online redefinition which requires aborting the redefinition.

Action: Correct the error, abort, and restart the online redefinition.

ORA-42011: error occurred while completing the redefinition

Cause: An error occurred while completing the online redefinition.

Action: Correct the error and continue the online redefinition.

ORA-42012: error occurred while completing the redefinition

Cause: An error occurred while completing the online redefinition which requires aborting the redefinition.

Action: Correct the error, abort, and restart the online redefinition.

ORA-42013: interim table of an AQ IOT table should be an IOT table

Cause: An attempt was made to create a table that is not an index-organized table (IOT) as the interim table of an AQ IOT table (history, time management, or dequeue).

Action: Ensure that the interim table is created as an IOT table.

ORA-42014: online redefinition unable to lock AQ objects

Cause: An online redefinition of an AQ table was unable to lock all related AQ objects.

Action: Abort and retry the redefinition.

ORA-42015: online redefinition unable to log changes made to AQ tables

Cause: An online redefinition of an AQ table was unable to log changes made to AQ tables during the redefinition.

Action: Abort and retry the redefinition.

ORA-42016: shape of interim table does not match specified column mapping

Cause: The number of columns, or the type or the length semantics of a column, in the interim table did not match the specified column mapping.

Action: Ensure that the interim table matches the column mapping by either modifying the column mapping string or altering the interim table's column definition(s).

ORA-42017: interim table of an AQ table should not be an AQ table

Cause: An attempt was made to create an AQ table as an interim table of an online redefined AQ table.

Action: Ensure that the interim table is not created as an AQ table.

ORA-42018: partition cannot be redefined online because of index organization incompatibility

Cause: interim table is incompatible with partition being redefined because one or more of the following apply:

- one is index-organized and the other is not
- one has IOT overflow segment and the other does not
- one has IOT mapping table and the other does not

Action: Ensure that the interim table is compatible with the partition being redefined.

ORA-42019: partition cannot be redefined online because of incompatible partitioning of interim table

Cause: both original and interim tables are partitioned, or original table is composite-partitioned but interim table is non-partitioned.

Action: Ensure that the interim table has compatible partitioning with the original table. For example, if the original table is partitioned, the interim table should be

non-partitioned. If the original table is composite-partitioned, the interim table should be partitioned.

ORA-42020: partition cannot be redefined online because of unsupported type of interim table

Cause: An unsupported type of interim table was provided during the partition redefinition. Currently the following types of interim tables are not supported:

- a nested table or has nested-table columns
- an external table
- part of cluster
- contains LOB shared segments

Action: Do not use unsupported types of interim tables.

ORA-42021: partition cannot be redefined online because of incompatible row dependencies

Cause: original/interim table was created with row dependency and interim/original table was not.

Action: Ensure that both tables are created with same row dependency properties.

ORA-42022: partition cannot be redefined online because of presence of nested columns

Cause: An attempt was made to online redefine a partition with nested table columns.

Action: Do not attempt to online redefine a partition with nested table columns.

ORA-42023: compatibility of AQ table must be release 8.1.x or later

Cause: An attempt was made to perform online redefinition on an AQ table that was created with compatibility prior to release 8.1.x.

Action: Ensure that the AQ table is created with the COMPATIBLE parameter set to release 8.1.x or later before attempting online redefinition.

ORA-42024: interim table of an AQ table can not be a partitioned table

Cause: An attempt was made to use a partitioned table as an interim table.

Action: Ensure that the interim table is not a partitioned table.

ORA-42025: redefinition of CONS_USE_ROWID method cannot be used to redefine an AQ IOT table

Cause: An attempt was made to use method of DBMS_REDEFINITION.CONST_USE_ROWID to redefine an AQ IOT table.

Action: Ensure that method of DBMS_REDEFINITION.CONST_USE_PK is used to redefine an AQ IOT table.

ORA-42026: duplicated rows detected while instantiating the redefinition

Cause: Duplicated rows are detected during instantiation of the redefinition.

Action: Abort the redefinition, turn off the optimistic ascending SCN optimization, and restart the redefinition.

ORA-42027: cannot redefine an object online that is not a table

Cause: An attempt was made to redefine an object online that is not a table.

Action: Ensure that the object being redefined online is a table.

ORA-42028: materialized view log "*string*"."*string*" does not exist

Cause: An attempt was made to register a nonexistent materialized view log as a dependent object.

Action: Invoke DBMS_REDEFINITION.REGISTER_DEPENDENT_OBJECT on a valid materialized view log.

ORA-42029: cannot online redefine table "*string*"."*string*" at this time

Cause: An attempt was made to redefine a table which is incompatible with another ongoing redefinition.

Action: Do not perform the redefinition operation on this table or wait until the incompatible ongoing redefinition has completed.

ORA-42030: cannot online redefine table "*string*"."*string*" with commit SCN-based MV log

Cause: An attempt was made to redefine a table which had a commit SCN-based materialized view log defined on it.

Action: Do not attempt to online redefine a table that has a commit SCN-based materialized view log defined on it.

ORA-42031: interim table cannot have a commit SCN-based MV log defined on it

Cause: An attempt was made to use an interim table which had a commit SCN-based materialized view log defined on it.

Action: Ensure that the interim table does not have a commit SCN-based materialized view log defined on it.

ORA-42032: cannot online redefine table "*string*"."*string*" with Flashback Data Archive enabled

Cause: An attempt was made to redefine a table which had Flashback Data Archive enabled.

Action: Do not attempt to online redefine a table that has Flashback Data Archive enabled.

ORA-42033: interim table "*string*"."*string*" cannot have Flashback Data Archive enabled

Cause: An attempt was made to redefine a table with an interim table which had Flashback Data Archive enabled.

Action: Do not attempt to online redefine a table with an interim table which has Flashback Data Archive enabled.

ORA-42034: cannot online redefine table "*string*"."*string*" which was a CDC table

Cause: An attempt was made to redefine a table which was a CDC table.

Action: Do not attempt to online redefine a table that was a CDC table.

ORA-42035: cannot online redefine IOT table "*string*"."*string*" with CONS_USE_ROWID

Cause: An attempt was made to redefine an IOT table with CONS_USE_ROWID.

Action: Do not attempt to online redefine an IOT table with CONS_USE_ROWID.

ORA-42036: cannot online redefine temporary table "*string*"."*string*"

Cause: An attempt was made to redefine a temporary table.

Action: Do not attempt to online redefine a temporary table.

ORA-42037: cannot online redefine table "*string*"."*string*" with IOT overflow segment

Cause: An attempt was made to redefine a table with IOT overflow segment.

Action: Do not attempt to online redefine a table with IOT overflow segment.

ORA-42038: cannot online redefine table "*string*"."*string*" with a CDC log defined on it

Cause: An attempt was made to redefine a table on which a CDC log was defined.

Action: Do not attempt to online redefine a table on which a CDC log was defined.

ORA-42039: cannot online redefine table "*string*"."*string*" with FGA or RLS enabled

Cause: An attempt was made to redefine a table with Fine Grained Auditing (FGA) or Row Level Security (RLS) enabled.

Action: Do not attempt to online redefine a table with Fine Grained Auditing (FGA) or Row Level Security (RLS) enabled.

ORA-42040: cannot online redefine table "*string*"."*string*" with column of binary XML type

Cause: An attempt was made to redefine a table with a column of binary XML type.

Action: Do not attempt to online redefine a table with a column of binary XML type.

ORA-42041: cannot online redefine table "*string*"."*string*" with nested table columns

Cause: An attempt was made to redefine a table with nested table columns.

Action: Do not attempt to online redefine a table with nested table columns.

ORA-42287: cannot rename user on whose type a table depends

Cause: An attempt was made to rename a user whose schema contained a type on which some table depends. The operation may not proceed as it would render the table invalid causing loss of data.

Action: Drop table(s) dependent on types belonging to the schema of the user being renamed.

ORA-42288: may not create a schema synonym for the specified schema

Cause: An attempt was made to create a schema synonym for one of the reserved schemas (such as SYS or SYSTEM.)

Action: Schema synonyms for this schema may not be created.

ORA-42289: may not rename specified user

Cause: An attempt was made to rename one of the reserved users (such as SYS or SYSTEM) or an administrative user.

Action: This user may not be renamed.

ORA-42290: specified schema does not exist

Cause: An attempt was made to create a schema synonym for a schema which did not exist.

Action: Correct the input and try again.

ORA-42291: schema synonym '*string*' does not exist

Cause: The named schema synonym did not exist.

Action: Verify you are using the correct schema synonym name.

ORA-42292: RENAME TO already specified

Cause: The RENAME TO clause was specified twice.

Action: Use only one RENAME TO clause.

ORA-42293: user name conflicts with another user, role or schema synonym name

Cause: There was already a user, role or schema synonym with that name.

Action: Specify a different user name.

ORA-42294: role name conflicts with another user, role or schema synonym name

Cause: There was already a user, role or schema synonym with that name.

Action: Specify a different role name.

ORA-42295: schema synonym name conflicts with another user, role or schema synonym name

Cause: There was already a user, role or schema synonym with that name.

Action: Specify a different schema synonym name or use CREATE OR REPLACE SCHEMA SYNONYM.

ORA-42296: user, role or schema synonym '*string*' does not exist

Cause: There was no user, role, or schema synonym by that name.

Action: Respecify the name.

ORA-42297: cannot drop a schema synonym for a schema of a user who is currently connected

Cause: An attempt was made to drop a schema synonym for a schema of a user who was logged on.

Action: Make sure user is logged off, then repeat command.

ORA-42298: cannot rename a user that is currently connected

Cause: An attempt was made to rename a user that was logged on.

Action: Make sure user is logged off, then repeat command.

ORA-42300: an Editioning view is already defined on this table

Cause: An attempt was made to create an Editioning view on a table on which another Editioning view is already defined in the same Edition. This violates a restriction that at most one Editioning view may be associated with any base table in a given Edition.

Action: Create the new view as a regular view or, if the view being created is really intended to be an Editioning view associated with this table, drop the existing Editioning view before creating the new one.

ORA-42301: definition of an Editioning view may not refer to a synonym

Cause: An attempt was made to create an Editioning view referring to a synonym, which is not supported.

Action: Do not create an Editioning view if you want the view to refer to a synonym.

ORA-42302: definition of an Editioning view may not refer to remote tables

Cause: An attempt was made to create an Editioning view referring to remote tables, which is not supported.

Action: Do not create an Editioning view if you want the view to refer to a remote table.

ORA-42303: duplicate column reference in a definition of an Editioning view

Cause: An attempt was made create an Editioning view referencing the same column of a base table more than once, which is not supported.

Action: Do not create an Editioning view if you have multiple columns referring to the same column of the base table.

ORA-42304: base table and the Editioning view must belong to the same schema

Cause: An attempt was made to create an Editioning view in a schema different from that of the base table.

Action: Create an Editioning view in the same schema as the base table.

ORA-42305: only an Editioning view may replace an Editioning view

Cause: An attempt was made to replace an Editioning view with a view which is not an Editioning view or vice versa.

Action: Ensure that either both or neither of the views involved are Editioning views.

ORA-42306: a CrossEdition trigger may not be created on an Editioning view

Cause: An attempt was made to create a CrossEdition trigger on an Editioning view, which is not supported.

Action: Instead of creating a CrossEdition trigger on an Editioning view, create it on the Editioning view's underlying table.

ORA-42307: columns of an Editioning view may only refer to base table columns

Cause: An attempt was made to define an Editioning view containing a column referring to an entity other than a base table column (for example, a PL/SQL function without a parameter), which is not supported.

Action: Ensure that every column of an Editioning view refers to a column of a base table.

ORA-42308: view *string.string* is already in read-only mode

Cause: An attempt was made to set a read-only table in read-only mode.

Action: This DDL can only be executed on a read/write view.

ORA-42309: view *string.string* is already in read/write mode

Cause: An attempt was made to set a read/write view in read/write mode.

Action: This DDL can only be executed on a read-only view.

ORA-42310: Implementation restriction: this operation is only permitted on Editioning views

Cause: The view being altered was not an Editioning view. In this release, an ALTER VIEW READ ONLY, or ALTER VIEW READ WRITE operation is only permitted on Editioning views.

Action: Ensure that the view is an Editioning view.

ORA-42311: This operation is not permitted on Editioning views with compilation errors

Cause: ALTER VIEW READ ONLY and ALTER VIEW READ WRITE are not permitted on Editioning views which have compilation errors.

Action: Resolve the compilation errors.

ORA-42313: This operation is not supported on Editioning views marked invalid

Cause: ALTER VIEW READ ONLY and ALTER VIEW READ WRITE are not permitted on Editioning views which are marked invalid.

Action: Recompile the Editioning view to ensure that it is valid.

ORA-42314: editioning view cannot be owned by a non-editioned user

Cause: An attempt was made to create an editioning view in a non-editioned schema.

Action: Enable editions for the user and then create the editioning view.

ORA-42399: cannot perform a DML operation on a read-only view

Cause: An attempt was made to insert, delete, or update row(s) of a view created with read-only option. DML operations on such views are explicitly prohibited.

Action: Perform the desired DML operation on the view's underlying base table or issue ALTER VIEW ... READ WRITE command to make the view updatable.

ORA-42803: Cannot use bind variable in VERSIONS clause when the object has a Row-Level Security (RLS) policy defined on it.

Cause: The object being accessed had a Row-Level Security (RLS) policy defined on it and the VERSIONS clause contained a bind variable.

Action: Rewrite the query without the bind variable in the VERSIONS clause.

NZE-43000 to NZE-43021

NZE-43000: pkcs11 library not found

Cause: The PKCS11 library could not be found.

Action: Make sure that the pkcs11 library is at the location specified in the wallet.

NZE-43001: pkcs11 token not found

Cause: The PKCS11 token could not be found.

Action: Make sure that a token with correct label is present in slot.

NZE-43002: pkcs11 passphrase is wrong

Cause: The PKCS11 passphrase is wrong.

Action: Make sure that the token passphrase specified is correct.

NZE-43005: pkcs11: No tokens present

Cause: a token is not present in the slot

Action: Place a pkcs11 token in the slot

NZE-43011: pkcs11: Token login failed

Cause: To login to the pkcs11 token a correct passphrase is needed

Action: Check the token passphrase.

NZE-43014: pkcs11: finding private key on token error

Cause: error occurred while finding private key on token

Action: Make sure the private key corresponding to the certificate in wallet is on the token. Check trace message

NZE-43015: pkcs11: key pair gen error

Cause: error occurred while generating key pair using HSM

Action: Check trace message

NZE-43017: pkcs11: No certificate found on the smart card/HSM

Cause: No certificate was found on the smart card/HSM.

Action: Follow smart card/HSM vendor documentation to populate the smart card/HSM with certificate.

NZE-43018: pkcs11: No user certificate found on the smart card/HSM

Cause: No user certificate was found on the smart card/HSM.

Action: Follow smart card/HSM vendor documentation to populate the smart card/HSM with certificate and private key.

NZE-43019: pkcs11: No certificate found on smart card/HSM label with given cert label

Cause: There were no certificate labels on the smart card/HSM that matched the certificate label specified in the wallet.

Action: Follow smart card/HSM vendor documentation to set certificate label in smart card/HSM.

NZE-43020: pkcs11: Multiple certificates found on smart card/HSM with given cert label

Cause: Certificates with identical labels were found in the smart card/HSM.

Action: Follow smart card/HSM vendor documentation to assign unique certificate labels to certificates.

NZE-43021: pkcs11: Certificate with given cert label is not a user cert

Cause: The certificate with the specified certificate label did not have a matching private key in the smart card/HSM.

Action: Follow smart card/HSM vendor instructions to create credentials (certificate/private key) in smart card/HSM.

ORA-43750 to ORA-45907

ORA-43750: invalid or illegal combination of COMMIT WRITE options

Cause: invalid or illegal combination of options provided to COMMIT WRITE SQL statement.

Action: Provide a valid combination of options for COMMIT WRITE statement

ORA-43751: invalid value for parameter *string*

Cause: invalid or illegal value provided for parameter.

Action: Provide a valid value for the parameter

ORA-43807: indexes on ORA_ROWSCN not allowed

Cause: An attempt was made to create an index that refers to the ORA_ROWSCN pseudo-column, either directly or in an expression.

Action: Do not use ORA_ROWSCN to define an index on a table.

ORA-43814: DROP INDEX is invalid for hash cluster index

Cause: An attempt was made to drop an index defined on a hash cluster. Hash cluster indexes cannot be dropped.

Action: Do not attempt to drop an index defined on a hash cluster.

ORA-43850: Advanced Compression Option parameter is required to be enabled

Cause: An Advanced Compression Option (ACO) feature was specified without enabling the ACO parameter.

Action: Set or Update the ACO parameter (enable_option_advanced_compression) to TRUE.

ORA-43851: LOB feature unsupported below compatible 11.0.0

Cause: An 11g LOB feature was specified when the RDBMS is operating at a compatible setting lower than "11.0.0".

Action: Upgrade the RDBMS compatible setting to "11.0.0" or higher to enable the desired new features.

ORA-43852: SECUREFILE and BASICFILE cannot be used together

Cause: SECUREFILE and BASICFILE were both specified.

Action: Modify the SQL statement to specify only one of SECUREFILE or BASICFILE.

ORA-43853: SECUREFILE lobes cannot be used in non-ASSM tablespace "*string*"

Cause: SECUREFILE lobes require ASSM

Action: Specify an ASSM tablespace for SECUREFILE lobs. 43854, 0000, "Deprecated"

ORA-43856: Unsupported LOB type for SECUREFILE LOB operation

Cause: A LOB that is not a SECUREFILE was used in a SQL statement or in a call where a SECUREFILE LOB was expected.

Action: Convert the LOB to a SECUREFILE LOB or do not use this keyword or call.

ORA-43857: Parameter Error

Cause: Attempt to modify a LOB with an invalid parameter.

Action: Fix paramters and retry the operation.

ORA-43859: CONTENTTYPE string too long

Cause: Length of CONTENTTYPE string exceeded the defined maximum.

Action: Modify length of CONTENTTYPE string and retry operation.

ORA-43862: CONTENTTYPE buffer length incorrect

Cause: Length of CONTENTTYPE buffer less than defined constant.

Action: Modify length of CONTENTTYPE buffer and retry operation.

ORA-43878: LOB feature unsupported below compatible setting 11.2.0

Cause: An 11.2 LOB feature was specified when the database was operating at a compatible setting lower than "11.2.0".

Action: Upgrade the database compatible setting to "11.2.0" or higher to enable the desired new features.

ORA-43883: SECUREFILE LOBs delta update invalid operation

Cause: Invalid delta update operation was issued on LOB. This includes operation beyond LOB length; move operation with destination offset inside move interval.

Action: Check operation parameters for validity.

ORA-44001: invalid schema

Cause: The schema for the given schema name did not exist.

Action: Provide a valid schema name.

ORA-44002: invalid object name

Cause: The input parameter string was not a qualified SQL identifier of an existing SQL object.

Action: Make sure the string matches an existing SQL object that is accessible by the current schema.

ORA-44003: invalid SQL name

Cause: The input parameter string was not a valid simple SQL name.

Action: Check with the DBMS_ASSERT spec to verify that the parameter string is a valid simple SQL name.

ORA-44004: invalid qualified SQL name

Cause: The input parameter string was not a valid qualified SQL name.

Action: Check with the DBMS_ASSERT spec to verify that the parameter string is a valid qualified SQL name.

ORA-44101: invalid priority

Cause: The priority level given by the user was invalid.

Action: See UTL_MAIL for valid priority values and change the priority parameter accordingly.

ORA-44203: timeout waiting for lock on cursor

Cause: A timeout occurred while waiting for a cursor to be compiled. This is usually caused by the SQL parse requiring access to system resources which are locked by concurrently executing sessions.

Action: Investigate possible causes of resource contention. If necessary, contact support for additional information on how to diagnose this problem.

ORA-44204: library cache object *string.string* found in an in-flux state

Cause: The pseudo-cursor depends on a table which was found to be obsolete due to metadata invalidation of the library cache object.

Action: Contact Oracle Support Services for additional information.

ORA-44301: NULL service name is not permitted

Cause: The service name argument was found to be NULL.

Action: Provide a non-NULL service name.

ORA-44302: NULL network name is not permitted

Cause: The network name argument was found to be NULL.

Action: Provide a non-NULL network name.

ORA-44303: service name exists

Cause: This service name was already in existence.

Action: Provide a new unique service name.

ORA-44304: service *string* does not exist

Cause: The specified service was not in existence.

Action: Provide a valid service name.

ORA-44305: service *string* is running

Cause: The specified service was running.

Action: This message is informational only.

ORA-44306: service name exceeds maximum length of *string*

Cause: The service name was too long.

Action: Use a shorter service name.

ORA-44307: network name too long

Cause: The network name, excluding the domain, was too long.

Action: Use a shorter network name.

ORA-44310: maximum number of services exceeded

Cause: The maximum number of services has been reached.

Action: None

ORA-44311: service *string* not running

Cause: The specified service was not running.

Action: This message is informational only.

ORA-44312: database closed

Cause: The database was closed.

Action: Open the database and retry the operation.

ORA-44313: instance name invalid

Cause: The instance name argument was not valid.

Action: Provide a valid instance name.

ORA-44314: network name already exists

Cause: The network name was already in existence.

Action: Use an alternate network name.

ORA-44315: all service attributes null

Cause: All attributes specified were null.

Action: At least one attribute must be non-null.

ORA-44316: invalid argument

Cause: Invalid argument supplied.

Action: Supply a valid argument.

ORA-44317: database open read-only

Cause: The database is open read-only.

Action: Close the database and reopen it read/write before trying again.

ORA-44318: exceeded maximum SERVICE_NAMES length

Cause: The total length of all running service network names exceeded the maximum allowable length.

Action: Stop another service to start this one.

ORA-44319: Cannot delete AQ service

Cause: Specified AQ service belonged to a queue.

Action: Delete the queue.

ORA-44321: cannot read command line from trace file *string*

Cause: Trace file could not be read.

Action: Make sure trace file exists and contains valid raw trace data.

ORA-44322: invalid file name '*string*'

Cause: A NULL or zero length file name was specified.

Action: Correct the file name to be a nonzero length string.

ORA-44323: negative <count> '*string*' to *string* option

Cause: The given count was a nonpositive number.

Action: Provide a positive count number.

ORA-44324: no <count> argument to *string* option

Cause: Count number was missing for the option.

Action: Provide a count number to the option.

ORA-44325: no entry points found in trace file *string*

Cause: The given trace symbol was not found.

Action: None

ORA-44326: no <symbol> argument to *string* option

Cause: <symbol> argument to `-[un]trace` option was missing.

Action: Provide <symbol> argument to `-[un]trace` option.

ORA-44327: no <filename> argument to *string* option

Cause: <filename> argument to the option was missing.

Action: Provide <filename> argument to the option.

ORA-44328: unsupported version number: *string*

Cause: Version of the trace file was not supported.

Action: Provide supported version of trace file.

ORA-44403: invalid value specified for flag parameter

Cause: Mutually exclusive values were specified for the flag parameter.

Action: Internal error. Contact Oracle Support Services.

ORA-44404: upicui2 client function requires Oracle server of 10.2 or higher

Cause: A 10.2 or higher client is being used with an older Oracle server.

Action: Use an Oracle server with the same version as the client.

ORA-44411: Invalid ACL: START_DATE cannot be larger than END_DATE for all ACE

Cause: The END_DATE was smaller than the START_DATE in one of the ACE's in this ACL.

Action: Set all END_DATE to be larger than or equal to the START_DATE in each of the ACE's in this ACL.

ORA-44412: Invalid ACL: Cyclic ACL inheritance is not allowed

Cause: A cycle was formed by ACL inheritance.

Action: Check the ACL inheritance and break the cycle by removing some ACL inheritance.GG function exceeds system limits.

ORA-44413: Invalid ACL: Security class of parent ACL must be an ancestor of security class of child ACL

Cause: Security class of parent ACL was not an ancestor of security class of child ACL

Action: Change the security class of parent ACL to be an ancestor of security class of child ACL.

ORA-44414: Invalid ACL: Parent ACL '*string*' does not exist

Cause: The path to the parent ACL was not a valid resource.

Action: Change the parent ACL of this resource or create the parent ACL at the specified location.

ORA-44415: Invalid ACL: Undefined privileges

Cause: An undefined privilege was found in an ACE in the ACL.

Action: Make sure the privilege is defined in the security class as specified in the ACL.

ORA-44416: Invalid ACL: Unresolved principal '*string*'

Cause: An unresolved principal is found in an ACE in the ACL.

Action: Make sure the principal is a valid user or role in the system.

ORA-44417: Invalid ACL: Invalid ACLID

Cause: The specified ACLID did not point to a valid ACL document.

Action: Make sure the ACLID points to a valid ACL document.

ORA-44418: Invalid ACL: *string*

Cause: The specified ACL did not meet the validation requirements of the constraining ACL.

Action: Ensure ACL meets the validation requirements of the constraining ACL.

ORA-44421: cannot DISALLOW NONSCHEMA without a SCHEMA clause

Cause: If no SCHEMA clause (explicit schema or ANYSCHEMA) was specified, nonschema data cannot be disallowed.

Action: Remove DISALLOW NONSCHEMA or add some SCHEMA clause.

ORA-44422: nonschema XML disallowed for this column

Cause: An attempt was made to insert nonschema based XML documents in a binary XML column that disallows nonschema data.

Action: Insert only schema-based documents or alter the column to ALLOW NONSCHEMA data.

ORA-44423: XML Schema registered for BINARY cannot be used for CLOB/OBJ-REL

Cause: An attempt was made to use a XML Schema registered for binary usage as part of a CLOB or OBJ-REL clause.

Action: Specify a schema registered for CLOB or OBJ-REL use. Else specify BINARY XML storage for column.

ORA-44424: BINARY XML storage requires XML Schema registered for BINARY usage

Cause: An attempt was made to specify BINARY XML storage using an XML schema not registered for BINARY.

Action: Specify a schema registered for BINARY usage. Else specify CLOB or OBJ-REL storage for column.

ORA-44425: XML DB needs to be installed for creating an XMLType table or column

Cause: An attempt was made to create an XMLType table or column with out XML DB installed.

Action: Install XML DB.

ORA-44501: QMEL: Too much concurrency.

Cause: Too much concurrency

Action: Transient error, try again.

ORA-44502: QMEL: Lock not found.

-
- Cause:** Lock not found
Action: Check arguments
- ORA-44503: QMEL: Lock Denied.**
Cause: Lock denied
Action: None
- ORA-44504: Resource Locked by Implicit Lock**
Cause: The resource is locked by an implicit lock
Action: Implicit locks are normally caused by NFS locks. Refer to XDB Protocol guide for removing/obtaining information about implicit locks.
- ORA-44505: QMEL: Invalid arguments.**
Cause: Arguments to QMEL are not correct.
Action: None
- ORA-44700: Language '*string*' is not a valid language for a translation**
Cause: Invalid language.
Action: The language must conform to IETF RFC 3066.
- ORA-44701: Language not found for translation**
Cause: The document had multiple translations and one of them did not have the xml:lang attribute.
Action: All translations must have the xml:lang attribute when multiple translations are present.
- ORA-44702: Multiple translations found for language '*string*'**
Cause: The document had multiple translations for a language.
Action: The document must contain only one translation per language for every translated element.
- ORA-44703: Multiple source language translations found**
Cause: The document had multiple source language translations.
Action: The document must contain only one source language translation for every translated element.
- ORA-44704: XPath '*string*' does not uniquely identify a translated element**
Cause: The given XPath pointed to multiple translated elements.
Action: The given XPath must uniquely identify a translated element.
- ORA-44705: Must have xdb:maxOccurs='1' for translated elements**
Cause: The value of xdb:maxOccurs was not '1' for a translated element.
Action: The value of xdb:maxOccurs must be '1' for a translated element.
- ORA-44706: Must have xsd:maxOccurs='unbounded' for translated elements**
Cause: The value of xsd:maxOccurs was not 'unbounded' for a translated element.
Action: The value of xsd:maxOccurs must be 'unbounded' for a translated element.
- ORA-44707: No source language translation found**
Cause: The document had no source language translation for a translated element.

Action: The document must contain exactly one source language translation for every translated element.

ORA-44708: Translations not supported for object relational storage

Cause: The storage type of the schema was object relational.

Action: Register the schema with storage type as clob or binary xml.

ORA-44709: Invalid schema definition for translated element

Cause: The schema definition for a translated element was invalid.

Action: A translated element must be a complex type with simple content which is a restriction or extension of xs:string.

ORA-44710: Malformed XLIFF document: *string*

Cause: The XLIFF document was malformed.

Action: Fix the error and try again.

ORA-44711: XPath refers to an untranslatable element

Cause: XPath pointed to an untranslatable element.

Action: XPath for this operation must refer to a translatable element.

ORA-44712: Invalid XPath in XLIFF document used for merging

Cause: XPath within trans-unit/id attribute was invalid.

Action: XPath within trans-unit/id attribute must point to a set of translations, not to a particular translation.

ORA-44713: XPath does not select all translations

Cause: XPath did not select all translations for a particular element.

Action: XPath must point to a set of translations, not to a particular translation.

ORA-44730: XML Index *string* is not usable at the moment

Cause: The async XML Index could not be used since ORACLE is not open for query.

Action: Try the same query again when ORACLE is open for query, or use NO_XMLINDEX_REWRITE hint.

ORA-44731: Path *string* cannot be removed from the repository XML Index

Cause: The repository XML Index indexed one of the parent folders of the resource identified by given path.

Action: Try removing the parent folder from the repository XML Index.

ORA-44732: Path *string* cannot be removed from the repository XML Index

Cause: The repository XML Index did not index the resource identified by given path.

Action: Try removing a resource that is indexed by the repository XML Index.

ORA-44733: The repository XML Index cannot be dropped directly

Cause: DROP INDEX could not be used on the repository XML Index.

Action: Try using DBMS_XDB_ADMIN.DROPREPOSITORYXMLINDEX.

ORA-44734: Predicate Index on nodes with similar children not allowed

Cause: There was at least one node in the document with multiple similar children which was used in Predicate Indexing.

Action: Try removing Predicate Index on nodes with multiple similar children.

ORA-44735: Too many predicates

Cause: Number of predicates were more than limit.

Action: Try reducing number of predicates.

ORA-44736: Group name already existed

Cause: The group name specified already exists.

Action: Try a different group name.

ORA-44737: Parameter *string* did not exist.

Cause: The parameter name specified did not exist.

Action: Check the parameter name.

ORA-44738: Group *string* did not exist.

Cause: The group name specified did not exist.

Action: Check the group name.

ORA-44739: Cannot drop the last group.

Cause: An attempt was made to drop the last group in the index.

Action: Use the DROP INDEX statement instead.

ORA-44740: Parameter *string* is already registered.

Cause: The parameter name specified was already registered.

Action: Either drop the existing parameter or use a different parameter name.

ORA-44741: Cannot drop a group whose tables are shared by other group(s).

Cause: An attempt was made to drop a group whose tables are shared by other group(s).

Action: First drop group(s) with shared table(s) from this group.

ORA-44742: Cannot alter columns of a table that is shared by other group(s).

Cause: An attempt was made to add columns to, modify columns of, or drop columns from a table shared by other group(s).

Action: First drop group(s) with shared table(s) from this group and then proceed with this operation.

ORA-44743: Cannot alter columns of a dependent shared table.

Cause: An attempt was made to add columns to, modify columns of, or drop columns from a dependent shared table. One can only add columns to, modify columns of, or drop columns from the original shared table.

Action: Use the group name of the original shared table while executing this operation.

ORA-44744: Cannot have more than one drop, add or modify operations in an ALTER INDEX statement.

Cause: An attempt was made to have more than one add, modify, or drop column or group operations in the ALTER INDEX statement.

Action: Use multiple ALTER INDEX statements instead.

ORA-44745: Cannot add or drop columns to or from multiple tables.

-
- Cause:** An attempt was made to add or drop columns to or from multiple tables in a single ALTER INDEX statement.
- Action:** Use multiple ALTER INDEX statements instead.
- ORA-44746: Missing XMLTABLE in GROUP clause.**
- Cause:** An attempt was made to create or add a group without XMLTABLE.
- Action:** Add required XMLTABLE clause to the GROUP clause.
- ORA-44747: An XMLIndex with a structured component cannot be specified with ASYNC.**
- Cause:** An attempt was made to specify ASYNC parameter for an XMLIndex with a structured component.
- Action:** Use valid parameters for XMLIndex with a structured component.
- ORA-44748: Invalid name for GROUP.**
- Cause:** An attempt was made to create a GROUP with invalid name.
- Action:** Use a valid name for the GROUP.
- ORA-44749: Missing PATH for the COLUMN.**
- Cause:** An attempt was made to create a COLUMN without PATH.
- Action:** Specify PATH for the COLUMN definition.
- ORA-44750: Cannot create secondary index on unstructured component of XMLIndex.**
- Cause:** An attempt was made to create a secondary index on the unstructured component of an XMLIndex when the XMLIndex does not have an unstructured component.
- Action:** Alter XMLIndex to add an unstructured component.
- ORA-44751: XML schema enumeration index is out of range**
- Cause:** The enumeration item corresponding to the enumeration index could not be found in the XML schema.
- Action:** If the XML schema has been evolved, try restarting the client that performed the evolution.
- ORA-44752: New element '*string*' in complex type '*string*' has the same qualified name as another element**
- Cause:** The new element that was added to a complex type by in-place XML schema evolution had the same qualified name as another element in the same complex type or in one of its ancestor complex types.
- Action:** Try adding an element with a different qualified name.
- ORA-44753: Change to minOccurs attribute of element '*string*' is illegal**
- Cause:** The value of attribute minOccurs on an element could not be increased by in-place XML schema evolution.
- Action:** Do not increase the value of attribute minOccurs.
- ORA-44754: Change to maxOccurs attribute of element '*string*' is illegal**
- Cause:** The value of attribute maxOccurs on an element could not be decreased by in-place XML schema evolution.
- Action:** Do not decrease the value of attribute maxOccurs.

ORA-44755: Change to complexType property of element 'string' is illegal

Cause: The complexType property on an element could not be changed by in-place XML schema evolution.

Action: Do not change the complexType property.

ORA-44756: Change to SQLType attribute of element 'string' is illegal

Cause: The SQLType property on an element in a binary XML schema could not be changed by in-place XML schema evolution.

Action: Do not change the SQLType property.

ORA-44800: Number of classifiers cannot be NULL

Cause: The num_classifiers argument was found to be NULL.

Action: Provide a non-NULL num_classifiers.

ORA-44801: NULL classifier list not permitted

Cause: The wlm_classifiers argument was found to be NULL.

Action: Provide a non-NULL wlm_classifiers.

ORA-44802: No new plan (classifier list) has been submitted

Cause: No new plan was created before submission.

Action: Create a new plan, followed by adding classifier & PC lists.

ORA-44803: Plan is in transition (about to be activated)

Cause: New plan was attempted to be created before activating the current plan.

Action: Completely submit the current plan and activate it.

ORA-44804: Plan is not created yet

Cause: A new plan was not created before submitting the Classifier and Performance Class lists.

Action: Call dbms_wlm.create_plan first to create the plan.

ORA-44805: No classifier is present

Cause: The classifier list contained no classifiers.

Action: Check the syntax of the classifier list.

ORA-44806: Extra classifiers are present in list

Cause: More classifiers were present in the list than specified.

Action: Only include the number of classifiers less than or equal to num_classifiers mentioned in dbms_wlm.create_plan.

ORA-44807: Performance Class name is too large

Cause: The Performance Class name was larger than 32 bytes.

Action: Rename the Performance Class to fit within 32 bytes.

ORA-44808: Work Request Class name is too large

Cause: The Work Request Class name was larger than 32 bytes.

Action: Rename the Work Request Class to fit within 32 bytes.

ORA-44809: No expression is present for classifier

Cause: This classifiers contained no expression. It should contain one more more expressions.

Action: Check syntax in the classifier list.

ORA-44810: No parameter is present for expression

Cause: This expression contained no parameters or attribute values. It should contain one or more attribute values. Attributes can be SERVICE, MODULE, ACTION, PROGRAM or USER.

Action: Check syntax in the classifier list.

ORA-44811: Service name is too large

Cause: The service name mentioned in the parameter list was too large.

Action: Check the service name.

ORA-44812: Module name is too large

Cause: The module name mentioned in the parameter list was too large.

Action: Check the module name.

ORA-44813: Action name is too large

Cause: The action name mentioned in the parameter list was too large.

Action: Check the action name.

ORA-44814: Program name is too large

Cause: The program name mentioned in the parameter list was too large.

Action: Check the program name.

ORA-44815: User name is too large

Cause: The user name mentioned in the parameter list was too large.

Action: Check the user name.

ORA-44816: Number of Performance Classes is less than specified

Cause: The number of Performance Classes submitted were less than what was specified.

Action: Submit the full list of Performance Classes.

ORA-44817: Classifier list is too large

Cause: The length of the classifier list was greater than 4000 bytes.

Action: Break the list into two lists before submission.

ORA-44818: General failure

Cause: There was an unknown failure.

Action: Contact Oracle Support Services.

ORA-44819: Execution of this WLM function is denied

Cause: Either a WLM plan was being loaded from another instance, or the strict order of the PL/SQL calls for loading WLM plan was not followed.

Action: Check if another session is also concurrently trying to load a WLM plan. If that is not true, check the order in which you are making these PL/SQL calls to load your WLM plan.

ORA-44820: Number of Work Request Classes is less than specified

Cause: The number of Work Request Classes submitted were less than what was specified.

Action: Submit the full list of Work Request Classes.

ORA-44821: Number of classifiers is too large

Cause: A very large number (> 1024) of classifiers were requested.

Action: Submit a smaller (< 1024) number of classifiers.

ORA-44822: QoS Resource Manager plan does not exist in database "*string*"

Cause: QoS Resource Manager plan did not exist in this database.

Action: Rerun CATPROC.SQL to create the plan.

ORA-44823: The QoS Resource Manager plan is not in use

Cause: The QoS Resource Manager plan was not in use.

Action: Correct the setting of the current Resource Manager plan and try again.

ORA-44824: Resource Manager is disabled

Cause: Resource Manager was turned off.

Action: Reenable the Resource Manager and retry the operation.

ORA-44825: Classifier plan does not match across instances

Cause: Classifier plan was not the same across instances.

Action: Resubmit the classifier plan and try again.

ORA-44826: Number of Performance Classes is more than what was specified.

Cause: The number of Performance Classes submitted were more than what was specified.

Action: Submit only the specified number of Performance Classes.

ORA-44827: Number of Performance Classes is too large

Cause: A large number (>= 50) of Performance Classes were requested.

Action: Submit a smaller (< 50) number of Performance Classes.

ORA-44901: Unable to resolve symbolic link "*string*"

Cause: The system is unable to resolve the specified symbolic link.

Action: Check the definition of the symbolic link to ensure that this refers to a valid resource.

ORA-44902: Too many steps in resolving symbolic link "*string*"

Cause: This error is raised when the system is unable to fully resolve a path with symbolic links within a reasonable number of steps. It could be due to cycles in definitions of symbolic links or very long chains of symbolic links to symbolic links.

Action: Remove any cycles in symbolic link definitions. If there are no cycles, reduce the length of chains of symbolic links to symbolic links.

ORA-44903: Cannot create hard link to specified resource

Cause: The system cannot create a hard link to the specified resource.

Action: Check the configuration parameter(s) to verify the restrictions on creating hard links to folder or non-folder resources.

ORA-44904: target path in document link exceeds maximum length

Cause: Target path length exceeds the maximum which can be stored to disk.

Action: Reduce target path to smaller length

ORA-44905: extended link type not supported

-
- Cause:** XLink type attribute is extended.
Action: Remove extended link, or replace with simple link.
- ORA-44906: unable to resolve target in document link**
Cause: target path does not resolve to valid resource.
Action: check validity of target path.
- ORA-44907: can not delete with incoming hard document links**
Cause: there is a hard document link with this resource as the target.
Action: query DOCUMENT_LINKS view to see which resource has a hard link to this resource. Change the document link in the source resource accordingly.
- ORA-44908: found a loop in XInclude elements while expanding *string***
Cause: There is a loop in XInclude elements within the document.
Action: Remove the loop in XInclude elements.
- ORA-44909: href attribute is required within XInclude element**
Cause: The href attribute is missing within XInclude element.
Action: Add the href attribute.
- ORA-44910: xpointer not supported within XInclude element**
Cause: The xpointer attribute is specified within XInclude element.
Action: Remove the xpointer attribute.
- ORA-44911: exceeded maximum depth of nested xinclude expansion**
Cause: The depth of nested xinclude expansion has exceeded system limit.
Action: Reduce the depth of nested xinclude expansion.
- ORA-44912: invalid or unsupported xpath expression *string***
Cause: The specified xpath is either invalid or unsupported in this context.
Action: Change the xpath expression.
- ORA-44913: error while processing XInclude *string***
Cause: There was an error while processing the specified XInclude.
Action: Ensure that the XInclude attributes are correct.
- ORA-45000: SecureFile feature unsupported below compatible 11.2.0.0.0**
Cause: An 11gR2 LOB feature was specified when the database was operating at a compatible setting lower than 11.2.0.0.0.
Action: Upgrade the database compatible setting to 11.2.0.0.0 or higher to enable the desired new features.
- ORA-45001: SecureFile archive implicit not allowed**
Cause: A SecureFile was archived and implicit retrieval was not allowed.
Action: Retrieve the SecureFile with a Get operation.
- ORA-45002: Content ID not found in the DBFS HS**
Cause: The content ID was invalid or was already deleted.
Action: No action required.
- ORA-45003: DBFS HS: Invalid checksum, potential data corruption**

Cause: Potential data corruption.

Action: No action required.

ORA-45004: DBFS HS SBT Error

Cause: Error related to SBT Tape library.

Action: Refer to error log for more details.

ORA-45005: DBFS HS invalid store

Cause: Error related to DBFS HS Store.

Action: Check that the store name and store parameters are valid values.

ORA-45902: cannot rename data file '*string*' - file was instantly restored.

Cause: During ALTER DATABASE RENAME or RMAN command SWITCH, the rename was specified for an instantly restored file.

Action: Rename the file that was not instantly restored or wait until the repopulation work is complete and the retry the command.

ORA-45903: catalog instantly restored data file copy *string* is not supported

Cause: This data file copy was instantly restored. Cataloging such file is not supported.

Action: Do not request to catalog instantly restored data file copy.

ORA-45904: instant restore of data file copy *string* is not supported

Cause: An attempt was made to create a data file copy in instant restore mode. This is not supported.

Action: Do not request to create data file copy in instant restore mode.

ORA-45905: deleting instantly restored data file *string* is not supported

Cause: This data file was instantly restored with the full option. Deleting such file is not supported.

Action: Do not request to delete instantly restored data file.

ORA-45906: moving instantly restored data file *string* is not supported

Cause: This data file was instantly restored. Moving such file is not supported.

Action: Do not request to move instantly restored data file.

ORA-45907: instant restore of data file *string* failed

Cause: During an instant restore, it was not possible to initialize the destination data file. There might be other messages on the error stack or alert log or trace file that indicate the specific reason for the failure. One common reason for this message is that the instant restore feature is disabled in this database.

Action: Check the other messages. If the situation cannot be resolved then request a regular, not instant, restore.

ORA-46000 to ORA-46342

ORA-46000: Invalid option to enable Extensible Data Security

Cause: Input value was not a valid option to enable XDS.

Action: Use a valid option to enable XDS.

ORA-46001: *string* is not valid for Extensible Data Security policies

Cause: An illegal argument value was used with DBMS_RLS to enable XDS.

Action: Use DBMS_XDS to enable XDS.

ORA-46002: Privilege "*string*" is not valid in Data Security Document for "*string*"

Cause: An invalid privilege was specified in the Data Security Document.

Action: Correct the privilege element in the document.

ORA-46003: Column "*string*" is not valid in Data Security Document for "*string*"

Cause: An invalid column was specified in the Data Security Document.

Action: Correct the column element in the document.

ORA-46004: Predicate "*string*" is not valid in Data Security Document

Cause: An invalid predicate was specified in the Data Security Document.

Action: Correct the predicate in the document.

ORA-46005: Document not found. Fix schema location.

Cause: CreateResource failed or an invalid schema location was specified.

Action: If the resource is in resource view, fix the schema location. Otherwise, consult create resource documentation.

ORA-46006: Cannot mix VPD column and Fusion column security policies

Cause: The object is protected by both VPD column security and Fusion column security policies.

Action: Disable or drop either the VPD or Fusion column policies.

ORA-46007: No colName foreignKey for inheritedFrom element "*string*".

Cause: No colName foreignKey was specified for an inheritedFrom element in the DataSecurity policy document.

Action: Correct the inheritedFrom element. At least one of the foreignKey elements of an inheritedFrom element must be specified by means of a colName element.

ORA-46008: The memberEvaluationRule in instanceSet "*string*" is too long.

Cause: The specified length for the memberEvaluationRule element of the instanceSet element in the DataSecurity policy document was greater than 4000.

Action: Limit the length of the memberEvaluationRule in the instanceSet to 4000.

ORA-46009: The "when" predicate of inheritedFrom "string" is too long.

Cause: The specified length for the "when" predicate element of the inheritedFrom element in the DataSecurity policy document was greater than 4000.

Action: Limit the length of the "when" predicate of the inheritedFrom element to 4000.

ORA-46010: The colValue of foreignKey of inheritedFrom "string" is too long.

Cause: The specified length for the colValue element of the foreignKey element of the inheritedFrom element in the DataSecurity policy document was greater than 32767.

Action: Limit the length of the colValue element of foreignKey element of inheritedFrom element to 32767.

ORA-46011: The value of the "selectPrivilege" element is too long.

Cause: The specified length for the selectPrivilege element in the DataSecurity policy document was greater than 32767.

Action: Limit the length of the selectPrivilege element to 32767.

ORA-46012: The value of the "privilege" element is too long.

Cause: The specified length for the privilege element of the attributeSec element in the DataSecurity policy document was greater than 32767.

Action: Limit the length of the privilege element to 32767.

ORA-46013: The value of the "aclDirectory" element is too long.

Cause: The specified length for the aclDirectory element of the acls element in the DataSecurity policy document was greater than 32767.

Action: Limit the length of the aclDirectory element to 32767.

ORA-46014: The value of the "aclFile" element is too long.

Cause: The specified length for the aclFile element of the aclFiles element in the DataSecurity policy document was greater than 32767.

Action: Limit the length of the aclFile element to 32767.

ORA-46015: The value of the "paramDatatype" element is too long.

Cause: The specified length for the paramDatatype element of the instanceSet element in the DataSecurity policy document was greater than 100.

Action: Limit the length of the paramDatatype element to 100.

ORA-46016: Number of columns of foreignKey does not match primaryKey.

Cause: The number of column elements within the foreignKey element did not match the number of column elements within the primaryKey element of the inheritedFrom element in the DataSecurity policy document. The column elements of foreignKey may be specified using either colName or colValue elements. The column elements of primaryKey may be specified using only colName elements.

Action: Ensure that the number of columns of foreignKey matches the number of columns of primaryKey.

ORA-46017: The OBJECT_ID is not valid.

Cause: The PL/SQL API DBMS_XDSUTL.INVALIDATE_DSD_CACHE was called with an invalid OBJECT_ID.

Action: Change the length of the OBJECT_ID passed into the PL/SQL API DBMS_XDSUTL.INVALIDATE_DSD_CACHE to 32, and ensure that its value matches exactly with the XMLRef object identifier of an existing DataSecurity document within the XDB repository.

ORA-46018: XDB object ID of DataSecurity document "*string*" was not found.

Cause: The XDB object ID corresponding to the DataSecurity document path (shown in the error message) was not found. Note that the error message is limited to displaying only the first 256 characters of the DataSecurity document's path.

Action: Resolve the error shown in the previous error frame.

ORA-46050: Triton security internal error.

Cause: This is a Triton security internal error.

Action: None

ORA-46051: Invalid XS user specified

Cause: An invalid extensible security user was specified.

Action: Check the user name and execute the function or procedure again.

ORA-46052: Invalid Session ID specified

Cause: An invalid extensible security session ID was specified.

Action: Check the session ID and execute the function or procedure again.

ORA-46053: Invalid Cookie specified

Cause: An invalid extensible security session cookie was specified.

Action: Check the session cookie and execute the function or procedure again.

ORA-46054: Invalid Namespace specified

Cause: An invalid extensible security application namespace was specified.

Action: Check the namespace and execute the function or procedure again.

ORA-46055: Invalid Role specified

Cause: An invalid extensible security role was specified.

Action: Check the role and execute the function or procedure again.

ORA-46056: Invalid Namespace or Attribute specified

Cause: An invalid extensible security application namespace or attribute was specified.

Action: Check the namespace and attribute, and execute the function or procedure again.

ORA-46057: Namespace already exists

Cause: The specified extensible security application namespace was already in existence.

Action: Execute the function or procedure with a different namespace.

ORA-46058: Invalid attribute specified

Cause: An invalid extensible security application namespace attribute was specified.

Action: Check the attribute, and execute the function or procedure.

ORA-46059: Invalid ACL identifier specified

Cause: The specified ACL identifier is invalid.

Action: Check the ACL identifier, and execute the function or procedure again with a valid ACL ID.

ORA-46060: Username not specified

Cause: Extensible security Username was not specified.

Action: Execute the function or procedure with a username.

ORA-46061: Session ID not specified

Cause: Extensible security Session ID was not specified.

Action: Execute the function or procedure with a session ID.

ORA-46062: Namespace not specified

Cause: Extensible security Application namespace was not specified.

Action: Execute the function or procedure with a namespace.

ORA-46063: Not attached to XS session

Cause: Not attached to an Extensible security session.

Action: Attach to a XS session and execute the function or procedure.

ORA-46064: Attribute name not specified

Cause: Extensible security Application namespace attribute name was not specified.

Action: Execute the function or procedure with an attribute name.

ORA-46065: Attribute value not specified

Cause: Extensible security Application namespace attribute value was not specified.

Action: Execute the function or procedure with an attribute value.

ORA-46066: Inactivity Timeout not specified

Cause: Extensible security session inactivity timeout was not specified.

Action: Execute the function or procedure with an inactivity timeout value.

ORA-46067: Cookie not specified

Cause: Extensible security session cookie was not specified.

Action: Execute the function or procedure with a cookie value.

ORA-46068: Role not specified

Cause: Extensible security Role was not specified.

Action: Execute the function or procedure with a Role value.

ORA-46070: Insufficient privileges

Cause: An attempt was made to execute an Extensible security session function or procedure without the appropriate privilege.

Action: Ask the administrator to perform the operation or to grant the appropriate privilege.

ORA-46071: Error occurred while executing the event handler

Cause: An error or exception was returned by the error handling function invoked as part of the current operation.

Action: Check the trace files to identify the source of the error in the event handling function. Attempt the operation again after the error has been resolved.

ORA-46072: Column width too small

Cause: The size of the column or variable used to store the output of this function or procedure is too small.

Action: Increase the size of the column or variable and try again.

ORA-46073: Cookie already in use by another session

Cause: The specified Extensible security session cookie was used by another Extensible security session.

Action: Execute the function or procedure with a different cookie.

ORA-46074: session ID mismatch

Cause: The specified session ID does not match the attached session ID.

Action: Execute the function or procedure without a session ID or with a matching attached session.

ORA-46075: Already attached to a lightweight user session

Cause: The current database session is already attached to a lightweight user session.

Action: Detach from the current lightweight user session before attaching to the new lightweight user session.

ORA-46076: The specified name string is too long

Cause: The length of the name is longer than allowable limits.

Action: Please try again with a new name with a length smaller than the allowable length. Please refer to the documentation to identify the maximum name length for the current operation.

ORA-46077: Length of value too large

Cause: The specified attribute value is too large.

Action: Execute the function or procedure again with a smaller attribute value.

ORA-46078: Invalid event type specified

Cause: The event type specified is invalid.

Action: Reattempt the operation with an invalid event type.

ORA-46080: User status is currently inactive

Cause: User was marked inactive.

Action: Change status in enterprise directory to active and try again.

ORA-46081: User's password has expired

Cause: User password was expired.

Action: Change the user's password and update status to active.

ORA-46082: User's account was locked

Cause: The user's account is locked.

Action: Update user's status to Active in Enterprise Directory and try again.

ORA-46083: Cannot create system dynamic role

Cause: An attempt was made to create system dynamic roles.

Action: Attempt the operation without system attribute or system attribute set to FALSE.

ORA-46084: Cannot delete system seeded principals

Cause: An attempt was made to delete system seeded principals.

Action: Do not attempt to delete system seeded principals.

ORA-46085: Cannot modify system attribute in dynamic roles

Cause: An attempt was made to modify system attribute in dynamic roles.

Action: Attempt operation without modifying the value of system.

ORA-46086: Cannot detach from a direct-login XS session

Cause: An attempt was made to detach from an XS session created by a direct password login.

Action: To detach and destroy the XS session, logout of the DB session.

ORA-46087: Switching users not allowed for a proxy session

Cause: An attempt was made to switch users within a proxy session.

Action: Switch back to original user and try again.

ORA-46088: Principal already exists

Cause: The specified light weight principal was already in existence.

Action: Execute the function or procedure with a different name.

ORA-46089: Unsupported verifier type

Cause: This verifier was not currently supported.

Action: Execute again with a different verifier type.

ORA-46090: Requested event handler not registered for the event

Cause: An attempt was made to update or delete nonregistered event handler.

Action: Please verify event handler name.

ORA-46091: Requested event handler already registered for the event

Cause: An attempt was made to re-register an event handler.

Action: Please verify event handler name.

ORA-46092: Requested event handler does not exist

Cause: An attempt was made to register a nonexistent event handler.

Action: Please verify event handler name or create the event handler.

ORA-46093: Cannot destroy a direct-login XS session

Cause: An attempt was made to destroy an XS session created by a direct password login.

Action: To destroy the XS session, logout of the DB session.

ORA-46095: Invalid error code supplied

Cause: An error code with an illegal value was supplied.

Action: Use an error code from the range of valid values.

-
- ORA-46101: Circular definition for aggregate privilege *string* in security class *string***
Cause: Definition of an aggregate privilege contained itself.
Action: Fix the aggregate privilege definition.
- ORA-46102: Privilege *string* aggregated in security class *string* is not found**
Cause: Definition of an aggregate privilege contained a privilege that is not defined in this or parent security classes.
Action: Fix the aggregate privilege definition.
- ORA-46103: Circular definition for security class *string***
Cause: Security class definition inherited from itself through circular definition.
Action: Fix the security class definition.
- ORA-46104: Security class *string* cannot inherit from base security classes**
Cause: Definition of a security class specified an internal base security class as a parent security class.
Action: Remove the internal base security class from the "inherits-from" list.
- ORA-46105: Unable to load security class *string***
Cause: The specified security class did not exist.
Action: Create resource for the security class.
- ORA-46106: Missing parent security class for security class *string***
Cause: The specified security class did not have any parent security class.
Action: Add a parent security class using "inherits-from" tag.
- ORA-46107: Privilege *string* not found in the associated security classes**
Cause: The specified privilege did not exist in the security classes that were associated with the ACLs.
Action: Use a security class that contains the specified privilege.
- ORA-46108: Invalid security class targetNamespace or name.**
Cause: The security class targetNamespace attribute was either null or was longer than 4000 characters. Or, the security class name attribute was either null or was longer than 1024 characters.
Action: Provide valid targetNamespace and name attributes.
- ORA-46109: Duplicate definition for privilege *string* in security class *string*.**
Cause: The privilege name in the security class was previously defined in another security class.
Action: Provide a unique name for the privilege.
- ORA-46112: Duplicate security class name *string* under targetnamespace *string***
Cause: The security class name under the targetnamespace was also used for another security class.
Action: Provide a unique name for the security class.
- ORA-46250: Invalid value for argument '*string*'**
Cause: Input value was not valid for the procedure.
Action: Use a valid option.
- ORA-46251: Value for argument '*string*' out of range**

-
- Cause:** Input value was out of range.
Action: Use a value within allowed range.
- ORA-46252: Cannot complete the operation, overlapping job already exists**
Cause: Cleanup job already existed which spanned the given audit trail type.
Action: Drop the existing job.
- ORA-46253: Cannot complete the operation, overlapping property already exists**
Cause: The property already exists which spans the given audit trail type.
Action: Clear the existing property.
- ORA-46254: 'string' already exists**
Cause: The value being set already existed.
Action: Delete the existing entry.
- ORA-46255: Incorrect job name specified**
Cause: The job did not exist or was not created by DBMS_AUDIT_MGMT package.
Action: Create the job using DBMS_AUDIT_MGMT package.
- ORA-46256: Internal error: Audit Table not partitioned**
Cause: Invalid operation on a non partitioned table.
Action: Contact Oracle Support Services.
- ORA-46257: Property 'string' cannot be cleared**
Cause: The property could not be cleared.
Action: None. The property can only be set or reset.
- ORA-46258: Cleanup not initialized for the audit trail**
Cause: DBMS_AUDIT_MGMT.INIT_CLEANUP was not called for the erroring audit trail.
Action: Invoke the procedure, DBMS_AUDIT_MGMT.INIT_CLEANUP.
- ORA-46260: Error during audit trail cleanup**
Cause: The audit trail cleanup operation could not be completed.
Action: Check the UNIX error number for a possible operating system error. If there is no error, contact Oracle Support Services.
- ORA-46261: Error during audit trail cleanup, internal error**
Cause: The audit trail cleanup could not be completed because of an internal error.
Action: Contact Oracle Support Services.
- ORA-46262: Audit table(s) cannot be moved to 'string' tablespace**
Cause: The tablespace was either unavailable or did not have enough space to accommodate the audit table being moved.
Action: Make sure that the tablespace is online and has enough space for the audit tables being moved.
- ORA-46263: The audit trail is already initialized for cleanup**
Cause: DBMS_AUDIT_MGMT.INIT_CLEANUP was already invoked for the audit trail type.

Action: None

ORA-46264: Error during DBMS_AUDIT_MGMT operation

Cause: Could not complete the DBMS_AUDIT_MGMT operation.

Action: Check the PL/SQL error stack and trace files for a possible error. Fix the cause and retry the operation. If the error is internal or if there is no error, contact Oracle Support Services.

ORA-46265: Subset of audit trail is already initialized

Cause: Audit Trail was initialized which spans the given audit trail type.

Action: Use DBMS_AUDIT_MGMT.DEINIT_CLEANUP to deinitialize conflicting audit trail types.

ORA-46266: Missing value for argument '*string*' in Oracle RAC enabled database

Cause: The DBMS_AUDIT_MGMT API was executed in an Oracle RAC enabled database and AUDIT_TRAIL_TYPE was one of AUDIT_TRAIL_OS or AUDIT_TRAIL_XML. But, Oracle RAC instance number for which DBMS_AUDIT_MGMT API was run, was not supplied.

Action: Input a valid Oracle RAC instance number for which the configuration must be done.

ORA-46267: Insufficient space in '*string*' tablespace, cannot complete operation

Cause: Could not complete the operation because the DBMS_AUDIT_MGMT API involved movement of one or more audit tables and there was not enough space in the destination tablespace.

Action: Turn on tracing using DBMS_AUDIT_MGMT.SET_DEBUG_LEVEL to find the amount of space required. Then, allocate that space in the destination tablespace, even if destination tablespace datafile has AUTOEXTEND option turned on. And then, retry the operation.

ORA-46268: Conflicting operation on audit table(s)

Cause: Audit tables were being operated by more than one DBMS_AUDIT_MGMT API from different sessions. The simultaneous execution of the following API with one another and with itself can cause the conflict: INIT_CLEANUP, DEINIT_CLEANUP, SET_AUDIT_TRAIL_LOCATION and MOVE_DBAUDIT_TABLES.

Action: Wait until the execution of one of the API's completes and try executing the API again.

ORA-46269: Conflicting operation on audit files

Cause: Audit files were being operated by more than one DBMS_AUDIT_MGMT API from different sessions. The simultaneous execution of the CLEAN_AUDIT_TRAIL API with itself can cause the conflict.

Action: Wait until the execution of one of the API's complete and try executing the API again.

ORA-46271: Error during DBMS_AUDIT_MGMT operation; database I/O suspended

Cause: An I/O attempt occurred during DBMS_AUDIT_MGMT operation and the database I/O was suspended.

Action: Retry the operation after resuming database I/O suspension. If database I/O is not suspended, contact Oracle Support Services.

ORA-46272: Subset of audit trail is already deinitialized

Cause: Audit trail was deinitialized which spans the given audit trail type.

Action: Use DBMS_AUDIT_MGMT.INIT_CLEANUP to initialize conflicting audit trail types.

ORA-46340: Command cannot have both BY <user-list> and IN SESSION <session-information> clauses together

Cause: BY <user-list> clause was supplied with IN SESSION <session-information> clause in the command.

Action: Use either BY <user-list> or IN SESSION <session-information> clause.

ORA-46341: ALL STATEMENTS option cannot be supplied with BY SESSION clause

Cause: An attempt was made to use ALL STATEMENTS audit option with BY SESSION clause. ALL STATEMENTS audit option can be configured with BY ACCESS only.

Action: Specify BY ACCESS instead of BY SESSION.

ORA-46342: NOAUDIT command cannot be executed with IN SESSION clause

Cause: An attempt was made to use IN SESSION <session-information> clause in NOAUDIT command.

Action: None

ORA-47000 to ORA-47999

ORA-47000: Factor Type *string* already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47001: Factor Type *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47002: error creating Factor Type *string, string*

Cause: An unexpected error occurred creating the factor type

Action: Please review the definition and retry the operation

ORA-47003: error deleting Factor Type *string, string*

Cause: An unexpected error occurred deleting the factor type

Action: Please review the definition and retry the operation

ORA-47004: error updating Factor Type *string, string*

Cause: An unexpected error occurred updating the factor type

Action: Please review the definition and retry the operation

ORA-47005: error renaming Factor Type *string, string*

Cause: An unexpected error occurred renaming the factor type

Action: Please review the definition and retry the operation

ORA-47020: Factor *string* already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47021: Factor *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47022: error creating Factor *string, string*

Cause: An unexpected error occurred creating the factor

Action: Please review the definition for accuracy and retry the operation

ORA-47023: error deleting Factor *string, string*

Cause: An unexpected error occurred deleting the factor

-
- Action:** Please review the definition for accuracy and retry the operation
- ORA-47024: error updating Factor *string*, *string***
Cause: An unexpected error occurred updating the factor
Action: Please review the definition for accuracy and retry the operation
- ORA-47025: Factor Link already exists for *string* and *string***
Cause: The object with this name exists already
Action: Choose a unique object name and retry the operation
- ORA-47026: error creating Factor Link for *string* and *string*, *string***
Cause: An unexpected error occurred creating the factor link
Action: Please review the definition for accuracy and retry the operation
- ORA-47027: Factor Link does not exist for *string* and *string***
Cause: The factor link referenced does not exist
Action: Please review the definition for accuracy and retry the operation
- ORA-47028: error deleting Factor Link for *string* and *string*, *string***
Cause: An unexpected error occurred deleting the factor link
Action: Please review the definition for accuracy and retry the operation
- ORA-47029: Factor type *string* is used by one or more factors.**
Cause: The specified factor type was used by existing factor(s).
Action: Remove the dependent factors and retry the operation.
- ORA-47030: Factor *string* is referred by one or more factor links.**
Cause: The specified factor was referred by existing factor link(s).
Action: Remove the dependent factor links and retry the operation.
- ORA-47031: Factor *string* is used by one or more policy factors.**
Cause: The specified factor was used by existing policy factor(s).
Action: Remove the dependent policy factors and retry the operation.
- ORA-47032: Factor *string* is referred by one or more identities.**
Cause: The specified factor was referred by existing identities.
Action: Remove the dependent identities and retry the operation.
- ORA-47033: Factor link for *string* and *string* is referred by one or more identity maps.**
Cause: The specified factor link was referred by existing identity maps.
Action: Remove the dependent identity maps and retry the operation.
- ORA-47040: Identity *string* for Factor *string* already defined**
Cause: The object with this name exists already
Action: Choose a unique object name and retry the operation
- ORA-47041: Identity *string* for Factor *string* not found**
Cause: The object being requested does not exist
Action: Choose an object name that exists and retry the operation

-
- ORA-47042: error creating Identity *string* for Factor *string*, *string***
Cause: An unexpected error occurred creating the identity
Action: Please review the definition for accuracy and retry the operation
- ORA-47043: error deleting Identity *string* for Factor *string*, *string***
Cause: An unexpected error occurred deleting the identity
Action: Please review the definition for accuracy and retry the operation
- ORA-47044: error updating Identity *string* for Factor *string*, *string***
Cause: An unexpected error occurred updating the identity
Action: Please review the definition for accuracy and retry the operation
- ORA-47045: Identity *string* for Factor *string* is used by one or more identity maps.**
Cause: The specified identity was used by exiting identity map(s).
Action: Remove the dependent identity maps and retry the operation.
- ORA-47046: Identity *string* for Factor *string* is referred by one or more policy labels.**
Cause: The specified identity was used by exiting policy label(s).
Action: Remove the dependent policy labels and retry the operation.
- ORA-47060: Identity map for Identity *string.string*, Factor Link *string*, *string* already defined for operation *string* on *string***
Cause: The object with this name exists already
Action: Choose a unique object name and retry the operation
- ORA-47061: Identity map for Identity *string.string*, Factor Link *string*, *string* not found for operation *string* on *string***
Cause: The object being requested does not exist
Action: Choose an object name that exists and retry the operation
- ORA-47062: error creating Identity map for Identity *string.string*, Factor Link *string*, *string* already defined for operation *string* on *string***
Cause: The object with this name exists already
Action: Choose a unique object name and retry the operation
- ORA-47063: error deleting Identity map for Identity *string.string*, Factor Link *string*, *string* already defined for operation *string* on *string***
Cause: The object with this name exists already
Action: Choose a unique object name and retry the operation
- ORA-47080: code *string* already defined in group *string***
Cause: The object with this name exists already
Action: Choose a unique object name and retry the operation
- ORA-47081: code *string* not found in group *string***
Cause: The object being requested does not exist
Action: Choose an object name that exists and retry the operation
- ORA-47100: Command Rule *string* already defined for *string.string***
Cause: The object with this name exists already
Action: Choose a unique object name and retry the operation

-
- ORA-47101: Command Rule *string* not found for *string.string***
Cause: The object being requested does not exist
Action: Choose an object name that exists and retry the operation
- ORA-47102: error creating Command Rule *string* for *string.string, string***
Cause: An unexpected error occurred creating the command rule
Action: Please review the definition for accuracy and retry the operation
- ORA-47103: error deleting Command Rule *string* for *string.string, string***
Cause: An unexpected error occurred deleting the command rule
Action: Please review the definition for accuracy and retry the operation
- ORA-47104: error updating Command Rule *string* for *string.string, string***
Cause: An unexpected error occurred updating the command rule
Action: Please review the definition for accuracy and retry the operation
- ORA-47105: invalid object owner *string* for command *string***
Cause: The object owner is invalid for this command
Action: Choose an object owner other than SYS or a wildcard for this command
- ORA-47120: Document *string* already defined**
Cause: The object with this name exists already
Action: Choose a unique object name and retry the operation
- ORA-47121: Document *string* not found**
Cause: The object being requested does not exist
Action: Choose an object name that exists and retry the operation
- ORA-47140: Factor expression *string* already defined**
Cause: The object with this name exists already
Action: Choose a unique object name and retry the operation
- ORA-47141: Factor expression *string* not found**
Cause: The object being requested does not exist
Action: Choose an object name that exists and retry the operation
- ORA-47160: Factor link *string* already defined**
Cause: The object with this name exists already
Action: Choose a unique object name and retry the operation
- ORA-47161: Factor link *string* not found**
Cause: The object being requested does not exist
Action: Choose an object name that exists and retry the operation
- ORA-47180: Integration Policy for OLS Policy *string* is already defined**
Cause: The object with this name exists already
Action: Choose a unique object name and retry the operation
- ORA-47181: Integration Policy for OLS Policy *string* not found**
Cause: The object being requested does not exist
Action: Choose an object name that exists and retry the operation

-
- ORA-47182: Label algorithm *string* not found**
Cause: The object being requested does not exist
Action: Choose an object name that exists and retry the operation
- ORA-47183: error creating Integration Policy for OLS Policy *string, string***
Cause: An unexpected error occurred creating the integration policy
Action: Please review the definition for accuracy and retry the operation
- ORA-47184: error updating Integration Policy for OLS Policy *string, string***
Cause: An unexpected error occurred updating the integration policy
Action: Please review the definition for accuracy and retry the operation
- ORA-47185: error deleting Integration Policy for OLS Policy *string, string***
Cause: An unexpected error occurred deleting the integration policy
Action: Please review the definition for accuracy and retry the operation
- ORA-47200: Integration Policy Factor already defined for Factor *string* and Policy *string***
Cause: The object with this name exists already
Action: Choose a unique object name and retry the operation
- ORA-47201: Integration Policy Factor not found for Factor *string* and Policy *string***
Cause: The object being requested does not exist
Action: Choose an object name that exists and retry the operation
- ORA-47202: error creating Integration Policy Factor for factor *string* and policy *string, string***
Cause: An unexpected error occurred creating the integration policy factor
Action: Please review the definition for accuracy and retry the operation
- ORA-47203: error deleting Integration Policy Factor for factor *string* and policy *string, string***
Cause: An unexpected error occurred deleting the integration policy factor
Action: Please review the definition for accuracy and retry the operation
- ORA-47220: Label *string* for Identity *string.string* under OLS Policy *string* already defined**
Cause: The object with this name exists already
Action: Choose a unique object name and retry the operation
- ORA-47221: Label *string* for Identity *string.string* under OLS Policy *string* not found**
Cause: The object being requested does not exist
Action: Choose an object name that exists and retry the operation
- ORA-47222: error creating Label *string* for Identity *string.string* under OLS Policy *string, string***
Cause: An unexpected error occurred creating the identity label
Action: Please review the definition for accuracy and retry the operation
- ORA-47223: error deleting Label *string* for Identity *string.string* under OLS Policy *string, string***

-
- Cause:** An unexpected error occurred deleting the identity label
Action: Please review the definition for accuracy and retry the operation
- ORA-47240: Realm *string* already defined**
Cause: The object with this name exists already
Action: Choose a unique object name and retry the operation
- ORA-47241: Realm *string* not found**
Cause: The object being requested does not exist
Action: Choose an object name that exists and retry the operation
- ORA-47242: error creating Realm *string, string***
Cause: An unexpected error occurred creating the realm
Action: Please review the definition for accuracy and retry the operation
- ORA-47243: error deleting Realm *string, string***
Cause: An unexpected error occurred deleting the realm
Action: Please review the definition for accuracy and retry the operation
- ORA-47244: error updating Realm *string, string***
Cause: An unexpected error occurred updating the realm
Action: Please review the definition for accuracy and retry the operation
- ORA-47245: error renaming Realm *string, string***
Cause: An unexpected error occurred renaming the realm
Action: Please review the definition for accuracy and retry the operation
- ORA-47260: Realm Authorization to *string* for Realm *string* already defined**
Cause: The object with this name exists already
Action: Choose a unique object name and retry the operation
- ORA-47261: Realm Authorization to *string* for Realm *string* not found**
Cause: The object being requested does not exist
Action: Choose an object name that exists and retry the operation
- ORA-47262: error creating Realm Authorization to *string* for Realm *string, string***
Cause: An unexpected error occurred creating the realm authorization
Action: Please review the definition for accuracy and retry the operation
- ORA-47263: error deleting Realm Authorization to *string* for Realm *string, string***
Cause: An unexpected error occurred deleting the realm authorization
Action: Please review the definition for accuracy and retry the operation
- ORA-47264: error updating Realm Authorization to *string* for Realm *string, string***
Cause: An unexpected error occurred updating the realm authorization
Action: Please review the definition for accuracy and retry the operation
- ORA-47280: Realm Object *string,string,string* already defined in Realm *string***
Cause: The object with this name exists already
Action: Choose a unique object name and retry the operation

-
- ORA-47281: Realm Object *string,string,string* not found in Realm *string***
Cause: The object being requested does not exist
Action: Choose an object name that exists and retry the operation
- ORA-47282: error adding Realm Object *string,string,string* to Realm *string, string***
Cause: An unexpected error occurred creating the realm object
Action: Please review the definition for accuracy and retry the operation
- ORA-47283: error deleting Realm Object *string,string,string* from Realm *string, string***
Cause: An unexpected error occurred deleting the realm object
Action: Please review the definition for accuracy and retry the operation
- ORA-47284: error adding Realm Object *string,string, string* is not a valid object type**
Cause: The specified object type is not valid.
Action: Enter a valid object type for the specified object name, or enter "%" and all objects with the specified name and the specified owner will be added to the realm.
- ORA-47290: error creating VPD policy for Realm *string, string***
Cause: An unexpected error occurred creating the VPD policy
Action: Please review the definition for accuracy and retry the operation
- ORA-47300: Role already *string* defined**
Cause: The object with this name exists already
Action: Choose a unique object name and retry the operation
- ORA-47301: Role *string* not found**
Cause: The object being requested does not exist
Action: Choose an object name that exists and retry the operation
- ORA-47302: error creating Role *string, string***
Cause: An unexpected error occurred creating the role
Action: Please review the definition for accuracy and retry the operation
- ORA-47303: error deleting Role *string, string***
Cause: An unexpected error occurred deleting the role
Action: Please review the definition for accuracy and retry the operation
- ORA-47304: error updating Role *string, string***
Cause: An unexpected error occurred updating the role
Action: Please review the definition for accuracy and retry the operation
- ORA-47305: Rule Set violation on *string (string)***
Cause: An operation that was attempted failed due to a rule set violation
Action: Ensure you have sufficient privileges for this operation retry the operation
- ORA-47320: Rule *string* already defined**
Cause: The object with this name exists already
Action: Choose a unique object name and retry the operation

ORA-47321: Rule *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47322: error creating Rule *string*, *string*

Cause: An unexpected error occurred creating the rule

Action: Please review the definition for accuracy and retry the operation

ORA-47323: error deleting Rule *string*, *string*

Cause: An unexpected error occurred deleting the rule

Action: Please review the definition for accuracy and retry the operation

ORA-47324: error updating Rule *string*, *string*

Cause: An unexpected error occurred updating the rule

Action: Please review the definition for accuracy and retry the operation

ORA-47325: Rule *string* is used by one or more rule sets.

Cause: The specified rule was used by existing rule set(s).

Action: Remove the dependent rule sets and retry the operation.

ORA-47340: Rule Set *string* already defined

Cause: The object with this name exists already

Action: Choose a unique object name and retry the operation

ORA-47341: Rule Set *string* not found

Cause: The object being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47342: error creating Rule Set *string*, *string*

Cause: An unexpected error occurred creating the rule set

Action: Please review the definition for accuracy and retry the operation

ORA-47343: error deleting Rule Set *string*, *string*

Cause: An unexpected error occurred deleting the rule set

Action: Please review the definition for accuracy and retry the operation

ORA-47344: error updating Rule Set *string*, *string*

Cause: An unexpected error occurred updating the rule set

Action: Please review the definition for accuracy and retry the operation

ORA-47345: Rule set *string* is used by one or more realm authorizations.

Cause: The specified rule set was used by existing realm authorization(s).

Action: Remove the dependent realm authorizations and retry the operation.

ORA-47346: Rule set *string* is used by one or more command rules.

Cause: The specified rule set was used by existing command rule(s).

Action: Remove the dependent command rules and retry the operation.

ORA-47347: Rule set *string* is used by one or more secure application roles.

Cause: The specified rule set was used by existing secure application role(s).

Action: Remove the dependent secure application roles and retry the operation.

-
- ORA-47348: Rule set *string* is used by one or more factors.**
Cause: The specified rule set was used by existing factor(s).
Action: Remove the dependent factors and retry the operation.
- ORA-47360: Rule *string* already added to Rule Set *string***
Cause: The object with this name exists already
Action: Choose a unique object name and retry the operation
- ORA-47361: Rule *string* not associated to Rule Set *string***
Cause: The rule specified is not associated to the rule set
Action: Please review the definition for accuracy and retry the operation
- ORA-47362: error adding Rule *string* to Rule Set *string*, *string***
Cause: An unexpected error occurred adding the rule to the rule set
Action: Please review the definition for accuracy and retry the operation
- ORA-47363: error deleting Rule *string* from Rule Set *string*, *string***
Cause: An unexpected error occurred deleting the rule to the rule set
Action: Please review the definition for accuracy and retry the operation
- ORA-47381: OLS Policy *string* not found**
Cause: The object being requested does not exist
Action: Choose an object name that exists and retry the operation
- ORA-47382: OLS Policy Label *string* not found for policy *string***
Cause: The object being requested does not exist
Action: Choose an object name that exists and retry the operation
- ORA-47383: error capturing the session state information**
Cause: An internal error occurred capture the session state
Action: Please retry the operation if possible
- ORA-47390: failed to audit event, *string***
Cause: An internal error auditing the operation
Action: Please retry the operation if possible
- ORA-47391: attempt to set Factor *string* violates Rule Set *string***
Cause: An attempt to set the factor violated the associated rule set
Action: Please check to ensure you have the ability to set the factor
- ORA-47392: Factor *string* cannot be set**
Cause: The attempt to set the factor is not allowed
Action: This factor cannot be set so there is no corrective action
- ORA-47393: Factor *string* value not allowed**
Cause: The value being assigned to the factor is not allowed
Action: None
- ORA-47394: Factor assignment rule set not defined**
Cause: The rule set being associated to the factor does not exist
Action: Please review the definition for accuracy and retry the operation

-
- ORA-47395: error returned by Factor *string* evaluation expression *string***
Cause: The factor retrieval method resulted in an error
Action: Please review the retrieval method definition for accuracy and correct it as required
- ORA-47396: error returned by Factor *string* validation expression *string***
Cause: The factor retrieval method resulted in an invalid value based on
Action: Please review the factor definition and correct it as required
- ORA-47397: incorrect identified by value for Factor *string***
Cause: The factor identified by value is incorrect
Action: Please review the factor definition and correct it as required
- ORA-47398: multiple identities defined for Factor *string***
Cause: The factor has duplicate identities defined
Action: Please review the factor definition and correct it as required
- ORA-47399: incorrect labeled by value for Factor *string***
Cause: The factor labeled by value is incorrect
Action: Please review the factor definition and correct it as required
- ORA-47400: Command Rule violation for *string* on *string***
Cause: An operation that was attempted failed due to a command rule violation
Action: Ensure you have sufficient privileges for this operation retry the operation
- ORA-47401: Realm violation for *string* on *string.string***
Cause: An operation that was attempted failed due to a realm protection
Action: Ensure you have sufficient privileges for this operation retry the operation
- ORA-47402: incorrect evaluation options value for Factor *string***
Cause: The factor evaluations options value is incorrect
Action: Please review the factor definition and correct it as required
- ORA-47403: NULL returned by Factor *string* evaluation expression *string***
Cause: The factor evaluated to a NULL value
Action: Please review the factor definition and correct it as required
- ORA-47404: NULL trust level for Factor *string***
Cause: The factor has a NULL trust level
Action: Please review the factor definition and correct it as required
- ORA-47405: negative trust level for Factor *string***
Cause: The factor has a negative trust level
Action: Please review the factor definition and correct it as required
- ORA-47406: ALWAYS AUDIT option set for Factor *string***
Cause: The factor audit option is set to always audit
Action: No action required

ORA-47407: ALWAYS AUDIT option set for Rule Set *string*

Cause: The rule set audit option is set to always audit

Action: No action required

ORA-47408: Realm violation for the EXECUTE command

Cause: A realm violation has occurred for a realm-protected stored procedure.

Action: In order to invoke the realm-protected procedure, you must have GRANT privileges to execute the procedure, or you must be authorized to operate in the procedure's realm.

ORA-47409: Command Rule violation for the EXECUTE command

Cause: A command rule violation occurred when trying to perform the EXECUTE command for a stored procedure protected by a command rule.

Action: Ask the Database Vault administrator to perform the operation or remove the command rule for the protected stored procedure.

ORA-47410: Realm violation for *string* on *string*

Cause: An operation that was attempted failed with insufficient privileges due to an attempt to violate a Database Vault Realm security policy which is currently enabled and enforced.

Action: Ensure you have sufficient privileges for this operation and retry the operation.

ORA-47411: Cannot use *string* due to Oracle Database Vault policy.

Cause: An operation that was attempted failed because Database Vault policy currently prevents the related feature from being used.

Action: Ask the Database Vault administrator to allow the feature to be used.

ORA-47901: OLS policy not specified

Cause: An OLS policy name is required for this operation

Action: Specify a policy name and retry the operation

ORA-47902: OLS policy label not specified

Cause: An OLS policy label is required for this operation

Action: Specify a policy label and retry the operation

ORA-47903: OLS policy label *string* not found for policy *string*

Cause: The policy label being requested does not exist

Action: Choose an object name that exists and retry the operation

ORA-47904: OLS session label does not exist

Cause: The policy label specified does not exist

Action: Choose a valid policy label and retry the operation

ORA-47905: OLS policy label *string* is not allowed for policy *string*

Cause: The policy label specified is not valid for this policy

Action: Choose a valid policy label for this policy and retry the operation

ORA-47906: OLS policy label not specified for identity *string.string* under policy *string*

Cause: The policy label is required for this operation

-
- Action:** Choose a valid policy label for this policy and retry the operation
- ORA-47920: Authorization failed for user *string* to perform this operation**
Cause: The operation attempted is not allowed for this user
Action: Please ensure you have privileges to perform this operation
- ORA-47921: error adding host *string* to domain *string*, *string***
Cause: An error occurred adding the host specified to the domain specified
Action: Please review the host and domain definition and correct it as required
- ORA-47922: error removing host *string* to domain *string*, *string***
Cause: An error occurred removing the host specified to the domain specified
Action: Please review the host and domain definition and correct it as required
- ORA-47950: no value defined for required parameter *string***
Cause: The operation requires a value for this parameter
Action: Please specify the missing parameter and retry the operation
- ORA-47951: invalid input value or length for parameter '*string*'**
Cause: The value specified for this parameter is invalid or too large
Action: Please specify the a valid parameter and retry the operation
- ORA-47952: Oracle Data Pump authorization for Oracle Database Vault to *string* already exists**
Cause: Oracle Data Pump authorization for Oracle Database Vault was already granted to the given grantee.
Action: Choose a different grantee and retry the operation.
- ORA-47953: Oracle Data Pump authorization for Oracle Database Vault to *string* on schema *string* already exists**
Cause: Oracle Data Pump authorization for Oracle Database Vault on the given schema was already granted to the given grantee.
Action: Choose a different grantee or schema and retry the operation.
- ORA-47954: Oracle Data Pump authorization for Oracle Database Vault to *string* on object *string.string* already exists**
Cause: Oracle Data Pump authorization for Oracle Database Vault on the given object was already granted to the given grantee.
Action: Choose a different grantee or a different object and retry the operation.
- ORA-47955: Oracle Data Pump authorization for Oracle Database Vault to *string* is not found**
Cause: Oracle Data Pump authorization for Oracle Database Vault was not granted to the given user.
Action: Choose a user who has Oracle Data Pump authorization for Oracle Database Vault and retry the operation.
- ORA-47956: Oracle Data Pump authorization for Oracle Database Vault to *string* on schema *string* is not found**
Cause: Oracle Data Pump authorization for Oracle Database Vault was not granted to the given user on the given schema.
Action: Choose a different user or schema and retry the operation.

ORA-47957: Oracle Data Pump authorization for Oracle Database Vault to *string* on object *string.string* is not found

Cause: Oracle Data Pump authorization for Oracle Database Vault was not granted to the given user on the given object.

Action: Choose a different user or object and retry the operation.

ORA-47958: Running EXP with direct path option is disallowed when Oracle Database Vault is enabled.

Cause: While Oracle Database Vault was enabled, an attempt was made to run EXP with the 'direct=y' option.

Action: Change the option to 'direct=n' or disable Oracle Database Vault and retry the operation.

ORA-47961: Oracle Scheduler Job authorization for Oracle Database Vault to *string* already exists

Cause: Oracle Scheduler Job authorization for Oracle Database Vault was already granted to the given grantee.

Action: Choose a different grantee and retry the operation.

ORA-47962: Oracle Scheduler Job authorization for Oracle Database Vault to *string* on schema *string* already exists

Cause: Oracle Scheduler Job authorization for Oracle Database Vault on the given schema was already granted to the given grantee.

Action: Choose a different grantee or schema and retry the operation.

ORA-47963: Oracle Scheduler Job authorization for Oracle Database Vault to *string* is not found

Cause: Oracle Scheduler Job authorization for Oracle Database Vault was not granted to the given user.

Action: Choose a user who has Oracle Scheduler Job authorization for Oracle Database Vault and retry the operation.

ORA-47964: Oracle Scheduler Job authorization for Oracle Database Vault to *string* on schema *string* is not found

Cause: Oracle Scheduler Job authorization for Oracle Database Vault was not granted to the given user on the given schema.

Action: Choose a different user or schema and retry the operation.

ORA-47985: password same as or similar to user

Cause: The password specified similar to the user account name and therefore insecure

Action: Please specify the more complex password and retry the operation

ORA-47986: password length must be 8 characters or more

Cause: The password specified is too short and therefore insecure

Action: Please specify a password with more characters and retry the operation

ORA-47987: password is too simple

Cause: The password specified can be guessed based on dictionary terms and therefore insecure

Action: Please specify a password that is not based on dictionary terms and retry the operation

ORA-47988: password should contain at least one numeric and one alphabetic character

Cause: The password does not contain at least one numeric and one alphabetic character

Action: Please specify a password with at least one numeric and one alphabetic character and retry the operation

ORA-47989: password should differ by at least 3 characters

Cause: The password specified does not differ from the previous one by more than 3 characters

Action: Please specify a password that differs from the previous one by more than 3 characters and retry the operation

ORA-47994: Database Vault removal script must be run as SYS

Cause: The Database Vault removal script was not run as SYS.

Action: Run the Database Vault removal script as SYS.

ORA-47995: Database Vault must be linked off and disabled before removal

Cause: Database Vault was not linked off and disabled.

Action: Link Database Vault off and execute DBMS_MACADM.DISABLE_DV_CHECK as DV_OWNER.

ORA-47996: The RECYCLEBIN is turned on

Cause: The RECYCLEBIN was turned on.

Action: Turn off the RECYCLEBIN and then execute Database Vault Removal script.

ORA-47997: Database Vault protected schema does not exist

Cause: The Database Vault DVSYS protected schema did not exist.

Action: Contact Oracle Support Services for instructions.

ORA-47999: internal Database Vault error: *string* Error: *string*

Cause: An internal Database Vault framework error occurred.

Action: Contact Oracle Customer Support.

ORA-48001 to ORA-51705

ORA-48001: internal error code, arguments: [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*], [*string*]

Cause: This is the generic internal error number for program exceptions. This indicated that a process encountered an exceptional condition.

Action: Report as a bug - the first argument is the internal error number.

ORA-48002: thread terminated by fatal error

Cause: The thread was in an unrecoverable state.

Action: Examine the thread trace file for more information.

ORA-48003: out of process memory when trying to allocate *string* bytes
(*string*,*string*)

Cause: Operating system process private memory was exhausted.

Action: None

ORA-48004: unable to allocate *string* bytes of shared memory
("*string*", "*string*", "*string*", "*string*")

Cause: More shared memory is needed than was allocated in the shared pool.

Action: Reduce your use of shared memory or increase the amount of available shared memory.

ORA-48007: name is already used by an existing product type

Cause: An attempt was made to define a product type with the same name as an already defined product type.

Action: Use the already existing product type with the specified name, or use a different name for the product type.

ORA-48008: id is already used by an existing product type

Cause: An attempt was made to define a product type with the same id as an already defined product type.

Action: Choose a different name for the product type.

ORA-48100: error encountered when attempting to open a file

Cause: There was an error encountered when attempting to open a file with the ADR file interface.

Action: Check that the specified directory name, file name, and open options are valid.

-
- ORA-48101: error encountered when attempting to read a file** *[string]* *[string]*
[string]
Cause: There was an error encountered when attempting to read a file with the ADR file interface.
Action: Check the specified arguments to the read interface.
- ORA-48102: encountered the end-of-file when reading the file**
Cause: The ADR file interface encountered the end-of-file when reading the file.
Action: Handle the end of file condition.
- ORA-48103: error encountered when attempting to write a file** *[string]* *[string]*
[string]
Cause: There was an error encountered when attempting to write a file with the ADR file interface.
Action: Check the specified arguments to the write interface.
- ORA-48104: read mismatch on blocks requested and returned,** *[string]*, *[string]*
Cause: There was a mismatch between the number of blocks requested for reading and the number of blocks actually returned.
Action: Check the file to make sure there are no partial blocks.
- ORA-48105: write mismatch on blocks requested and returned,** *[string]*, *[string]*
Cause: There was a mismatch between the number of blocks requested for writing and the number of blocks actually written.
Action: Check that there is enough space left on the device to write the requested number of blocks.
- ORA-48106: error initializing the ADR *string* object**
Cause: There was an error encountered during the initialization of one of the ADR file objects.
Action: Check the validity of the specified directory name and file name.
- ORA-48107: invalid Bfile input,** *[string]*
Cause: An invalid Bfile was passed into the routine to convert the bfile into a file handle.
Action: Verify the contents of the specified Bfile.
- ORA-48108: invalid value given for the diagnostic_dest init.ora parameter**
Cause: The value given for the diagnostic_dest directory is not a valid directory. Either the directory does not exist or the process does not have read/write privileges on the directory.
Action: Use a value for diagnostic_dest that is a valid directory with the proper read and write privileges.
- ORA-48109: invalid lock mode for file descriptor,** *[string]*
Cause: The lock mode associated with the file descriptor was invalid in the context of the routine.
Action: Verify that a file is not trying to obtain multiple locks and that the file is holding a lock when attempting to release the lock.
- ORA-48110: error encountered while attempting to get a file lock** *[string]* *[string]*
Cause: There was an error encountered while trying to get a file lock.

-
- Action:** Check the state of the file and operating system.
- ORA-48111: error encountered while attempting to release a file lock [string]**
Cause: There was an error encountered while trying to release a file lock.
Action: Check the state of the file and operating system.
- ORA-48112: invalid flags for open file, string**
Cause: Invalid flags were passed in to the open file routine.
Action: Check to see if the flags are a valid combination.
- ORA-48113: unable to write to stream file because of out of space condition**
Cause: The system is unable to write the requested number of bytes to a stream file. This is due to an out of space condition. The additional information shows how many bytes were not written.
Action: Check that there is enough space left on the device to write the requested number of bytes.
- ORA-48114: error encountered when attempting to close a file**
Cause: There was an error encountered when attempting to close a file with the ADR file interface.
Action: Check the validity of the file descriptor.
- ORA-48115: error encountered while seeking a file position**
Cause: There was an error encountered while seeking a position in a file.
Action: Check that the requested file position falls within the file boundaries.
- ORA-48116: error encountered when attempting to create a directory [string]**
Cause: There was an error encountered when attempting to create a directory.
Action: Check the directory name.
- ORA-48117: error encountered when attempting to remove a directory [string]**
Cause: There was an error encountered when attempting to remove a directory.
Action: Check the directory name.
- ORA-48118: error encountered with list directory [string]**
Cause: There was an error with listing the elements of a directory.
Action: Check the state of the operating system.
- ORA-48119: error encountered when attempting to remove a file [string] [string]**
Cause: There was an error encountered when attempting to remove a file with the ADR file interface.
Action: Check the directory name and file name.
- ORA-48120: error encountered when attempting to retrieve the file size [string] [string]**
Cause: There was an error encountered when attempting to retrieve the file size with the ADR file interface.
Action: Check the directory name and file name.
- ORA-48121: error with opening the ADR stream file [string] [string]**
Cause: An error was encountered when attempting to open an ADR stream file.

Action: Check the rest of the error stack for details of the actual error that was encountered.

ORA-48122: error with opening the ADR block file [string] [string]

Cause: An error was encountered when attempting to open an ADR block file.

Action: Check the rest of the error stack for details of the actual error that was encountered.

ORA-48123: error encountered when attempting to flush a file

Cause: There was an error encountered when attempting to flush a file with the ADR file interface.

Action: Check the state of the file.

ORA-48124: device full encountered during write to a file

Cause: The device full error was encountered during the write to a file.

Action: Check the amount of free space on the device.

ORA-48125: illegal identifier length, argn:string, len:string, lim:string

Cause: An input identifier was passed in that has a length that is greater than the max length.

Action: Make sure the input identifier has a length that is less than the max length.

ORA-48126: attempting to create a file that already exists

Cause: The client attempted to create a file that already exists.

Action: Either remove the file or check if it is okay if the file already exists.

ORA-48127: attempting to open a file that does not exist

Cause: An attempt was made to open a file that does not exist.

Action: Either create the file or check why the file does not exist.

ORA-48128: opening of a symbolic link is disallowed

Cause: An error was encountered when attempting to open a file that is a symbolic link. Users are not allowed to open symbolic links.

Action: Check the specified file name.

ORA-48129: invalid input for the full path specification

Cause: Input was incorrectly specified for the full path specification, or the default extension may have been incorrectly specified. Or an empty string was passed in for the full path.

Action: Check that the full path string is non-NULL. If you want to specify a relative path from ADR Home for the full path specification, then use '<ADR_HOME>' instead of the actual path to ADR Home. For ADR Base, use '<ADR_BASE>'.

ORA-48130: invalid lock parameters for get file lock [string]

Cause: Invalid lock parameters passed in for the get file lock routine. The user must pass in file as the lock type. Or, there is a lock mode mismatch. Exclusive locks are not allowed in read-only mode, and shared locks are not allowed in write-only mode.

Action: Check that correct lock type is specified and that the correct lock mode is requested for the file given its open flags.

ORA-48131: error encountered when attempting to tell the file position

Cause: An error was encountered when attempting to tell the file position using the ADR file interface.

Action: Check the directory and file name of the file along with the open state.

ORA-48132: requested file lock is busy, [string] [string]

Cause: The requested file lock is busy because another process is holding the file lock.

Action: Try to get the file lock again at a later time.

ORA-48133: file descriptor has already been opened [string] [string]

Cause: The specified file descriptor has already been opened.

Action: Do not open a file that has previously been opened, or check your code to make sure you are cleaning up a file descriptor that is being reused correctly.

ORA-48134: invalid file descriptor state for operation, string, string, string

Cause: The state of the file descriptor was invalid for the requested operation. An example is that a file was opened for read, but a write operation to the file was requested.

Action: Check the state of the file descriptor and make sure it matches the operation.

ORA-48135: uninitialized file descriptor

Cause: The specified file descriptor is uninitialized.

Action: Make sure the file descriptor is initialized before passing it into the routine.

ORA-48136: directory already exists [string]

Cause: Operation failed because the specified directory already exists.

Action: Remove the directory or ignore this error.

ORA-48137: uninitialized file handle

Cause: The specified file handle is uninitialized.

Action: Make sure the file handle is initialized before passing it into the routine.

ORA-48138: invalid directory name input for client address

Cause: An invalid directory name was specified as part of the address path specification.

Action: Check that the directory name is non-NULL and that the directory name length does not exceed the maximum length.

ORA-48139: invalid input to ADR initialization routine

Cause: There was an invalid input to the ADR initialization routine.

Action: Check the length of the ADR base, product ID, and instance ID input arguments.

ORA-48140: the specified ADR Base directory does not exist [string]

Cause: The specified ADR Base Directory does not exist.

Action: Check that the specified ADR Base Directory is a valid path name and that the directory exists.

ORA-48141: error creating directory during ADR initialization [string]

-
- Cause:** Error encountered when creating a directory during the initialization of the ADR subsystem.
- Action:** Check the input arguments to the ADR initialization routine and the state of the operating system.
- ORA-48142: invalid permissions input for change permissions**
- Cause:** Invalid permissions passed into change permissions routine.
- Action:** Check the value of the permissions input.
- ORA-48143: error changing permissions for a file**
- Cause:** Error encountered while changing the permissions for a file
- Action:** Check the specified directory and file and the state of the operating system.
- ORA-48144: error encountered while performing standard file I/O**
- Cause:** Error encountered while performing standard file I/O
- Action:** Check the validity of standard in, out, and error.
- ORA-48145: invalid seek location, [string], [string]**
- Cause:** Invalid seek location specified for routine.
- Action:** Check the validity of specified seek location.
- ORA-48146: missing read, write, or exec permission on directory during ADR initialization [string] [string]**
- Cause:** Error encountered when checking if the process has read, write, and exec privileges on directories needed by the ADR subsystem. This error occurs during the initialization of the ADR subsystem.
- Action:** Check the input arguments to the ADR initialization routine and the state of the operating system. Ensure that the user has the proper permissions on the ADR directories.
- ORA-48147: invalid home location specification for ADR, [string], [string], [string]**
- Cause:** Invalid read or write home location specification for ADR.
- Action:** An invalid home was specified for the ADR Read or Write Home location.
- ORA-48148: error encountered when attempting to move a file**
- Cause:** There was an error encountered when attempting to move a file with the ADR file interface.
- Action:** Check the directory name and file name.
- ORA-48149: error encountered when attempting to copy a file**
- Cause:** There was an error encountered when attempting to copy a file with the ADR file interface.
- Action:** Check the directory name and file name.
- ORA-48150: error encountered with set current working directory**
- Cause:** There was an error with setting the current working directory.
- Action:** Check the path used, or the state of the operating system.
- ORA-48151: error getting operating system time for a file**
- Cause:** Error encountered while getting the operating system time for a file.

Action: Check the specified directory and file and the state of the operating system.

ORA-48152: lock table is full

Cause: Lock table is full - too many locks granted

Action: Try again later

ORA-48153: error encountered when getting ADR base directory default

Cause: There was an error encountered when attempting to get the ADR base directory default value.

Action: Check your environment to see if the \$ORACLE_BASE and \$ORACLE_HOME environment variables are set.

ORA-48154: reached end of file for alert log

Cause: The end of file was reached for reading the Alert Log. There are no more messages to read in the Alert Log.

Action: Do not read from the Alert Log

ORA-48155: error encountered when read alert log [*string*]

Cause: There was an error encountered when attempting to read a message from the Alert Log.

Action: Check the error message and the contents of the alert message.

ORA-48156: Alert log purge has occurred - retry operation

Cause: The purge of the alert log has occurred.

Action: Retry the operation.

ORA-48157: null input to ADR initialization

Cause: There was a null input to the ADR initialization routine.

Action: Check the ADR base, product ID, and instance ID input arguments.

ORA-48158: invalid input for ADR base directory

Cause: An invalid input was passed in for the ADR base directory name. The ADR base directory name is either NULL or too long of a string.

Action: Check the ADR base directory input argument.

ORA-48159: invalid input for ADR product type

Cause: An invalid input was passed in for the ADR product type. The ADR product type is out of bounds.

Action: Check the ADR product type input argument.

ORA-48160: invalid input for ADR product id

Cause: An invalid input was passed in for the ADR product id. The ADR product id is either NULL or too long of a string.

Action: Check the ADR product id input argument.

ORA-48161: invalid input for ADR instance id

Cause: An invalid input was passed in for the ADR instance id. The ADR instance id is either NULL or too long of a string.

Action: Check the ADR instance id input argument.

ORA-48162: string buffer too small to hold input, [*string*], [*string*], [*string*]

-
- Cause:** The string buffer is too small to copy an input string into.
- Action:** Check the size of the string buffer and the input string. Look in the argument for the location in the code where the error occurs.
- ORA-48163: error concatenating directory onto path, [string], [string], [string]**
- Cause:** Error encountered while concatenating a directory onto a path name.
- Action:** Check the error returned by the OS and the size of the input and output buffers.
- ORA-48164: error concatenating file onto path, [string], [string], [string]**
- Cause:** Error encountered while concatenating a directory onto a path name.
- Action:** Check the error returned by the OS and the size of the input and output buffers.
- ORA-48165: user missing read, write, or exec permission on specified ADR Base directory [string]**
- Cause:** The specified ADR Base Directory does not have the correct permissions.
- Action:** Check the read, write, and exec permissions on the specified ADR Base Directory
- ORA-48166: error with opening ADR block file because file does not exist [string] [string]**
- Cause:** An error was encountered with opening an ADR block file because the file does not exist.
- Action:** Check the existence of the ADR Block File.
- ORA-48167: invalid argument for checking ADR initialization**
- Cause:** Invalid arguments were specified for the routine to check ADR initialization.
- Action:** Check the inputs to the ADR initialization routine.
- ORA-48168: the ADR sub-system is not initialized**
- Cause:** The ADR subsystem has not been initialized. The requested operation cannot be performed.
- Action:** Check the usage of the call to the ADR services. The ADR sub-system must be initialized for the call to work.
- ORA-48169: incorrect arguments to ADR deferred initialization**
- Cause:** There are incorrect arguments to the ADR deferred initialization.
- Action:** Check the input arguments. It could be possible that the product is not set up for deferred initialization.
- ORA-48170: unable to lock file - already in use**
- Cause:** the file is locked by another process, indicating that it is currently in use by another process
- Action:** determine which process legitimately owns this file.
- ORA-48171: unable to get share lock - file not readable**
- Cause:** share lock request was made on a file not open for read access.
- Action:** file must be open read-only or read-write to get a share lock.
- ORA-48172: unable to find a valid ADR base**

Cause: Unable to find a valid ADR base. We tried the ORACLE_BASE, ORACLE_HOME, home, and tmp directories, but none of the directories exist for read/write access.

Action: Check the validity of the ORACLE_BASE, ORACLE_HOME, home, and tmp directories.

ORA-48173: error checking directory existence during ADR initialization [string]

Cause: Error encountered when checking directory existence during the initialization of the ADR subsystem. Either the diag or product type directory does not exist underneath the ADR base.

Action: The directory in the error message must exist in order for ADR initialization to succeed. Make sure the directories exist.

ORA-48174: error encountered with get current working directory

Cause: There was an error with getting the current working directory.

Action: Check the state of the operating system or the size of the path buffer.

ORA-48175: the path name must not contain the string '..'

Cause: The specified path name contains '..'.

Action: Correct the path name and retry the operation.

ORA-48176: error translating a path name into its full path name

Cause: An error was encountered when translating a path name into its full path name.

Action: Check the inputted path name to make sure it is a valid relative path.

ORA-48177: file name with full path information [string] not allowed

Cause: Input was incorrectly specified for the file name. The inputted file name is greater than the maximum length, or the file name has path information. In this case, the file name should not have any path information. The path information should be specified in a separate argument.

Action: Check that the string for the file name is not too long and does not have path information.

ORA-48178: error encountered while reading an ADR block file during ADR initialization [string]

Cause: An error was encountered while reading an ADR block file during the initialization of the ADR subsystem.

Action: Check the state of the file system.

ORA-48179: OS file synchronization failure

Cause: OS command to synchronize the changes to a file with the operating system failed.

Action: Check the state of the file system and the amount of free space left on your device.

ORA-48180: OS open system call failure

Cause: OS open system call failed. The system failed to open or create a file in the requested mode.

Action: Check the OS error code

ORA-48181: OS write system call failure

-
- Cause:** OS write system call failed. The system failed to write to a file.
Action: Check the OS error code
- ORA-48182: OS read system call failure**
Cause: OS read system call failed. The system failed to read to a file.
Action: Check the OS error code
- ORA-48183: OS close system call failure**
Cause: OS close system call failed. The system failed to close a file.
Action: Check the OS error code
- ORA-48184: OS seek system call failure**
Cause: OS seek system call failed. The system failed to seek to a position in a file.
Action: Check the OS error code
- ORA-48185: OS file size system call failure**
Cause: OS file size call failed. The system failed to retrieve the file size for a file.
Action: Check the OS error code
- ORA-48186: OS check file exists system call failure**
Cause: OS check file exists system call failed. The system failed to perform the check file exists command for a file.
Action: Check the OS error code
- ORA-48187: specified directory does not exist**
Cause: The specified directory does not exist.
Action: Check the directory name.
- ORA-48188: user missing read, write, or exec permission on specified directory**
Cause: The user does not have valid permissions on the specified directory. The user is missing either the read, write, or execute permission.
Action: Check the permissions of the specified directory.
- ORA-48189: OS command to create directory failed**
Cause: The OS command to create a directory failed.
Action: Check the error number associated with the create directory failure.
- ORA-48190: OS unlink system call failure**
Cause: OS unlink system call failed. The system failed to perform unlink on the specified file.
Action: Check the OS error code
- ORA-48191: user missing read or write permission on specified file**
Cause: The user does not have valid permissions on the specified file. The user is missing either the read or write permission.
Action: Check the permissions of the specified file.
- ORA-48192: OS command to move a file failed**
Cause: The OS command to move a file failed.
Action: Check the error number associated with the move file.

ORA-48193: OS command to open a directory failed

Cause: The OS command to open a directory failed.

Action: Check the OS error associated with the open directory failure.

ORA-48194: OS command to close a directory failed

Cause: The OS command to close a directory failed.

Action: Check the OS error associated with the close directory failure.

ORA-48195: OS command to remove a directory failed

Cause: The OS command to remove a directory failed.

Action: Check the OS error associated with the remove directory failure.

ORA-48196: OS command to release advisory lock failed

Cause: The OS command to release the advisory lock failed

Action: Check the OS error associated with the release advisory lock failure.

ORA-48197: OS command to get the file status failed

Cause: The OS command to get the file status failed. This could be because the file is not open or file descriptor is invalid.

Action: Check the OS error associated with the get file status failure.

ORA-48198: OS command to change the file permissions failed

Cause: The OS command to change the file permissions failed.

Action: Check the OS error associated with the failure.

ORA-48199: OS command to copy a file failed

Cause: The OS command to copy a file failed.

Action: Check the error number associated with the copy file.

ORA-48200: Illegal Input Argument [string]

Cause: An illegal argument was passed in.

Action: Fix the call.

ORA-48201: Field Length Exceeds Maximum [string] [string] [string]

Cause: An illegal field length was used.

Action: Fix the call.

ORA-48202: Illegal Identifier [string] [string]

Cause: Illegal identifier specified.

Action: Use a valid identifier.

ORA-48203: Illegal Data Type [string]

Cause: Illegal data type specified.

Action: Use a valid data type.

ORA-48204: Illegal Identifier Length [string] [string] [string]

Cause: The input identifier is too long.

Action: Specify a shorter identifier.

ORA-48205: Record Length too Big [string] [string] [string]

-
- Cause:** The sum of the maximum lengths of all fields exceeds the maximum record length that is supported.
Action: Remove or shorten some of the fields.
- ORA-48206: Illegal Number of Fields** [*string*] [*string*] [*string*]
Cause: The number of fields specified exceeds the supported maximum.
Action: Remove some of the fields in the relation.
- ORA-48207: Illegal Field Name** [*string*]
Cause: The field name is invalid.
Action: Specify a valid field name.
- ORA-48208: Duplicate Field Names** [*string*]
Cause: The list of fields specified contains a duplicate field.
Action: Remove the duplicate field.
- ORA-48209: Relation Already Exists**
Cause: The relation already exists.
Action: Remove the relation.
- ORA-48210: Relation Not Found**
Cause: The relation was not found.
Action: Either specify a valid relation name or create one with that name.
- ORA-48211: Illegal Access Mode** [*string*] [*string*]
Cause: The supplied access mode is not recognized.
Action: Supply a valid mode.
- ORA-48212: Open Record Access Not Done**
Cause: The open record access call was not performed.
Action: The open record access call is required before attempting this call.
- ORA-48213: Incorrect Access Mode for Operation** [*string*] [*string*]
Cause: The relation was opened in a mode not compatible with the attempted operation being done.
Action: Reopen the relation in the correct mode.
- ORA-48214: Sequence Overflow** [*string*] [*string*] [*string*]
Cause: The sequence number will exceed the system maximum.
Action: Reset the sequence number.
- ORA-48215: Sequence Invalid Operation** [*string*] [*string*]
Cause: The specified sequence operation is not valid.
Action: Specify a valid operation.
- ORA-48216: Field Len Exceeds Max Field Length** [*string*] [*string*] [*string*] [*string*]
Cause: The field length specified exceeds the defined maximum for the field.
Action: Supply a smaller field length.
- ORA-48217: Out of Space on Device**
Cause: The storage subsystem is out of space.

-
- Action:** Add more space to the storage subsystem.
- ORA-48218: Duplicate Key Name** [*string*] [*string*]
Cause: The key name already exists.
Action: Specify a different key name.
- ORA-48219: Key Name Doesn't Match Any Existing Key**
Cause: The key name provided doesn't match an existing key.
Action: Specify a key name that exists.
- ORA-48220: Too Many Keys Defined** [*string*] [*string*]
Cause: A key is trying to be created that exceeds the maximum number of keys supported.
Action: Drop another key.
- ORA-48221: Key Exceeds Maximum Allowed Length** [*string*] [*string*] [*string*]
Cause: The sum of the lengths of the fields in the key exceeds the maximum length supported.
Action: Remove one or more fields from the key.
- ORA-48222: Predicates/Order By Not Allowed**
Cause: A predicate or order by can not be added after fetch has started.
Action: Put the predicate or order by call before the first fetch.
- ORA-48223: Interrupt Requested - Fetch Aborted - Return Code** [*string*] [*string*]
Cause: User interrupt has occurred.
Action: None
- ORA-48224: DDL has occurred since parse - reparse** [*string*] [*string*] [*string*]
Cause: Another session has performed a DDL (i.e. add field, create key, drop key) that prevents this session from being to continue.
Action: Call open record access again.
- ORA-48225: No More Space in Order By Buffer**
Cause: The order by buffer size is not sufficient for the number of rows.
Action: Increase the order by buffer size specified.
- ORA-48226: No Fetch in Progress**
Cause: An attempt to perform update or delete has occurred without a fetch.
Action: You must first perform a fetch.
- ORA-48227: Invalid Relation File -** [*string*] [*string*] [*string*] [*string*]
Cause: The AMS file is invalid or corrupt.
Action: Do a repair relation
- ORA-48228: Missing Define Call** [*string*]
Cause: A call to define was not performed before doing a fetch.
Action: Call the define service before fetch.
- ORA-48229: Invalid Relation Handle Provided** [*string*] [*string*]
Cause: An invalid or corrupt relation handle was used.

-
- Action:** Possible memory corruption.
- ORA-48230: Expression arguments must match types**
Cause: Incorrect type semantics for fields in the predicate.
Action: Correct the predicate.
- ORA-48231: Predicate syntax error**
Cause: A syntax error exists in the predicate string.
Action: Correct the predicate.
- ORA-48232: Debug command syntax error** [*string*]
Cause: An invalid debug command has been specified.
Action: Correct the debug command.
- ORA-48233: Invalid Field Handle** [*string*] [*string*] [*string*]
Cause: The field handle is invalid.
Action: Possible memory corruption.
- ORA-48238: Invalid Surrogate Length Specified** [*string*] [*string*]
Cause: An invalid length during create field was specified
Action: Specify a correct length
- ORA-48239: Invalid Predicate Handle Provided** [*string*] [*string*]
Cause: An invalid or corrupt relation handle was used.
Action: Possible memory corruption.
- ORA-48240: Field is NOT NULL but NULL value supplied**
Cause: A field [%s] declared to not allow nulls contains a null value.
Action: Specify a correct value
- ORA-48242: Fields that are NOT NULL can not use surrogates**
Cause: NOT NULL fields can not have surrogates specified.
Action: Either remove the constraint or the surrogate.
- ORA-48243: Additional Fields must be declared nulls allowed**
Cause: A field can not be added to a relation that is defined NOT NULL
Action: Do not specify NOT NULL
- ORA-48244: Purge for Retention can't be called while in an Query**
Cause: A query is already running - purge for retention can't be invoked
Action: Fix call sequence
- ORA-48245: Attempt to Update/Delete when at EOF**
Cause: The fetch operation is positioned at EOF - can not update/delete
Action: Do not call update/delete after fetch has returned EOF
- ORA-48246: Illegal Operation on External Relation**
Cause: An illegal call was made using an external relation
Action: Do not perform the API Call
- ORA-48247: Predicate Conversion Error** *string*

-
- Cause:** A time conversion failed
Action: Fix the input
- ORA-48248: Function *string* type check error; ityp = *string* typ = *string* arg = *string***
Cause: Invalid inputs to the specified function
Action: Change the inputs
- ORA-48251: Failed to open relation due to following error**
Cause: See error below in the error stack
Action: See error below in the error stack
- ORA-48252: Relation does not require migration**
Cause: Relation on disk is compatible with the current code
Action: Don't run the migration services
- ORA-48258: AMS Corrupt Page Found - Rebuild Relation**
Cause: A corrupted page has been found.
Action: Do a rebuild of the relation
- ORA-48259: AMS Relation not Created Correctly**
Cause: Create relation failed
Action: Recreate the relation
- ORA-48260: Function *string* not found**
Cause: A reference to a function that is not valid was found
Action: Fix the function name
- ORA-48262: Sequence references not allowed in predicates**
Cause: References to currval or nextval not allowed
Action: Remove these references
- ORA-48263: Currval not set yet - use nextval**
Cause: References to currval can't occur until a nextval is done
Action: Remove the reference
- ORA-48265: Incorrect number of arguments (*string*) provided - expected (*string*)**
Cause: Number of arguments to function is incorrect
Action: Specify the correct number of arguments
- ORA-48291: Field name *string* can't be unique resolved**
Cause: Field name appears in more than one relation
Action: Prefix the field name with the relation name
- ORA-48292: Can't use outer join syntax mixed with inner join syntax**
Cause: The join condition was specified using both inner and outer join elements"
Action: Specify the join condition correctly
- ORA-48293: Outer join syntax not allowed without a join**
Cause: Using outer join syntax in the predicate without doing a join
Action: Fix the predicate

-
- ORA-48300: Incident Record Already Exists**
Cause: trying to create an incident that already exists
Action: retry operation with new incident ID
- ORA-48301: An Invalid Incident ID was specified**
Cause: the specified incident ID was invalid
Action: retry operation with correct incident ID
- ORA-48302: Incident Directory does not exist**
Cause: the incident directory was not found
Action: retry operation with a different incident ID
- ORA-48303: Exceeded max Incident Sequence Value**
Cause: the maximum supported incident sequence value was exceeded
Action: reset incident sequence and retry operation
- ORA-48304: incident staging file not found**
Cause: the incident staging file is missing
Action: retry with a different incident ID
- ORA-48305: incident ID range is too large**
Cause: the maximum incident sequence value was exceeded
Action: retry operation with a smaller range
- ORA-48309: illegal incident state transition, [*string*] to [*string*]**
Cause: the incident cannot be moved to the new state
Action: retry operation with a valid incident status
- ORA-48310: Incident *string* staging file not found**
Cause: the incident staging file does not exist
Action: retry operation with a valid incident ID
- ORA-48311: Invalid field name [*string*]**
Cause: the specified field name is invalid
Action: retry operation with a valid field name
- ORA-48312: Sweep incident *string* staging file failed**
Cause: the sweep action of incident staging file failed
Action: check the incident ID and retry
- ORA-48313: Updates not allowed on ADR relation [*string*] of Version=*string***
Cause: Update operations not supported on this version of ADR relation
Action: check ADR version and retry
- ORA-48314: Invalid ADR Control parameter [*string*]**
Cause: the specified control parameter is invalid
Action: check parameter and reissue command
- ORA-48315: ADR unavailable**
Cause: the ADR directory is not available
Action: enable ADR and retry operation

-
- ORA-48316: relation [*string*] unavailable or cannot be created**
Cause: the ADR relation is not available
Action: check ADR directory and retry operation
- ORA-48317: ADR Relation [*string*] of version=*string* is obsolete**
Cause: the version of ADR relation is too old and not supported
Action: check the ADR version and retry
- ORA-48318: ADR Relation [*string*] of version=*string* cannot be supported**
Cause: the version of ADR relation is too new and cannot be supported
Action: need to use a newer release to access the ADR
- ORA-48319: Update operation on ADR relation [*string*] not allowed**
Cause: updates to foreign ADR relation cannot be supported
Action: verify ADR location and reissue command
- ORA-48320: Too many incidents to report**
Cause: the result set of incidents is too large to handle
Action: use a predicate to reduce the number of incidents and retry
- ORA-48321: ADR Relation [*string*] not found**
Cause: the required ADR relation is missing, ADR may be corrupted
Action: check ADR directory and retry
- ORA-48322: Relation [*string*] of ADR V[*string*] incompatible with V[*string*] tool**
Cause: the tool version is incompatible with the ADR version
Action: use another version of tool and retry
- ORA-48323: Specified pathname [*string*] must be inside current ADR home**
Cause: file outside of ADR home not allowed as incident file
Action: check the file name and retry
- ORA-48324: Incompatible staging file encountered**
Cause: sweep incident failed because staging file is incompatible
Action: check the incident ID and version of ADR and retry
- ORA-48339: view [*string*] does not exist**
Cause: view has not been created
Action: verify view name and reissue command
- ORA-48340: operation not supported on view [*string*]**
Cause: unsupported (dml) operation on views
Action: verify relation name and reissue command
- ORA-48341: Field [*string*] not a grouping field**
Cause: the field name specified is not a grouping field
Action: verify field names and groupby clause and reissue command
- ORA-48342: Field [*string*] cannot be mixed with *string* fields**
Cause: the specified field is incompatible with other grouping fields *A8
Action: verify this and other field names and reissue command

Action: None

ORA-48343: invalid field [*string*] reference in *string* clause

Cause: the specified field in the specified clause is invalid

Action: verify this field name and reissue command

ORA-48344: Invalid Name [*string*] specified

Cause: Either the name refers to an existing object or violates the reserved namespace rules.

Action: Pick another name

ORA-48345: Timeout encountered during operation

Cause: The attempted operation conflicted with another operation that was already being executed.

Action: Retry operation at a later time.

ORA-48400: ADRCI initialization failed

Cause: The ADR Base directory does not exist

Action: Either create an ADR Base directory or point to an existing one

ORA-48401: SET command requires arguments

Cause: No arguments are input for the SET command

Action: Input the arguments

ORA-48402: Variable is not defined

Cause: No substitution value is input.

Action: Input the substitution value following after the variable name.

ORA-48403: DEFINE or UNDEFINE command has no arguments

Cause: DEFINE and UNDEFINE command need users to input the substitution variable name.

Action: Input the vairable name follow after the DEFINE or UNDEFINE

ORA-48404: RUN or @ command has no arguments

Cause: RUN and @ commands need users to input script filename

Action: Input script filename after RUN and @ commands

ORA-48405: The option in the command is invalid

Cause: The option is not allowed in the command

Action: Check the command syntax

ORA-48406: ECHO or TERMOUT status must be set to ON or OFF

Cause: the status of ECHO ann TERMOUT commands must be ON or OFF

Action: input ON or OFF

ORA-48407: DESCRIBE and QUERY commands need at least relation name argument

Cause: This is no relation name is input as argument

Action: Need users to input at least the relation name

ORA-48408: The incident number exceeds the maximum number [*string*]

Cause: The input incident number exceeds the maximum number

Action: Input less incidents

ORA-48409: The ADR homes exceeds the maximum number [*string*]

Cause: The input ADR homes number exceeds the maximum number

Action: Input less ADR home string

ORA-48410: The trace path exceeds the maximum number [*string*]

Cause: The input trace path exceeds the maximum number

Action: Input less trace path

ORA-48411: The trace files exceeds the maximum number [*string*]

Cause: The input trace file path number exceeds the maximum number

Action: Input less trace file path

ORA-48412: The parameters exceeds the maximum number [*string*]

Cause: The input paramter number exceeds the maximum number

Action: Input less parameter number or increase the upper bound

ORA-48413: The number of orderby fields exceeds maximum number [*string*]

Cause: The orderby field number exceeds the maximum number

Action: Input less fields

ORA-48414: The string in the execution option exceeds maximum length [*string*]

Cause: The string length is too long

Action: Divid the commands into two sets or use adrci scripts.

ORA-48415: Syntax error found in string [*string*] **at column** [*string*]

Cause: Parsing error found in the user input string

Action: Validate the input string

ORA-48419: Illegal arguments

Cause: The input argument is illegal

Action: Check the input arguments and make sure it is not null

ORA-48421: Predicate string in the command must be single or double quoted

Cause: The predicate string is not single or double quoted

Action: Put single or double quotes around the predicate string

ORA-48423: IMPORT command must have a filename

Cause: File name is missing from the command

Action: Input the import file name after the IMPORT keyword

ORA-48424: SHOW TRACE command needs argument

Cause: SHOW TRACE command needs arguments

Action: Input arguments

ORA-48426: The initialization filename is too long

Cause: The initialization filename length exceeds the maximum length

Action: This is really an internal setting parameter of the ADRCI, report it as a bug. Alternatively move the initialization file to the current working directory

-
- ORA-48428: Input command string exceeds max length [*string*]**
Cause: The current command string is too long and exceeds the limit
Action: Input less characters
- ORA-48429: Variable name [*string*] is an invalid identifier**
Cause: The substitution variable name is not a valid identifier
Action: Input the valid identifier defined by ADRCI
- ORA-48431: Must specify at least one ADR home path**
Cause: The command syntax requires at least one ADR home path to be input
Action: Check the command syntax and input the home path
- ORA-48432: The ADR home path [*string*] is not valid**
Cause: The adr home user inputs is not valid, which may due to the path does not exist.
Action: Check if the input home path exists
- ORA-48433: Unknown help topic**
Cause: The input topic is unknown
Action: Check if the topic is valid
- ORA-48434: No DDE commands are input**
Cause: No DDE commands are input
Action: Input a DDE command
- ORA-48435: Input a trace file**
Cause: Show trace expects a trace file
Action: Input a trace file
- ORA-48436: File [*string*] does not exist**
Cause: the file does not exist
Action: Validate the trace file name
- ORA-48437: No IPS commands are input**
Cause: No IPS commands are input
Action: Input a IPS command
- ORA-48438: [*string*] is not a valid number**
Cause: The input number is not valid
Action: Check the input number
- ORA-48439: The input path name exceeds the maximum length [*string*]**
Cause: The input path name is too long
Action: Report as a bug to change the limit
- ORA-48440: Variable [*string*] is already defined**
Cause: The variable name is defined previously
Action: Use another variable name
- ORA-48441: The function parameter number exceeds the maximum number [*string*]**
Cause: The function parameter number exceeds the maximum number

-
- Action:** Report it as bug to change the maximum number
- ORA-48442: The control parameter number exceeds the maximum number** [*string*]
Cause: The control parameter number exceeds the maximum number
Action: Report it as bug to change the maximum number
- ORA-48443: Trace Record type appears in the middle of the path**
Cause: The trace record cannot be in the middle of the path
Action: Validate the input
- ORA-48444: The single "." and "*" cannot appear in the middle of the path**
Cause: The single "." and "*" appears in the middle of the path
Action: Validate the input
- ORA-48445: Path expression only supports one bucket dump type**
Cause: The path expression only supports one bucket dump"
Action: Change the path expresison syntax
- ORA-48446: The command needs path input**
Cause: No path is input as a parameter
Action: Input the path
- ORA-48447: The input path** [*string*] **does not contain any ADR homes**
Cause: The input path does not contain ADR homes
Action: Validate the path
- ORA-48448: This command does not support multiple ADR homes**
Cause: There are multiple homes in the current adr setting.
Action: Use command SET HOMEPATH to set a single home
- ORA-48449: Tail alert can only apply to single ADR home**
Cause: There are multiple homes in the current setting
Action: Use command SET HOMEPATH to set a single home
- ORA-48457: ADRCI core dumped**
Cause: It is adrci internal error.
Action: Report to Oracle
- ORA-48458: "show incident" failed due to the following errors**
Cause: There could be a bug or users do not have the access permission
Action: Report to Oracle if the errors are not due to ADR permission settings
- ORA-48459: "describe" command only supports one ADR home path**
Cause: Multiple ADR home paths in the command
Action: put one ADR home path
- ORA-48460: The home path** [*string*] **is not valid**
Cause: The input home path is not valid home path
Action: Verify the homepath
- ORA-48461: "describe" failed due to the following errors**

-
- Cause:** Underlying code failed
Action: If it is not due to permission issue, report to Oracle
- ORA-48462: Fatal error encountered in [string]**
Cause: Fatal error encountered
Action: Report to Oracle
- ORA-48463: The value buffer reached the maximum length [string]**
Cause: The value buffer is full
Action: Report to Oracle
- ORA-48464: The predicate buffer reached the maximum length [string]**
Cause: The predicate buffer is too small
Action: Report to Oracle
- ORA-48465: The specified type [string] is undefined**
Cause: The purge type specified is undefined
Action: Check the type name
- ORA-48466: Internal failure, the report context is not initialized**
Cause: Internal problem failure.
Action: Report to Oracle
- ORA-48467: "string" for the keyword "string" is not a valid number**
Cause: The keyword value is not a valid number
Action: Check the value
- ORA-48468: "string" is not a valid keyword**
Cause: The keyword is not defined for the command
Action: Check the available keywords
- ORA-48469: Keyword "string" cannot be duplicated**
Cause: The command can only allow one key with the name
Action: Remove one keyword name from the command
- ORA-48470: Unknown "string" command**
Cause: The command is not valid
Action: Use help manual to check the command syntax
- ORA-48472: Invalid product name**
Cause: The product name provided does not exist
Action: Specify a product name, see HELP SHOW BASE
- ORA-48473: Internal failure, unknown return code [string]**
Cause: Internal program failure
Action: Report to Oracle
- ORA-48474: Syntax error specifying product, must not be NULL**
Cause: The product clause is being used, but no product name is provided
Action: Supply the product name

ORA-48475: [string] is not a valid timestamp

Cause: The input timestamp string is not in valid format

Action: None

ORA-48476: Cannot write the results out to a file, please check if the environment variable TMPDIR is set or the current directory is not writable

Cause: The current path may not be writable

Action: If the current path is writable, report to Oracle

ORA-48477: The input path does not contain any valid ADR homes

Cause: The input path does not contain any valid ADR homes

Action: Check the path if it is valid

ORA-48478: No alert messages are created

Cause: No alert messages are created

Action: No action

ORA-48479: No HM runs are created

Cause: There is no hm runs

Action: No action

ORA-48480: No incidents are created

Cause: There is no incident

Action: No action

ORA-48481: Report is not available

Cause: The requested report does not exist"

Action: Check the report ID

ORA-48482: Report is not generated

Cause: The requested report is not ready to be generated

Action: Check the report ID

ORA-48483: Spooling failed, it may be because the spool file cannot be created due to a permission issue

Cause: The spooling filename may not be valid or the file cannot be created

Action: Check the permissions of the target directory and verify the filename

ORA-48484: Run script failed, it may be because the script file does not exist

Cause: The script file may not exist

Action: Check if the script file exist

ORA-48485: The file exceeds the maximum length [string]

Cause: The filename is too long

Action: Report to Oracle

ORA-48486: The file [string] exceeds the maximum length [string]

Cause: The filename is too long

Action: Report to Oracle

ORA-48487: The internal predicate string exceeds the maximum length [string]

-
- Cause:** The predicate string exceeds the maximum length
Action: Report to Oracle
- ORA-48488: The predicate string exceeds the maximum length [string]**
Cause: The input predicate string exceeds the maximum length
Action: Report to Oracle
- ORA-48489: The input exceeds the maximum length [string]**
Cause: The input exceeds the maximum length
Action: Report to Oracle
- ORA-48490: The field number exceeds the maximum number [string]**
Cause: The input field number exceeds the maximum number
Action: Input less field names
- ORA-48491: The program name is too long, exceeds the maximum length [string]**
Cause: the program name length exceeds the maximum length setting
Action: Report to Oracle
- ORA-48492: The report component name is not defined**
Cause: the report component name does not exist
Action: Check the component name to ensure it is registered
- ORA-48493: Sweep command needs parameters**
Cause: sweep command needs parameter
Action: Check the syntax of the command
- ORA-48494: ADR home is not set, the corresponding operation cannot be done**
Cause: The adr home is not set in the current adrci session
Action: Set the adr home using the adrci command "set base" and "set homepath"
- ORA-48495: Interrupt requested**
Cause: User requested to interrupt the current action
Action: No action is needed
- ORA-48496: "string" is a mandatory keyword for the command**
Cause: The keyword is not specified for the command
Action: Input the keyword
- ORA-48497: "string" is an invalid product type**
Cause: The product type is not registered
Action: Check the product type
- ORA-48499: The value of the keyword "string" exceeds the maximum length string**
Cause: The keyword value is too long
Action: Check the limit and input again
- ORA-48500: File Write Error [string] [string]**
Cause: Number of bytes written differs from number requested. Possibly due to out of disk space.
Action: Ensure sufficient disk space.

ORA-48501: File Read Error [*string*] [*string*]

Cause: Number of bytes read differs from number requested. Possibly due due to corrupted file.

Action: Recreate the file.

ORA-48502: Invalid Command Line - Missing Required Elements

Cause: Missing required command line arguments.

Action: Review the help message and supply the required arguments.

ORA-48503: Invalid Parameter Specified

Cause: Invalid input parameter supplied.

Action: Review the help message and correct the invalid input parameter.

ORA-48504: Relation Parameter Must be Specified

Cause: Relation parameter must be specified during adrexp.

Action: Supply the relation parameter.

ORA-48505: File Parameter Must be Specified

Cause: File parameter must be specified during adrimp.

Action: Supply the file parameter.

ORA-48506: Existing Relation at different version than export [*string*] [*string*]

Cause: Attempting to import into an existing relation and the schema version of that relation differs from the schema of the relation that was exported.

Action: Drop the existing relation if you still wish to import the relation.

ORA-48507: Predicate Not Allowed during Import

Cause: The predicate option is not allowed during adrimp.

Action: Remove the predicate argument.

ORA-48508: Export File Version [*string*] **Can Not be Used by Import** [*string*]

Cause: The version of the export file is not able to be read by this version of adrimp.

Action: Rerun the export using the current version of adrexp.

ORA-48509: Error occurred during operation. See the following errors

Cause: An underlying error has occurred.

Action: Review and correct the underlying error.

ORA-48510: Can not export an in memory relation

Cause: In memory relations can not be exported.

Action: Pick a different relation.

ORA-48600: HM run with name [*string*] **already exists**

Cause: The specified run name already existed.

Action: Specify different run name and re-run the check

ORA-48615: Parameter [*string*] **value not specified**

Cause: Run was invoked without specifying the parameter and its value

Action: Specify the needed parameter and its value

-
- ORA-48800: "*string*" for the keyword "*string*" is not in the right format of timestamp**
Cause: The value format is not right
Action: Check the format ADRCI supports
- ORA-48801: The option "*string*" is duplicated**
Cause: The option has been specified more than once
Action: Check the input
- ORA-48802: The options "*string*" and "*string*" are mutual exclusive**
Cause: These two options cannot be specified together
Action: Only specify one of them
- ORA-48803: The keyword "*string*" is not defined for this command**
Cause: The keyword is invalid
Action: Check the valid keywords for the command
- ORA-48804: The command needs at least one file input**
Cause: No files are specified to view
Action: Input the files
- ORA-48805: BEGIN BACKUP issued already - must do an END BACKUP first**
Cause: A begin backup was already issued.
Action: Issue END BACKUP
- ORA-48806: Unknown Function Reference (*string*)**
Cause: The function reference is not a valid function
Action: Change the reference
- ORA-48900: Illegal Input Argument [*string*]**
Cause: The input argument is invalid
Action: Check the input parameter
- ORA-48906: Parser context is not valid**
Cause: The parser context is not initialized
Action: Call the initialization routine first before using the context
- ORA-48907: The end of file is reached**
Cause: The end of file is reached
Action: Handle the end of file
- ORA-48908: No trace files are found**
Cause: This is no file in the navigator context, either it is done with parsing, or no file is pushed
Action: Check if the file is added to the context
- ORA-48909: Scan context is not initialized**
Cause: The scan context is not initialized
Action: call the initialization routine of the scan context
- ORA-48912: The specified trace filename is too long**
Cause: The resulting trace filename length exceeds the maximum length

Action: Use a smaller trace filename suffix or move ADR higher in the directory hierarchy

ORA-48913: Writing into trace file failed, file size limit [string] reached

Cause: An attempt was made to write into a trace file that exceeds the trace's file size limit

Action: increase the trace's file size limit.

ORA-48914: File position is not in right format

Cause: The file position format is not right

Action: Check if the file format string is the right one

ORA-48928: The predicate exceeds the max limit string

Cause: The predicate is too long, exceeds the max limit

Action: Use a shorter predicate

ORA-48929: The trace record size exceeded the max size that can be read [string]

Cause: A trace record is too large to be read by the ADR viewer

Action: Report to Oracle

ORA-48930: Cannot allocate memory for processing traces

Cause: A memory allocation request failed

Action: Report to Oracle

ORA-48934: invalid input for the file name identifier

Cause: An invalid input was given for the file name identifier. The file name is not allowed to have slashes ('', '/') and is not allowed to refer to the parent directory using the '..' characters.

Action: Check the file name and provide a valid input.

ORA-48936: The number of relations exceeds maximum number [string]

Cause: Too many relations listed

Action: Reduce the number

ORA-48937: Feature (string) currently not allowed for SELECT

Cause: Feature is not allowed

Action: Remove feature

ORA-48938: View select column count differs from select alias list

Cause: The view alias list has a different number of fields than the select list"

Action: Change the alias list or view select statement

ORA-48939: Select * not allowed in a CREATE VIEW

Cause: * is currently not allowed for a create view select list

Action: List the fields explicitly

ORA-49315: Invalid incident type specified [string]

Cause: The specified incident type is not defined in this ADR.

Action: Specify an available incident type.

ORA-49404: No such package [string]

Cause: The specified package does not exist.

-
- Action:** Specify an existing package.
- ORA-49405: Cannot change package name** [*string*] [*string*]
Cause: Attempted to change package name after package generation.
Action: Use current name, or create a new package with the desired name.
- ORA-49406: Undefined configuration parameter specified** [*string*]
Cause: The specified configuration parameter was not found in ADR.
Action: Specify an existing parameter. Re-populate parameters if necessary.
- ORA-49407: No unpacking history in this home**
Cause: No packages were unpacked into this home.
Action: Verify the current home. Unpack a package if necessary.
- ORA-49408: Invalid home specified** [*string*]
Cause: An invalid ADR_HOME was specified.
Action: Verify that the directory exists, and has the correct structure.
- ORA-49409: Incremental package provided when complete expected**
Cause: No packages were unpacked into this home.
Action: Provide a complete package, or use FORCE option.
- ORA-49410: Not an IPS package**
Cause: The specified file was not an IPS package.
Action: Verify that the file is a valid zip file with expected contents.
- ORA-49412: Package ID does not match existing ID** [*string*] [*string*]
Cause: The package ID in package file did not match previously unpacked packages.
Action: Use the correct location for unpacking the package.
- ORA-49413: Package name does not match existing name** [*string*] [*string*]
Cause: The package name in package file did not match previously unpacked packages.
Action: Use the correct location for unpacking the package.
- ORA-49414: Package sequence later than expected** [*string*] [*string*]
Cause: The package sequence in package file was later than expected.
Action: Apply packages in correct order, or use FORCE option.
- ORA-49415: Package sequence earlier than expected** [*string*] [*string*]
Cause: The package sequence in package file was earlier than expected.
Action: Apply packages in correct order, or use FORCE option.
- ORA-49416: Earlier package sequence applied with FORCE option** [*string*] [*string*]
Cause: An earlier package sequence was applied using the FORCE option.
Action: Apply a complete sequence which is later than any already applied, or use FORCE option to apply an incremental package.
- ORA-49417: Cannot modify already generated package**
Cause: Attempted to change package attributes after package generation.

Action: Create a new package with the desired name.

ORA-49420: Package too large [*string*] [*string*]

Cause: The package is too large.

Action: Remove some files or incidents from the package, or try using incremental mode.

ORA-49421: Maximum number of package files generated [*string*]

Cause: The command generated the maximum number of package files.

Action: Remove some files or incidents from the package, or use incremental mode to generate additional files.

ORA-49423: File outside ADR not allowed

Cause: The specified file is not within the ADR directory structure.

Action: Specify a file inside ADR.

ORA-49424: Directory outside ADR not allowed

Cause: The specified directory is not within the ADR directory structure.

Action: Specify a directory inside ADR.

ORA-49425: File inside ADR not allowed

Cause: The specified file is within the ADR directory structure.

Action: Specify a file outside ADR.

ORA-49426: Directory inside ADR not allowed

Cause: The specified directory is within the ADR directory structure.

Action: Specify a directory outside ADR.

ORA-49427: No such file or file not accessible [*string*]

Cause: The specified file does not exist or cannot be accessed.

Action: Create the file or verify file permissions.

ORA-49428: No such directory or directory not accessible [*string*]

Cause: The specified directory does not exist or cannot be accessed.

Action: Create the directory or verify directory permissions.

ORA-49429: File already exists and OVERWRITE option not specified [*string*]

Cause: The client attempted to create a file that already exists.

Action: Either remove the file or use the OVERWRITE option.

ORA-49430: No such problem [*string*]

Cause: The specified problem does not exist.

Action: Specify a problem that exists in this repository.

ORA-49431: No such incident [*string*]

Cause: The specified incident does not exist.

Action: Specify an incident that exists in this repository.

ORA-49432: Problem not part of package [*string*]

Cause: The specified problem is not included in the package.

Action: Specify a problem that is included in the package.

-
- ORA-49433: Incident not part of package** [*string*]
Cause: The specified incident is not included in the package.
Action: Specify an incident that is included in the package.
- ORA-49434: Invalid date format**
Cause: An invalid format was used to specify a date
Action: Specify the date in a supported format.
- ORA-49435: Flood-controlled incident not allowed here** [*string*]
Cause: A flood-controlled incident cannot be included in a package
Action: Specify an incident that is not flood-controlled
- ORA-49436: Date conversion error** [*string*]
Cause: An invalid format was used to specify a date
Action: Specify the date in a supported format.
- ORA-49440: Warnings while unpacking package, details in file** *string*
Cause: There were some non-fatal errors when unpacking a package
Action: Review the specified unpacking log file
- ORA-49441: Warnings while finalizing package, details in file** *string*
Cause: There were some non-fatal errors when finalizing a package
Action: Review the specified finalize log file
- ORA-49450: Non-zero return code from archiving utility** [*string*] [*string*]
Cause: The archiving utility (zip/unzip) returned a warning or error.
Action: Verify that the file and directory exist and are readable, and that the file is a valid zip file.
- ORA-49451: Archive file structure error** [*string*] [*string*]
Cause: The archiving utility (zip/unzip) returned an error indicating that the archive file structure is incorrect.
Action: Verify that the file was transferred correctly and that the file is a valid zip file.
- ORA-49452: Archiving utility out of memory** [*string*] [*string*]
Cause: The archiving utility (zip/unzip) returned an error indicating that it was unable to allocate enough memory.
Action: Check for operating system limitations on process memory usage.
- ORA-49453: Invalid command invoking archiving utility** [*string*] [*string*]
Cause: The archiving utility (zip/unzip) was invoked with an invalid command line, or with invalid options.
Action: Verify that there are no operating system settings affecting the behavior of the archiving utility..
- ORA-49454: Archive is missing or empty** [*string*] [*string*]
Cause: The specified archive does not exist, or is empty.
Action: Check if the specified archive exists.
- ORA-49455: Archive I/O failed** [*string*] [*string*]

-
- Cause:** An attempt to create, write to or read from an archive failed.
Action: Verify that operating system I/O operations are working correctly.
- ORA-49456: Operation failed due to insufficient disk space [string] [string]**
Cause: An operation on an archive failed due to insufficient disk space.
Action: Verify that there is sufficient disk space. Check for operating system quotas or other restrictions.
- ORA-49601: syntax error: found "string": expecting one of: "string" etc..**
Cause: Syntax error discovered when processing event specification
Action: Enter correct event specification
- ORA-51001: check [string] not found in HM catalog**
Cause: checker name might have been misspelled
Action: retry running check with proper checker name
- ORA-51003: run parameters not formatted correctly**
Cause: Run parameters were given in a wrong format
Action: Correct the run params text and try again
- ORA-51004: Check doesn't take any input params**
Cause: run params were passed to the check, which doesn't take any inputs
Action: don't pass any run params and try again
- ORA-51006: unexpected delimiter ';' in the run params text**
Cause: run params were not properly formatted.
Action: correct the run params format and try again
- ORA-51007: parameter [string] not registered with this check**
Cause: Wrong inputs were given to this check.
Action: correct the run params and try the check again
- ORA-51008: parameter [string] value is not a proper number**
Cause: the given parameter value is a not a proper number
Action: correct the run params and try again
- ORA-51025: check name should be non NULL value**
Cause: NULL value was passed for check name
Action: give a proper check name and retry again
- ORA-51035: invalid timeout value**
Cause: User specified an invalid timeout value
Action: None
- ORA-51036: check [string] can only be executed in database instance**
Cause: An attempt was made to run database-specific check in ASM environment
Action: Don't run the check in ASM environment
- ORA-51037: check [string] can only be executed in ASM instance**
Cause: An attempt was made to run ASM-specific check in a database environment

Action: Don't run the check in database environment

ORA-51102: cannot change priority of a critical failure *string*

Cause: An attempt was made to change priority of a failure with CRITICAL priority.

Action: No action is required.

ORA-51103: cannot change priority of a closed failure *string*

Cause: An attempt was made to change priority of a closed failure.

Action: No action is required.

ORA-51105: cannot change priority of a failure to CRITICAL

Cause: An attempt was made to change priority of a failure to CRITICAL.

Action: No action is required.

ORA-51106: check failed to complete due to an error. See error below

Cause: While executing the check, an unexpected error occurred.

Action: Check the errors below and try rerunning the check.

ORA-51107: failures are changing too rapidly - retry command

Cause: Failures were added or closed during a Data Recovery Advisor command.

Action: Retry the command.

ORA-51108: unable to access diagnostic repository - retry command

Cause: A lock or timeout error occurred when trying to read failure or repair data from the Automatic Diagnostic Repository.

Action: Retry the command.

ORA-51109: repair script file is too large

Cause: Data Recovery Advisor generated a repair script file that was too large.

Action: Retry the command with fewer failures selected.

ORA-51110: buffer size [*string*] is too small - [*string*] is needed

Cause: An internal buffer was too small.

Action: This is an internal error. Contact Oracle Support Services.

ORA-51111: failure revalidation timed out

Cause: Data Recovery Manager was unable to revalidate all failures before timing out.

Action: Increase timeout and retry the command.

ORA-51190: Internal error [*string*], [*string*] from DBMS_IR

Cause: An unexpected error occurred while executing a routine in the DBMS_IR package.

Action: This is an internal error. Contact Oracle Support Services.

ORA-51191: Too many files opened

Cause: Data Recovery Advisor attempted to open too many files using the DBMS_IR package.

Action: This is an internal error. Contact Oracle Support Services.

ORA-51192: File not open

Cause: Data Recovery Advisor attempted to read or write from a file that was not open.

Action: This is an internal error. Contact Oracle Support Services.

ORA-51193: invalid parameter value

Cause: An invalid parameter value was supplied in a call to the DBMS_IR package.

Action: Fix the parameter value and retry the call.

ORA-51303: illegal check mask value specified

Cause: An illegal check mask value was specified.

Action: Specify one of the following legal values: COLUMN_CHECKS, ROW_CHECKS, REFERENTIAL_CHECKS, or ALL.

ORA-51316: No check meta-data found on specified table *string*

Cause: No check meta-data was found for the object

Action: Table may not exist or no checks currently defined for the table

ORA-51700: Invalid file URL

Cause: A URL with invalid syntax was provided, either directly to the function or through an XML IMPORT or INCLUDE.

Action: Check the URL.

ORA-51701: Invalid file URL or path prefix

Cause: Either a URL or path prefix with invalid syntax was provided.

Action: Check the URL.

ORA-51702: Could not find file at URL provided

Cause: The file requested could not be found in the given location.

Action: Check the URL provided.

ORA-51703: Missing <body> tag from HTML

Cause: An HTML document was passed to the function missing its <body> tag.

Action: Check the HTML source.

ORA-51704: Error *string* received from XPath engine

Cause: An error was received from the XPath library during an XPath operation.

Action: Check xmlerr.h to understand the cause of the error and correct the relevant client code.

ORA-51705: XML *string* error: *string* "*string*"

Cause: An error was received from an underlying XDK API and is being resignalled.

Action: Check xmlerr.h to understand the cause of the error and correct the relevant client code.

ORA-53000 to ORA-54038

ORA-53000: document type "*string*" is invalid

Cause: An invalid document type was specified.

Action: See the ORDDCM_DOCUMENT_TYPES view for a list of valid document types.

ORA-53001: <TAG> and <TAG_RANGE> tag values are null

Cause: An invalid attribute was found in the private dictionary document. The values specified by the <TAG> and <TAG_RANGE> tags were null.

Action: A private attribute definition must contain either a non-null <TAG> value or a non-null <TAG_RANGE> value. Correct the values and try the operation again. See the private dictionary schema (ordcmpv.xsd) listed in the Oracle Multimedia documentation for more information.

ORA-53002: document name "*string*" already inserted

Cause: The specified document name was found in the repository.

Action: Specify a unique document name and try again. See the ORDDCM_DOCUMENTS view for a list of document names.

ORA-53003: document *string* does not exist

Cause: The specified document name was not found in the repository.

Action: Correct the value and try again. See the ORDDCM_DOCUMENTS view for a list of documents in the repository.

ORA-53004: The value of tag <VR> "*string*" is invalid.

Cause: An invalid value for the <VR> tag was found in the dictionary document.

Action: Correct the value and try again. The value of the <VR> tag must either be a value defined by DICOM or an Oracle extension. See the data type schema (ordcmdt.xsd) listed in the Oracle Multimedia documentation for a list of valid <VR> tag values.

ORA-53005: tag references found in document: *string*

Cause: The delete operation failed because some tags in the dictionary document were being referenced by the listed document.

Action: To perform the delete operation, follow these steps:

1. Export the listed document to a file.
2. Delete the listed document from the repository.
3. Remove the referencing tags from the exported document.

4. Insert the updated document into the repository.

5. Repeat the delete operation.

ORA-53006: wild card characters are not allowed in <TAG_RANGE> tags

Cause: A <TAG_RANGE> tag containing wild card characters 'x' or 'X' was found in the dictionary document.

Action: Remove the wild card characters from <TAG_RANGE> tag and try again. See the Oracle Multimedia documentation for information about the private dictionary schema (ordcmpv.xsd).

ORA-53007: The document type STANDARD_DICTIONARY is not loaded.

Cause: The standard dictionary document was not found.

Action: Load the standard dictionary document (ordcmsd.xml). This is an installation error. Contact Oracle Support Services.

ORA-53008: The <NAMESPACE> tag value is not a registered schema.

Cause: The schema URL specified by the value of the <NAMESPACE> tag was not a registered Oracle XML DB schema.

Action: Specify a registered schema URL value. See the ALL_XML_SCHEMAS view for a list of registered schemas. See the Oracle XML DB Developers's Guide for information about registering schemas. See the Oracle Multimedia documentation for information about the mapping document schema (ordcmmmp.xsd).

ORA-53009: cannot find the <ROOT_ELEM_TAG> tag value in the metadata schema

Cause: The value of the <ROOT_ELEM_TAG> tag was not found in the metadata schema specified by the value of the <NAMESPACE> tag.

Action: Correct the value and try again. You can either specify a valid value for the <ROOT_ELEM_TAG> tag or clear the value of the <NAMESPACE> tag. See the Oracle Multimedia documentation for information about the mapping document schema (ordcmmmp.xsd).

ORA-53010: The value of the <VR> tag is null.

Cause: A null <VR> tag was found in the dictionary document.

Action: Correct the value and try again. If the value of the <VR> tag is null, then the value of the <RETIRED> tag must be set to true. See the Oracle Multimedia documentation for information about the standard dictionary schema (ordcmsd.xsd) and the private dictionary schema (ordcmpv.xsd).

ORA-53011: cannot find the <MAPPED_ELEM> tag value in the metadata schema

Cause: The value of the <MAPPED_ELEM> tag was not found in the metadata schema specified by the value of the <NAMESPACE> tag.

Action: Correct the value and try again. You can either specify a valid value for the <MAPPED_ELEM> tag or clear the value of the <NAMESPACE> tag. See the Oracle Multimedia documentation for information on the mapping document schema (ordcmmmp.xsd).

ORA-53012: cannot find the <UNMAPPED_ELEM> tag value in the metadata schema

Cause: The value of the <UNMAPPED_ELEM> tag was not found in the metadata schema specified by the value of the <NAMESPACE> tag.

Action: Correct the value and try again. You can either specify a valid value for the <UNMAPPED_ELEM> tag or clear the value of the <NAMESPACE> tag. See the Oracle Multimedia documentation for information about the mapping document schema (ordcmmp.xsd).

ORA-53013: cannot find the <ATTRIBUTE_TAG> value: *string* in the dictionaries

Cause: The value of the specified <ATTRIBUTE_TAG> tag was not found in the standard or private dictionaries.

Action: Correct the tag and/or the definer name value and try again. The value of the <ATTRIBUTE_TAG> tag must refer to a tag and definer name specified in the data dictionaries.

ORA-53014: The runtime preference table is not empty

Cause: The function was unable to process due to an internal error.

Action: Contact Oracle Support Services.

ORA-53015: An internal dictionary attributes table is empty

Cause: This document could not be processed due to an internal error.

Action: Contact Oracle Support Services.

ORA-53016: null input argument: *string*

Cause: The function was unable to process due to an internal error

Action: Contact Oracle Support Services.

ORA-53017: The installation file *string* has an incorrect document type

Cause: An incorrect document type was specified for this file during installation. The function was unable to process due to an internal error.

Action: Contact Oracle Support Services.

ORA-53018: document *string* contains an unsupported encrypt action attribute

Cause: The operation failed because an unsupported encrypt action

Action: Change the value of the action attribute to none, remove or replace

ORA-53019: cannot delete installation document: *string*

Cause: The document could not be deleted because it was an installation document.

Action: See the ORDDCM_DOCUMENTS view for a list of the documents in the repository.

ORA-53020: invalid external reference in the constraint document: *string*

Cause: The referenced external rule or macro could not be found in the repository.

Action: Insert the referenced documents first and try again.

ORA-53021: cannot insert a rule or macro *string* that was already inserted

Cause: The rules or macros existed in the repository.

Action: Insert a new rule or macro.

ORA-53022: rules or macros in the constraint document *string* do not exist

Cause: The rules or macros did not exist in the repository.

Action: Delete or update an existing rule or macro.

ORA-53023: cannot delete or update a referenced rule or macro *string*

Cause: Because the rules or macros were referenced by other rules or macros, they could not be deleted or updated.

Action: Delete the referencing rules or macros first and try again.

ORA-53024: error processing constraint document: *string*

Cause: An error occurred while processing the constraint document.

Action: If the error described in the message can be corrected, do so; otherwise, contact Oracle Support Services.

ORA-53025: invalid constraint document: *string*

Cause: The constraint document was invalid.

Action: Correct the error described in the message and try again.

ORA-53026: failed to insert the constraint *string* to the database

Cause: An error occurred while trying to insert the constraint document into the database.

Action: Contact Oracle Support Services.

ORA-53027: invalid invocation of a macro *string* that is partially defined

Cause: Constraint rules could not invoke partially defined constraint macros.

Action: Ensure that all dependent constraint macros are inserted into the repository, then try the operation again.

ORA-53031: unable to export or import data model: *string*

Cause: An error occurred during export or import data model.

Action: If the error described in the message can be corrected, do so; otherwise, contact Oracle Support Services.

ORA-53032: The default preference document cannot be found.

Cause: The delete operation failed due to an internal error.

Action: When a user-defined preference document is deleted, the default values are restored from the Oracle default preference document. The default preference document is loaded during installation. If this document cannot be found, it is an unrecoverable error. Contact Oracle Support Services.

ORA-53033: The default UID Definition document cannot be found.

Cause: The delete operation failed due to an internal error.

Action: When a user-defined UID Definition document is deleted, the default values are restored from the Oracle default UID Definition document. The default UID Definition document is loaded during installation. If this document cannot be found, it is an unrecoverable error. Contact Oracle Support Services.

ORA-53034: document *string* contains an unsupported action attribute

Cause: The operation failed because an unsupported action attribute was found in the specified anonymity document.

Action: Change the value of the action attribute to none, remove or replace

ORA-53035: The rows for the mapping document (*string*) do not exist.

Cause: The delete operation failed due to an internal error.

Action: Contact Oracle Support Services.

ORA-53036: An internal table for the mapping document (*string*) is empty.

Cause: The function failed due to an internal error.

Action: Contact Oracle Support Services.

ORA-53037: invalid range tag, <START_TAG> *string* must be less than <END_TAG> *string*

Cause: The operation failed because an invalid range tag was specified.

Action: Correct the value and try the operation again.

ORA-53038: The data type name for tag: *string* cannot be found.

Cause: The function failed due to an internal error.

Action: Contact Oracle Support Services.

ORA-53039: user-defined preference document: *string* already exists

Cause: The insert operation failed because only one user-defined preference document is allowed.

Action: To change an existing user-defined preference document, follow these steps:

1. Export the specified document to a file.
2. Delete the specified document from the repository.
3. Make changes to the exported document.
4. Insert the updated document into the repository. To add a new user-defined preference document, follow these steps:
 1. Delete the specified document from the repository.
 2. Insert the new document into the repository.

ORA-53040: user-defined UID definition document: *string* already exists

Cause: The insert operation failed because only one user-defined UID definition document is allowed.

Action: To change an existing user-defined UID definition document, follow these steps:

1. Export the specified document to a file.
2. Delete the specified document from the repository.
3. Make changes to the exported document.
4. Insert the updated document into the repository. To add a new user-defined UID definition document, follow these steps:
 1. Delete the specified document from the repository.
 2. Insert the new document into the repository.

ORA-53041: The tag value for a replace action attribute is null.

Cause: The operation failed because a null tag value was found for a replace action attribute in the anonymity document

Action: Either add a non-null tag value for each replace action attribute

ORA-53042: tag *string* is referenced by document: *string*

Cause: The insert operation failed because the specified tag in the dictionary document was being referenced by the listed document.

Action: To perform the insert operation, follow these steps

-
1. Export the listed document to a file.
 2. Delete the listed document from the repository.
 3. Remove the specified tag from the exported document.
 4. Insert the updated document into the repository.
 5. Repeat the insert operation.

ORA-53043: tag *string* is referenced by unknown document

Cause: The operation failed because a tag in the specified dictionary document was being referenced by another document in the repository.

Action: This is an internal error. Contact Oracle Support Services.

ORA-53044: invalid tag: *string*

Cause: The operation failed because the specified tag was invalid.

Action: The tag must match the regular expression ([0-9a-fA-FxX]{8}). Correct the tag format and try the operation again. See the dictionary schemas (ordcmsd.xsd, ordcmpv.xsd) listed in the Oracle Multimedia documentation for more information.

ORA-53045: invalid tag: *string*

Cause: The operation failed because the specified tag was invalid.

Action: The tag must match the regular expression ([0-9a-fA-F]{8}). Correct the tag format and try the operation again. See the dictionary schemas (ordcmsd.xsd, ordcmpv.xsd) listed in the Oracle Multimedia documentation for more information.

ORA-53046: tag: *string* collides with existing tag: *string* in document: *string*

Cause: The operation failed because the specified tag collided with

Action: Tag collisions are not allowed in the dictionary documents. Correct the specified tag in the document and try the operation again.

ORA-53047: internal error: *string*

Cause: This document could not be processed due to an internal error.

Action: Contact Oracle Support Services.

ORA-53048: definer name DICOM is not allowed in a private dictionary

Cause: The operation failed because the definer name DICOM was found in the private dictionary.

Action: Correct the definer name and try the operation again.

ORA-53049: unsupported <ATTRIBUTE_TAG> tag value: *string*

Cause: The operation failed because the locator path with FIELD_TAG was not supported in the <ATTRIBUTE_TAG> tag in the anonymity document.

Action: Remove the FIELD_TAG in the locator path and try the operation again. See the Oracle Multimedia documentation for more information about locator path syntax.

ORA-53050: The data model is being edited by another user.

Cause: The operation failed because the data model was being edited by another user.

Action: The data model can be edited by only one administrator at a time.

ORA-53051: no editDataModel session found

Cause: The operation failed because there was no editDataModel session.

Action: Call the editDataModel procedure first and try the operation again.

ORA-53052: lock release returned error: *string*

Cause: The operation succeeded, but an error occurred while releasing a lock.

Action: This is an internal error. Contact Oracle Support Services.

ORA-53053: lock request error: *string*

Cause: The operation failed because an exclusive lock could not be acquired.

Action: This is an internal error. Contact Oracle Support Services.

ORA-53054: An editDataModel session already exists.

Cause: The editDataModel procedure was called more than once in the same session.

Action: Continue the insert or delete operations, call rollbackDataModel to rollback the data model changes, or call publishDataModel to publish the data model changes.

ORA-53055: empty data model table

Cause: The operation failed because the data model table was empty.

Action: This is an internal error. Contact Oracle Support Services.

ORA-53056: unrecognized preference parameter name: *string*

Cause: The operation failed because the parameter name was invalid.

Action: Correct the value and try the operation again. See the preference schema (ordcmpf.xsd) listed in the Oracle Multimedia documentation for more information.

ORA-53057: invalid preference parameter value: *string*

Cause: The operation failed because the parameter value was invalid.

Action: Correct the value and try the operation again. See the preference schema (ordcmpf.xsd) listed in the Oracle Multimedia documentation for more information.

ORA-53058: The <ATTRIBUTE_TAG> value:*string* is not a simple tag.

Cause: The operation failed because the value of the specified <ATTRIBUTE_TAG> tag contained wild card characters 'x' or 'X'.

Action: Only simple tags that match the regular expression `[0-9A-F]{8}(\(.*\))?` are allowed in the <ATTRIBUTE_TAG> tag. For example: 00080096(DICOM), 00080096 and so on. Correct the tag format and try the operation again. See the schemas ordcmdt.xsd, ordcmmmp.xsd, and ordcman.xsd listed in the Oracle Multimedia documentation for more information.

ORA-53059: document name: *string* is too long

Cause: A document name with more than 100 characters was specified.

Action: Use a shorter document name and try the operation again.

ORA-53060: *string* is not a standard attribute tag

Cause: The operation failed because the specified standard dictionary attribute tag did not have an even group number.

Action: A standard dictionary attribute tag represents a two-byte hexadecimal number (group number followed by element number) and must match the regular expression `[0-9a-fA-FxX]{3}[02468aceACExX]{1}[0-9a-fA-FxX]{4}`. Correct the attribute tag format and try the operation again.

ORA-53061: document name *string* contains reserved prefix - ORD

Cause: The operation failed because the specified document name contained the ORD prefix that is reserved for Oracle Multimedia documents.

Action: Remove the ORD prefix from the document name and try the operation again.

ORA-53062: invalid model name: *string*

Cause: The operation failed because the specified model name was invalid.

Action: The model name DEFAULT is the only value that is supported in this release. Remove the model name or replace it with the value DEFAULT and try the operation again.

ORA-53063: invalid exportOption: *string*

Cause: The specified value for the exportOption parameter was not valid.

Action: Valid values for the exportOption parameter are USER, ALL, or ORACLE. The default value is USER. Remove the specified value for the exportOption parameter or replace it with a valid value for this parameter.

ORA-53064: no user-defined documents to export

Cause: The value USER was specified for the exportOption parameter, but there were no user-defined documents in the repository.

Action: Valid values for the exportOption parameter are USER, ALL, or ORACLE. Specify another valid value for the exportOption parameter.

ORA-53065: stored tag list document: *string* already exists

Cause: The operation failed because only one stored tag list document is allowed.

Action: To change an existing stored tag list document, follow these steps:

1. Export the specified document to a file.
2. Delete the specified document from the repository.
3. Make changes to the exported document.
4. Insert the updated document into the repository. To add a new stored tag list document, follow these steps:
 1. Delete the specified document from the repository.
 2. Insert the new document into the repository.

ORA-53066: invalid manifest file: *string* or directory: *string*

Cause: The specified manifest file name or directory name was invalid.

Action: Confirm that the manifest file and the directory exist, and that the names are valid.

ORA-53067: validation failed for manifest file: *string*

Cause: The specified manifest file did not conform to the XML schema `ordcmmft.xsd`.

Action: Ensure that the manifest file conforms to the XML schema `ordcmmft.xsd`.

ORA-53068: cannot import data model because user-defined documents exist

Cause: User-defined documents were found in the repository.

Action: First export all user-defined documents in the repository so they can be saved, then delete all user-defined documents in the repository before importing a data model.

ORA-53069: doc version:string in string is not <= repos version:string

Cause: The document version of the specified document was not compatible with the repository version.

Action: You cannot import this data model into this version of the repository. Either upgrade or import a data model that is compatible with your repository version. See the Oracle Multimedia documentation for more information about document versioning considerations for the importDataModel procedure.

ORA-53070: manifest file:string does not contain all the Oracle documents

Cause: The specified manifest file did not contain the complete set of Oracle-defined documents that were included in the database release.

Action: A manifest file can contain all user-defined documents, all Oracle-defined documents, or both. Confirm that the manifest file includes all the documents listed in the orddcm_dbrelease_docs information view or no Oracle-defined documents. See the Oracle Multimedia documentation for more information on manifest files.

ORA-53071: tag: string from string is not listed in the stored tag list document

Cause: The specified document contained a tag that was not included in the stored tag list document.

Action: If the preference parameter MANDATE_ATTR_TAGS_IN_STL is set to true the stored tag list document must contain all the tags used by the constraint and mapping documents. Change the preference parameter value to false, or add the listed tag to the stored tag list document. See the Oracle Multimedia documentation for more information on stored tag list documents.

ORA-53072: even group number is not allowed in private tag: string

Cause: The operation failed because the specified private dictionary attribute tag contained an even group number.

Action: A dictionary attribute tag represents a two-byte hexadecimal number (a group number followed by an element number). Even group numbers are reserved for the DICOM Standard dictionary. Thus, the group number of a private dictionary attribute tag must be an odd number. Replace the even group number with an odd number in the specified attribute tag, and try the operation again.

ORA-53073: invalid docSet: string

Cause: The specified value for the docSet parameter was not valid.

Action: Valid values for the docSet parameter are USER, ALL, or ORACLE. The default value is USER. Remove the specified value for the docSet parameter, or replace it with a valid value.

ORA-53074: namespace value is too long

Cause: A namespace value longer than 700 characters was specified in the mapping document.

Action: Use a shorter namespace value and try the operation again.

ORA-53075: null ROOT_ELEM_TAG tag value

-
- Cause:** The value of the ROOT_ELEM_TAG tag was null or all spaces.
Action: Correct the value and try again.
- ORA-53100: The repository data model is in invalid state.**
Cause: Error detected while loading the data model from the repository.
Action: Contact Oracle Support Services.
- ORA-53111: The repository data model is not loaded.**
Cause: The operation failed because the ord_dicom.setDataModel procedure was not called to load the repository data model.
Action: Call the ord_dicom.setDataModel procedure first and try the operation again.
- ORA-53112: unable to load repository: *string***
Cause: The ord_dicom.setDataModel procedure failed to load the repository due to the listed error.
Action: This is an internal error. Contact Oracle Support Services.
- ORA-53122: invalid document type : *string***
Cause: The ord_dicom.setDataModel procedure failed to load the repository because an invalid document type was found.
Action: This is an internal error. Contact Oracle Support Services.
- ORA-53124: cannot find VR number for data type: *string***
Cause: The VR number for the listed data type could not be found in the lookup table.
Action: This is an internal error. Contact Oracle Support Services.
- ORA-53125: invalid range tag: *string***
Cause: The ord_dicom.setDataModel procedure failed to load the repository because an invalid range tag was found in the dictionary table.
Action: This is an internal error. Contact Oracle Support Services.
- ORA-53126: assertion failure: *string***
Cause: The operation failed because an assertion error had occurred.
Action: This is an internal error. Contact Oracle Support Services.
- ORA-53200: Argument *string* is null.**
Cause: The argument was expecting a non-null value, but the value of the passed argument was null.
Action: Check your program and ensure that the caller of the routine does not pass a null argument value.
- ORA-53201: Argument *string* is null or invalid.**
Cause: The argument was expecting a non-null, valid value, but the value of the passed argument was null or invalid.
Action: Check your program and ensure that the caller of the routine does not pass a null or invalid argument value.
- ORA-53202: internal error, argument [*string*]**
Cause: The internal argument was invalid.
Action: Contact Oracle Support Services.

ORA-53203: security violation

Cause: A possible security violation was detected.

Action: Check the alert log and trace file for more information.

ORA-53210: unable to read empty DICOM object

Cause: There was no data in the specified DICOM object.

Action: See the Oracle Multimedia documentation for information about loading DICOM object data into the database.

ORA-53211: unable to read invalid ORDDicom object

Cause: The value of the source attribute or the extension attribute of the ORDDicom object was null.

Action: See the Oracle Multimedia documentation for information about creating a valid ORDDicom object.

ORA-53212: unable to read invalid ORDImage object: attribute *string* is null

Cause: The ORDImage object was invalid.

Action: See the Oracle Multimedia documentation for information about creating a valid ORDImage object.

ORA-53213: cannot access DICOM data with invalid source type

Cause: An invalid source type was stored in the source attribute of the ORDDicom object.

Action: See the Oracle Multimedia documentation for information about the supported source types for DICOM data.

ORA-53214: cannot access DICOM image data with invalid source type

Cause: An invalid source type was stored in the source attribute of the ORDImage object.

Action: See the Oracle Multimedia documentation for information about the supported source types for DICOM image data.

ORA-53215: cannot access ORDDataSource object with invalid source type

Cause: An invalid source type was stored in the ORDDataSource object. Or, an error occurred while trying to retrieve a BFILE while the object status was local.

Action: See the Oracle Multimedia documentation for information about the supported source types.

ORA-53216: cannot export the ORDDataSource object with an external source

Cause: The source of the ORDDataSource object was not local.

Action: Import the data before calling the export procedure. Or, get the data directly from the external source.

ORA-53217: The source LOB locator is null.

Cause: The source BLOB locator or BFILE locator was null.

Action: Correct the statement to pass an initialized LOB locator.

ORA-53230: unable to write to an invalid destination ORDDicom object

Cause: The value of the source attribute or the extension attribute of the destination ORDDicom object was null.

Action: See the Oracle Multimedia documentation for information about constructing a valid ORDDicom object.

ORA-53231: unable to write to a nonlocal destination ORDDicom object

Cause: The source attribute of the destination ORDDicom object was not local.

Action: See the Oracle Multimedia documentation for information about constructing a local ORDDicom object.

ORA-53232: unable to write to an invalid destination ORDImage object

Cause: The value of the source attribute of the destination ORDImage object was null.

Action: See the Oracle Multimedia documentation for information about constructing a valid ORDImage object.

ORA-53233: unable to write to a nonlocal destination ORDImage object

Cause: The source attribute of the destination ORDImage object was not local.

Action: See the Oracle Multimedia documentation for information about constructing a local ORDImage object.

ORA-53234: The destination BLOB locator is null.

Cause: The destination BLOB locator was null.

Action: Correct the statement to pass an initialized BLOB locator.

ORA-53250: Mapping document does not exist.

Cause: The specified mapping document did not exist.

Action: Check the installed mapping documents, and correct the statement to pass the name of an installed mapping document.

ORA-53251: Anonymity document does not exist.

Cause: The specified anonymity document did not exist.

Action: Check the installed anonymity definition documents, and correct the statement to pass the name of an installed anonymity definition document.

ORA-53252: Constraint does not exist.

Cause: The specified constraint did not exist.

Action: Check the installed constraints, and correct the statement to pass an installed constraint name.

ORA-53253: The metadata for the new DICOM object is invalid.

Cause: The metadata for the new DICOM object did not conform to the default metadata schema (ordcmmd.xsd).

Action: Check the metadata argument to ensure it has the correct namespace and conforms to the default metadata schema (ordcmmd.xsd). See the Oracle Multimedia documentation for information about the default metadata schema (ordcmmd.xsd).

ORA-53254: The SOP INSTANCE UID for the new DICOM object is invalid.

Cause: The SOP INSTANCE UID for the new DICOM object was invalid.

Action: See the Oracle Multimedia documentation for information about creating a valid SOP INSTANCE UID.

ORA-53255: cannot import from a null or invalid source type

Cause: A null or invalid source type was specified in the import procedure.

Action: See the Oracle Multimedia documentation for information about the supported source types for the DICOM object.

ORA-53256: cannot export to a null or invalid destination data type

Cause: A null or invalid destination data type was specified in the export procedure.

Action: See the Oracle Multimedia documentation for information about the supported destination data types for the DICOM object.

ORA-53257: Attribute does not exist.

Cause: The specified attribute did not exist.

Action: Ensure that the attribute name is valid.

ORA-53258: Metadata attribute is not available.

Cause: The value of the metadata attribute of the ORDDicom object was null.

Action: Call the setProperties method first.

ORA-53259: cannot extract metadata that conforms to the schema definition

Cause: The extracted metadata did not conform to its schema definition.

Action: Check the metadata schema definition, the mapping document and the parameters for the extractMetadata method to ensure that they are correct. See the Oracle Multimedia documentation for information about creating repository documents and extracting metadata.

ORA-53400: Missing DICOM magic number.

Cause: The DICOM object did not contain the DICOM magic number "dicm" required by part 10 of the DICOM standard.

Action: Fix the DICOM object or the DICOM object source, if possible. Otherwise, update the DICOM preference document to ignore this category of error.

ORA-53402: Missing DICOM header.

Cause: The DICOM object did not contain the file preamble.

Action: Fix the DICOM object or the DICOM object source, if possible. Otherwise, update the DICOM preference document to ignore this category of error.

ORA-53404: Missing the mandatory DICOM attribute *string*.

Cause: One or more mandatory DICOM attributes were missing from the DICOM object.

Action: Fix the DICOM object or the DICOM object source, if possible. Otherwise, update the DICOM preference document to ignore this category of error.

ORA-53406: The DICOM object contains invalid attribute value *string*.

Cause: The DICOM object did not conform to the DICOM standard and contained invalid attribute values.

Action: Fix the DICOM object or the DICOM object source, if possible. Otherwise, update the DICOM preference document to ignore this category of error.

ORA-53408: The DICOM object encoding is wrong *string*.

Cause: The DICOM object did not conform to the DICOM standard's binary encoding rules.

Action: Determine if the DICOM object is corrupt. If the DICOM object is not corrupt, verify whether it conforms to the binary encoding rules in the DICOM standard. If the DICOM object is corrupt, fix it if possible. Otherwise, update the DICOM preference document to ignore this category of error.

ORA-53410: The attribute *string* does not conform to the VM rule.

Cause: The DICOM object either contained an attribute that did not conform to the DICOM value multiplicity rule or was missing an attribute that was required by the DICOM standard.

Action: Determine if the DICOM object conforms to the DICOM standard. If it does, verify if the data dictionary matches the DICOM object or is more recent than the DICOM object. If the data dictionary is obsolete, update it using the ORD_DICOM_ADMIN repository API, if possible. Otherwise, update the DICOM preference document to ignore this category of error.

ORA-53412: The DICOM object contains an invalid VR value *string*.

Cause: The DICOM object with explicit value representation encoding had attribute VR values that did not match their definitions in the data dictionary.

Action: Determine if the DICOM object conforms to the DICOM standard. If it does, verify if the data dictionary matches the DICOM object or is more recent than the DICOM object. If the data dictionary is obsolete, update it using the ORD_DICOM_ADMIN repository API, if possible. Otherwise, update the DICOM preference document to ignore this category of error.

ORA-53414: The DICOM object contains undefined values *string*.

Cause: The DICOM object had attribute values that were expected to be part of the data model.

Action: Determine if the DICOM object conforms to the DICOM standard. If it does, verify if the data model matches the DICOM object or is more recent than the DICOM object. If the data model is obsolete, update it using the ORD_DICOM_ADMIN repository API, if possible. Otherwise, update the DICOM preference document to ignore this category of error.

ORA-53430: The DICOM object contains unsupported values *string*.

Cause: This type of DICOM object is not supported by the current release.

Action: Check for software updates, and contact Oracle Support Services for information about feature enhancements.

ORA-53432: The DICOM object attribute *string* has invalid definer name.

Cause: A private attribute definer for a private attribute contained in this DICOM object had invalid characters.

Action: Determine if the DICOM object is corrupt. If the DICOM object conforms to the DICOM standard, contact Oracle Support Services.

ORA-53434: Not a DICOM object.

Cause: The binary object is not a DICOM object.

Action: Determine if the DICOM object is corrupt. If the DICOM object conforms to the DICOM standard, contact Oracle Support Services.

ORA-53500: Not a DICOM image.

Cause: The binary object was not a DICOM image.

Action: Determine if the DICOM object is an image. Only DICOM images can be processed with image processing functions.

ORA-53502: Image processing failure.

Cause: An error occurred when processing a DICOM image.

Action: Determine if the DICOM image is corrupt, and if it is supported by the current release.

ORA-53800: The DICOM object does not contain attribute *string*.

Cause: The DICOM object did not contain the attribute that was required for conformance validation.

Action: Determine if the locator path is properly constructed. All attributes used in the locator path must be defined in the DICOM standard, and must not be retired. All attributes except the last attribute in the locator path must be of sequence type. If the locator path is correct, verify if the DICOM data dictionary is up to date. If the data dictionary is obsolete, update it using the ORD_DICOM_ADMIN repository API.

ORA-53801: cannot apply conformance validation on DICOM attribute *string*.

Cause: The content length of the attribute exceeded the value of the XML_SKIP_ATTR parameter that was defined in the preference document.

Action: Remove the attribute from the constraint rule or increase the value of the XML_SKIP_ATTR parameter that is defined in the preference document. Then, attempt the operation again.

ORA-53802: cannot perform conformance validation because recursion level exceeds MAX_RECURSION_DEPTH

Cause: When evaluating the recursive constraint on the DICOM object, the number of levels of recursion exceeded the value of the MAX_RECURSION_DEPTH parameter that was defined in the preference document.

Action: Ensure that the constraint definition is correct. If necessary, increase the value of the MAX_RECURSION_DEPTH parameter that is defined in the preference document. Then, attempt the operation again.

ORA-53810: error logging conformance validation messages

Cause: An error occurred while trying to log conformance validation messages.

Action: Ensure that the constraint rule definition does not contain any ACTION elements if the isConformanceValid method is called from a SQL query. If this error persists, contact Oracle Support Services.

ORA-53820: Invalid locator path *string*

Cause: A locator path for an attribute was invalid.

Action: Please verify the locator path is properly constructed. All attribute used in the locator path must be defined in the DICOM standard and must not be retired. An attribute that is not the last one of the locator path must be a sequence type. If the locator path is correct, please verify the DICOM data dictionary is up-to-date. If the data dictionary is obsolete, please use the ORD_DICOM_ADMIN API to update the data dictionary.

ORA-53900: I/O failure *string*.

Cause: A device I/O failure occurred when attempting to read from and write to a DICOM object.

Action: Check the permissions and privileges that have been granted for I/O operations.

ORA-53910: SQL error *string*.

Cause: An error occurred when attempting to run a SQL command.

Action: If you are using a JDBC connection string, ensure that the connection string is valid. Check the user account to see if it is locked. Ensure that the listener and the database server are running. And ensure that the setDataModel() function has been invoked before any other DICOM functions are called.

ORA-53920: XML error string.

Cause: An error occurred when attempting to read from and write to XML metadata.

Action: Ensure that Oracle XDB and all related schemas are properly installed.

ORA-53930: XSLT error string.

Cause: An error occurred while attempting to process XML metadata.

Action: Ensure that Oracle XDB and all related schemas are properly installed. And, verify that the mapping and anonymity documents are valid.

ORA-53940: make anonymous error string.

Cause: An error occurred while attempting to make DICOM object anonymous.

Action: Ensure that the anonymity document content is valid.

ORA-53980: unimplemented feature: string

Cause: The specified feature is not implemented.

Action: Contact Oracle Support Services.

ORA-53990: internal error string.

Cause: An internal error occurred while attempting to process a DICOM object.

Action: Contact Oracle Support Services, and supply them with a script that can be duplicated as well as the DICOM object that caused this error.

ORA-53991: cannot move tablespace because tables are being used

Cause: The operation failed because Oracle Multimedia tables were being used.

Action: End all sessions using Oracle Multimedia tables and try again.

ORA-54000: Virtual column feature not yet implemented

Cause: Feature has not been implemented.

Action: Feature is being implemented.

ORA-54001: string: invalid identifier specified for virtual column expression

Cause: Column expression referenced a column that does not exist in the table.

Action: Rewrite column expression to reference only scalar columns in the table.

ORA-54002: only pure functions can be specified in a virtual column expression

Cause: Column expression contained a function whose evaluation is non-deterministic.

Action: Rewrite column expression to reference only pure functions.

ORA-54003: specified data type is not supported for a virtual column

Cause: Only scalar data types are supported for virtual columns. LONG, BLOB, REF, and BFILE data types are not supported for virtual columns.

Action: Specify the expression column with a supported scalar data type.

ORA-54004: resultant data type of virtual column is not supported

Cause: The data type of the underlying expression is not supported. Only scalar data types are supported for virtual columns. LONG, BLOB, REF, and BFILE data types are not supported for virtual columns.

Action: Specify the expression of virtual column to return a supported scalar data type.

ORA-54005: keyword VIRTUAL cannot be specified here

Cause: The keyword VIRTUAL was either repeated or incorrectly specified.

Action: Remove the keyword from the specified syntax.

ORA-54006: keyword VISIBLE cannot be specified here

Cause: The keyword VISIBLE was either repeated or incorrectly specified.

Action: Remove the keyword from the specified syntax.

ORA-54007: keyword HIDDEN cannot be specified here

Cause: The keyword HIDDEN was either repeated or incorrectly specified.

Action: Remove the keyword from the specified syntax.

ORA-54008: expression column is not supported for an index organized table

Cause: Attempt to create/alter an index organized table with an expression column

Action: These columns are not supported, change the DDL.

ORA-54009: expression column is not supported for an external table

Cause: Attempt to create/alter an external table with an expression column

Action: These columns are not supported, change the DDL.

ORA-54010: expression column is not supported for a temporary table

Cause: Attempt to create/alter a temporary table with an expression column

Action: These columns are not supported, change the DDL.

ORA-54011: expression column is not supported for a clustered table

Cause: Attempt to create/alter a clustered table with an expression column

Action: These columns are not supported, change the DDL.

ORA-54012: virtual column is referenced in a column expression

Cause: This virtual column was referenced in an expression of another virtual column

Action: Ensure the column expression definition for any virtual column does not refer to any virtual column

ORA-54013: INSERT operation disallowed on virtual columns

Cause: Attempted to insert values into a virtual column

Action: Re-issue the statement without providing values for a virtual column

ORA-54014: Resulting table from a CTAS operation contains virtual column(s)

Cause: Table being created by a CTAS operation contains a virtual column definition

Action: Remove the virtual column definition from the table being created

ORA-54015: Duplicate column expression was specified

Cause: Expression of the virtual column being added/created conflicts with an existing/previously specified functional index expression or virtual column expression

Action: Change the expression of the virtual column as there are no duplicate expressions

ORA-54016: Invalid column expression was specified

Cause: Virtual column expression is not a valid arithmetic expression. It probably refers to another column in the table

Action: Change the expression of the virtual column

ORA-54017: UPDATE operation disallowed on virtual columns

Cause: Attempted to update values of a virtual column

Action: Re-issue the statement without setting values for the virtual column

ORA-54018: A virtual column exists for this expression

Cause: Specified index expression matches an existing virtual column"

Action: Re-issue the statement by replacing the index expression with the matching virtual column

ORA-54019: Virtual column expression cannot be changed because it is a partitioning column

Cause: Attempted to modify the expression of a virtual column that was also a partitioning column.

Action: This is not supported.

ORA-54020: Virtual column expression cannot be changed because it is a subpartitioning column

Cause: Attempted to modify the expression of a virtual column that was also a subpartitioning column.

Action: This is not supported.

ORA-54021: Cannot use PL/SQL expressions in partitioning or subpartitioning columns

Cause: Attempted to partition a table on a virtual column that contained PL/SQL expressions.

Action: This is not supported.

ORA-54022: Virtual column expression cannot be changed because an index is defined on column

Cause: Attempted to change the expression of a virtual column that was indexed.

Action: Alter index unusable. Change expression and then rebuild index.

ORA-54023: Virtual column expression cannot be changed because a constraint is defined on column

Cause: Attempted to change the expression of a virtual column that had a constraint defined on it.

Action: Drop constraint and then change expression.

ORA-54024: expression column is not supported for an organization cube table

Cause: Attempted to create or alter an organization cube table with an expression column

Action: These columns are not supported, change the DDL.

ORA-54025: Virtual column cannot have a default value

Cause: Attempted to alter a virtual column to have a default value.

Action: This is not valid, change the DDL.

ORA-54026: Real column cannot have an expression

Cause: Attempted to alter a real column to have an expression.

Action: This is not valid, change the DDL.

ORA-54027: cannot modify data-type of virtual column

Cause: Attempted to change the data-type of virtual column without modifying the underlying expression

Action: change the underlying expression to be compatible with the data-type change

ORA-54028: cannot change the HIDDEN/VISIBLE property of a virtual column

Cause: Attempted to change the HIDDEN/VIRTUAL property of a virtual column

Action: re-issue the DDL without the virtual column property change

ORA-54029: Virtual column cannot be updated in trigger body

Cause: Attempted to change the value of virtual column in a trigger body"

Action: This is not valid, change the trigger definition.

ORA-54030: datatype mismatch between virtual column and expression

Cause: virtual column expression was changed after column was created"

Action: change the underlying expression to return datatype that conforms to the virtual column

ORA-54031: column to be dropped or modified is used in a virtual column expression

Cause: Attempted to drop or modify a column that was used in a virtual column expression.

Action: Drop the virtual column first or change the virtual column expression to eliminate dependency on the column to be dropped.

ORA-54032: column to be renamed is used in a virtual column expression

Cause: Attempted to rename a column that was used in a virtual column expression.

Action: Drop the virtual column first or change the virtual column expression to eliminate dependency on the column to be renamed.

ORA-54033: column to be modified is used in a virtual column expression

Cause: Attempted to modify the data type of a column that was used in a virtual column expression.

Action: Drop the virtual column first or change the virtual column expression to eliminate dependency on the column to be modified.

ORA-54034: virtual columns not allowed in functional index expressions

Cause: An attempt was made to create a functional index with an expression defined on one or more virtual columns.

Action: Specify the index expression using only regular columns.

ORA-54035: keyword HIDDEN cannot be specified here

Cause: Attempted to specify HIDDEN key word for a virtual column

Action: This is not supported.

ORA-54036: cannot define referential constraint with ON DELETE SET NULL clause on virtual column

Cause: Attempted to specify ON DELETE SET NULL clause for a referential integrity constraint on a virtual column.

Action: Reissue the statement without specifying ON DELETE SET NULL clause.

ORA-54037: table must have at least 1 column that is not virtual

Cause: An attempt was made to create a table with only virtual columns.

Action: Include at least 1 column that is not virtual in the table being created.

ORA-54038: Virtual column cannot be encrypted

Cause: An attempt was made to create or alter a virtual column to have encryption.

Action: Encryption is unnecessary for a virtual column as the data is not stored on disk.

ORA-54500 to ORA-56974

ORA-54500: invalid combination of elements

Cause: The geometry did not start from the correct level in the hierarchy.

Action: Correct the hierarchy in the geometry.

ORA-54501: no holes expected

Cause: The geometry contained one or more unexpected holes.

Action: Remove any holes in the geometry.

ORA-54502: solid not closed

Cause: The solid geometry was not closed i.e., faces of solid are not 2-manifold due to incorrectly defined, oriented, or traversed line segment because each edge of a solid must be traversed exactly twice, once in one direction and once in the reverse direction.

Action: Correct the orientation of the edges of the neighboring polygons.

ORA-54503: incorrect solid orientation

Cause: The orientation of the solid was not correct.

Action: Correct the orientation or specification of the outer or inner solid geometry according to the geometry rules for such a solid.

ORA-54504: multiple outer geometries

Cause: The geometry contained more than one outer geometry.

Action: Remove all but one of the outer geometries.

ORA-54505: ring does not lie on a plane

Cause: The ring was not flat.

Action: Make sure all of the vertices of the ring are on the same plane.

ORA-54506: compound curve not supported for 3-D geometries

Cause: The 3-D geometry contained one or more compound curves, which are not supported for 3-D geometries.

Action: Remove all compound curves from the geometry.

ORA-54507: duplicate points in multipoint geometry

Cause: The multipoint geometry had two points that either had identical coordinates or were the same point considering the geometry tolerance.

Action: Make sure all points are different, considering the tolerance.

ORA-54508: overlapping surfaces in a multisolid geometry

Cause: The multisolid geometry contained one or more fully or partially overlapping surfaces.

Action: Ensure that the multisolid geometry contains no overlapping areas.

ORA-54509: solid not attached to composite solid

Cause: To connect solids in a composite solid geometry, at least one of the faces of a solid must be shared (fully or partially) with only another solid. However, at least one of the faces in this composite solid was not shared by exactly two solids only.

Action: Ensure that at least one face in a composite solid is shared by exactly two solids.

ORA-54510: no outer geometry expected

Cause: An outer geometry was found when only inner geometries were expected.

Action: Remove all outer geometries.

ORA-54511: edges of inner and outer solids intersect

Cause: An inner solid had a common edge with outer solid.

Action: Ensure that edges of inner and outer solids do not intersect.

ORA-54512: a vertex of an inner solid is outside corresponding outer solid

Cause: A solid geometry contained an inner solid with at least one vertex outside its corresponding outer solid.

Action: Ensure that all vertices of inner solids are not outside their corresponding outer solid.

ORA-54513: inner solid surface overlaps outer solid surface

Cause: One or more faces of an inner solid surface either fully or partially overlapped an outer solid surface.

Action: Ensure that inner and outer surfaces have no shared (fully or partially overlapping) faces.

ORA-54514: overlapping areas in multipolygon

Cause: A multipolygon geometry contained one or more common (shared, fully or partially overlapped) polygons.

Action: Ensure that no polygons in a multipolygon overlap.

ORA-54515: outer rings in a composite surface intersect

Cause: Outer rings, either on the same plane or different planes, in a composite surface intersected.

Action: Ensure that outer rings do not intersect. They can share edges.

ORA-54516: adjacent outer rings of composite surface cannot be on same plane

Cause: The conditional flag was set, and a composite surface had at least two outer rings sharing a common edge on the same plane.

Action: Change those outer rings into one larger outer ring.

ORA-54517: outer ring is on the same plane and overlaps another outer ring

Cause: An outer ring in a composite surface shared a common area with another outer ring.

Action: Ensure that no outer rings fully or partially overlap.

ORA-54518: shared edge of composite surface not oriented correctly

Cause: A shared edge (one shared by two polygons) in a composite surface was not correctly oriented. Each shared edge must be oriented in one direction with respect to its first polygon and then in the reverse direction with respect to its second polygon.

Action: Reverse one of the directions of the shared edge with respect to its polygons.

ORA-54519: polygon (surface) not attached to composite surface

Cause: Not all polygons of a surface had a common (fully or partially shared) edge.

Action: Ensure that each polygon is attached to the composite surface by one of its edges.

ORA-54520: inner ring not on the same plane as its outer ring

Cause: An inner ring was not on the same plane as its outer ring.

Action: Ensure that each inner ring is on the same plane as its outer ring.

ORA-54521: inner ring is not inside or is touching outer ring more than once

Cause: An inner ring either was not inside its outer ring or touched its outer ring more than once.

Action: Ensure that the inner ring is inside its outer ring and does not touch the outer ring more than once. If an inner ring touches its outer ring more than once, then the outer ring is no longer a topologically simple or singly connected polygon (ring).

ORA-54522: inner rings of same outer ring cannot intersect or share boundary

Cause: Two inner rings of the same outer ring intersected or shared a boundary.

Action: Ensure that line segments of an inner ring do not intersect or fully or partially coincide with line segments of another inner ring sharing the same outer ring.

ORA-54523: inner rings of same outer ring cannot touch more than once

Cause: Two inner rings of the same outer ring touched more than once.

Action: Ensure that inner rings of the same outer ring touch at no more than one point.

ORA-54524: inner ring cannot be inside another inner ring of same outer ring

Cause: An inner ring was inside another ring of the same outer ring.

Action: Ensure that no inner ring is inside another inner ring of the same outer ring.

ORA-54525: incorrect box volume due to wrong ordinates

Cause: The rectangular box in shortcut format did not have its first x,y,z coordinates either all greater or less than its second x,y,z coordinates.

Action: Make sure that the first x,y,z coordinates are either all greater or all less than the second x,y,z coordinates.

ORA-54526: multi or composite geometry must be decomposed before extraction

Cause: The extraction could not be performed because the multi or composite geometry must first be decomposed into simple geometries (with or without inner geometries). The multi or composite geometry had a gtype of GTYPE_

MULTISOLID, GTYPE_MULTISURFACE, GTYPE_MULTICURVE, GTYPE_MULTIPOINT, or GTYPE_COLLECTION, or the geometry was a line string.

Action: Use the MULTICOMP_TOSIMPLE parameter to element extractor to decompose the multi or composite geometry to a simple geometry.

ORA-54527: operation not permitted on a simple geometry

Cause: A MULTICOMP_TOSIMPLE parameter to element extractor was attempted on a geometry that is already simple.

Action: Do not use the MULTICOMP_TOSIMPLE parameter to element extractor on simple geometries.

ORA-54528: inner composite surfaces or surfaces with inner ring(s) expected

Cause: An INNER_OUTER parameter to element extractor was attempted on a surface that was not simple or composite.

Action: Ensure that the etype of the geometry for the INNER_OUTER parameter to element extractor is ETYPE_SURFACE or ETYPE_COMPOSITESURFACE.

ORA-54529: geometry should have multi-level hierarchy (like triangle)

Cause: The geometry did not have the multi-level hierarchy required for this operation. For example, if the parameter to element extractor (hierarchy level) is not LOWER_LEVEL, but the geometry etype is ETYPE_SOLID and gtype is GTYPE_SOLID, an extract operation is not allowed, because a simple solid can only be decomposed into lower level geometries, such as composite surfaces.

Action: Ensure that the geometry has the appropriate hierarchy. For example, if the geometry etype is ETYPE_SOLID and gtype is GTYPE_SOLID, the parameter to element extractor (hierarchy level) should be LOWER_LEVEL.

ORA-54530: invalid etype for element at element offset

Cause: An invalid etype was encountered.

Action: Correct the etype of the geometry.

ORA-54531: invalid orientation for element at element offset

Cause: The orientation of the current geometry was not valid.

Action: Reverse the orientation of the geometry.

ORA-54532: incomplete composite surface

Cause: The end of composite surface was reached before all necessary surfaces were defined.

Action: Add more surfaces to match the geometry definition, or reduce the specified number of surfaces.

ORA-54533: invalid etype in composite surface of solid

Cause: The etype of the composite surface of a solid was not valid.

Action: Ensure that the etype is orient*1000+ETYPE_SOLID, where orient is 1 for outer solid and 2 for inner solid.

ORA-54534: incorrect box surface due to wrong specification

Cause: The elemInfo definition was not correct for the surface of the axis aligned box.

Action: Change the interpretation to 3 in the elemInfo definition.

ORA-54535: incorrect box surface because it is on arbitrary plane

Cause: The axis aligned box surface was not on the yz, xz, or xy plane.

Action: Ensure that the first and fourth coordinates, or the second and fifth coordinates, or the third and sixth coordinates are the same. This means that the surface is on the yz, xz or xy plane, respectively.

ORA-54536: axis aligned box surface not defined properly

Cause: The inner geometry etype did not start with 2, or the outer geometry etype did not start with 1, or both occurred.

Action: Use the correct etype for the inner and outer geometries.

ORA-54537: incorrect box surface due to wrong orientation

Cause: The rectangular surface in shortcut format did not have its first x,y,z coordinates all greater than or equal to or all less than or equal to its second x,y,z coordinates.

Action: Ensure that the first x,y,z coordinates are either all greater than or equal to or all less than or equal to the second x,y,z coordinates.

ORA-54538: unexpected gtype

Cause: The gtype of the geometry was not GTYPE_SOLID, GTYPE_SURFACE, GTYPE_CURVE or GTYPE_POINT.

Action: Correct the elemInfo array to fix any invalid gtype and etypes that violate the geometry hierarchy.

ORA-54539: cannot process the geometry(s) for this operation

Cause: The geometry had errors in it.

Action: Validate the geometry or geometries to ensure that each is valid.

ORA-54540: at least one element must be a surface or solid

Cause: One of the geometries had holes, and the geometries were neither (A) simple, composite, or multisurfaces, or (B) simple, composite, or multisolids. (Surfaces and solids are the only geometries that can have holes. Points and curves cannot have holes.)

Action: Ensure that each geometry having holes is a surface or solid (simple, composite, or multi).

ORA-54545: holes incorrectly defined

Cause: The holes were defined with incorrect etype.

Action: Ensure that the etype is correct in the definition of the inner geometry.

ORA-54546: volume of solid cannot be 0 or less

Cause: The solid geometry having one outer and multiple inner geometries had a negative or zero volume.

Action: Correct the orientation or specification of the outer solid geometry to obey outer geometry rules so that the outer geometry has a positive volume.

Additionally, correct the orientation or specification of inner solid geometries to obey inner geometry rules so that each inner geometry has a negative volume.

ORA-54547: wrong input for COUNT_SHARED_EDGES

Cause: The COUNT_SHARED_EDGES parameter value was not 1 or 2.

Action: Ensure that the COUNT_SHARED_EDGES parameter value is either 1 or 2.

-
- ORA-54548: input geometry gtype must be GTYPE_POLYGON for extrusion**
Cause: The input geometry gtype was not GTYPE_POLYGON.
Action: Ensure that the gtype of the input polygon is GTYPE_POLYGON.
- ORA-54549: input geometry has incorrect elemInfo**
Cause: The input 2-D polygon did not have only one outer ring.
Action: Ensure that the input 2-D polygon has only one outer ring.
- ORA-54550: input 2-D polygon not valid**
Cause: The 2-D polygon violated the rules for polygons and rings.
Action: Correct the polygon definition.
- ORA-54551: grdHeight and/or Height array sizes incorrect**
Cause: The sizes of grdHeight and Height arrays were not equal to half the size of input 2-D polygon's ordinates array. As a result, each point in the 2-D polygon could not be extruded from the grdHeight entry to the Height entry.
Action: Ensure that the sizes of the grdHeight and Height arrays are half that of input 2-D polygon ordinates array.
- ORA-54552: height entries must be >= to ground height entries**
Cause: In the definition of a solid, the height values were less than the ground height.
Action: Ensure that that height values are greater than or equal to ground height values.
- ORA-54553: incorrect geometry for appending**
Cause: The geometry could not be appended to a homogeneous collection (for example, multi-geometry) or to a heterogeneous geometry (for example, collection). In other words, the gtype of the geometry to be appended was neither GTYPE_COLLECTION or GTYPE_MULTI-X (where X is point, curve, surface, or solid).
Action: Ensure that the geometries involved in the append operation have appropriate gtypes.
- ORA-54554: arcs are not supported as defined**
Cause: An arc was defined in a geometry type in which arcs are not supported. Arcs are supported for 2-D (circle) polygons, 2-D compound polygons, 2-D single arc, and 2-D compound (composite) curves only.
Action: Remove or simplify the arcs.
- ORA-54555: invalid geometry dimension**
Cause: The geometry did not have three dimensions.
Action: Ensure that geometry has three dimensions.
- ORA-54556: operation is not supported for 3-D geometry**
Cause: A 3-D geometry was passed into an operation that supports only 2-D geometries.
Action: Check the Spatial documentation for operations that are supported and not supported on 3-D geometries.
- ORA-54557: incomplete composite solid**

Cause: The end of composite solid was reached before all necessary solids were defined.

Action: Add more solids to match the geometry definition, or reduce the specified number of solids.

ORA-54558: 3D SRID is not found for the corresponding 2D SRID

Cause: In extruding a 2D polygon into a 3D geometry, the SRID conversion function did not find an equivalent 3D SRID of the 2D SRID.

Action: Specify a 2D SRID that has a 3D equivalent

ORA-54559: query element and source geometry cannot be the same

Cause: A query element geometry and a source geometry were the same, which prevented a label pointing query element in the source geometry from being output.

Action: Redefine the query element or the source geometry so that a label can be output.

ORA-54560: query element cannot be a collection or multitype geometry

Cause: A query element was a collection geometry or a multitype geometry. Such geometries are not permitted in a query element because they are at the top of the geometry hierarchy. A query element must be part of the source geometry.

Action: Redefine the query element or the source geometry so that a label can be output.

ORA-54601: CREATE_PC: invalid parameters for creation of Point Cloud

Cause: An invalid or unknown parameter was specified in the creation of Point Cloud.

Action: Check for valid set of parameters.

ORA-54602: CREATE_PC: input points table *string* does not exist

Cause: The specified table for loading points into a Point Cloud did not exist.

Action: Create the points table with appropriate columns, and then create the Point Cloud.

ORA-54603: CREATE_PC: specified total dimensionality cannot exceed 8

Cause: The specified total dimensionality for the Point Cloud exceeded the maximum limit of 8.

Action: Create the Point Cloud with fewer dimensions. You can store the rest in the output points table.

ORA-54604: CREATE_PC: input points table should not be empty

Cause: The input points table had no data.

Action: Insert data into the input points table and then create the Point Cloud.

ORA-54605: CREATE_PC: scratch-tables/views (*string*) exist and need to be dropped

Cause: Transient tables/views from a previous CREATE_PC operation were still in existence.

Action: Delete the invalid Point Cloud from the base table (for cleanup of scratch tables), and initialize and create the Point Cloud again. Alternately, use SDO_UTIL.DROP_WORK_TABLES with oidstring as the parameter.

ORA-54607: CREATE_PC: error fetching data from input points table

-
- Cause:** An internal read error occurred during Point Cloud creation.
- Action:** Contact Oracle Support Services with the error number reported.
- ORA-54608: CREATE_PC: error writing Point Cloud LOB**
- Cause:** An internal LOB write error occurred during Point Cloud creation. The cause might be lack of table space.
- Action:** Look for information from other errors in the stack, or contact Oracle Support Services with the error number reported.
- ORA-54609: CREATE_PC: input extent cannot be null**
- Cause:** The extent of the Point Cloud was null.
- Action:** Specify an extent for the Point Cloud that is not null.
- ORA-54610: CREATE_PC: input extent cannot be more than 2-D for geodetic data**
- Cause:** The extent of the Point Cloud was more than 2-D for geodetic data.
- Action:** Change the extent to 2-D (longitude, latitude).
- ORA-54611: INIT: either invalid basetable/schema or they do not exist**
- Cause:** The base table or schema, or both, were invalid strings; or the base table and schema combination did not exist.
- Action:** Ensure that the specified base table exists in the specified schema before performing the initialization operation.
- ORA-54613: INIT: internal error creating DML trigger**
- Cause:** The necessary privileges to create the trigger were not granted.
- Action:** Grant the necessary privileges to create the trigger. If necessary, contact Oracle Support Services for help with privileges for trigger creation.
- ORA-54614: INIT: block table name has to be unique**
- Cause:** The specified block table name was not unique. For example, it might have been used for another block table.
- Action:** Specify a different block table name.
- ORA-54616: INIT: internal error [number, string]**
- Cause:** An internal error occurred.
- Action:** Contact Oracle Support Services.
- ORA-54617: CLIP_PC: invalid Point Cloud; extent is empty**
- Cause:** The input Point Cloud for the CLIP_PC operation was invalid.
- Action:** Specify a point cloud that was created using the CREATE_PC procedure.
- ORA-54618: CLIP_PC: SRIDs of query and Point Cloud are incompatible**
- Cause:** The Point Cloud and the query geometry had incompatible SRID values.
- Action:** Change the query SRID to be compatible with that of the Point Cloud.
- ORA-54619: CLIP_PC: query and BLKID parameters cannot both be null**
- Cause:** Both the query and BLKID parameters were null in the call to the CLIP_PC operation.
- Action:** Either specify a query geometry that is not null, or specify a BLKID for use as a query.
- ORA-54620: CLIP_PC: internal error [number, string]**

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54621: TO_GEOMETRY: TOTAL_DIMENSIONALITY not same as in INIT operation

Cause: The specified TOTAL_DIMENSIONALITY was invalid.

Action: Ensure that the TOTAL_DIMENSIONALITY matches that specified in the call to the initialization operation.

ORA-54622: TO_GEOMETRY: internal error [number, string]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54623: CREATE_PC: internal error [number, string]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54640: PARTITION_TABLE utility: invalid input parameters [number, string]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54641: PARTITION_TABLE utility: scratch tables exist with oidstr = string

Cause: Scratch tables/views could not be created because they already existed.

Action: Use SDO_UTIL.DROP_WORK_TABLES with the specified oidstr parameter to clean up the scratch tables.

ORA-54642: PARTITION_TABLE utility: invalid SORT_DIMENSION specified

Cause: An invalid string was specified for the SORT_DIMENSION.

Action: Specify the SORT_DIMENSION as 'BEST_DIM', 'DIMENSION_1', 'DIMENSION_2', or 'DIMENSION_3'.

ORA-54643: PARTITION_TABLE utility: invalid WORKTABLESPACE parameter

Cause: An invalid string was specified for the WORKTABLESPACE parameter.

Action: Specify an existing valid tablespace for WORKTABLESPACE (to hold the scratch tables).

ORA-54644: PARTITION_TABLE utility: error in reading input, output tables

Cause: The names for the input/output tables were invalid, or the tables did not exist or did not have the right structure.

Action: Check the Spatial documentation for PARTITION_TABLE.

ORA-54651: CREATE_TIN: invalid parameters specified in creation of TIN

Cause: An invalid or unknown parameter was specified in the creation of the TIN.

Action: Check the Spatial documentation for CREATE_TIN.

ORA-54652: CREATE_TIN: input points table string does not exist

Cause: The specified table for loading points into a TIN did not exist.

Action: Create the points table with appropriate columns, and then create the TIN.

ORA-54653: CREATE_TIN: specified total dimensionality cannot exceed 8

-
- Cause:** The specified total dimensionality for the TIN exceeded the maximum limit of 8.
- Action:** Create the TIN with fewer dimensions. You can store the rest in the output points table.
- ORA-54654: CREATE_TIN: input points table should not be empty**
- Cause:** The input points table had no data.
- Action:** Insert data into the input points table, and then create the TIN.
- ORA-54655: CREATE_TIN: scratch tables/views(*string*) exist and need to be dropped**
- Cause:** Transient tables from previous CREATE_TIN operation still existed.
- Action:** Delete the invalid TIN from the base table (for cleanup of scratch tables), and initialize and create the TIN again. Alternately, use SDO_UTIL.DROP_WORK_TABLES with oidstring as its parameter.
- ORA-54656: CREATE_TIN: error fetching data from input points table**
- Cause:** An internal read error occurred during TIN creation.
- Action:** Contact Oracle Support Services with the error number reported.
- ORA-54657: CREATE_TIN: error writing TIN LOB**
- Cause:** An internal LOB write error occurred during TIN creation. The cause might be lack of table space.
- Action:** Look for information from other errors in the stack, or contact Oracle Support Services with the error number reported.
- ORA-54658: CREATE_TIN: input extent cannot be null**
- Cause:** The extent of the TIN was null.
- Action:** Specify an extent for the TIN that is not null.
- ORA-54659: CREATE_TIN: input extent has to be 2-D for geodetic data**
- Cause:** The extent of the TIN was more than 2-D for geodetic data.
- Action:** Change the extent to 2-D (longitude, latitude).
- ORA-54660: CLIP_TIN: invalid Point Cloud; extent is empty**
- Cause:** The input TIN for the CLIP_TIN operation was invalid.
- Action:** Specify a TIN that was created using the CREATE_TIN operation.
- ORA-54661: CLIP_TIN: SRIDs of query and TIN are incompatible**
- Cause:** The TIN and the query geometry had incompatible SRID values.
- Action:** Change the query geometry SRID to be compatible with that of TIN.
- ORA-54662: CLIP_TIN: query and blkid parameters cannot both be null**
- Cause:** Both the query and blkid parameters were null in the call to the CLIP_TIN operation.
- Action:** Either specify a query geometry that is not null, or specify a blkid for use as a query.
- ORA-54663: CLIP_TIN: internal error [*number, string*]**
- Cause:** An internal error occurred.
- Action:** Contact Oracle Support Services.

ORA-54664: TO_GEOMETRY: internal error [number, string]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54665: CREATE_TIN: internal error [number, string]

Cause: An internal error occurred.

Action: Contact Oracle Support Services.

ORA-54666: query gtype is a superset of the source geometry

Cause: A query element geometry was at a higher level in the geometry hierarchy than the source geometry.

Action: Try replacing the source geometry with the query geometry.

ORA-54667: query element cannot be matched to an element in source geometry (string)

Cause: A query element geometry was not a part of the source geometry.

Action: Redefine the query element or the source geometry.

ORA-54668: a 2D SRID cannot be used with a 3D geometry

Cause: A 2D SRID was used with a 3D geometry.

Action: Replace the 2D SRID with an appropriate 3D SRID.

ORA-55200: Java exception from tag data translation java stack

Cause: Java exceptions.

Action: Turn on java output by calling `dbms_java.set_output(OUTPUT_SIZE)`; Set java logging level by calling `MGD_ID_UTL.setJavaLogLevel('INFO')`; Analyze java logging messages.

ORA-55201: Tag data translation category not found

Cause: No matching category ID could be found.

Action: Make sure the input category name, category version or category ID is correct.

ORA-55202: Tag data translation scheme not found

Cause: No matching scheme could be found for the input data format.

Action: Make sure the input data format is supported and correct.

ORA-55203: Tag data translation level not found

Cause: No matching level could be found for the input data format.

Action: Make sure the input data format is supported and correct.

ORA-55204: Tag data translation option not found

Cause: No matching option could be found for the input data format.

Action: Make sure the input data format is supported and correct.

ORA-55205: Tag data translation field validation failed

Cause: Invalid field value.

Action: Make sure the field value of the input data is within the range specified in the tag data translation XML.

ORA-55206: Tag data translation field not found

-
- Cause:** Invalid input field.
- Action:** Make sure the spellings of the input fields are correct.
- ORA-55207: Tag data translation rule evaluation failure**
- Cause:** Error occurred when idcode translator tried to evaluate the rule specified in the tag data translation XML.
- Action:** Java proxy must be set in order to evaluate manager look up rules. Call `MGD_ID_UTL.setProxy(PROXY_HOST, PROXY_PORT)` to enable java proxy.
- ORA-55208: Too many matching levels were found for the input data**
- Cause:** Necessary field values were missing.
- Action:** Add additional field value pairs that are necessary to determine a unique matching level.
- ORA-55300: model *string* does not exist**
- Cause:** The specified model could not be found.
- Action:** Make sure that the model has been created.
- ORA-55301: rulebase *string* does not exist**
- Cause:** The specified rulebase could not be found.
- Action:** Make sure that the rulebase has been created.
- ORA-55302: insufficient privileges *string***
- Cause:** Sufficient privileges were not granted.
- Action:** Ask the database administrator to grant the appropriate privileges.
- ORA-55303: SDO_RDF_TRIPLE_S constructor failed: *string***
- Cause:** SDO_RDF_TRIPLE_S constructor failed.
- Action:** Check the stack trace for additional information.
- ORA-55304: specified reuse-bNode model-id *string* != target model-id *string***
- Cause:** The reuse-bNode model-id specified for the SDO_RDF_TRIPLE_S constructor was neither 0 nor the model-id of the target model.
- Action:** Make sure that the reuse-bNode model is either 0 or the model-id of the target model.
- ORA-55305: reification constructor functions not supported**
- Cause:** Unsupported reification constructor functions were used.
- Action:** Insert each triple in the reification quad individually. See documentation for more information.
- ORA-55306: internal error: invalid *string*: value_name=*string* value_type=*string***
- Cause:** The value type of this component of the RDF triple was invalid.
- Action:** This is an internal error. Contact Oracle Support Services.
- ORA-55307: invalid value type for lexical value: *string***
- Cause:** The value type of this lexical value was invalid.
- Action:** Make sure that the lexical value format is correct. If this error occurs during bulk load from a staging table, then this may be an internal error. Contact Oracle Support Services.
- ORA-55308: invalid time zone *string* for lexical value *string***

Cause: The time zone of this lexical value was invalid.

Action: Make sure that the lexical value format is correct. If this error occurs during bulk load from a staging table then this may be an internal error. Contact Oracle Support Services.

ORA-55309: hash collision resolution failed for lexical value *string*

Cause: Attempts to resolve hash collision exceeded the maximum retry count.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55310: parse failed for the *string* lexical value: *string*

Cause: Attempts to insert the specified lexical value failed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55311: invalid value type *string* for long lexical value *string*

Cause: The value type of this long (length > 4000) lexical value was invalid.

Action: Make sure that the long value has a valid value type.

ORA-55312: parse failed for triple: id-form: *string string string*

Cause: Attempts to insert triple failed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55313: SDO_RDF_TRIPLE_S constructor failed to process triple containing bNode

Cause: The SDO_RDF_TRIPLE_S constructor without bNode reuse option was invalid for triple containing bNode.

Action: Use SDO_RDF_TRIPLE_S constructor that allows bNode reuse.

ORA-55314: invalid temporary table name (*string*) for use with batch load

Cause: Specified temporary table name was not valid.

Action: See documentation for rules for temporary table name validity.

ORA-55315: batch load attempt failed: *string*

Cause: The batch load operation failed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55316: model *string* does not match model *string* for table and column

Cause: This column of the table was not associated with the specified model.

Action: Make sure to use the correct target model.

ORA-55317: model *string* already exists

Cause: A model with the specified name was already present.

Action: Choose a different model name, or delete the existing model and create a new model with the specified name.

ORA-55318: column *string* in table *string* already contains data

Cause: At model creation time, the table column contained data.

Action: Ensure that the table column does not contain data before model creation.

ORA-55319: model *string* create attempt failed: *string*

Cause: The attempt to create the specified model did not succeed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55320: model *string* drop attempt failed: *string*

Cause: The attempt to drop the specified model did not succeed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55321: network already exists

Cause: Attempt to create the network failed because the network already existed.

Action: If necessary, drop the network before trying to recreate the network.

ORA-55322: model(s) exist

Cause: An attempt was made to drop a network that contained one or more models.

Action: Drop all the model(s) and then retry the operation.

ORA-55323: rulebase(s) exist

Cause: An attempt was made to drop a network that contained one or more rulebases.

Action: Drop all the rulebase(s) and then retry the operation.

ORA-55324: no rulebases specified

Cause: Rulebases for the operation were not specified.

Action: Specify at least one rulebase.

ORA-55325: rulebase or rules index *string* already exists *string*

Cause: A rulebase or rules index with the specified name already existed.

Action: Choose a different name, or delete the existing rulebase or rules index.

ORA-55326: rules index (*string*) create attempt failed: *string*

Cause: The attempt to create the specified rules index did not succeed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55327: rule *string* yields a triple with a literal subject or predicate

Cause: The specified rule created an invalid triple containing a literal in the subject or predicate position.

Action: Check and modify the rule to avoid creation of invalid triple.

ORA-55328: literal value *string* insert attempt failed

Cause: The attempt to create the specified literal value failed.

Action: This may be an internal error. Contact Oracle Support Services.

ORA-55329: same model *string* specified more than once in the list of models

Cause: The specified model occurred more than once in the list of models.

Action: Eliminate duplicate occurrences of the model in the list of models.

ORA-55330: rulebase or rules index *string* is busy

Cause: The specified rulebase or rules index was busy and could not be used.

Action: Retry your operation later.

ORA-55331: user owns RDF objects

Cause: The user could not be dropped because it owns RDF objects.

Action: Drop the RDF objects and then retry.

ORA-55332: virtual model cannot be used in this context

Cause: A virtual model was used as input instead of a model.

Action: Use a model as input.

ORA-55333: virtual model *string* does not exist

Cause: The specified virtual model could not be found.

Action: Make sure that the virtual model has been created.

ORA-55334: virtual model name *string* is invalid

Cause: The specified virtual model name was not valid.

Action: Check Oracle documentation for valid virtual model names.

ORA-55335: at least one model must be specified

Cause: An empty list of models was specified as the set of models for a virtual model.

Action: Make sure at least one model appears in the set of models used to create a virtual model.

ORA-55336: insufficient privileges for using one or more of the models and rules indexes

Cause: An attempt was made to create a virtual model without the appropriate privileges.

Action: Ask the database administrator to perform the operation or to grant the required privileges.

ORA-55337: a virtual model or rules index with the name *string* already exists

Cause: A virtual model or rules index with the specified name was already present.

Action: Choose a different virtual model name.

ORA-55338: a model with the name *string* already exists

Cause: A model with the specified name was already present.

Action: Choose a different virtual model name.

ORA-55339: a virtual model already exists for the specified model-rulebase combination

Cause: A virtual model with identical components was already present.

Action: Choose a different set of components for the new virtual model.

ORA-55340: rules index does not exist for the specified model-rulebase combination

Cause: A rules index did not exist for the specified sets of models and rulebases.

Action: Make sure a rules index is created for the specified sets of models and rulebases.

ORA-55341: label index out-of-range

Cause: An attempt was made to use an out-of-range index for retrieving the label.

Action: Correct the input and try again.

ORA-55342: not a defined label in the policy

Cause: An attempt was made to use an undefined label.

Action: Correct the input and try again.

ORA-55343: invalid dependent component for custom label generator

Cause: An attempt was made to specify an invalid dependent component for the label generator.

Action: Correct the input and try again.

ORA-55344: invalid label generator implementation or use

Cause: An attempt was made to use an invalid label generator to generate labels for inferred data.

Action: Correct the input and try again.

ORA-55345: invalid use of label generator with no OLS policy

Cause: An attempt was made to use a label generator when Oracle Label Security (OLS) was not enabled for Resource Definition Framework (RDF) data.

Action: None

ORA-55346: invalid label generation option with user rules

Cause: An attempt was made to specify an invalid label generation option for entailment involving user rules.

Action: Correct the input and try again.

ORA-55347: missing proof for the specified label generation option

Cause: The chosen label generation option required proof, which was missing for the entailment.

Action: Correct the input and try again.

ORA-55348: label generator error: RDF data not enabled for *string*

Cause: An invalid label generator option was chosen for entailment.

Action: Correct the input and try again.

ORA-55349: OLS not installed or in an invalid state

Cause: Oracle Label Security (OLS) support for Resource Definition Framework (RDF) was not installed.

Action: Consult Oracle documentation to install the Oracle Label Security (OLS) support.

ORA-55350: RDF-OLS table option *string* not supported

Cause: An attempt was made to use an unsupported Oracle Label Security (OLS) option for Resource Definition Framework (RDF) data.

Action: Correct the input and try again.

ORA-55351: RDF secure access option not supported or is invalid

Cause: An attempt was made to use an unsupported secure access option for Resource Definition Framework (RDF).

Action: Correct the input and try again.

ORA-55352: insufficient privileges for policy administration

Cause: The necessary privileges needed to administer Oracle Label Security (OLS) or Oracle Virtual Private Database (VPD) policies for Resource Definition Framework (RDF) data were not specified.

Action: None

ORA-55353: invalid column name for label column *string*

Cause: An attempt was made to use an invalid column to maintain labels for Resource Definition Framework (RDF) data.

Action: Use CTXT2 as the label column.

ORA-55354: Policy *string* does not exist or is inaccessible

Cause: An attempt was made to use a nonexistent policy.

Action: Correct the input and try again.

ORA-55355: RDF network does not exist

Cause: An attempt was made to perform an operation that required Resource Definition Framework (RDF) network to be present.

Action: Create the Resource Definition Framework (RDF) network.

ORA-55356: OLS not enabled for RDF data

Cause: An attempt was made to perform an RDF-OLS-specific operation when Oracle Label Security (OLS) was not enabled for Resource Definition Framework (RDF) data.

Action: None

ORA-55357: insufficient privileges for the current operation

Cause: An attempt was made to perform a Resource Definition Framework (RDF) secure access operation with restricted privileges.

Action: See Oracle documentation.

ORA-55358: model "*string*" is not empty

Cause: An attempt was made to reset Oracle Label Security (OLS) labels for a model with some data.

Action: None

ORA-55359: unauthorized operation with policy *string* - *string*

Cause: An attempt was made to perform an unauthorized DML operation on OLS-enabled Resource Definition Framework (RDF) repository.

Action: None

ORA-55360: invalid value for resource position - *string*

Cause: An invalid value was specified for the resource position while setting labels.

Action: Correct the input and try again.

ORA-55361: duplicate specification for the namespace found

Cause: An attempt was made to use a namespace map that contained one or more duplicate specifications.

Action: Correct the input and try again.

ORA-55362: RDF VPD policy may not be created in the SYS schema

Cause: An attempt was made to create an Oracle Virtual Private Database (VPD) policy in the SYS schema.

Action: None

ORA-55363: context *string* does not exist

Cause: An attempt was made to specify a nonexistent context for the Oracle Virtual Private Database (VPD) policy.

Action: Create the context using CREATE CONTEXT command.

ORA-55364: invalid operation type *string* for VPD policy

Cause: An attempt was made to specify an invalid operation for the application of Oracle Virtual Private Database (VPD) policy.

Action: Specify ALL, QUERY, or DML for operation type.

ORA-55365: invalid metadata for VPD policy

Cause: An attempt was made to define invalid metadata elements for the Oracle Virtual Private Database (VPD) policy.

Action: See Oracle documentation for valid set of metadata elements.

ORA-55366: unknown namespace prefix "*string*"

Cause: An attempt was made to make use of an undefined namespace prefix in Oracle Virtual Private Database (VPD) metadata.

Action: Correct the input and try again.

ORA-55367: invalid maintenance operation for VPD metadata

Cause: An attempt was made to perform an invalid maintenance operation on Oracle Virtual Private Database (VPD) metadata.

Action: Specify ADD or DELETE for VPD metadata maintenance.

ORA-55368: empty match or apply pattern not allowed in a VPD constraint

Cause: An attempt was made to specify an empty match or apply pattern for a Oracle Virtual Private Database (VPD) constraint.

Action: Correct the input and try again.

ORA-55369: invalid identifier specified for the constraint group

Cause: An invalid SQL identifier was specified for the constraint group.

Action: Correct the input and try again.

ORA-55370: input parameter not a zero or positive integer

Cause: The input parameter was not zero or a positive integer.

Action: Change the input parameter to zero or a positive integer.

ORA-55371: RDF rules index '*string*' exists for different model-rulebase combination

Cause: A rules index with the specified name has already been built for a different model-rulebase combination.

Action: Specify a different rules index name, or drop the existing rules index and then create a new rules index with that name.

ORA-55372: entailment (rules index) '*string*' already exists

Cause: The entailed graph (rules index) already exists.

Action: Specify a different rules index name, or drop the existing rules index and then create a new rules index with that name.

ORA-55373: inference internal error: *string*

Cause: An unexpected internal error condition occurred.

Action: Check the error message and the stack trace.

ORA-55374: query constants not in the database; no rows selected

Cause: URIs or literals used in the query did not exist in the database.

Action: Check the query, and ensure that the URIs or literals do exist.

ORA-55375: cannot drop table '*string*' because this table owns RDF objects

Cause: A table containing RDF data could not be dropped without first dropping its RDF model.

Action: Drop the corresponding RDF model or models, and then drop the table.

ORA-55376: cannot alter or drop column '*string*' because this column owns RDF objects

Cause: A table column containing RDF data could not be altered or dropped without first dropping its RDF model.

Action: Drop the corresponding RDF model or models, and then alter or drop the column.

ORA-55377: number of triples less than 1 or null error indication marker

Cause: An internal error occurred during validation. The number of triples was less than 1 or the error indication marker was null.

Action: Check the input parameters, and ensure that the number of triples is 1 or greater and that the error indication marker is not null; or contact Oracle Support Services.

ORA-55378: invalid error code

Cause: An invalid error code was passed in during validation.

Action: Specify a valid error code.

ORA-55379: too many triples

Cause: An internal error occurred during validation. Too many triples were passed in.

Action: Specify a valid number of triples for the operation, or contact Oracle Support Services.

ORA-55430: query pattern is null

Cause: The query pattern specified in the SEM_MATCH query was null.

Action: Modify the query pattern to be non-null.

ORA-55441: insufficient privileges to drop virtual model *string*

Cause: An attempt was made to drop a virtual model without the appropriate privileges.

Action: Ask the database administrator to perform the operation or grant the required privileges.

ORA-55442: a virtual model cannot be used with other models in a SEM_MATCH query

Cause: The set of models used as input to a SEM_MATCH query contained a virtual model.

Action: Create a new virtual model with contents that are equivalent to the specified SEM_MATCH model set and query the new virtual model.

ORA-55443: a virtual model cannot be used with a rulebase in a SEM_MATCH query

Cause: A rulebase was specified in conjunction with a virtual model as input to a SEM_MATCH query.

Action: Create a new virtual model that expands the specified virtual model to include the specified rulebase and query the new virtual model.

ORA-55450: continually refreshed workspaces not supported with RDF

Cause: An attempt was made to use continually refreshed workspaces with Resource Definition Framework (RDF) data.

Action: None

ORA-55451: multi-parent workspaces not supported with RDF

Cause: An attempt was made to use multi-parent workspaces with Resource Definition Framework (RDF) data.

Action: None

ORA-55452: batch mode not allowed with version-enabled models

Cause: An attempt was made to batch load data into a version-enabled Resource Definition Framework (RDF) model. This is not supported.

Action: None

ORA-55453: OLS/VPD-enabled indexes must be created with CREATE_ENTAILMENT API

Cause: An attempt was made to create entailment for OLS/VPD-enabled models using unsupported API.

Action: Correct the input and try again.

ORA-55454: version-enabled indexes must be created with CREATE_ENTAILMENT API

Cause: An attempt was made to create entailment for version-enabled models using unsupported API.

Action: Correct the input and try again.

ORA-55455: rules index status not recognized (*string*)

Cause: The specified rules index status was not recognized.

Action: Ensure that the rules index status is VALID, INCOMPLETE, or INVALID, and retry the operation.

ORA-55456: no valid rules index for this model-rulebase combination

Cause: A valid rules index did not exist for specified combination of models and rulebases.

Action: Create a rules index for the specified models and rulebases combination, or use a combination of models and rulebases for which a rules index exists, and retry the operation. Also ensure that the rules index status matches the status for the rules index specified in the query.

ORA-55457: predicate not found in model

Cause: The predicate value passed in as an argument to the semantic operator did not exist in the model.

Action: In the query using semantic operators, use a predicate value that exists in the model and retry the operation.

ORA-55458: object not found in model

Cause: The object value passed in as an argument to the semantic operator did not exist in the model.

Action: In the query using semantic operators, use an object value that exists in the model and retry the operation.

ORA-55459: invalid parameter string

Cause: The parameter string used in the creation of an index of type SEM_INDEXTYPE had invalid or malformed parameters.

Action: See the documentation for information on how to write a valid parameter string.

ORA-55460: incorrect usage of semantic operators

Cause: There was a syntax error in the call to the SEM_RELATED operator

Action: See the documentation for information on how to use the SEM_RELATED operator. Check that the value returned by SEM_RELATED is compared to 1 or 0.

ORA-55461: no distance information available

Cause: Distance information was not generated during rules index creation.

Action: Retry query without the SEM_DISTANCE operator and/or without specifying bounds in the SEM_RELATED operator. See the documentation for information on when distance information is generated.

ORA-55462: internal error

Cause: An internal error occurred during a semantic operator query or during the creation of an index of type SEM_INDEXTYPE.

Action: Contact Oracle Support Services.

ORA-55463: missing privileges for MDSYS schema for OLS-enabled entailment

Cause: An attempt was made to run entailment with insufficient privileges for MDSYS schema.

Action: Grant EXEMPT ACCESS POLICY to MDSYS.

ORA-55464: model "*string*" does not exist

Cause: An attempt was made to use a nonexistent Resource Definition Framework (RDF) model.

Action: Correct the input and try again.

ORA-55465: resource position *string* not secured with OLS policy

Cause: An attempt was made to associate labels with resource positions that were not secured with Oracle Label Security (OLS).

Action: Correct the input and try again.

ORA-55466: one or more triples have incompatible sensitivity label

Cause: An attempt was made to reset a label for a resource that participated in triples with incompatible label.

Action: Correct the input and try again.

ORA-55467: model-specific label for the resource is incompatible

Cause: An attempt was made to set a global label for a resource when an incompatible model-specific label already existed.

Action: Correct the input and try again.

ORA-55468: rule base "*string*" does not exist or is not accessible

Cause: An attempt was made to specify a rule base that did not exist.

Action: Correct the input and try again.

ORA-55469: rule "*string*" does not exist or is not accessible

Cause: An attempt was made to set a label for a rule that did not exist.

Action: Correct the input and try again.

ORA-55470: OLS may not be applied with one or more models VPD-enabled

Cause: An attempt was made to OLS-enable Resource Definition Framework (RDF) repository when one or more models is VPD-enabled.

Action: Oracle Label Security (OLS) and Oracle Virtual Private Database (VPD) may not be used simultaneously.

ORA-55471: OLS may not be applied to version-enabled RDF repository

Cause: An attempt was made to OLS-enable Resource Definition Framework (RDF) repository when one or more models is version-enabled.

Action: Oracle Label Security (OLS) may not be enabled when one or more models is version-enabled.

ORA-55472: Secure access policy already assigned to RDF data

Cause: An attempt was made to assign an Oracle Label Security (OLS) policy to Resource Definition Framework (RDF) data when some other policy was already in effect.

Action: None

ORA-55473: RDF model participating in a virtual model may not be version-enabled

Cause: An attempt was made to version-enable a Resource Definition Framework (RDF) model which participated in a virtual model.

Action: None

ORA-55474: internal error: [*string*],[*string*],[*string*]

Cause: There was an internal error with Resource Definition Framework (RDF) OLS/VPS support.

Action: Contact Oracle Support Services.

ORA-55475: policy with a matching name already exists

Cause: An attempt was made to specify a duplicate Oracle Virtual Private Database (VPD) policy name.

Action: Correct the input and try again.

ORA-55476: policy "*string*" does not exist

Cause: An attempt was made to use a nonexistent Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

ORA-55477: policy with dependent models may not be dropped

Cause: An attempt was made to drop an Oracle Virtual Private Database (VPD) policy with dependent models.

Action: Remove the VPD policy from the models and try again.

ORA-55478: application table with multiple RDF models not suitable for VPD

Cause: An attempt was made to VPD-enable a model which shared the application table with another model.

Action: None

ORA-55479: a policy already assigned to the RDF model

Cause: An attempt was made to assign Oracle Virtual Private Database (VPD) policy to a model with a VPD policy already in effect.

Action: None

ORA-55480: model participating in a virtual model may not be VPD-enabled

Cause: An attempt was made to VPD-enable a model that participated in a virtual model.

Action: None

ORA-55481: VPD policy may not be applied for OLS-enabled RDF repository

Cause: An attempt was made to VPD-enable a model with an Oracle Label Security (OLS) policy already in effect.

Action: OLS and VPD may not be used simultaneously.

ORA-55482: VPD may not be applied to version-enabled RDF repository

Cause: An attempt was made to VPD-enable a version-enabled Resource Definition Framework (RDF) repository. This is not supported.

Action: None

ORA-55483: policy "*string*" not assigned to the model

Cause: An attempt was made to remove an Oracle Virtual Private Database (VPD) policy that was never assigned to the model.

Action: None

ORA-55484: circular dependency not allowed in RDF metadata

Cause: An attempt was made to define metadata elements that had a circular dependency for the Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

ORA-55485: metadata may not be directly assigned to an equivalent property

Cause: An attempt was made to assign metadata directly to a property that was declared to be an equivalent of another.

Action: None

ORA-55486: metadata exists for the equivalent property

Cause: An attempt was made to make a property equivalent of another when some metadata already existed for this property.

Action: None

ORA-55487: VPD constraints exist for the equivalent property

Cause: An attempt was made to make a property equivalent of another when some Oracle Virtual Private Database (VPD) constraints already existed for this property.

Action: Correct the input and try again.

ORA-55488: metadata definition already exists for the policy

Cause: An attempt was made to add a duplicate metadata definition for an Oracle Virtual Private Database (VPD) policy.

Action: None

ORA-55489: conflicting metadata definition exists for the policy

Cause: An attempt was made to define conflicting metadata definitions for an Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

ORA-55490: VPD constraint may not be assigned to an equivalent property

Cause: An attempt was made to assign an Oracle Virtual Private Database (VPD) constraint to a property declared to be an equivalent of another.

Action: Assign the VPD constraint to the property that is the target of the equivalent property.

ORA-55491: VPD policy constraint with matching name already exists

Cause: An attempt was made to specify a duplicate name for the Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

ORA-55492: error creating VPD policy constraint: *string*

Cause: The Oracle Virtual Private Database (VPD) constraint had errors.

Action: See Oracle documentation.

ORA-55493: specified VPD policy constraint does not exist

Cause: An attempt was made to operate on an Oracle Virtual Private Database (VPD) constraint that did not exist.

Action: None

ORA-55494: input model set may only have a unique VPD policy

Cause: An attempt was made to execute a multi-model query where the models, as a set, did not have a unique Oracle Virtual Private Database (VPD) policy.

Action: Correct the input and try again.

ORA-55495: application table with multiple models may not be version-enabled

Cause: An attempt was made to version-enable an application table associated with multiple Resource Definition Framework (RDF) models.

Action: Correct the input and try again.

ORA-55496: unsupported versioning configuration (History/Valid time) for RDF data

Cause: An attempt was made to use an unsupported configuration for Resource Definition Framework (RDF) versioning.

Action: Correct the input and try again.

ORA-55497: RDF repository with an OLS policy may not be version-enabled

Cause: An attempt was made to version-enable a model with Oracle Label Security (OLS) policy.

Action: Versioning is not supported for OLS-enabled Resource Definition Framework (RDF) repository.

ORA-55498: VPD-enabled RDF model may not be version-enabled

Cause: An attempt was made to version-enable a model with an Oracle Virtual Private Database (VPD) policy in effect.

Action: Versioning of VPD-enabled Resource Definition Framework (RDF) models is not supported.

ORA-55501: Backing out live transaction

Cause: Flashback Transaction Backout was requested on a transaction that has not committed yet.

Action: Commit the transaction before using this feature.

ORA-55502: Specified input transaction by name has no SCN hint

Cause: The specified transaction names for Flashback Transaction Backout was missing an SCN hint.

Action: Provide an SCN hint, and guarantee that the named transactions start before the given SCN.

ORA-55503: Mining finished without seeing specified transactions

Cause: The SCN hit passed was not good. The SCN hit may have come after the start of any of the input transactions.

Action: Give a lesser and more conservative SCN hint, with greater probability of having seen the start of a transaction.

ORA-55504: Transaction conflicts in NOCASCADE mode

Cause: Transactions other than the ones specified conflicts with the specified transactions.

Action: Try using other options like NONCONFLICT_ONLY or CASCADE or NOCASCADE_FORCE.

ORA-55505: DDL done on an interesting object after mining start SCN

Cause: The Flashback Transaction Backout process encountered an interesting object which had its last DDL operation done on it after the mining start time. An interesting object is one that has been modified by either the specified transactions or any of their dependents.

Action: Specify transactions that have committed after the last DDL done on all the objects they touched.

ORA-55506: Transaction performed unsupported change

Cause: A transaction in the dependency DAG performed some

Action: The specified transaction cannot be backed out.

**ORA-55507: Encountered mining error during Flashback Transaction Backout.
function:string**

Cause: Mining error.

Action: None

ORA-55508: Invalid input to Flashback Transaction Backout

Cause: Null varrays passed or invalid input specified

Action: Specify properly formed varrays and valid options

ORA-55509: Creation of dependencies could not finish

Cause: One or more input transaction or any of its dependents are not committed or have been aborted after more than 1 minute of calling the backout function.

Action: Commit all the active transactions associated with this table and try again.

ORA-55510: Mining could not start

Cause: Mining could not start for the following reasons.

1. A logminer session was processing
2. The database was not mounted or not opened for read and write
3. Minimum supplemental logging was not enabled
4. Archiving was not enabled

Action: Fix the mentioned problems and try again. Note that if you enable supplemental logging now, you will not be able to remove a transaction that has committed without supplemental logging.

ORA-55511: Flashback Transaction experienced error in executing undo SQL

Cause: There was a constraint violation exception when executing in NOCASCADE_FORCE mode. Users could also get this error if appropriate supplemental logging is not enabled causing constraint dependencies to go unnoticed.

Action: Either use CASCADE or NONCONFLICT_ONLY options or add appropriate level for supplemental logging.

ORA-55512: Backing out PDML or XA-RAC transaction

Cause: One of the transactions in the dependency graph was a PDML transaction or a local transaction which is a branch of a global XA transaction, spanning multiple RAC instances. Currently flashback transaction does not support this type of transaction.

Action: None

ORA-55513: Backing out an AQ transaction

Cause: One of the transactions in the dependency graph touched an AQ table. As AQ externalizes database information, these transactions are not backed out, as the entire effects of the transaction cannot be seen from inside the database.

Action: None

ORA-55514: Backing out a DDL transaction

Cause: One of the transactions in the dependency graph is a DDL transaction and could not be backed out.

Action: None

ORA-55515: Mining sees input transaction changes without seeing transaction start

Cause: The start SCN provided was higher than the transaction start but below the transaction commit. The result was only partial changes for the given transaction.

Action: Please provide a lower scn hint to flashback transaction.

ORA-55518: Mining across reset logs

Cause: Flashback Transaction Backout cannot work with missing changes. This error is thrown if we walk across a reset-logs branch, where we might have missed changes.

Action: If the user knows that the transaction happened in the current reset logs branch, then the SCN-hint is possibly incorrect. Provide an SCN in the current reset log branch.

ORA-55519: Supplemental logging not available for mining SCN range

Cause: Flashback Transaction cannot work if there are regions in the mining range where supplemental logging is not enabled.

Action: If you have provided a SCN/time hint which is approximate and far beyond the specified transaction start time, then readjust the SCN hint and try again. If the system has figured out the transaction start time or you are sure of the range, then the specified transaction cannot be backed out.

ORA-55520: Log record in compatibility lower than 11.0

Cause: The logical change record shows that the compatibility of the mined redo is lower than version 11.0. Flashback transaction works only on redo versions 11.0 and above.

Action: Advance the compatibility and try to back out transactions that have occurred after the compatibility increase.

ORA-55557: Trigger 4144 corruption

Cause: Above events used for testing corruption path

Action: None

ORA-55558: *string* is not a corrupted transaction

Cause: the given transaction is not in the corrupt list v\$corrupt_xid_list

Action: check v\$corrupt_xid_list

ORA-55563: *number* is not a valid undo segment number

Cause: the given usn is not a valid one

Action: check undo\$

ORA-55564: *string* is not a valid transaction id

Cause: the given txn is not a valid one

Action: check txn id

ORA-55565: *string* is not a valid undo segment number

Cause: the given usn is not a valid one

Action: check undo\$

ORA-55566: SQL statement issued when the database was not open for queries

Cause: Tried to access SMON time zone information when database was not open for queries.

Action: Reissue the SQL statement after the database is open for queries.

ORA-55567: The *_highthreshold_undoretention* value should be at least *string* based on the current undo retention settings.

Cause: The *_highthreshold_undoretention* value was not greater than or equal to the UNDO_RETENTION setting and the low threshold value used for tuning undo retention.

Action: Reissue the SQL statement with a higher value.

ORA-55568: The maximum query length (mql) value should be atmost *string* based on the current *_highthreshold_undoretention* setting.

Cause: The maximum query length (mql in minutes) was not less than or equal to half the *_highthreshold_undoretention* parameter setting.

Action: Reissue the SQL statement with a lower value for mql or increase the value of `_highthreshold_undoretention` parameter.

ORA-55569: The UNDO_RETENTION parameter value should be atmost *string*, the `_highthreshold_undoretention` setting.

Cause: The UNDO_RETENTION parameter value was not less than or equal to the `_highthreshold_undoretention` parameter setting.

Action: Reissue the SQL statement with a lower value for UNDO_RETENTION parameter or increase the value of `_highthreshold_undoretention` parameter.

ORA-55600: The table "*string*".*string*" is already enabled for Flashback Archive

Cause: The specified table is already enabled for Flashback Archive.

Action: No action required.

ORA-55601: The table "*string*".*string*" cannot be enabled for Flashback Archive

Cause: An attempt is made to enable Flashback Archive for a table which should never be enabled for Flashback Archive.

Action: Check the table name.

ORA-55602: The table "*string*".*string*" is not enabled for Flashback Archive

Cause: An attempt was made to perform Flashback Archive operation on a table on which Flashback Archive is not enabled.

Action: Check the table name.

ORA-55603: Invalid Flashback Archive command

Cause: An invalid Flashback Archive command was specified.

Action: Check the SQL statement.

ORA-55604: Incorrect tablespace is specified

Cause: An incorrect tablespace is specified for the Flashback Archive.

Action: Check the SQL statement and verify the possible causes, 1, the tablespace that was already used by the Flashback Archive. 2, the tablespace was not used by the Flashback Archive. 3, the tablespace block size is less than 8K.

ORA-55605: Incorrect Flashback Archive is specified

Cause: An attempt was made to operate on a Flashback Archive that does not exist, or to create a Flashback Archive that already exists.

Action: Check the SQL statement.

ORA-55606: Event to modify archiver sleep time in seconds

Cause: 30 seconds is recommended as the archiver sleep time for tests.

Action: The default archiver sleep time is 300 seconds

ORA-55607: Event to enable debugging of archiver

Cause: The purpose of this event is for debugging.

Action: Attach to process specified.

ORA-55608: Default Flashback Archive does not exist

Cause: The default Flashback Archive did not exist.

Action: Create the default Flashback Archive first.

ORA-55609: Attempt to create duplicate default Flashback Archive

Cause: An attempt was made to create a default Flashback Archive while one already exists.

Action: No action required.

ORA-55610: Invalid DDL statement on history-tracked table

Cause: An attempt was made to perform certain DDL statement that is disallowed on tables that are enabled for Flashback Archive.

Action: No action required.

ORA-55611: No privilege to manage default Flashback Archive

Cause: An attempt was made to create, alter, or drop the default Flashback Archive.

Action: No action required.

ORA-55612: No privilege to manage Flashback Archive

Cause: An attempt was made to create, alter, or drop a Flashback Archive.

Action: No action required.

ORA-55613: Invalid Flashback Archive quota size

Cause: An attempt was made to specify invalid Flashback Archive quota size.

Action: Specify size in MB, GB, TB, PB, or EB.

ORA-55614: AUM needed for transactions on tracked tables

Cause: An attempt was made to execute DML on a tracked table without enabling Auto Undo Management.

Action: Disable tracking on the table or enable Auto Undo Management.

ORA-55615: Event to test archiver scheduled internal tasks

Cause: The purpose of this event is for testing.

Action: No action required.

ORA-55616: Transaction table needs Flashback Archiver processing

Cause: Too many transaction table slots were being taken by transactions on tracked tables.

Action: Wait for some amount of time before doing tracked transactions.

ORA-55617: Flashback Archive "*string*" runs out of space and tracking on "*string*" is suspended

Cause: Flashback archive tablespace quota is running out.

Action: Add tablespace or increase tablespace quota for the flashback archive.

ORA-55618: Insufficient privilege to grant Flashback Archive privilege

Cause: An attempt was made to grant Flashback Archive privilege.

Action: No action required.

ORA-55619: Invalid privilege to grant on Flashback Archive

Cause: An attempt was made to grant invalid privilege on a Flashback Archive object.

Action: Specify valid privilege.

ORA-55620: No privilege to use Flashback Archive

-
- Cause:** An attempt was made to enable Flashback Archive on a table without such privileges.
- Action:** No action required.
- ORA-55621: User quota on tablespace "*string*" is not enough for Flashback Archive**
- Cause:** An attempt was made to create or alter a Flashback Archive quota which is larger than the user's quota.
- Action:** No action required.
- ORA-55622: DML, ALTER and CREATE UNIQUE INDEX operations are not allowed on table "*string*".*string*"**
- Cause:** An attempt was made to write to or alter or create unique index on a Flashback Archive internal table.
- Action:** No action required. Only Oracle is allowed to perform such operations on Flashback Archive internal tables.
- ORA-55623: Flashback Archive "*string*" is blocking and tracking on all tables is suspended**
- Cause:** Flashback archive tablespace has run out of space.
- Action:** Add tablespace or increase tablespace quota for the flashback archive.
- ORA-55624: The table "*string*".*string*" cannot be enabled for Flashback Archive at this point**
- Cause:** An attempt was made to enable Flashback Archive again on a table which was just disabled.
- Action:** Try again later.
- ORA-55625: Cannot grant Flashback Archive privilege to a role**
- Cause:** An attempt was made to grant or revoke Flashback Archive privilege to a role.
- Action:** No action required.
- ORA-55626: Cannot remove the Flashback Archive's primary tablespace**
- Cause:** An attempt was made to remove the primary tablespace of the Flashback Archive.
- Action:** No action required.
- ORA-55627: Flashback Archive tablespace must be ASSM tablespace**
- Cause:** An attempt was made to add a tablespace that was not an ASSM tablespace.
- Action:** Add tablespace that is created with segment space management auto.
- ORA-55628: Flashback Archive supports Oracle 11g or higher**
- Cause:** An attempt was made to created a Flashback Archive with incorrect compatible mode or without auto undo management.
- Action:** Use compatible mode equal to 11.0 or higher, and use auto undo management.
- ORA-55629: Event to test Flashback Archiver internal management tasks**
- Cause:** The purpose of this event is for testing.
- Action:** No action required.

ORA-55630: Flashback Data Archive cannot be enabled on this object

Cause: An attempt was made to enable Flashback Data Archive on an object which is not supported by Flashback Data Archive.

Action: Do not use Flashback Archive clause for this object.

ORA-55631: Table has columns with data types that are not supported by Flashback Data Archive

Cause: An attempt was made to add a column of data type that is not supported by Flashback Data Archive. Or, the table on which Flashback Data Archive is being enabled contains column(s) with data types not supported by Flashback Data Archive.

Action: Do not use FLASHBACK ARCHIVE clause for this object. If adding column, do not use LONG or Nested Table column data type.

ORA-55632: Tablespace has Flashback Archive tables

Cause: An attempt was made to remove a tablespace that has Flashback Archive tables.

Action: No action required.

ORA-55633: Cannot do DDL on Flashback Data Archive enabled table

Cause: An attempt was made to do DDL on tracked tables while one DDL is running.

Action: Retry the DDL at a later time.

ORA-55634: Unable to disassociate or re-associate Flashback Data Archive table "*string*".*string*"

Cause: Either an incorrect table name was used or an exclusive lock on the table could not be acquired.

Action: Check the table name and release locks on the table.

ORA-55635: Flashback Data Archive enabled table "*string*".*string*" is disassociated

Cause: An attempt was made to perform operation on a Flashback Data Archive enabled table that is currently disassociated for DDL.

Action: Retry the operation at a later time.

ORA-55636: Flashback Data Archive enabled table "*string*".*string*" has different definition from its history table

Cause: The Flashback Data Archive enabled table has different table definition from its history table.

Action: Fix the table definition.

ORA-55637: Flashback Data Archive enabled table "*string*".*string*" is not in the correct compliance mode for this operation

Cause: An attempt was made to perform disassociation operation on a Flashback Data Archive enabled table that is in compliance mode. Or, DDL are not supported on tables in noncompliance mode.

Action: Disable compliance mode before retrying the disassociation operation.

ORA-55638: DDL operations on Flashback Data Archive-enabled table are not allowed at this point

Cause: Flashback Data Archive could not acquire resources to complete the operation on Oracle RAC.

Action: Retry the DDL at a later time.

ORA-55639: Flashback Data Archive internal SQL error

Cause: Flashback Data Archive encountered internal SQL error.

Action: No action required.

ORA-55640: Insufficient privilege to perform the Flashback Data Archive operation

Cause: An attempt was made to disassociate tables enabled for Flashback Data Archive without the required privilege.

Action: No action required.

ORA-55641: Cannot drop tablespace used by Flashback Data Archive

Cause: An attempt was made to drop a Flashback Data Archive tablespace.

Action: Remove the tablespace from Flashback Data Archive before retrying the operation.

ORA-55642: Table has column names that are reserved by Flashback Data Archive

Cause: The table on which Flashback Data Archive is being enabled contains column(s) with names that are reserved by Flashback Data Archive.

Action: Rename column name before retry.

ORA-55710: Unable to alter system parameter GLOBAL_TXN_PROCESSES at this time

Cause: The system was in the process of adjusting the number of global transaction background processes.

Action: Retry the operation at a later time.

ORA-55711: Unable to bind clusterwide global transactions to compatible undo

Cause: Undo tablespace was not online for automatic undo management.

Action: Create undo tablespace if it has not been created.

ORA-55712: XA transactions on RAC are not supported with GLOBAL_TXN_PROCESSES set to 0

Cause: The initialization parameter GLOBAL_TXN_PROCESSES was set to 0.

Action: Set the initialization parameter GLOBAL_TXN_PROCESSES to a value greater than 0.

ORA-55713: GLOBAL_TXN_PROCESSES cannot be set to 0 at runtime

Cause: An attempt was made to set initialization parameter GLOBAL_TXN_PROCESSES to 0 at runtime.

Action: Set the initialization parameter GLOBAL_TXN_PROCESSES to 0 before starting RAC instance to disable GTX background processes. Note that XA transactions are not supported on RAC database when GTX background processes are disabled.

ORA-55714: savepoint '*string*' disabled with interleaved changes across Oracle RAC instances

Cause: After the savepoints were established, interleaved changes were made across Oracle RAC instances within the clusterwide global transaction.

Action: Do not make interleaved changes across Oracle RAC instances after savepoints are established.

ORA-55800: NLS errors while processing Oracle number

Cause: Error occurred when trying to convert Oracle number to an integer.

Action: Check the input parameters.

ORA-55801: Event to control CR activity

Cause: The bit values that we consider. 0x1: Remove fix for bug 3514835 which could potentially throw more 8177 errors We have conservatively blocked some serializability errors, where there could potentially be a dependency between a service transaction in an index and forward going transaction.

Action: Set event 55801 to 1 to disable the bug fix, thereby reducing 8177 error, although it might cause some internal errors instead.

ORA-56500: DRCP: Pool not found

Cause: The pool name passed was either null or an invalid pool name.

Action: Input a valid pool name.

ORA-56501: DRCP: Pool startup failed

Cause: The connection pool failed to start up.

Action: Check logs for details.

ORA-56502: DRCP: Pool is inactive

Cause: The operation is only supported on an active pool.

Action: Start the pool.

ORA-56503: DRCP: Pool is active

Cause: The operation is only supported on an inactive pool.

Action: Shutdown the pool.

ORA-56504: DRCP: Invalid pool configuration parameter name

Cause: The configuration parameter name is null or invalid input.

Action: Input a valid configuration parameter name.

ORA-56505: DRCP: Invalid pool configuration parameter value

Cause: The configuration parameter value is null or invalid input.

Action: Input a valid configuration parameter value.

ORA-56506: DRCP: Pool shutdown failed

Cause: Connection pool failed to shutdown.

Action: Check logs for details.

ORA-56507: DRCP: Pool alter configuration failed

Cause: Connection pool failed to configure pool.

Action: Check logs for details.

ORA-56508: DRCP: Pool startup failed

Cause: Connection Broker failed to startup the pool.

Action: Check logs for details.

ORA-56509: DRCP: Pool shutdown failed

Cause: Connection Broker failed to shutdown the pool.

Action: Check logs for details.

-
- ORA-56510: DRCP: Pool alter configuration failed**
Cause: Connection Broker failed to configure the pool.
Action: Check logs for details.
- ORA-56511: DRCP: Cross instance synchronization failed**
Cause: Publish message to all RAC instances failed.
Action: Check logs for details.
- ORA-56512: DRCP: Failed to synchronize RAC instances [*string*]**
Cause: Some of the RAC instances were not synchronized.
Action: Perform the same operations on all the failed instances.
- ORA-56513: DRCP: Cannot perform requested operation using pooled connection**
Cause: This operation was not supported using connections from a pool.
Action: Use a regular connection to perform this operation.
- ORA-56514: DRCP: invalid value for maximum number of connections to Connection broker**
Cause: The value passed exceeded the maximum allowed.
Action: No action required. The maximum number of connections was automatically set to the maximum allowed value.
- ORA-56600: DRCP: Illegal call [*string*]**
Cause: An illegal OCI function call was issued.
Action: Check the documentation for Database Resident Connection Pool (DRCP) usage.
- ORA-56601: DRCP: Illegal connection class**
Cause: Wrong value for connection class was given.
Action: Check the documentation for Database Resident connection pool usage.
- ORA-56602: DRCP: Illegal purity**
Cause: Wrong value for purity was provided.
Action: Check the documentation for Database Resident connection pool usage.
- ORA-56603: DRCP: Internal error**
Cause: Malformed input values.
Action: Input well-formed values.
- ORA-56604: DRCP: Length[*string*] for *string* exceeded the MAX allowed**
Cause: Length exceeded MAX for the value.
Action: Use a value within the MAX allowed.
- ORA-56605: DRCP: Session switching and migration not allowed**
Cause: Application tried to switch or migrate session across connections.
Action: This usage is irrelevant in the Database Resident connection pooling context and is not supported. Release existing session.
- ORA-56606: DRCP: Client version does not support the feature**
Cause: The client version is lower than 11g.

Action: Upgrade to a higher client version or turn off (SERVER=POOLED) in the connect string.

ORA-56607: DRCP: Connection is already authenticated

Cause: Attempt to reauthenticate the connection which is authenticated.

Action: Logoff the connection before reauthenticating.

ORA-56608: DRCP: Server Group feature is not supported

Cause: Server Group attribute was set on the server handle, connected to a Database Resident connection pool.

Action: Do not set Server Group attribute on server handles while using Database Resident connection pool.

ORA-56609: Usage not supported with DRCP

Cause: This usage was not supported on a DRCP connection.

Action: Use a dedicated connection to perform this task.

ORA-56700: plan *string* is a subplan and SUB_PLAN attribute cannot be modified

Cause: An attempt was made to modify the SUB_PLAN attribute of the specified plan.

Action: Do not attempt to modify the SUB_PLAN attribute.

ORA-56701: INTERNAL_USE attribute of consumer group *string* cannot be modified

Cause: An attempt was made to modify the INTERNAL_USE attribute of the specified consumer group.

Action: Do not attempt to modify the INTERNAL_USE attribute.

ORA-56702: consumer group *string* is for internal use only and cannot be a switch target

Cause: An attempt was made to specify an INTERNAL_USE consumer group as a switch target.

Action: Do not attempt to switch to INTERNAL_USE consumer groups.

ORA-56703: VKTM process died unexpectedly

Cause: An explicit kill or internal error caused the death of VKTM background process.

Action: Restart the instance.

ORA-56704: EXPLICIT consumer group mapping priority must be set to 1

Cause: An attempt was made to set the EXPLICIT mapping priority to a value other than 1.

Action: Set the mapping priorities to unique integers within the documented range with the EXPLICIT priority set to 1.

ORA-56705: I/O calibration already in progress

Cause: An attempt was made to run a second instance of I/O Calibration

Action: Wait until the first I/O calibration run is complete; then, retry the operation.

ORA-56706: The specified Resource Manager plan is a subplan and cannot be set as a top-level plan

Cause: An attempt was made to set a subplan as a top-level plan.

Action: Do not attempt to set subplans as top-level plans.

ORA-56707: INTERNAL QUIESCE plan cannot be specified as a top-level Resource Manager plan

Cause: An attempt was made to specify INTERNAL QUIESCE as a top-level Resource Manager plan.

Action: Do not attempt to set INTERNAL QUIESCE as a Resource Manager plan.

ORA-56708: Could not find any datafiles with asynchronous i/o capability

Cause: There are no datafiles which are asynchronous I/O capable.

Action: Make sure asynchronous i/o is permitted to datafiles.

ORA-56709: timed_statistics set to FALSE

Cause: timed_statistics parameter in database is set to FALSE. Needs to be enabled for calibration.

Action: set timed_statistics=TRUE in init.ora or "alter system set timed_statistics=TRUE"

ORA-56710: DBRM process died unexpectedly

Cause: An explicit kill or internal error caused the death of the DBRM background process.

Action: Restart the instance.

ORA-56711: string is an invalid string argument

Cause: The named argument is invalid.

Action: Specify a valid argument for this procedure.

ORA-56713: Insufficient Resource Manager privileges

Cause: An attempt was made to switch the consumer group of a user without the appropriate privilege.

Action: Ask the database administrator to perform the switch operation or grant switch or system privilege to the user.

ORA-56714: Plan name string exceeds the maximum length allowed

Cause: Plan name is greater than 30 characters long.

Action: Do not exceed 30 characters when naming a resource plan.

ORA-56715: string resource plan contains a reserved word

Cause: The specified plan name is prefixed with a reserved prefix such as FORCE or SCHED.

Action: Do not prefix resource plan name with FORCE or SCHED.

ORA-56716: Category string does not exist

Cause: A non-existent category was specified as an argument to a procedure in the package, DBMS_RESOURCE_MANAGER.

Action: Specify an existing category name or create a new category with this name.

ORA-56717: SWITCH_TIME is set without specifying SWITCH_GROUP

Cause: The plan directive specifies a SWITCH_TIME without a SWITCH_GROUP.

Action: Specify a SWITCH_GROUP parameter in the plan directive.

ORA-56718: Timeout occurred while setting resource plan

Cause: A timeout occurred while waiting for one or more RAC instances to set the resource plan.

Action: Since the resource plan may have actually been set successfully, first check the current resource plan for each instance by querying `gv$sqlsrc_plan`. If the resource plan was not successfully set on all instances, then retry the operation.

ORA-56719: Error spawning or communicating with calibration slave

Cause: An error occurred in calibration slave process - Calibration process aborted.

Action: Review trace files for errors.

ORA-56720: I/O data limit exceeded - call aborted

Cause: The Resource Manager `SWITCH_IO_MEGABYTES` limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56721: I/O data limit exceeded - session terminated

Cause: The Resource Manager `SWITCH_IO_MEGABYTES` limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56722: I/O request limit exceeded - call aborted

Cause: The Resource Manager `SWITCH_IO_REQS` limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56723: I/O request limit exceeded - session terminated

Cause: The Resource Manager `SWITCH_IO_REQS` limit was exceeded.

Action: Reduce the complexity of the update or query, or contact your database administrator for more information.

ORA-56725: Could not spawn additional calibration slaves

Cause: An error occurred when spawning calibration slave process - Calibration process aborted.

Action: Check OS resources required for spawning processes

ORA-56726: Category *string* is referred to by a consumer group and cannot be deleted

Cause: An attempt was made to delete a category that is referred to by a consumer group.

Action: Modify or remove all consumer groups that use this category and then retry.

ORA-56727: Orion (*string*) must be invoked using its full, absolute path

Cause: Orion is spawning a child process and cannot determine the location of the executable.

Action: Use the full, absolute path for Orion.

ORA-56728: SQL blocks cannot be nested

Cause: An attempt was made to start an SQL block using `DBMS_RESOURCE_MANAGER.BEGIN_SQL_BLOCK()` while already inside an SQL block.

Action: Close the existing SQL block using DBMS_RESOURCE_MANAGER.BEGIN_SQL_BLOCK() or remove this call.

ORA-56729: Failed to bind the database instance to processor group *string*

Cause: Binding the database instance to the processor group specified by the PROCESSOR_GROUP_NAME parameter failed.

Action: Set the PROCESSOR_GROUP_NAME to a valid, configured processor group and restart the database instance.

ORA-56800: DSKM process died unexpectedly

Cause: An explicit kill or internal error caused the death of the DSKM background process.

Action: Restart the instance.

ORA-56840: LIBCELL API error in Master Diskmon

Cause: A LIBCELL operation in Master Diskmon failed.

Action: Look in the \$ORA_CRS_HOME/log/<hostname>/diskmon/diskmon.log file for additional error information.

ORA-56841: Master Diskmon cannot connect to a CELL

Cause: A LIBCELL operation from Master Diskmon failed to create a network connection to the target CELL.

Action: Look in the \$ORA_CRS_HOME/log/<hostname>/diskmon/diskmon.log file for additional error information.

ORA-56842: LIBCELL operation network error in Master Diskmon

Cause: A LIBCELL operation in Master Diskmon failed because of a network error.

Action: Look in the \$ORA_CRS_HOME/log/<hostname>/diskmon/diskmon.log file for additional error information.

ORA-56843: LIBCELL SKGXP error in Master Diskmon

Cause: A LIBCELL operation from Master Diskmon failed because of an SKGXP network layer error.

Action: Look in the \$ORA_CRS_HOME/log/<hostname>/diskmon/diskmon.log file for additional error information.

ORA-56864: Master Diskmon "*stringstring*" operation cannot complete because of a LIBCELL network error

Cause: A LIBCELL operation between Master Diskmon and a CELL failed because of a network error.

Action: Look in the \$ORA_CRS_HOME/log/<hostname>/diskmon/diskmon.log file for additional error information.

ORA-56865: Invalid IP address in CELLINIT.ORA

Cause: One or more of the specified IP addresses in CELLINIT.ORA is not valid.

Action: Check that all IP addresses in CELLINIT.ORA are valid.

ORA-56866: No IP parameter

Cause: No IP address is set in CELLINIT.ORA.

Action: Check that one or more valid IP addresses are set in CELLINIT.ORA.

ORA-56867: Cannot connect to Master Diskmon on pipe "*string*"

Cause: Master Diskmon was not running or the listening pipe was deleted.

Action: Look at the \$ORA_CRS_
HOME/log/<hostname>/diskmon/diskmon.log, \$ORA_CRS_
HOME/log/<hostname>/hasmsgs.log and \$ORA_CRS_
HOME/log/<hostname>/alert<hostname>.log for additional error information.

ORA-56868: Duplicate IP address in CELLINIT.ORA

Cause: One or more of the specified IP addresses in CELLINIT.ORA was repeated.

Action: Check that all IP addresses in CELLINIT.ORA are unique.

ORA-56870: Attempt to register dead cell with Master Diskmon

Cause: An attempt was made by a process to register a cell that is known to be down.

Action: None

ORA-56900: bind variable is not supported inside pivot | unpivot operation

Cause: Attempted to use bind variables inside pivot | unpivot operation.

Action: This is not supported.

ORA-56901: non-constant expression is not allowed for pivot | unpivot values

Cause: Attempted to use non-constant expression for pivot | unpivot values.

Action: Use constants for pivot | unpivot values.

ORA-56902: expect aggregate function inside pivot operation

Cause: Attempted to use non-aggregate expression inside pivot operation.

Action: Use aggregate function.

ORA-56903: sys_op_pivot function is not allowed here

Cause: invalid use of sys_op_pivot function.

Action: Remove sys_op_pivot function.

ORA-56904: pivot value must have datatype that is convertible to pivot column

Cause: Datatype of pivot value is not convertible to the datatype of pivot column.

Action: Check and correct pivot value.

ORA-56920: a prepare or upgrade window or an on-demand or datapump-job loading of a secondary time zone data file is in an active state

Cause: A prepare or upgrade window was started or an on-demand or datapump-job loading of a secondary time zone data file was done.

Action: Make sure there is no active prepare or upgrade window and no active on-demand or datapump-job loading of a secondary time zone data file.

ORA-56921: invalid time zone version

Cause: Invalid time zone version passed.

Action: Check and correct the time zone version.

ORA-56922: Starting a prepare window failed

Cause: Error(s) occurred when starting a prepare window.

Action: Check alert or trace file for error(s).

ORA-56923: database properties related to time zone version are not set up properly

Cause: There were no database properties related to time zone version in dictionary table sys.props\$.

Action: Contact Oracle Support Services.

ORA-56924: prepare window does not exist

Cause: There was no active prepare window.

Action: None

ORA-56925: Ending a prepare window failed

Cause: Error(s) occurred when ending a prepare window.

Action: Check alert or trace file for error(s).

ORA-56926: database must be in UPGRADE mode in order to start an upgrade window

Cause: Database was not in UPGRADE mode.

Action: Restart database in UPGRADE mode.

ORA-56927: Starting an upgrade window failed

Cause: Error(s) occurred when starting an upgrade window.

Action: Check alert or trace file for error(s).

ORA-56928: upgrade window does not exist

Cause: There was no active upgrade window.

Action: None

ORA-56929: Ending an upgrade window failed

Cause: Ending an upgrade window failed or there were tables containing TSTZ data which have not been upgraded.

Action: Check alert or trace file for error(s) or complete upgrading of tables containing TSTZ data.

ORA-56930: database must be restarted before performing upgrade of user tables

Cause: Database was not restarted after starting an upgrade window.

Action: Restart database.

ORA-56931: inconsistent DST patching state found

Cause: DST patching was in an inconsistent state.

Action: Contact Oracle Support Services.

ORA-56932: "string"."string" does not exist

Cause: Specified table name was invalid.

Action: Check the existence of the specified table name.

ORA-56933: Table creation failed

Cause: Error(s) occurred when creating the table.

Action: Check the error.

ORA-56934: database property DST_UPGRADE_STATE for datapump job is in an inconsistent state

Cause: Database property DST_UPGRADE_STATE was not recorded correctly.

Action: Check the alert file.

ORA-56935: existing datapump jobs are using a different version of time zone data file

Cause: An attempt was made from a datapump job to request a different version of time zone data file from the one used by existing datapump jobs.

Action: Wait until existing datapump jobs unload the secondary time zone data file.

ORA-56936: datapump jobs are utilizing secondary time zone data file

Cause: An on-demand loading of secondary time zone data file was requested when there was a secondary time zone data file already loaded in the database utilized by existing datapump jobs.

Action: Wait until existing datapump jobs unload the secondary time zone data file.

ORA-56937: failed to load the secondary time zone data file

Cause: Attempt to load the secondary timezone data file failed.

Action: Check alert or trace files for error(s).

ORA-56938: no secondary time zone data file being loaded by on-demand or a datapump job

Cause: There was no secondary timezone data file being loaded by on-demand or a datapump job.

Action: None

ORA-56939: failed to unload the secondary time zone data file

Cause: Attempt to unload the secondary timezone data file failed.

Action: Check alert or trace files for error(s).

ORA-56950: Invalid value for incident identifier

Cause: Invalid incident identifier argument passed.

Action: Check and correct the identifier

ORA-56971: Invalid set of export options

Cause: The options specified are inconsistent

Action: Check and a consistent set of option parameters

ORA-56972: referenced file not found

Cause: One of the file specified in the test case package is missing

Action: rebuild the SQL test case or make sure that all the referenced files are readable and located in the same directory as the SQL test case manifest.

ORA-56973: import options do not match export options

Cause: The import options specified do not match the export options

Action: Check that import is being invoked with the same values for options like export environment, export data and export metadata

ORA-56974: Invalid set of import options

Cause: The import options specified are inconsistent

Action: Check that import options are consistent and have valid values

ORA-57000 to ORA-57000

ORA-57000: TimesTen IMDB error: *string*

Cause: An error occurred during a TimesTen operation.

Action: Look up the error code in the TimesTen error documentation to diagnose.

ORA-60001 to ORA-64621

ORA-60001: adding (*string*) blocks to save undo segment in tablespace *string* with MAXSIZE (*string*)

Cause: Save undo for the offline tablespace at segment MAXSIZE.

Action: Check the storage parameters for the system tablespace. The tablespace needs to be brought back online so the undo can be applied.

ORA-60002: adding (*string*) blocks to temporary segment in tablespace *string* with MAXSIZE (*string*)

Cause: Extending a temporary segment violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60003: adding (*string*) blocks to table *string.string* partition *string* with MAXSIZE (*string*)

Cause: Extending a table partition violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60004: adding (*string*) blocks to table *string.string* with MAXSIZE (*string*)

Cause: Extending a table violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60005: adding (*string*) blocks to cluster *string.string* with MAXSIZE (*string*)

Cause: Extending a cluster violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60006: adding (*string*) blocks to index *string.string* partition *string* with MAXSIZE (*string*)

Cause: Extending an index partition violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60007: adding (*string*) blocks to index *string.string* subpartition *string* with MAXSIZE (*string*)

Cause: Extending an index subpartition violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

ORA-60008: adding (*string*) blocks to index *string.string* with MAXSIZE (*string*)

Cause: Extending an index violated MAXSIZE limit.

Action: Increase the MAXSIZE limit and retry command.

-
- ORA-60009: adding (*string*) blocks to LOB segment *string.string* partition *string* with MAXSIZE (*string*)**
Cause: Extending a LOB segment violated MAXSIZE limit.
Action: Increase the MAXSIZE limit and retry command.
- ORA-60010: adding (*string*) blocks to LOB segment *string.string* with MAXSIZE (*string*)**
Cause: Extending a LOB segment violated MAXSIZE limit.
Action: Increase the MAXSIZE limit and retry command.
- ORA-60011: adding (*string*) blocks to lob segment *string.string* subpartition *string* with MAXSIZE (*string*)**
Cause: Extending a LOB segment violated MAXSIZE limit.
Action: Increase the MAXSIZE limit and retry command.
- ORA-60012: adding (*string*) blocks to table *string.string* subpartition *string* with MAXSIZE (*string*)**
Cause: Extending a table subpartition violated MAXSIZE limit.
Action: Increase the MAXSIZE limit and retry command.
- ORA-60013: invalid MAXSIZE storage option value**
Cause: Invalid value was specified for MAXSIZE storage clause.
Action: Correct the value and retry command.
- ORA-60014: invalid MAXSIZE storage option value**
Cause: Minimum of 1M should have been specified against the MAXSIZE storage clause.
Action: Correct the value and retry command.
- ORA-60015: invalid RETENTION storage option value**
Cause: Value of MIN retention should have been nonzero.
Action: Correct the value and retry command.
- ORA-60016: Operation not supported on SECUREFILE segment**
Cause: The operation to ALTER FREELIST/RETENTION was not supported on SECUREFILE segment.
Action: Check the LOB type and reissue the statement.
- ORA-60018: adding *string* blocks to rollback segment *string* with MAXSIZE (*string*)**
Cause: Extending a rollback segment violated MAXSIZE limit.
Action: Increase the MAXSIZE limit and retry command.
- ORA-60019: Creating initial extent of size *string* in tablespace of extent size *string***
Cause: Creation of SECUREFILE segment failed due to small tablespace extent size.
Action: Create tablespace with larger extent size and reissue command.
- ORA-60025: Event for temp segment cleanup used for temp lobs**
Cause: Temp LOB segments used for temporary LOBs are deleted only on session exit which may lead to large amounts of memory being held across multiple sessions.

Action: Setting this event will cause temporary LOB segments to be freed when there are no active temporary LOBs in the session. Setting this event will have a significant performance impact as it can cause temporary lob segments to be allocated and deleted many times during a session rather than once per session. Use this event only when temporary LOB segment memory use is an issue.

ORA-62001: value for parameter cannot contain a comma

Cause: Parameter value contained a comma.

Action: Remove the comma from the parameter value.

ORA-62007: encountered a value of unsupported type or size for XPath (*string*)

Cause: A value of an unsupported type was encountered in a SQL/XML operator. SQL/XML operators, such as updateXML, expect value operands of type VARCHAR2 and XMLTYPE. XML DML replication is not supported for SQL/XML DML operators with values of unsupported types or very large values of supported types.

Action: Use event 19027 level 1 to dump XML document instead of XMLDiff in redo log.

ORA-62008: Cannot rewrite a newer version of XML redo diff (encountered: *string*, supported: *string*)

Cause: Encountered a newer version of XML redo diff that is not supported.

Action: Use RDBMS version that supports rewrite of given version of XML redo diff.

ORA-63000: operation disallowed: data file *string* is being moved

Cause: The specified data file was being moved.

Action: Wait for the move operation to complete and retry the command.

ORA-63001: file error during move operation

Cause: The move operation encountered an error for the moved data file. The error might be caused by file going offline or by an I/O error. See alert or trace files in all instances for further information.

Action: Retry the move command.

ORA-63002: a data file copy that is not current

Cause: An obsolete copy of a data file left from a data file move operation was used for the CREATE CONTROLFILE command or file header read.

Action: Pass a valid file or perform a media recovery on the file.

ORA-63003: a half-done data file copy

Cause: A half-done copy of a data file created from a previous data file move operation was used for the CREATE CONTROLFILE command or file header read.

Action: Check file headers and pass only valid files.

ORA-63997: file size refresh failed

Cause: An operating system error or device error occurred when retrieving the file's size.

Action: Remedy the operating system or device errors mentioned in the error stack and then perform crash recovery.

ORA-63998: undo tablespace file suffered media failure

Cause: An undo tablespace file was detected as inaccessible due to media failure.
Action: Restore accessibility to the file mentioned in the error stack and restart the instance.

ORA-63999: data file suffered media failure

Cause: A data file was detected as inaccessible due to media failure.
Action: Restore accessibility to the file mentioned in the error stack and restart the instance.

ORA-64000: specified path already exists

Cause: The pathname of a new item specified in a DBFS API operation already exists.
Action: Specify a valid, new pathname for the operation.

ORA-64001: invalid parent directory in specified path

Cause: The pathname of an item specified in a DBFS API operation has one or more invalid parent components.
Action: Specify a valid pathname with valid parent components for the operation.

ORA-64002: specified path is invalid

Cause: The pathname of an item specified in a DBFS API operation is invalid.
Action: Specify a valid pathname for the operation.

ORA-64003: an unsupported operation was invoked

Cause: The current DBFS API operation is unsupported by a provider.
Action: Use the provider feature set to invoke only supported operations.

ORA-64004: an invalid combination of arguments was specified

Cause: The current DBFS API operation specifies an invalid combination of arguments for the specified pathname(s) and operation.
Action: Specify a valid combination of pathname(s) and arguments.

ORA-64005: access control checks failed

Cause: The current DBFS API operation failed access control checks for the pathname(s) being accessed.
Action: Specify valid pathname(s) and principal for the operation, or take store-specific actions to enable access.

ORA-64006: lock conflict in current operation

Cause: A DBFS API locking operation could not be completed due to conflicts in the locking protocol.
Action: Follow the proper lock/unlock protocol according to the provider feature set.

ORA-64007: invalid store specified

Cause: The current operation specifies an invalid store name.
Action: Specify a valid store name for the operation.

ORA-64008: invalid mount-point specified

Cause: The current operation specifies an invalid mount-point.
Action: Specify a valid mount-point for the operation.

ORA-64009: invalid provider specified

Cause: The current operation refers to an invalid or incomplete or non-conformant store provider package.

Action: Specify a valid, complete, and conformant (per "dbms_dbfs_content_spi") store provider package.

ORA-64010: cannot modify store via read-only mount

Cause: The current operation attempts to modify a store via a read-only mount (or specifies a read-only store).

Action: Specify a valid modifiable store/mount for the operation.

ORA-64011: cross store operation

Cause: The current operation attempts to span 2 or more different stores and cannot be implemented entirely by the DBFS API.

Action: Split the operation, at the application-level, into multiple sub-operations to implement the same overall functionality.

ORA-64012: specified path is a directory

Cause: The current operation specifies a path that is a directory element, when a non-directory element is expected.

Action: Specify a path of the proper type for the operation.

ORA-64013: specified path is not a directory

Cause: The current operation specifies a path that is not a directory element, when a directory element is expected.

Action: Specify a path of the proper type for the operation.

ORA-64014: directory not empty

Cause: The current operation specifies a directory element that is not empty as required.

Action: Specify an empty directory element.

ORA-64101: Cannot alter both a structured and an unstructured component of an XMLIndex in the same ALTER INDEX statement.

Cause: An attempt was made to alter the unstructured component and structured component of an XMLIndex at the same time.

Action: Use separate ALTER INDEX statements to change an unstructured component and a structured component of an XMLIndex.

ORA-64102: Cannot create an XMLIndex with a structured component on a CLOB column within the object-relational storage model.

Cause: An attempt was made to create an XMLIndex with a structured component on a CLOB column within the object-relational storage model.

Action: Only unstructured XML indexes can be created on a CLOB column within the object-relational storage model.

ORA-64103: Cannot create an XMLIndex on an object-relational XML type table or column.

Cause: An attempt was made to create an XMLIndex on an XML type table or column that uses the object-relational storage model.

Action: The object-relational storage model does not support an XMLIndex.

ORA-64104: Column name already used by internal column of the structured component of the XMLIndex.

Cause: An attempt was made to use a column name already in use by an internal column of the structured component of the XMLIndex.

Action: Chose another column name.

ORA-64105: Cannot create domain index on XMLIndex internal tables.

Cause: An attempt was made to create a domain index on an internal table of an XMLIndex.

Action: Create the domain index on the base table.

ORA-64106: Incorrect use of comma(,) punctuation in COLUMN definitions.

Cause: An attempt was made to define COLUMNS with incorrect use of comma punctuation.

Action: Properly separate COLUMN definitions with comma punctuation.

ORA-64107: The XMLIndex has been successfully altered but the metadata could not be updated.

Cause: An internal error occurred when updating the index metadata. The `dbms_metadata.get_ddl` function may return improper metadata.

Action: contact Oracle Support Services.

ORA-64108: Cannot truncate a table that has an XMLIndex whose internal table has been indexed using Oracle Text.

Cause: An attempt was made to truncate a table that has an XMLIndex whose internal table has been indexed using Oracle Text.

Action: Drop the Oracle Text index on the XMLIndex internal table.

ORA-64109: XMLIndex: problems encountered during the dropping of statistics

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64110: XMLIndex: problems encountered during the gathering of statistics

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64111: XMLIndex: problems encountered during EXPORT

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64112: XMLIndex: problems encountered during IMPORT

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64113: XMLIndex: XDB.XDB\$XIDX_IMP_T still has bad data for "string"."string"

Cause: See associated error message.

Action: Ask the DBA to delete all the rows that belong to the given schema_name.index_name from the system table XDB.XDB\$XIDX_IMP_T."

ORA-64115: XMLIndex Exchange Partition: the table has no XMLIndex

Cause: The non-partitioned table had no XMLIndex.

Action: None

ORA-64116: XMLIndex Exchange Partition: incompatible XPath subsets

Cause: The XMLIndexes on the two tables had different path subsets.

Action: Correct the error and retry the command.

ORA-64117: XMLIndex Exchange Partition: incompatible modes for asynchronous DML

Cause: The XMLIndexes on the two tables had different deferred DML modes.

Action: Correct the error and retry the command.

ORA-64118: XMLIndex Exchange Partition: incompatible unstructured components

Cause: One of the XMLIndexes had no unstructured component.

Action: Correct the error and retry the command.

ORA-64119: XMLIndex Exchange Partition: incompatible structured components

Cause: One of the XMLIndexes had no structured component.

Action: Correct the error and retry the command.

ORA-64120: XMLIndex Exchange Partition: incompatible structured components

Cause: The XMLIndexes had different structured components.

Action: Correct the error and retry the command.

ORA-64121: XMLIndex DDL: failure of the internal "string"

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64122: XMLIndex DDL: failure of the recursive "string"

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64123: XMLIndex DDL: failure of a recursive DDL

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64124: XMLIndex: failure during the setting of an event

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64125: XMLIndex: failure during the resetting of an event

Cause: See associated error message.

Action: Correct the error and retry command.

ORA-64126: XMLIndex Table Function: failure at the start of the function

Cause: See associated error message.

Action: Examine the error messages and take appropriate action.

ORA-64127: XMLIndex Table Function: failure at the beginning of the function

Cause: See associated error message.

Action: Examine the error messages and take appropriate action.

-
- ORA-64128: XMLIndex Table Function: failure during the function evaluation**
Cause: See associated error message.
Action: Examine the error messages and take appropriate action.
- ORA-64129: XMLIndex Table Function: failure at the end of the function**
Cause: See associated error message.
Action: Examine the error messages and take appropriate action.
- ORA-64130: XMLIndex: invalid namespace mapping "string"**
Cause: Namespace mapping was invalid. The syntax is XMLNS="string".
Action: Check the namespace string, correct the error and retry command.
- ORA-64131: XMLIndex Metadata: failure during the looking up of the dictionary**
Cause: See associated error message.
Action: Correct the error and retry command.
- ORA-64132: XMLIndex Metadata: failure during the updating of the dictionary**
Cause: See associated error message.
Action: Correct the error and retry command.
- ORA-64133: XMLIndex DML: failure of the internal "string"**
Cause: See associated error message.
Action: Correct the error and retry command.
- ORA-64134: XMLIndex DML: failure of the recursive "string"**
Cause: See associated error message.
Action: Correct the error and retry command.
- ORA-64135: XMLIndex DML: failure of a recursive DML**
Cause: See associated error message.
Action: Correct the error and retry command.
- ORA-64136: XMLIndex Asynchronous DML: synchronization failure**
Cause: See associated error message.
Action: Correct the error and retry command.
- ORA-64137: Cannot drop an XMLIndex whose internal table has been indexed using Oracle Text.**
Cause: An attempt was made to drop an XMLIndex whose internal table has been indexed using Oracle Text.
Action: Drop the Oracle Text index on the XMLIndex internal table.
- ORA-64138: Cannot drop groups from an XMLIndex whose internal table has been indexed using Oracle Text.**
Cause: An attempt was made to drop groups from an XMLIndex whose internal table has been indexed using Oracle Text.
Action: Drop the Oracle Text index on the XMLIndex internal table.
- ORA-64139: The type of VIRTUAL column is not XMLTYPE**
Cause: An attempt was made to create an XML index with VIRTUAL column not of XMLTYPE.

Action: Specify the type of VIRTUAL column to be XMLTYPE.

ORA-64140: missing chaining XMLTABLE for VIRTUAL column in the index

Cause: An attempt was made to create an XML index with VIRTUAL column but without required chaining XMLTABLE.

Action: Specify a chaining XMLTABLE after VIRTUAL column.

ORA-64141: Can only have a single XMLType column when a table is shared.

Cause: An attempt was made to create a shared table with more than one columns.

Action: Specify a correct shared table definition with only one XMLType column.

ORA-64142: Shared tables must have same semantics for truncation.

Cause: An attempt was made to create shared tables with inconsistent semantics for truncation. Either all shared tables should have or should not have (TRUNCATE) keyword.

Action: Be consistent with (TRUNCATE) keyword while defining shared tables.

ORA-64143: Can only share an existing XMLIndex table with an XMLTYPE column.

Cause: An attempt was made to share a table without an XMLTYPE column.

Action: Drop the group containing the XMLIndex table without an XMLTYPE column and re-create the group with new definition.

ORA-64144: Shared tables must have equivalent paths.

Cause: An attempt was made to share a table with different paths.

Action: Specify a correct shared table definition with appropriate paths.

ORA-64146: Nonblocking alter XMLIndex error

Cause: Internal error.

Action: None

ORA-64147: Invalid use of NONBLOCKING COMPLETE or ABORT.

Cause: NONBLOCKING COMPLETE or ABORT is only allowed for XMLIndex that is being modified using NONBLOCKING ADD_GROUP or ADD_COLUMN.

Action: None

ORA-64148: Cannot complete nonblocking alter index operation.

Cause: NONBLOCKING COMPLETE is only allowed for XMLIndex that is being modified using NONBLOCKING ADD_GROUP or ADD_COLUMN and there are no pending rows left.

Action: Call DBMS_XMLINDEX.PROCESS_PENDING to finish pending work.

ORA-64149: Invalid alter XMLIndex operation.

Cause: An attempt was made to alter an XMLIndex that is already being modified using NONBLOCKING ADD_GROUP or ADD_COLUMN. Only NONBLOCKING COMPLETE or ABORT alter index operations are allowed. Also, NONBLOCKING operation is not allowed with alter index rebuild.

Action: Call DBMS_XMLINDEX.PROCESS_PENDING to finish pending work and then execute NONBLOCKING COMPLETE to successfully finish existing NONBLOCKING operation. Execute NONBLOCKING ABORT to cancel existing NONBLOCKING operation.

ORA-64151: Invalid use of DBMS_XMLINDEX.PROCESS_PENDING.

Cause: DBMS_XMLINDEX.PROCESS_PENDING was called on an index that was not modified using NONBLOCKING ADD_GROUP or ADD_COLUMN.

Action: None

ORA-64152: There are no pending rows to process.

Cause: DBMS_XMLINDEX.PROCESS_PENDING was called on an index that does not have any pending rows to process.

Action: Execute NONBLOCKING COMPLETE operation to complete the nonblocking alter index.

ORA-64201: unregistered LOB value encountered

Cause: The LOB value associated with the input locator did not exist in client-side reference tables.

Action: This is an internal error. Contact Oracle Support Services.

ORA-64202: remote temporary or abstract LOB locator is encountered

Cause: Local database encountered a temporary or abstract LOB created on a remote database. Remote access to temporary or abstract LOB is not supported.

Action: Avoid remote queries that return a temporary or abstract LOB.

ORA-64203: Destination buffer too small to hold CLOB data after character set conversion.

Cause: An attempt was made to convert CLOB to CHAR, where the LOB size was bigger than the buffer limit for CHAR types or the CHAR buffer was not big enough to hold all data after character set conversion.

Action: Do one of the following:

* Make the LOB smaller before performing the conversion. for example, by using SUBSTR on CLOB

* Use DBMS_LOB.SUBSTR to convert CLOB to CHAR.

ORA-64204: encountered partial multibyte character

Cause: The requested operation could not complete because a partial multibyte character was found at the end of the input.

Action: Ensure that the input buffer ends with a complete multibyte character and retry the operation.

ORA-64300: Invalid compression level specified

Cause: The specified archive compression level value was invalid. Valid values are LOW or HIGH.

Action: Choose a valid level and retry the operation.

ORA-64307: Exadata Hybrid Columnar Compression is not supported for tablespaces on this storage type

Cause: An attempt was made to use Exadata Hybrid Columnar Compression on an unsupported storage type.

Action: Create this table in a tablespace residing on Oracle Exadata, Oracle's Sun ZFS or Pillar Axiom storage type or use a different compression type.

ORA-64308: hybrid columnar compressed table cannot have column with LONG data type

Cause: One of the following was attempted:

- Create a hybrid columnar compressed table with a LONG data type.
- Alter an existing table with a LONG data type to be hybrid columnar compressed.
- Add a LONG data type column to a hybrid columnar compressed table.

Action: LONG data types are not supported with hybrid columnar compressed tables. Create table without LONG column or change table to not be hybrid columnar compressed. If adding a column, do not use LONG data type. If modifying attributes of a column to change data type to LONG, the table cannot be hybrid columnar compressed.

ORA-64477: Multiple token tables are not supported.

Cause: An attempt was made to create a new token table. If encountered during an import, a critical patch was possibly missing on the export database.

Action: Use the default token table. If encountered during an import, apply the appropriate patch on the export database and try the export and import again.

ORA-64621: SQL statement length (*string*) exceeds maximum allowed length (*string*)

Cause: An attempt was made to issue a SQL statement that exceeded the maximum allowed length of a statement.

Action: Modify the SQL statement or the views to which it refers to fit within the maximum length or split the SQL statement.

EXP-00000 to EXP-00114

EXP-00000: Export terminated unsuccessfully

Cause: Export encountered an Oracle error.

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual, and take appropriate action.

**EXP-00001: data field truncation - column length=*number*, buffer size=*number*
actual size=*number***

Cause: Export could not fit a column in the data buffer.

Action: Record the given size parameters and the accompanying messages and report this as an Export internal error to customer support. (Part of the table has been exported. Export will continue with the next table.)

EXP-00002: error in writing to export file

Cause: Export could not write to the export file, probably because of a device error. This message is usually followed by a device message from the operating system.

Action: Take appropriate action to restore the device.

EXP-00003: no storage definition found for segment(*number*, *number*)

Cause: Export could not find the storage definitions for a cluster, index, or table.

Action: Record the accompanying messages and report this as an Export internal error to customer support.

EXP-00004: invalid username or password

Cause: An invalid username or password was specified.

Action: Retry with a valid username and password.

EXP-00005: all allowable logon attempts failed

Cause: Attempts were repeatedly made to log on with an invalid username or password.

Action: Shut down the utility, then restart and retry with a valid username and password.

EXP-00006: internal inconsistency error

Cause: Export's data structure was corrupted.

Action: Record the accompanying messages and report this as an Export internal error to customer support.

EXP-00007: dictionary shows no columns for *string.string*

Cause: Export failed to gather column information from the data dictionary. The table may have been dropped.

Action: Retry the export and, if this error recurs, report it as an Export internal error to customer support.

EXP-00008: ORACLE error *number* encountered

Cause: Export encountered the referenced Oracle error.

Action: Look up the Oracle message in the ORA message chapters of this manual and take appropriate action.

EXP-00009: no privilege to export *string's table string*

Cause: An attempt was made to export another user's table. Only a database administrator can export another user's tables.

Action: Ask your database administrator to do the export.

EXP-00010: *string* is not a valid username

Cause: An invalid username was specified.

Action: Shut down the utility, then restart and retry with a valid username.

EXP-00011: *string.string* does not exist

Cause: Export could not find the specified table.

Action: Retry with the correct table name.

EXP-00012: *string* is not a valid export mode

Cause: An invalid export mode was specified.

Action: Retry with a valid export mode.

EXP-00013: respond with either 'Y', 'N', RETURN or '.' to quit

Cause: An invalid response was entered.

Action: Enter any of the responses shown in the message.

EXP-00014: error on row *number* of table *string*

Cause: Export encountered an Oracle error while fetching rows.

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual and take appropriate action.

EXP-00015: error on row *number* of table *string*, column *string*, datatype *number*

Cause: Export encountered an error while fetching or writing the column. An accompanying message gives more information.

Action: Correct the error and try again.

EXP-00016: ORACLE error encountered while reading default auditing options

Cause: Export encountered an Oracle error while reading the default auditing options (those for updates, deletes, and so on).

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual and take appropriate action.

EXP-00017: feature "*string*" is needed, but not present in database

Cause: The command entered requires the specified feature. Either that feature is not installed, or the row describing the feature is missing from table V\$OPTION

Action: Reinstall Oracle with the feature specified in the message.

-
- EXP-00018: datatype (*number*) for column *string*, table *string.string* is not supported**
Cause: Export does not support the referenced datatype.
Action: Retry with an acceptable datatype (CHAR, NUMBER, DATE, LONG, or RAW).
- EXP-00019: failed to process parameters, type 'EXP HELP=Y' for help**
Cause: Invalid command-line parameters were specified.
Action: Check the online help screen for the set of valid parameters, then retry.
- EXP-00020: failed to allocate memory of size *number***
Cause: Export failed to allocate the necessary memory.
Action: Decrease the export buffer size so that less memory is required, or increase the runtime memory size for Export.
- EXP-00021: can only perform incremental export in Full Database mode**
Cause: USER or TABLE mode was specified when doing an incremental export.
Action: Specify FULL database mode (FULL=Y) and retry.
- EXP-00022: must be SYS or SYSTEM to do incremental export**
Cause: The privileges needed to do an incremental export do not exist. Only a data base administrator can do incremental exports.
Action: Ask the database administrator to do the incremental export.
- EXP-00023: must be a DBA to do Full Database or Tablespace export**
Cause: The privileges needed to do a FULL database export do not exist. Only a database administrator can do a FULL database export.
Action: Ask the database administrator to do the FULL database export.
- EXP-00024: Export views not installed, please notify your DBA**
Cause: The necessary Export views were not installed.
Action: Ask the database administrator to install the required Export views.
- EXP-00025: dictionary shows no column for constraint *string.number***
Cause: Export failed to gather column information about the referenced constraint from the data dictionary. The constraint may have been altered.
Action: Retry the export and, if this error recurs, report it as an Export internal error to customer support.
- EXP-00026: conflicting modes specified**
Cause: Conflicting export modes were specified.
Action: Specify only one parameter and retry.
- EXP-00027: failed to calculate ORACLE block size**
Cause: Export failed to calculate the Oracle block size.
Action: Report this as an Export internal error to customer support.
- EXP-00028: failed to open *string* for write**
Cause: Export failed to open the export file for writing. This message is usually followed by device messages from the operating system.
Action: Take appropriate action to restore the device.
- EXP-00029: Incremental export mode and consistent mode are not compatible**

Cause: Both consistent and incremental exports were specified.

Action: None. Consistent mode is turned off.

EXP-00030: Unexpected End-Of-File encountered while reading input

Cause: Encountered an End-Of-File while reading the user input.

Action: If input to export is being redirected, check the file for errors.

EXP-00031: Arraysize not in valid range. Using arraysize=*number*

Cause: The arraysize value specified is not in the valid range.

Action: None

EXP-00032: Non-DBAs may not export other users

Cause: Only database administrators can export to other users. A non- database administrator attempted to specify owner=user where exporter is not the user.

Action: Request that this operation be performed by the database administrator.

EXP-00033: Could not find environment character set

Cause: The environment character set is missing or incorrectly specified.

Action: Ensure that the environment character set is correctly specified and is present.

EXP-00034: error on rowid: file# *number* block# *number* slot# *number*

Cause: Identifies the rowid on which an error occurred.

Action: This is an information message. No action is required.

EXP-00035: QUERY parameter valid only for table mode exports

Cause: You specified the QUERY parameter in an export command, but you are not performing a table mode export. The QUERY parameter cannot be used for a user mode export, a full export, nor a point in time recovery export.

Action: If you want to select a subset of rows for a table, you must export the table independently with a table mode export. Issue a table mode export command that specifies the table name and the query you want to execute during export.

EXP-00036: Object *number* non-existent in dictionary

Cause: The specified object could not be found in the dictionary. The object might have been dropped during the export

Action: The object no longer exists; no action is needed.

EXP-00037: Export views not compatible with database version

Cause: The Export utility is at a higher version than the database version and is thereby incompatible.

Action: Use the same version of Export utility as the database.

EXP-00038: Bad Hash cluster id in clu\$

Cause: The function id in clu\$ is not a legal number. Clu\$ has become corrupted.

Action: Contact Worldwide Support

EXP-00039: export file *string* must be on a disk

Cause: On some platforms, export can read files from tape. This message is displayed if the first file in an export file set was on disk and you specified a tape device for a second or subsequent file.

Action: Verify that you have specified the correct file name for the export file. Remember that all export files can be either on disk or all files can be on tape, but not mixed both tape and disk.

EXP-00040: Dump file and log file must be different

Cause: The dump file and log file cannot be the same file.

Action: Specify different file names for the dump file and the log file, then retry the operation.

EXP-00041: INCTYPE parameter is obsolete

Cause: Export encountered the INCTYPE parameter when parsing Export options. Incremental Exports are no longer supported.

Action: Consult the Oracle Backup and Recovery guide. Export will attempt to continue.

EXP-00042: Missing NLS_CHARACTERSET/NLS_NCHAR_CHARACTERSET in props\$

Cause: A value for NLS_CHARACTERSET/NLS_NCHAR_CHARACTERSET was not entered in the props\$ table"

Action: internal error.

EXP-00043: Invalid data dictionary information in the row where column "string" is "string" in table string

Cause: The export utility retrieved invalid data from the data dictionary.

Action: Contact Oracle Worldwide Support.

EXP-00044: must be connected 'AS SYSDBA' to do Point-in-time Recovery or Transportable Tablespace import

Cause: The user must log in 'as SYSDBA' to perform transportable tablespace imports or Point-In-Time Recovery imports.

Action: Ask your database administrator to perform the Transportable Tablespace import or the Tablespace Point-in-time Recovery import.

EXP-00045: Cannot export SYSTEM Tablespace for Point-in-time Recovery or Transportable Tablespace

Cause: SYSTEM tablespace cannot be part of recovery set or transportable tablespace set.

Action: Contact Oracle Worldwide Support.

EXP-00046: Tablespace named *string* does not exist

Cause: The specified tablespace does not exist in dictionary.

Action: Contact Oracle Worldwide Support.

EXP-00047: Missing tablespace name(s)

Cause: Tablespace name(s) were not supplied

Action: Provide tablespace name(s)

EXP-00048: Cannot export SYSAUX Tablespace for Point-in-time Recovery or Transportable Tablespace

Cause: SYSAUX tablespace cannot be part of recovery set or transportable tablespace set.

Action: Contact Oracle Worldwide Support.

-
- EXP-00049: *string* option is not compatible with Point-in-time Recovery or Transportable Tablespace Export**
Cause: An option was specified incompatible with Point-in-time Recovery or Transportable Tablespace Export.
Action: Retry the Export without the displayed option.
- EXP-00050: Cannot perform Partition Export "*string*" on non-partitioned table "*string*"**
Cause: The table specified in this Partition Export is not a partitioned table.
Action: Use Table mode, or specify a non-partitioned table.
- EXP-00051: "*string*" - given partition or subpartition name is not part of "*string*" table**
Cause: The specified partition or subpartition name is not in the specified table.
Action: Check if the correct table, partition or subpartition name was specified.
- EXP-00052: error on row *number* of partition *string***
Cause: Export encountered the referenced Oracle error while fetching rows.
Action: Look up the Oracle message in the ORA message chapters of this manual and take appropriate action.
- EXP-00053: unable to execute QUERY on table *string* because the table has inner nested tables**
Cause: You specified the QUERY parameter on a table that has one or more inner nested tables. The QUERY parameter cannot be specified on tables that have inner nested tables.
Action: Export the entire table by omitting the QUERY parameter.
- EXP-00054: error on row *number* of subpartition *string***
Cause: Export encountered the referenced Oracle error while fetching rows.
Action: Look up the Oracle message in the ORA message chapters of this manual and take appropriate action.
- EXP-00055: *string.string* is marked not exportable**
Cause: An object was marked as non-exportable in the NOEXP\$ table.
Action: Consult your database administrator.
- EXP-00057: Failure to initialize parameter manager**
Cause: The parameter manager failed in initialization.
Action: Record the messages that follow and report this to Oracle Worldwide Support as an Export internal bug.
- EXP-00058: Password Verify Function for *string* profile does not exist**
Cause: Cannot find the function for the profile.
Action: Check if the profile was created properly.
- EXP-00059: error converting an object type's identifier to characters**
Cause: An invalid length of an object type identifier prevented its conversion.
Action: Contact Oracle Worldwide Support
- EXP-00060: an object type had multiple TYPE BODYs**
Cause: More than one TYPE BODY was found for an object type.

Action: Try dropping the TYPE BODY, if that is not successful, contact Oracle Worldwide Support

EXP-00061: unable to find the outer table name of a nested table

Cause: While exporting a bitmap index or posttable action on an inner nested table, the name of the outer table could not be located, using the NTAB\$ table.

Action: Verify the table is properly defined.

EXP-00062: invalid source statements for an object type

Cause: TYPE was not found in the statements in SOURCE\$ for an Object Type

Action: Contact Oracle Worldwide Support.

EXP-00063: error in changing language handle

Cause: Unable to change language handle.

Action: Contact Oracle Worldwide Support.

EXP-00064: *string* is an inner nested table and cannot be exported.

Cause: An attempt was made to export an inner nested table without its parent table.

Action: Export the parent of the inner nested table.

EXP-00065: Error writing lob to the dump file.

Cause: The current LOB could not be written to the dump file.

Action: Identify the cause of the write failure and fix it.

EXP-00066: Object table *string* is missing its object identifier index

Cause: All object tables must have an object identifier index, but the specified table was missing an index on its object identifier column.

Action: Recreate the type table and retry the operation.

EXP-00068: tablespace *string* is offline

Cause: Export failed to export tablespace (tablespace being offline).

Action: Make tablespace online and re export.

EXP-00070: attempt to free unallocated memory

Cause: An attempt was made to free memory that was not allocated.

Action: Contact Oracle Worldwide Support

EXP-00071: QUERY parameter not compatible with Direct Path export

Cause: You specified a value for the QUERY parameter for a direct path export. The QUERY parameter cannot be used with a direct path export.

Action: Re-issue the export command with DIRECT=N or omit the DIRECT parameter from the command line.

EXP-00072: error closing export file *string*

Cause: An error occurred while trying to close the export file.

Action: Contact Oracle Worldwide Support.

EXP-00073: dump file size too small

Cause: You specified either the FILESIZE parameter or the VOLSIZE parameter (if your platform supports it), and the value of the parameter is too small to hold the header information for the export file, plus any data.

Action: Increase the value of the FILESIZE or VOLSIZE parameter.

EXP-00074: rounding VOLSIZE down, new value is *string*

Cause: The VOLSIZE parameter must be a multiple of the RECORDLENGTH, but the value you specified for VOLSIZE does not meet this requirement. The value of VOLSIZE has been rounded down to be a multiple of the RECORDLENGTH used for the dump file.

Action: No action is required. You can adjust the VOLSIZE or RECORDLENGTH parameter to avoid this message. When importing this file, you must specify the VOLSIZE value reported by this message.

EXP-00075: rounding FILESIZE down, new value is *string*

Cause: The FILESIZE parameter must be a multiple of the RECORDLENGTH, but the value you specified for FILESIZE does not meet this requirement. The value of FILESIZE has been rounded down to be a multiple of the RECORDLENGTH used for the dump file.

Action: No action is required. You can adjust the FILESIZE or RECORDLENGTH parameter to avoid this message. When importing this file, you must specify the FILESIZE value reported by this message.

EXP-00076: multiple devices specified for tape output

Cause: You specified multiple file names when doing an export to a tape device. EXPORT uses the same device for writing all files, of the number of tape volumes required. For this reason, export will accept only one value for the FILE parameter when writing to tape.

Action: Reenter the EXPORT command, but specify only one tape device in the FILE parameter.

EXP-00077: multiple output files specified for unbounded export file

Cause: You specified multiple file names when doing an export and you also specified a value of 0 for the FILESIZE parameter. Note that 0 is the value used if FILESIZE is not specified on the command line. Since a value of 0 for FILESIZE means that only one file will be written and there is no size limit for that file, the other files you specified in the FILE parameter can never be used.

Action: If you intended to write multiple files, respecify the command but use the FILESIZE to specify the maximum number of bytes that EXPORT should write to each file. If you intended to write only one file with no limits on it's size, reissue the EXPORT command but specify only one file name for the FILE parameter.

EXP-00078: Error exporting metadata for index *string*. Index creation will be skipped

Cause: Domain indexes export private metadata via anonymous PL/SQL blocks prior to the CREATE INDEX statement. Export does this by calling the ODCIIndexGetMetadata method on the implementation type associated with the index. A problem occurred inside this routine. Because the metadata is considered an integral part of the index, the CREATE INDEX statement was not written to the dump file.

Action: Contact the developer of the index's implementation type. If this is an Oracle-supplied index (perhaps via a data cartridge), contact Oracle Worldwide Support.

EXP-00079: Data in table "*string*" is protected. Conventional path may only be exporting partial table.

Cause: User without the execute privilege on DBMS_RLS, the access control package, tries to export a table that has access control. Since table owner is also subjected to access control, the owner may not be able to export all rows in the table, but only the ones he can see. Also, to preserve integrity of the table, user exporting the table should have enough privilege to recreate the table with the security policies at import time. Therefore, it is strongly recommended the database administrator should be handling exporting of this table. Granting the table owner execute privilege would also satisfy this security check, though it might have other security implications. If the table does not have objects, can use direct mode.

Action: Ask the database administrator to export/import this table/view.

EXP-00080: Data in table "*string*" is protected. Using conventional mode.

Cause: User without the execute privilege on DBMS_RLS, the access control package, tries to direct export a table that has access control enabled. Using conventional export mode instead. Note that because of access control, only a partial table may be exported.

Action: Ask the database administrator to export/import this table/view.

EXP-00081: Exporting access control for table/view "*string*" as non-DBA.

Cause: A non-DBA user tries to export table/view and the associated fine grain access control policies. The user may not have enough privilege to recreate the access control policies when importing the table/view. And such an event may cause inconsistency in the security model of the table/view.

Action: Ask the database administrator to export/import this table/view.

EXP-00082: Invalid function name passed to procedural object support: *string*

Cause: Internal inconsistency error: The listed function is not a method on export's procedural object interface specification.

Action: Contact Oracle Worldwide Support

EXP-00083: The previous problem occurred when calling *string.string.string*

Cause: The listed package provides export/import support for procedural

Action: Contact Oracle Worldwide Support. Most packages are supplied by Oracle internal cartridge or server development groups. The package name will help Support determine the correct owner of the problem.

EXP-00084: Unexpected DbmsJava error *number* at step *number*

Cause: The error was returned from a call to a DbmsJava procedure.

Action: Record the accompanying messages and report this as an Export internal error to customer support.

EXP-00085: The previous problem occurred when calling *string.string.string* for object *number*

Cause: The listed package provides export/import support for procedural objects, i.e, those whose DDL is supplied by stored procedures. The previously listed error occurred while calling the specified function.

Action: Contact Oracle Worldwide Support. Most packages are supplied by Oracle internal cartridge or server development groups. The package name will help Support determine the correct owner of the problem.

EXP-00086: Primary key REFs in table "*string*" may not be valid on import

Cause: The specified table contains primary key REFs which may not be valid in the import database.

Action: Do not use Export/Import to move Primary key REFs between databases having differing character sets.

EXP-00087: Problem with internal hash table of schema/table names

Cause: Most likely a problem with allocating memory for the hash table entries.

Action: Contact Oracle Worldwide Support

EXP-00089: invalid FILE_FORMAT specification

Cause: The FILE_FORMAT specification did not contain an instance of "%s". This wildcard string must be present.

Action: Correct the error and reenter the EXPORT command.

EXP-00090: cannot pin type "string"."string"

Cause: Export was unable to pin the specified type in the object cache. This is typically caused because a type could not be made valid (for example because of authorization violations in accessing subtypes).

Action: Fix the problem with the offending type until the type can be successfully compiled.

EXP-00091: Exporting questionable statistics.

Cause: Export was able export statistics, but the statistics may not be usable. The statistics are questionable because one or more of the following happened during export: a row error occurred, client character set or NCHARSET does not match with the server, a query clause was specified on export, only certain partitions or subpartitions were exported, or a fatal error occurred while processing a table.

Action: To export non-questionable statistics, change the client character set or NCHARSET to match the server, export with no query clause, export complete tables. If desired, import parameters can be supplied so that only non-questionable statistics will be imported, and all questionable statistics will be recalculated.

EXP-00092: Unable to set NLS_NUMERIC_CHARACTERS to required defaults.

Cause: Export was unable to set NLS_NUMERIC_CHARACTERS to '.,'

Action: Record the accompanying messages and report this as an Export internal error to customer support.

EXP-00093: Could not convert to server character set's handle

Cause: Internal error.

Action: Contact Worldwide support.

EXP-00094: Could not convert to server national character set's handle

Cause: Internal error.

Action: Contact Worldwide support.

EXP-00095: Flashback_time and Flashback_scn are not compatible

Cause: Both flashback_time and flashback_scn parameters were specified.

Action: Reissue command with only one flashback parameter.

EXP-00097: Object type "string"."string" is not in a valid state, type will not be exported

Cause: The object type's status is invalid which may be caused by a dependant type's modification (or removal) without cascading the change.

Action: The type must be recompiled using ALTER TYPE COMPILE.

EXP-00098: Data in table has not been upgraded, table will not be exported

Cause: Export is attempting to process a table containing references to a type which has evolved. In order for Export to process the table successfully, all data within each table must be upgraded to the latest revision of each referenced type.

Action: The table must be updated using ALTER TABLE UPGRADE DATA.

EXP-00099: Table "*string*"."*string*" is not in a valid state, table will not be exported

Cause: A table or one of its dependant types has modified without cascading the change. This left the table in an INVALID state.

Action: The table must be updated using ALTER TABLE UPDATE.

EXP-00100: error converting an object type's hashcode to characters

Cause: An invalid length of an object type identifier prevented its conversion.

Action: Contact Oracle Worldwide Support

EXP-00101: Version 1 extensible index "*string*"."*string*" can not be included in Transportable Tablespace Export

Cause: Transportable Tablespace extensible indexes must be at least version 2.

Action: Upgrade extensible index implementation to version 2 specifications.

EXP-00102: Resumable parameters ignored -- current session not resumable

Cause: Current session is not resumable.

Action: Must specify RESUMABLE=Y to enable resumable session in order for the RESUMABLE_NAME and RESUMABLE_TIMEOUT parameters to take effect.

EXP-00103: The FLASHBACK_TIME parameter was invalid

Cause: FLASHBACK_TIME did not contain a valid timestamp or an expression that yields a valid timestamp.

Action: Specify a timestamp value in the format of YYYY-MM-DD HH24:MI:SS or an expression that evaluates to a valid timestamp.

EXP-00104: datatype (*string*) of column *string* in table *string.string* is not supported, table will not be exported

Cause: The column is of a datatype which does not contain the required support. The table will not be exported.

Action: Use the Data Pump version of Export to export this table.

EXP-00105: parameter *string* is not supported for this user

Cause: The user attempted to specify either CONSISTENT or OBJECT_CONSISTENT when connected as sysdba.

Action: If a consistent export is needed, then connect as another user.

EXP-00106: Invalid Database Link Passwords

Cause: Invalid Encoded Password for Database Link

Action: Please drop the Database Link and recreate it after import.

EXP-00107: Feature (*string*) of column *string* in table *string.string* is not supported. The table will not be exported.

Cause: Export does not contain the required support for this feature. The table will not be exported.

Action: Use the Data Pump version of Export to export this table.

EXP-00108: NULL lob fetched

Cause: Internal error

Action: Contact Oracle Worldwide Support.

EXP-00109: XSL delimiter not found

Cause: Internal error

Action: Contact Oracle Worldwide Support.

EXP-00110: Tablespace *string* is encrypted and will not be exported

Cause: Encrypted Tablespace feature is not supported by classic export

Action: Use DATAPUMP Utility to export this tablespace.

EXP-00111: Table *string* resides in an Encrypted Tablespace *string* and will not be exported

Cause: Encrypted Tablespace feature is not supported by classic export

Action: Use DATAPUMP Utility to export this table.

EXP-00112: Index *string* is of XMLType and could not be exported

Cause: Export does not contain the required support for this feature. The index could not be exported.

Action: Use Oracle Data Pump Utility to export this index.

EXP-00113: Feature *string* is unsupported. *string string.string* could not be exported

Cause: Export does not contain the required support for this feature.

Action: Use Oracle Data Pump Utility

EXP-00114: Length of *string string* is exceeding the maximum limit

Cause: Provided length was more than the maximum limit allowed.

Action: Check the input value and provide the correct value.

IMP-00000 to IMP-00402

IMP-00000: Import terminated unsuccessfully

Cause: Import encountered an Oracle error.

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual, and take appropriate action.

IMP-00001: respond with either *string*, *string*, RETURN or '.' to quit

Cause: An invalid response was entered.

Action: Enter any of the responses shown in the message.

IMP-00002: failed to open *string* for read

Cause: Import failed to open the export file for reading. This message is usually followed by a device message from the operating system.

Action: Take appropriate action to restore the device.

IMP-00003: ORACLE error *number* encountered

Cause: Import encountered the referenced Oracle error.

Action: Look up the Oracle message in the ORA message chapters of this manual, and take appropriate action.

IMP-00004: invalid username or password

Cause: An invalid username or password was specified.

Action: Retry with a valid username and password.

IMP-00005: all allowable logon attempts failed

Cause: An attempt was repeatedly made to log on with an invalid username or password.

Action: Retry with valid username and password.

IMP-00006: failed to allocate memory of size *number*

Cause: Import failed to allocate the necessary memory.

Action: Decrease the import buffer size so that less memory is required, or increase the runtime memory size for Import.

IMP-00007: must be a DBA to import objects to another user's account

Cause: The privileges needed to import into another user's account do not exist. Only a database administrator can import into another user's account.

Action: Ask the database administrator to do the import.

IMP-00008: unrecognized statement in the export file: *string*

Cause: Import did not recognize a statement in the export file. Either the export file was corrupted, or an Import internal error has occurred.

Action: If the export file was corrupted, retry with a new export file. Otherwise, report this as an Import internal error and submit the export file to customer support.

IMP-00009: abnormal end of export file

Cause: The export file is probably from an aborted Export session.

Action: If so, retry the export and import. Otherwise, report this as an Import bug and submit the export file that caused this error to customer support.

IMP-00010: not a valid export file, header failed verification

Cause: Either the file was not generated by Export or it was corrupted.

Action: If the file was indeed generated by Export, report this an Import bug and submit the export file to customer support.

IMP-00011: formatted table data not currently supported

Cause: You tried to import an export file that contains formatted table data. Import only supports export files containing binary table data.

Action: Retry using an export file that contains only binary table data.

IMP-00012: invalid export mode (*character*) in header

Cause: The Export mode specified in the export file header is invalid.

Action: Check the export file to see if it was corrupted. If it was not, report this as an Import bug and submit the export file to customer support.

IMP-00013: only a DBA can import a file exported by another DBA

Cause: The privileges needed to Import an export file generated by a database administrator do not exist. Only a database administrator can import such files.

Action: Ask the database administrator to do the import.

IMP-00014: option "*string*" is needed, but not present in database

Cause: The command entered requires the specified option. Either that option is not installed, or the row describing the option is missing from table V\$OPTION

Action: Reinstall Oracle with the option specified by the message.

IMP-00015: following statement failed because the object already exists:

Cause: Import failed to create an object because it already exists.

Action: Specify IGNORE=Y to ignore such errors and import rows even when tables are not created because they already exist.

IMP-00016: required character set conversion (type *number* to *number*) not supported

Cause: Import could not convert the character format of the export file into the native character format.

Action: Change the user character set by setting the NLS_LANG environment variable to match the character set of the export file.

IMP-00017: following statement failed with ORACLE error *number*:

Cause: Import failed to execute the statement from the export file because of an Oracle error.

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual and take appropriate action.

IMP-00018: partial import of previous table completed: *number* rows imported

Cause: A table was only partially imported because of an Oracle error.

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual and take appropriate action.

IMP-00019: row rejected due to ORACLE error *number*

Cause: Import encountered the referenced Oracle error while trying to import a row.

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual and take appropriate action.

IMP-00020: long column too large for column buffer size (*number*)

Cause: The column buffer is too small. This usually occurs when importing LONG data.

Action: Increase the insert buffer size 10,000 bytes at a time (for example). Use this step-by-step approach because a buffer size that is too large may cause a similar problem.

IMP-00021: INCTYPE parameter is obsolete

Cause: Import encountered the INCTYPE parameter when parsing Import options. Incremental Imports are no longer supported.

Action: Consult the Oracle Backup and Recovery guide. Import will attempt to continue.

IMP-00022: failed to process parameters, type 'IMP HELP=Y' for help

Cause: Invalid command-line parameters were specified.

Action: Check the online help screen for the set of valid parameters, then retry.

IMP-00023: Import views not installed, please notify your DBA

Cause: The necessary Import views were not installed.

Action: Ask your database administrator to install the required Import views.

IMP-00024: Only one mode (TABLES, FROMUSER, or FULL) can be specified

Cause: Parameters were specified that conflict with the import specification FULL=Y.

Action: Retry, making sure not to specify FULL=Y.

IMP-00025: for DBA export files, FROMUSER must be specified with TOUSER option

Cause: When importing a database administrator export file, you specified the TOUSER parameter but not the FROMUSER parameter.

Action: Specify the FROMUSER parameter so that Import knows which user's objects to import.

IMP-00027: failed to rollback partial import of previous table

Cause: Import encountered an Oracle error while trying to roll back a partial import.

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual and take appropriate action. Then, log on to Oracle and check that the partial import was not committed.

IMP-00028: partial import of previous table rolled back: *number* rows rolled back

Cause: Import encountered an Oracle error while trying to import a table.

Action: Look up the accompanying Oracle message in the ORA message chapters of this manual and take appropriate action. Then, if necessary, re-import the table.

IMP-00029: cannot qualify table name by owner (*string*), use FROMUSER parameter

Cause: A table name was qualified with the name of its owner, as shown in the following example. This is not allowed. IMP SYSTEM/MANAGER TABLES=(SCOTT.EMP)

Action: Use the FROMUSER parameter to specify the table's owner, as shown in the following example: IMP SYSTEM/MANAGER FROMUSER=SCOTT TABLES=(EMP, DEPT)

IMP-00030: failed to create file *string* for write

Cause: Import was unable to create the specified file with write enabled.

Action: Check the file name and file system for the source of the error.

IMP-00031: Must specify FULL=Y or provide FROMUSER/TOUSER or TABLES arguments

Cause: The database administrator did not specify full or partial import.

Action: The database administrator must specify FROMUSER/TOUSER or table arguments if not a full import.

IMP-00032: SQL statement exceeded buffer length

Cause: The buffer was too small for the SQL statement being read.

Action: Rerun with a larger buffer. This can also be an indication of a corruption in the import datafile.

IMP-00033: Warning: Table "*string*" not found in export file

Cause: A table name was specified that does not exist in export file.

Action: Correct the table specification.

IMP-00034: Warning: FromUser "*string*" not found in export file

Cause: The user specified a FROMUSER name that does not exist in export file.

Action: Correct the FROMUSER specification.

IMP-00035: input file *string* must be on a disk

Cause: On some platforms, import can read files from tape. This message is displayed if the first file in an export file set was on disk and you specified a tape device for a second or subsequent file.

Action: Verify that you have specified the correct file name for the import file. Remember that all input files can be either on disk or all files can be on tape, but not mixed both tape and disk.

IMP-00036: Could not find environment character set

Cause: An environment character set was specified that was not recognized by the Import utility.

Action: Ensure that the spelling of the character set specified in the command line parameter CHARSET (for Release 6 only) or the environment variable NLS_LANG is correct.

IMP-00037: Character set marker unknown

Cause: The export file is corrupted.

Action: Try to obtain an uncorrupted version of the export file. If the export file is not corrupted, report this as an Import internal error and submit the export file to customer support.

IMP-00038: Could not convert to environment character set's handle

Cause: Internal error.

Action: Contact Worldwide Support.

IMP-00039: VOLSIZ does not match the value used for export: *string*

Cause: The value specified for VOLSIZ does not match the value specified during the creation of the export file.

Action: If you believe that the specified VOLSIZ value is correct, verify that you specified the correct file for import. If you specified the correct file but are unsure about the correct value, re-execute the import command but specify VOLSIZ=0.

IMP-00040: FILESIZE does not match the value used for export: *string*

Cause: The value specified for FILESIZE does not match the value specified during the creation of the export file.

Action: If you believe the specified FILESIZE value is correct, verify that you specified the correct file for import. If you specified the correct file but are unsure about the correct value, re-execute the import command but specify FILESIZE=0.

IMP-00041: Warning: object created with compilation warnings

Cause: The object in the SQL statement following this error was created with compilation errors. If this error occurred for a view, it is possible that the base table of the view was missing.

Action: This is a warning. The object may have to be recompiled before being used.

IMP-00042: CHARSET used, but the export file has specific character set

Cause: The user requested that a specific character set be used to process an export file that has a specific embedded character set ID. The ID in the export file is accurate and should be used.

Action: Remove the CHARSET keyword from the command line.

IMP-00043: export file character set inconsistent

Cause: The character set of the export file and the environment character set (or the character set specified with the CHARSET keyword) are inconsistent. One character set is ASCII-based while the other is EBCDIC based.

Action: Specify the correct character set with the CHARSET keyword.

IMP-00044: unable to allocate enough memory for statement

Cause: Import was unable to allocate sufficient memory to read in the specified statement and execute it.

Action: Increase the allocation for database buffers, restart the instance, and reexecute the Import command.

IMP-00045: using VOLSIZE value from export file of *string*

Cause: Either you did not specify the VOLSIZE parameter in your IMPORT command, or you specified VOLSIZE=0 and the export was created with a non-zero value for VOLSIZE. Import will use the value specified in the export file.

Action: None required.

IMP-00046: using FILESIZE value from export file of *string*

Cause: Either you did not specify the FILESIZE parameter in your IMPORT command, or you specified FILESIZE=0 and the export file was created with a non-zero value for FILESIZE. Import will use the value specified in the export file.

Action: None required.

IMP-00047: unexpected file sequence number; expected *number* but found *number*

Cause: The header in the export file contains a sequence number that is used to track the order in which multiple export files are written. The first export file is assigned sequence number one, the second file is assigned sequence number two and so on. This message is displayed when a number other than the expected sequence number is found in the file header

Action: Execute the import command again, but specify the files in the order in which Export wrote them.

IMP-00048: mismatched file header

Cause: During verification of the 2nd or subsequent file in a multi-file export, Import found header fields in the file that did not match values in the first file.

Action: Check the names of the files created by Export and verify that you specified them correctly for the import operation.

IMP-00049: Unknown language specified in CHARSET

Cause: An unknown language was listed in the CHARSET option.

Action: Use a known character set.

IMP-00050: Dump file and log file cannot be identical

Cause: Identical names were given to the dump file and log file.

Action: Specify different names for the dump file and log file and retry the operation.

IMP-00051: Direct path exported dump file contains illegal column length

Cause: An invalid column length was encountered while processing column pieces."

Action: Check to make sure the export file is not corrupted, or else report this to Oracle Worldwide Support as an Import/Export internal bug and submit the export file.

IMP-00052: Warning: Unable to set event for freelist communication with server

Cause: An event could not be set for current the session.

Action: If Import fails, give the Import user ALTER SESSION PRIV and retry the operation.

IMP-00053: Import mode incompatible with Export dump file

Cause: The specified import option is incompatible with point-in-time- recovery dump file.

Action: Generate a proper dump file or use point-in-time-recovery import mode.

IMP-00054: must be connected 'AS SYSDBA' to do Point-in-time Recovery or Transportable Tablespace import

Cause: The user must log in 'as SYSDBA' to perform transportable tablespace imports or Point-In-Time Recovery imports.

Action: Ask your database administrator to perform the Transportable Tablespace import or the Tablespace Point-in-time Recovery import.

IMP-00055: Warning: partition or subpartition "*string*":"*string*" not found in export file

Cause: A partition or subpartition name was specified that does not exist in export file.

Action: Check to make sure the partition or subpartition name belongs to the table.

IMP-00056: multiple devices specified for tape input

Cause: You specified multiple file names when doing an import from a tape device. Import uses the same device for reading all tapes, regardless of the number of tape volumes required. For this reason, export will accept only one value for the FILE parameter when writing to tape.

Action: Reenter the IMPORT command, but specify only one tape device in the FILE parameter.

IMP-00057: Warning: Dump file may not contain data of all partitions of this table

Cause: The dump file used for this Table Import might not contain all of the data belonging to the exported table.

Action: Check to see if the export was done as intended, or try performing a Partition Import.

IMP-00059: Failure to initialize parameter manager

Cause: Parameter manager failed in initialization.

Action: Report this to Oracle Worldwide Support as an Import internal bug.

IMP-00060: Warning: Skipping table "*string*"."*string*" because object type "*string*"."*string*" does not exist or has different identifier

Cause: An object type needed by the table, either does not exist on the * target system or, if it does exist, it has a different object identifier.

Action: Create the object type on the target system with a valid * identifier.

IMP-00061: Warning: Object type "*string*"."*string*" already exists with a different identifier

Cause: An object type cannot be created because it already exists on the * target system, but with a different identifier

Action: Drop the object type from the target system and retry the operation.

IMP-00062: Warning: The identifier on the dump file for object type "*string*"."*string*" is invalid

Cause: The character string representing the object type's identifier * could not be converted to an object identifier.

Action: Internal error.

IMP-00063: Warning: Skipping table "string"."string" because object type "string"."string" cannot be created or has different identifier

Cause: An error occurred creating an object type that is used by the
* table.

Action: Examine the import log to determine why the object type could not
* be created. If the object type already existed, with a
* different object identifier, then drop the object type and
* retry the import.

IMP-00064: Definition of LOB was truncated by export

Cause: While producing the dump file, Export was unable to write the
* entire contents of a LOB. Import is therefore unable to
* reconstruct the contents of the LOB. The remainder of the
* import of the current table will be skipped.

Action: Delete the offending row in the exported database and retry the
* export.

IMP-00065: Import is unable to recreate lob's within objects.

Cause: An error occurred recreating a LOB within an imported object.

Action: Report this to Oracle Worldwide Support as an Import internal error.

IMP-00066: Missing NLS_CHARACTERSET in props\$

Cause: No value for NLS_CHARACTERSET in props\$.

Action: Contact Worldwide support.

IMP-00067: Could not convert to server character set's handle

Cause: Internal error.

Action: Contact Worldwide support.

IMP-00068: Could not find environment national character set

Cause: An environment national character set was specified that was not
recognized by the Import utility.

Action: Ensure that the spelling of the national character set specified in the
environment variable NLS_NCHAR is correct.

IMP-00069: Could not convert to environment national character set's handle

Cause: Internal error..

Action: Contact Worldwide support.

IMP-00070: Lob definitions in dump file are inconsistent with database.

Cause: The number of LOBS per row in the dump file is different than the
* number of LOBS per row in the table being populated.

Action: Modify the table being imported so that it matches the column
* attribute layout of the table that was exported.

IMP-00071: Object identifier of imported table mismatches object identifier of existing table

Cause: An attempt was made to import data into a table that was recreated under a different object identifier than the object identifier used for the exported object table. Under this situation, REF's to this table that are contained within the dump file will also be invalid.

Action: Drop the offending object table prior to import.

IMP-00072: Warning: The object table's object identifier is invalid.

Cause: The character string representing the table's object identifier could not be converted to an internal object identifier.

Action: Internal error.

IMP-00073: FILE locator "string" "string" is truncated to "string" "string" in server character set

Cause: The conversion of the specified directory and name strings for a file attribute or column from the export server's character set into the import server's character set exceeded the maximum string lengths allowed within FILE descriptors. The strings will be truncated to the maximum supported lengths.

Action: Rename the directory aliases and external filenames to match the truncated names in the specified FILE column or attribute.

IMP-00074: The constraints flagged by ALL_CONSTRAINTS.BAD will break in 2000 A.D.

Cause: Constraints exist in the data base that specify date values without fully specifying the year. These constraints could break in the year 2000 A.D.

Action: Query ALL_CONSTRAINTS and correct those constraints marked as bad.

IMP-00075: Warning: The nested table may contain partial rows or duplicate rows

Cause: An error occurred inserting data into an outer or inner nested table. If the error occurred in the outer table, rows are still inserted into the inner tables. If the error occurred in an inner table, data is still inserted into the outer table and other inner tables. This can result in duplicate inner table rows or partial logical rows.

Action: Examine the data in the tables. Delete the incorrect rows or drop the entire table and perform the import again.

IMP-00076: Missing NLS_NCHAR_CHARACTERSET in props\$

Cause: No value for NLS_NCHAR_CHARACTERSET in props\$.

Action: Contact Worldwide support.

IMP-00077: Could not convert to server national character set's handle

Cause: Internal error.

Action: Contact Worldwide support.

IMP-00078: Cannot translate FILE locator to "string" "string" in server character set

Cause: (1) The current export dump file was generated using Beta-2 of Oracle8.0 AND (2) there was a File that appeared as an attribute of an ADT within a table's column AND (3) the character set of the export server's database was different than the character set of the import server's database AND (4) when the filename or the aliasname of the File increased in size when it was translated to the character set of the import server. When all of these conditions are true, translation of the strings could yield corruption of the data in the column. Rather than proceeding with the translation, import will leave the character strings in the File in the old character set.

Action: After import completes, rename the directory aliases and external filenames to match the real names used for the target database.

IMP-00079: Warning: National character set data in this table may be incorrect

Cause: Due to a problem in 8.0.2 Export, national character data in NCHAR and NVARCHAR2 columns was incorrectly assumed to be in the export server's data base character set and was converted to the export client's data base character set. This conversion would only be correct if the export server's data base character set was the same as the export server's national character set and the export client's data base character set was the same as the export client's national character set. All other combinations would likely be incorrect. This export dump file was generated by 8.0.2 Export and the export client and server character sets did not fit that criteria.

Action: Examine the national character data. If incorrect, update the data with correct data.

IMP-00080: Error during character conversion of long column or long command

Cause: During piecewise character conversion of the data in a long column or of a long command, a fatal conversion error occurred. Either character truncation occurred or an invalid character set handle was used.

Action: Retry the import with a different character set.

IMP-00081: attempt to free unallocated memory

Cause: An attempt was made to free memory that was not allocated.

Action: Contact Oracle Worldwide Support

IMP-00082: Error during conversion ROWID from string format to internal

Cause: An error occurred while attempting to convert a ROWID from an export dump file into an internal format.

Action: Report this to Oracle Worldwide Support as an Import internal error.

IMP-00083: dump file does not contain an incremental export

Cause: An incremental import was requested and the dump file specified for the import command is either a user or table export.

Action: Reissue the command import command but specify the name of a dump file containing an incremental export.

IMP-00084: attempt to mix incremental import with user or table import

Cause: An incremental import was requested along with the FROMUSER, TOUSER, or TABLE qualifier. An incremental import cannot be done if any of these other qualifiers are also specified.

Action: Determine whether you want to do an incremental import, full import, user import or table import and reissue the import command with the appropriate qualifiers.

IMP-00085: multiple input files specified for unbounded export file

Cause: You specified multiple file names for the FILE parameter when doing an import, but the header in the export file indicates that the export operation could create only one file. Specifying multiple file names is valid for an import operation only if the export files were created by an export operation in which the user specified a non-zero value for the FILESIZE parameter.

Action: If you believe the export contains multiple files, verify that you have specified the correct files. If you believe the export should be in only one file then try the import operation again, but specify only one value for the FILE parameter.

IMP-00086: TOID "*string*" not found in export file

Cause: Import did not find the type identification specified in the TOID_NOVALIDATE parameter. The specified type identification does not exist in export file.

Action: Correct or omit the TOID_NOVALIDATE parameter.

IMP-00087: Problem with internal hash table of schema/table names

Cause: Most likely a problem with allocating memory for the hash table entries.

Action: Contact Oracle Worldwide Support

IMP-00088: Problem importing metadata for index *string*. Index creation will be skipped

Cause: Domain indexes import private metadata via anonymous PL/SQL blocks prior to the CREATE INDEX statement. The execution of one of these PL/SQL blocks failed. Because the metadata is considered an integral part of the index, the subsequent CREATE INDEX statement was skipped.

Action: Contact the developer of the index's implementation type. If this is an Oracle-supplied index (perhaps via a data cartridge), contact Oracle Worldwide Support.

IMP-00089: Fine grain policy "*string*" not recreated on table/view "*string*"

Cause: Import user fails to recreate fine grained policies of the table/view being imported. To recreate the policy, the user doing the import needs execute privilege on the package DBMS_RLS for access policies or DBMS_FGA for audit policies.

Action: Ask the database administrator to perform the export/import of this table/view.

IMP-00090: Unexpected DbmsJava error *number* at step *number* while creating *string*

Cause: The error was returned from a call to a DbmsJava procedure.

Action: Record the accompanying messages and report this as an Import internal error to customer support.

IMP-00091: Above error occurred on the following function and object: *string*. Remaining PL/SQL blocks for this object will be skipped.

Cause: An error occurred while executing a PL/SQL block that implements the DDL for the named function and procedural object. A procedural object is one whose DDL is implemented as stored procedures rather than as standard SQL statements.

Action: Contact Oracle Worldwide Support so they may determine the development group responsible for the package that failed.

IMP-00092: Java object "*string*"."*string*" already exists, cannot be created

Cause: Import failed to create the Java source, class or resource object because it already exists.

Action: Drop the object type from the target system and retry the operation.

IMP-00093: Inconsistency between dumpfile constraint definition for table *string* with columns (*string*)

Cause: Import failed to locate a base table for a constraint that was defined in the dump file and statistics were not imported.

Action: Check to see if the table and constraint exist. If the table and constraint exist, then report this to Oracle Support Services as an Import internal error.

IMP-00094: Warning: The identifier on the dump file for object type "*string*".*string*" is invalid

Cause: The character string representing the object type's identifier
* could not be converted.

Action: Contact Oracle Worldwide Support.

IMP-00095: Resumable parameters ignored -- current session not resumable

Cause: Current session is not resumable.

Action: Must specify RESUMABLE=Y to enable resumable session in order for the RESUMABLE_NAME and RESUMABLE_TIMEOUT parameters to take effect.

IMP-00096: Warning: Skipping table "*string*".*string*" because type synonym "*string*".*string*" cannot be created

Cause: An error occurred creating a synonym for a type that is used by the
* table.

Action: Examine the import log to determine why the type synonym could

* not be created. If the synonym already existed, but is not

* needed, then drop the synonym and retry the import. If the

* synonym is PUBLIC but the importer does not have the

* CREATE PUBLIC SYNONYM system privilege, then the import must

* be done by someone possessing that privilege, or the importer

* must be granted the privilege.

IMP-00097: STREAMS_CONFIGURATION=Y ignored, only valid with FULL=Y

Cause: STREAMS_CONFIGURATION=Y can only be used

* when FULL=Y is present on the command line

Action: Remove conflicting command arguments

IMP-00098: INTERNAL ERROR: *string*

Cause: An INTERNAL error occurred.

Action: Contact Oracle Worldwide Support.

IMP-00099: Warning: The typeid in the dump file for object type "*string*".*string*" is invalid

Cause: The character string representing the object type's identifier

* could not be converted.

Action: Contact Oracle Worldwide Support.

IMP-00400: Warning: Object type "*string*".*string*" already exists with a different typeid

Cause: An object type could not be created because it already existed on the

* target system, but with a different typeid

Action: Drop the object type from the target system and retry the operation.

IMP-00401: dump file "*string*" may be an Data Pump export dump file

Cause: A dump file was specified for an import operation which appears to have been created using the Data Pump export utility. These dump files cannot be processed by the original import utility.

Action: Try using the Data Pump import utility to process this dump file.

IMP-00402: Invalid parameter "*string*" with data_only mode

Cause: Parameter provided along data_only is invalid.

Action: Remove the invalid parameter from command line.

SQL*Loader-00100 to SQL*Loader-03120

SQL*Loader-00100: Syntax error on command-line

Cause: Possible causes for this error include: placing a positional argument after keyword arguments, misspelling a keyword, not balancing parentheses or quotes, or leaving space between the operator, '=', and an argument.

Action: Check the command syntax and the spelling, then retry.

SQL*Loader-00101: Invalid argument for username/password

Cause: The username/password argument specified on the command line was not recognized. Another argument (not identified by a keyword) could be in the position where username/password is expected.

Action: Check the format of the username/password argument, which is the first argument on the command line, if arguments are given without keywords.

SQL*Loader-00102: Invalid control file name on command line

Cause: is the existence of a space between username and password. See error 101, above.

Action: Check the spelling and position of the arguments on the command line.

SQL*Loader-00103: Invalid log file name on command line

Cause: The log file name specified on the command line was not recognized. It could be misspelled, or another argument (not identified by a keyword) could be in its place.

Action: Check the spelling and position of the arguments on the command line.

SQL*Loader-00104: Invalid bad file name on command line

Cause: The bad file name specified on the command line was not recognized. It could be misspelled, or another argument (not identified by a keyword) could be in its place.

Action: Correct it.

SQL*Loader-00105: Invalid data file name on command line

Cause: The datafile name specified on the command line was not recognized. It could be misspelled, or another argument (not identified by a keyword) could be in its place.

Action: Check the spelling and position of the arguments on the command line.

SQL*Loader-00106: Invalid discard file name on command line

Cause: The discard file name specified on the command line was not recognized. It could be misspelled, or another argument (not identified by a keyword) could be in its place.

Action: Check the spelling and position of the arguments on the command line.

SQL*Loader-00107: Invalid maximum number of discards

Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00108: Invalid number of logical records to load

Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00109: Invalid number of logical records to skip

Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00110: Invalid maximum number of errors

Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00111: Invalid number of rows for bind array or data saves

Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00112: Invalid maximum bind array size

Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00113: Invalid silent mode option

Cause: The only valid options for the SILENT command-line argument are ALL, ERROR, FEEDBACK, or HEADER. The argument could be misspelled, or another argument (not identified by a keyword) could be in its place.

Action: Check the command line and retry.

SQL*Loader-00114: Error in OPTIONS statement

Cause: Command line options specified in the SQL*Loader control file with the OPTIONS clause were found to be incorrect.

Action: Check the format of the OPTIONS clause in the SQL*Loader control file.

SQL*Loader-00115: Invalid direct path option

Cause: The only valid options for the DIRECT command-line argument are TRUE or FALSE. The argument could be misspelled, or another argument (not identified by a keyword) could be in its place.

Action: Check the command line and retry.

SQL*Loader-00116: Error prompting for password

Cause: An internal error has occurred.

Action: Contact customer support.

SQL*Loader-00118: Invalid parallel load option

Cause: The command-line argument used for the parallel load is incorrect.

Action: Use only TRUE or FALSE as the value for the parallel load option.

SQL*Loader-00119: Invalid parallel file (data file) name on command line

Cause: The command-line argument for the parallel file was entered incorrectly.

Action: Check the command line argument and retry the operation.

SQL*Loader-00120: Invalid _synchro option string

Cause: The command-line argument _synchro is incorrect.

Action: Use only one of the allowed modes: see ulminv[.].

SQL*Loader-00121: Invalid skip_unusable_indexes option

Cause: The command line argument for skip_unusable_indexes is incorrect.

Action: Use only TRUE or FALSE as the value for the skip_unusable_indexes option.

SQL*Loader-00122: Invalid skip_index_maintenance option

Cause: The command line argument for skip_index_maintenance is incorrect.

Action: Use only true or false as the value for the skip_index_maintenance option.
(Note: only on direct loads!)

SQL*Loader-00123: specified value for bindsize(*number*) less than readsize(*number*)

Cause: The command line argument specified for bindsize was less than the value of readsize.

Action: No action is required. SQL*Loader automatically adjusts the value of bindsize to equal the value of readsize.

SQL*Loader-00124: specified value for readsize(*number*) less than bindsize(*number*)

Cause: The command line argument specified for readsize was less than the value of bindsize.

Action: No action is required. SQL*Loader automatically adjusts the value of readsize to equal the value of bindsize.

SQL*Loader-00125: specified value for readsize(*number*) less than max_record_size(*number*)

Cause: The command line argument specified for readsize was less than the value of max_record_size.

Action: No action is required. SQL*Loader automatically adjusts the value of readsize to equal the value of max_record_size.

SQL*Loader-00126: Invalid read size

Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00127: Invalid maximum record size

Cause: The argument's value is inappropriate, or another argument (not identified by a keyword) is in its place.

Action: Check the command line and retry.

SQL*Loader-00128: unable to begin a session

Cause: An error occurred when attempting to start a session on the database.

Action: See the message that follows this message for information on the cause of the error.

SQL*Loader-00129: Invalid number of rows for direct path column array

Cause: The argument's value is inappropriate

Action: Check the command line and retry.

SQL*Loader-00130: Invalid direct path stream size

Cause: The argument's value is inappropriate

Action: Check the command line and retry.

SQL*Loader-00131: Invalid multithreading option

Cause: The only valid options for the MULTITHREADING command-line argument are TRUE or FALSE. The argument could be misspelled, or another argument (not identified by a keyword) could be in its place.

Action: Check the command line and retry.

SQL*Loader-00132: invalid argument for external table option

Cause: The command line argument specified for external_tables was not TRUE or FALSE

Action: Check the command line and retry.

SQL*Loader-00133: Can't specify both direct path and external tables

Cause: Both options for direct path and external tables were indicated. Only one of these can be applied at a time.

Action: Change at least one of the parameters to enable only one.

SQL*Loader-00134: invalid option specified for EXTERNAL_TABLE parameter

Cause: An invalid value was specified for the EXTERNAL_TABLE parameter.

Action: Specify one of the following values. NOT_USED disables use of external tables. GENERATE_ONLY generates the SQL statements that will use external tables to load the data. EXECUTE both generates the SQL statements and then executes them.

SQL*Loader-00135: Invalid argument for RESUMABLE

Cause: The command line argument specified for RESUMABLE was not TRUE or FALSE.

Action: Check the command line and retry.

SQL*Loader-00136: Invalid argument for RESUMABLE_NAME

Cause: The command line argument specified for RESUMABLE_NAME was not a valid string.

Action: Check the command line and retry.

SQL*Loader-00137: Invalid value for RESUMABLE_TIMEOUT

Cause: The command line argument specified for RESUMABLE_TIMEOUT was not a valid positive integer.

Action: Check the command line and retry.

SQL*Loader-00138: Invalid value for DATE_CACHE

Cause: The command line argument specified for DATE_CACHE was not a valid positive integer.

Action: Check the command line and retry.

SQL*Loader-00144: Conflicting load methods: *string/string* specified.

Cause: External table mode and direct path mode were both specified.

Action: Specify only one load method.

SQL*Loader-00145: Invalid value for NO_INDEX_ERRORS

Cause: The command line argument specified was not a valid boolean.

Action: Check the command line and retry.

SQL*Loader-00146: Invalid value for _PARTITION_MEMORY

Cause: The command line argument specified was not -1, 0, or positive.

Action: Check the command line and retry.

SQL*Loader-00147: Warning: The NO_INDEX_ERRORS parameter is ignored for direct path parallel loads.

Cause: The NO_INDEX_ERRORS parameter was specified for a parallel load.

Action: Do not use the NO_INDEX_ERRORS parameter for parallel loads.

SQL*Loader-00200: FORMAT clause should not be present - flat data files only

Cause: SQL/DS FORMAT clause is not supported.

Action: Remove the FORMAT command from the SQL*Loader control file or

SQL*Loader-00250: Work data sets are not used by SQL*Loader

Cause: The SQL*Loader control file contains a WRKDDN statement. SQL*Loader ignores this clause.

Action: No action required. This is an informational message.

SQL*Loader-00251: Sort devices are not used by SQL*Loader

Cause: The SQL*Loader control file contains a SORTDEVT statement. SQL*Loader ignores this clause.

Action: No action required. This is an informational message.

SQL*Loader-00252: Sort data sets are not used by SQL*Loader

Cause: The SQL*Loader control file contains a SORTNUM statement. SQL*Loader ignores this clause.

Action: No action required. This is an informational message.

SQL*Loader-00253: DB2 partition number has no significance -- ignored

Cause: The SQL*Loader control file contains a PART statement. SQL*Loader ignores this clause.

Action: No action required. This is an informational message.

SQL*Loader-00254: Cannot have DISCARDFILE specs here when multiple data files

Cause: The SQL*Loader control file contained multiple INFILE statements and a DISCARDFILE statement was found below the RESUME clause.

Action: Move the DISCARDFILE statement above the RESUME clause, so it is adjacent to one of the INFILE statements.

SQL*Loader-00255: Log file for error recovery not used by SQL*Loader

Cause: The SQL*Loader control file contains a LOG statement. SQL*Loader ignores this clause.

Action: No action required. This is an informational message.

SQL*Loader-00256: SORTED INDEXES option allowed only for direct path

Cause: The SQL*Loader control file contains a SORTED INDEXES statement, but it was not used in a direct path load.

Action: Specify a direct path load with DIRECT=TRUE on the command line, remove the statement from the SQL*Loader control file, or

SQL*Loader-00257: TERMINATED BY EOF option not valid with ENCLOSED BY option

Cause: A field description in the SQL*Loader control file contains both the TERMINATED BY EOF and the ENCLOSED BY options. These options are mutually exclusive.

Action: Remove either or both of the clauses.

SQL*Loader-00258: Maximum number of SORTED INDEXES (*number*) exceeded on table *string*

Cause: There are too many indexes in the SORTED INDEX clause. The message displays the maximum number that are permitted.

Action: Reduce the number of indexes specified in the SORTED INDEX clause or use the conventional path load instead of the direct path load.

SQL*Loader-00259: Could not escalate DDL share lock to exclusive on table *string*

Cause: This error occurs when another user has a parse lock on the table, for example, when another user is doing a select on the table. The parse lock should clear momentarily.

Action: Give the parse lock a chance to clear and then retry or else use the conventional path load.

SQL*Loader-00260: TERMINATED BY EOF option available only with LOBFILE option

Cause: The TERMINATED BY EOF option can be used only when describing data to be loaded from a LOBFILE. It cannot be specified at the table level and it cannot be for data in "regular" data files.

Action: Verify that you have specified the correct option for TERMINATED BY and verify that the TERMINATED BY option is specified for the correct fields.

SQL*Loader-00261: illegal use of TERMINATED BY for RAW field

Cause: The TERMINATED BY option cannot be used for loading data of type RAW from the data file. The only exception is when loading RAW data from LOBFILES. In that case, you may specify the TERMINATED BY EOF option.

Action: Remove the TERMINATED BY option from the RAW field in the SQL*Loader control file.

SQL*Loader-00262: PIECED keyword (on column *string*) allowed only when path is direct

Cause: The PIECED keyword cannot be used in a conventional path load.

Action: Remove the PIECED keyword or use the direct path load.

SQL*Loader-00263: PIECED column *string* must be last specified column in table *string*

Cause: A column that is not the last column was specified as PIECED.

Action: Remove the PIECED keyword or place the column last.

SQL*Loader-00264: File mode token *string* parsed but ignored

Cause: An obsolete file mode token was used in the SQL*Loader control file. As of Release 1.1 of SQL*Loader, the file-processing options string is used to control file processing, rather than keywords like STREAM, RECORD, FIXED, and VARIABLE.

Action: No action required. This message is informational. Removing the obsolete keywords will eliminate the message without changing the way in which the datafile is processed.

SQL*Loader-00265: Unable to get default character set name.

Cause: SQL*Loader was unable to locate the default character set name for the environment.

Action: Supply a character set name with the CHARACTERSET keyword.

SQL*Loader-00266: Unable to locate character set handle for *string*.

Cause: SQL*Loader could not find the character set handle for the named character set.

Action: Correct the character set name.

SQL*Loader-00267: Control file must be first data file.

Cause: The SQL*Loader control file is specified as containing data using the INFILE "*" clause, but other datafiles were named first.

Action: Move the INFILE "*" clause so that it is the first datafile declared in the SQL*Loader control file.

SQL*Loader-00268: UNRECOVERABLE keyword may be used only in direct path.

Cause: The UNRECOVERABLE keyword can only be specified in the direct path load.

Action: Use the direct path load or remove the keyword. (Conventional path loads are always recoverable).

SQL*Loader-00269: Null string not allowed as clause comparison text.

Cause: A clause is being compared to a null string.

Action: Modify the clause to compare to at least one character.

SQL*Loader-00270: TERMINATED BY EOF valid only for CHAR or RAW datatypes

Cause: A field description in the SQL*Loader control file used the TERMINATED BY EOF option when the field was not a RAW or CHAR datatype.

Action: Modify the SQL*Loader control file to either remove the TERMINATED BY EOF clause or change the datatype for the field to be CHAR or RAW.

SQL*Loader-00271: Not a Parallel load. Table level OPTIONS statement ignored.

Cause: A table-level OPTIONS statement was specified for a non-parallel load.

Action: Remove the OPTIONS statement from the SQL*Loader control file.

SQL*Loader-00272: Table level OPTIONS statement ignored.

Cause: In the parallel load option, the file specified on the command line overrides the file specified in the SQL*Loader control file.

Action: Remove the OPTIONS statement from the SQL*Loader control file.

SQL*Loader-00273: READBUFFERS may be used only in direct path.

Cause: The READBUFFERS specification was not entered as part of a direct path.

Action: Use the direct path or remove the READBUFFERS specification from the SQL*Loader control file.

SQL*Loader-00274: At least 2 read buffers have to be specified.

Cause: Fewer than 2 read buffers have been specified.

Action: Specify at least 2 read buffers in the READBUFFERS statement, in the SQL*Loader control file.

SQL*Loader-00275: Data is in control file but "INFILE *" has not been specified.

Cause: The INFILE specification was not entered in the SQL*Loader control file.

Action: If data in the SQL*Loader control file is to be read, specify INFILE * in the SQL*Loader control file.

SQL*Loader-00276: Local storage option overrides global storage.

Cause: A storage clause has been specified in the table level options statement and also in the global options statement.

Action: This is only a warning message. Table level options take precedence over global options. Drop the table level options statement if this is not the intent.

SQL*Loader-00277: Local file specification overrides global file specification.

Cause: A filename has been specified in the table level options statement and also in the global options statement.

Action: This is only a warning message. Table level options take precedence over global options. Drop the table level options statement if this is not the intent.

SQL*Loader-00278: Incorrect file specification for parallel load.

Cause: The filename used to perform the parallel load was entered incorrectly.

Action: Correct the filename and re-invoke parallel loader.

SQL*Loader-00279: Only APPEND mode allowed when parallel load specified.

Cause: INSERT, REPLACE, or TRUNCATE mode was used in a parallel load specification.

Action: Change the SQL*Loader control file to use the APPEND keyword and re-invoke the parallel loader.

SQL*Loader-00280: table *string* is a temporary table

Cause: The sqlldr utility does not load temporary tables. Note that if sqlldr did allow loading of temporary tables, the data would disappear after the load completed.

Action: Load the data into a non-temporary table.

SQL*Loader-00281: Warning: ROWS parameter ignored in parallel mode.

Cause: Specifying save points using the ROWS parameter is not supported for parallel loads.

Action: Remove the ROWS parameter from the command-line arguments or specify a non-parallel direct load to have save points performed.

SQL*Loader-00282: Unable to locate character set handle for character set ID (*number*).

Cause: SQL*Loader could not find the character set handle for the given character set ID.

Action: The character set ID was obtained from the database server, the SQL*Loader client does not have knowledge of the given character set ID. Possible mis-match of NLS data on the client and server side.

SQL*Loader-00283: file processing string "*string*" ignored for INFILE *

Cause: The SQL*Loader control file specified INFILE * for a load data file along with an optional file processing string. This message is a warning that the file processing string will be ignored since SQLLDR will expect the data to have the same record format as the SQL*Loader control file.

Action: If the data in the SQL*Loader control file is in the same format as the rest of the SQL*Loader control file, then you don't need to do anything. Removing the file processing string will get rid of this error message. If the data in the SQL*Loader control file has a different record format, then you need to copy the data into a separate file and use that file's name in the INFILE clause.

SQL*Loader-00284: Warning: Input data file *string* specified multiple times.

Cause: The same input datafile is loaded multiple times. This can occur if the INFILE keyword is placed out of order in the load syntax statement, which causes the filename of the first datafile loaded to default to the name of the control file with an extension or file type of DAT.

Action: Check that INFILE keyword is not placed after one of these - BADFILE/BADDN/DISCARDFILE/DISCARDDN/DISCARDS.

SQL*Loader-00285: *string* may be used only in conventional path.

Cause: HIDDEN can only be specified in the conventional path load.

Action: Use the conventional path load.

SQL*Loader-00286: ROWS parameter is not supported when loading an IOT.

Cause: Specifying save points using the ROWS parameter is not supported when loading an IOT.

Action: Remove the ROWS parameter from the command-line arguments.

SQL*Loader-00287: No control file name specified.

Cause: No control file name was provided at the control prompt.

Action: Provide the name of a valid control file at the prompt or on the command line.

SQL*Loader-00288: Delimiters may not be specified for collections stored in SDF.

Cause: A TERMINATED BY or ENCLOSED BY clause was found along with an SDF (secondary data files) clause for a nested table or varray field.

Action: The TERMINATED BY or ENCLOSED BY clauses may be specified only if the nested table or VARRAY data is stored in the record in the main data file. If you are loading nested table or VARRAY data from a secondary data file, then you

must use COUNT to indicate the number of elements in the secondary data file that are stored in the file.

SQL*Loader-00289: SQL string for column *string* occludes SQL string for column *string*.

Cause: A SQL string has been associated with both a column object and one of its attributes in the control file. Because the SQL string of the column object will replace the entire column object in the VALUE clause of the INSERT statement, the SQL string of the attribute is ignored. This could cause unexpected or incorrect values to be loaded.

Action: Correct the control file so that only the column object or its attribute has a SQL string, but not both.

SQL*Loader-00290: PIECED keyword (on column *string*) allowed only for lob or long columns

Cause: The PIECED keyword cannot be used for non lob or long columns.

Action: Remove the PIECED keyword or use lob or long column type.

SQL*Loader-00291: Invalid bind variable *string* in SQL string for column *string*.

Cause: A bind variable may not refer to a filler field or to a non-existent field. Also, when running in direct-path mode, a bind variable may not refer to field that represents a LOB stored in a secondary file or a collection.

Action: Remove the offending bind variable from the SQL string.

SQL*Loader-00292: ROWS parameter ignored when an XML, LOB or VARRAY column is loaded

Cause: Command-line arguments contained a ROWS parameter. Specifying save points using the ROWS parameter is not supported when any table being loaded contains a LOB or a column stored as a LOB. XML and VARRAY columns may be stored as a LOB.

Action: Remove the ROWS parameter from the command-line arguments.

SQL*Loader-00293: Missing XMLTYPE directive in control file for table *string*

Cause: A table of sys.xmltype must specify the XMLTYPE directive.

Action: Add XMLTYPE directive to control file.

SQL*Loader-00294: invalid name % specified in TREAT AS clause

Cause: The type name specified in a TREAT AS clause is invalid. It might contain characters that are not valid in the client character set or a quoted string might not be terminated or the name might be too long to contain a valid schema name and type name.

Action: Verify that the type name has valid characters and is not too long. Also, ensure that all quoted strings are terminated.

SQL*Loader-00295: Warning: Table *string*, Column *string* - Quoting rule of object attribute bind variables has changed.

Cause: The quoting rule of bind variables consisting of full object attribute names changed. The old quoting rule is incorrect because it can lead to ambiguous column references. For backward compatibility, current load will continue unless ambiguous column references are detected.

Action: This is only a warning message. Because the quoting rule of object attribute bind variables has changed, it is recommended that the control file be replaced with the new rule. With the new rule, a full object attribute bind variable

name is not enclosed in its entirety in double quotes. Instead, each attribute name in the bind variable should be independently quoted as needed. Note that each attribute name is actually an identifier on its own and thus should follow the quoting rules for an identifier. For example, bind variable ':A.B.C' here consists of 3 attribute names (or identifiers): 'A', 'B', and 'C'.

SQL*Loader-00296: Bind variable *string* for column *string* is ambiguous.

Cause: A bind variable can only refer to one column in the control file. Current load could not continue due to ambiguous column references.

Action: Fix the bind variable. If this bind variable consists of quotes, check that the quotes are used correctly. For example, the old quoting rule of bind variables consisting of full object attribute names was incorrect because it can lead to ambiguous column references. Let's say we have an expression "LTRIM(:'A.B.C')". Using the old quoting rule, this bind variable can refer to object attribute columns "'A"."B"."C'", "'A.B'.C", and "'A"."B.C'". To avoid this confusion, use the new quoting rule for object attribute bind variables, which is to quote each attribute name independently as needed. In the preceding example, if the intended object attribute column is 'A.B.C', then the expression rewritten as "LTRIM(:A.B.C)" or "LTRIM(:'A"."B"."C") will not lead to ambiguities.

SQL*Loader-00297: Invalid syntax or bind variable in SQL string for column *string*.

Cause: See following error message for more information. A SQL string cannot have quoted strings improperly terminated. A bind variable in a SQL string cannot have a length of 0, cannot exceed maximum length of 30 characters, and cannot be missing a double quote.

Action: Fix the SQL string. See following error for more information.

SQL*Loader-00298: Filler field name is too long

Cause: The specified filler field name exceeded the maximum of 30 characters.

Action: Specify at most 30 characters.

SQL*Loader-00299: Virtual column *string* in table *string.string* cannot be loaded.

Cause: Virtual columns were specified in the control file.

Action: Virtual columns cannot be specified in the control file. Remove the virtual column from the SQL*Loader control file.

SQL*Loader-00300: error while attempting to enable tracing

Cause: An error occurred while executing an ALTER SESSION statement to enable tracing. This message will be followed by the error returned from ALTER SESSION.

Action: No action required.

SQL*Loader-00301: string for TERMINATED BY or ENCLOSED BY clause is longer than *number* bytes

Cause: The size of a string literal is longer than the maximum number of bytes allowed for an ENCLOSED BY or TERMINATED BY string. This error can also occur if the string needs to be converted to the character set of the data file and the resulting string is too long.

Action: Use shorter strings for the TERMINATED BY and ENCLOSED BY clauses.

SQL*Loader-00303: Non-hex character encountered where hex char expected

Cause: A non-hex character was found in a hexadecimal string.

Action: Change it to the intended hexadecimal character.

SQL*Loader-00304: Illegal combination of non-alphanumeric characters

Cause: The SQL*Loader control file contains a combination of non-alphanumeric characters that SQL*Loader does not recognize. For example, the combination != is recognized as "not equal", but the combination =! is not valid.

Action: Remove the unrecognized characters from the control file.

SQL*Loader-00305: More than one end of file character encountered

Cause: The file contains multiple end-of-file marks.

Action: Remove the excess end-of-file characters.

SQL*Loader-00306: Token longer than max allowable length of *number* chars

Cause: The SQL*Loader control file contains a single word or combination of characters (a token) that is longer than the maximum permissible value. The maximum possible value is shown. This error could result from missing spaces, so that multiple tokens are joined.

Action: Check that the proper SQL*Loader control file is being executed. Separate tokens, if joined, or shorten the token.

SQL*Loader-00307: Warning: conflicting lengths *number* and *number* specified for column *string* table *string*

Cause: The SQL*Loader control file specifies two different lengths for the named column. There are three ways to specify the length of a field: --with the POSITION keyword: POSITION(1:3) -- with the length specifier: CHAR(6) -- with the implied length of a datatype; for example, INTEGER -- A conflict could occur between any two of these specifications (or among all three, but only two are shown). A common cause of this error is the specification of some numeric datatype, such as INTEGER, when the numeric external form is intended (INTEGER EXTERNAL). The external form consists of character data, so it is considerably longer than the numeric form, which consists of binary data.

Action: No action is necessarily required, because SQL*Loader uses only one of the lengths. Check the log file under the heading "Len" in the table-description section to see which length was used. Adjusting the SQL*Loader control file to produce uniform length specifications will remove the warning.

SQL*Loader-00308: *string* SQL string of column *string* must be in double quotes.

Cause: A SQL string was found that was not quoted or in single quotes.

Action: Use double quotes for the SQL string, rather than single quotes.

SQL*Loader-00309: No SQL string allowed as part of *string* field specification

Cause: Particular field types do not allow SQL strings as part of their field specification (e.g. field corresponding to a LOB column). This was violated and needs to be corrected.

Action: Remove the SQL string from the particular field specification.

SQL*Loader-00310: Interval partition values of table *string* must be in double quotes.

Cause: A string specified for interval partitioning was found that was not quoted or in single quotes.

Action: Use double quotes for the interval partitioning values string, rather than single quotes.

SQL*Loader-00350: Syntax error at line *number*.

Cause: num identifies the line in the SQL*Loader control file at which the error occurred. This message is followed by another of the form -- Expecting str1, found str2 where str1 is a description of what SQL*Loader expected in the SQL*Loader control file, and str2 is what was found. Then SQL*Loader displays the offending line from the SQL*Loader control file, indicating the location of the error in the line by a caret (^) or an asterisk (*). An example follows: -- SQL*Loader-350: Syntax error at line 28 -- Expecting column name, found keyword CHAR -- col3 ENCLOSED BY '"', CHAR ENCLOSED '"',

Action: Compare the DDL syntax against the syntax diagrams in Oracle7 Server Utilities and make any necessary corrections.

SQL*Loader-00401: End field position *number* must be greater than or equal to start *number*

Cause: The named field contains a (start:end) clause in which end is less than start.

Action: Modify the clause so that end is greater than or equal to start.

SQL*Loader-00402: Unable to determine length of column *string* from specification

Cause: The specified datatype does not have an implied length (for example, a numeric external or RAW datatype), it is not specified with delimiters, no length was specified, and a length cannot be determined from a POSITION clause.

Action: If a POSITION clause is specified, adding an end location to it produces a length specification. This clause then has the form POSITION(start:end) A length can also be specified after the datatype, as in INTEGER EXTERNAL (6) Finally, the field could be specified with delimiters, or the datatype changed to one that has an implied length.

SQL*Loader-00403: Referenced column *string* not present in table *string*.

Cause: The named column is not present in the given table.

Action: Correct the column name or table name.

SQL*Loader-00404: Column *string* present more than once in *string*'s INTO TABLE block.

Cause: The named column is specified more than once in a single INTO TABLE statement.

Action: Remove the extraneous column specification.

SQL*Loader-00405: Need termination delim with optional enclosure delim: column *string* table *string*

Cause: The named column was specified with an optional enclosure delimiter, but no termination delimiter. Enclosure delimiters can only be optional when termination delimiters are present.

Action: Specify a termination delimiter or make the enclosure delimiters non-optional.

SQL*Loader-00406: If data is all generated, number to load cannot be ALL

Cause: When only generated data is loaded, a number to load must be given so SQL*Loader knows when to stop.

Action: Specify a number to load.

SQL*Loader-00407: If data is all generated, number to skip is meaningless

Cause: When all data is generated, no file is read, and there are no records to skip.

Action: Remove the number to skip.

SQL*Loader-00408: Physical record stack overflow

Cause: An internal error has occurred.

Action: Contact customer support.

SQL*Loader-00409: Number to skip must be table-level, not load-level on continued loads

Cause: The SKIP parameter was specified on the command line or in the OPTIONS statement, but the load was specified as continued with CONTINUE_LOAD. When a multiple-table direct load is interrupted, it is possible that a different number of records were loaded into each table. As a result, the number of records to skip must be specified for each table when continuing the load. In this case, the load is specified as continued with the CONTINUE_LOAD statement, and the number of records to skip is given in each INTO TABLE statement. See also messages 410 and 411 for more information.

Action: Check the log file to determine the appropriate number of records to skip for each table and specify this number in the INTO TABLE statement for each table in a continued load or with the command-line SKIP parameter in a standard load.

SQL*Loader-00410: Number to skip must be load-level, not table-level

Cause: A SKIP clause was found in the INTO TABLE statement of a standard (non-continued) load. In a standard load, specified with LOAD DATA, it is not possible to skip a different number of records for each table. The number of records to skip must be specified for the entire load by using the SKIP parameter on the command line or in the OPTIONS clause. If table-level skip is required, because a different number of records were loaded into each table (only possible for a multiple-table direct load), then specify a continued load with the CONTINUE_LOAD statement. See also messages 409 and 411 for more information.

Action: If the load was not a multiple-table, direct path load, then move the SKIP clause from the INTO TABLE statements to the command line or to the OPTIONS clause. Otherwise, specify the load as continued with CONTINUE_LOAD.

SQL*Loader-00411: Only a direct path load may be continued

Cause: The load is specified with CONTINUE_LOAD, but DIRECT=FALSE. CONTINUE_LOAD is only possible for a direct path load and is only necessary for a multiple-table, direct path load when a different number of records have been loaded into each table. See also messages 409 and 410 for more information.

Action: If CONTINUE_LOAD is necessary, specify a direct load and put the number of records to skip in each INTO TABLE statement. Otherwise, use the command line or OPTIONS clause to specify the number of records to skip and use LOAD DATA instead of CONTINUE_LOAD.

SQL*Loader-00412: More columns specified for table *string* than the maximum (number)

Cause: More columns were specified for the table than the maximum number allowed by the database.

Action: Remove the extraneous columns.

SQL*Loader-00413: NULLIF or DEFAULTIF clause specified for filler field *string* in table *string*.

Cause: A NULLIF or DEFAULTIF clause was specified in the SQL*Loader control file for the named filler field. These options cannot be specified for filler fields.

Action: Remove the NULLIF or DEFAULTIF clause from the field definition.

SQL*Loader-00414: no columns to load for table *string*

Cause: There were no fields in the data file to be loaded for the table. Probably all fields were identified as FILLER fields.

Action: Verify that the FILLER attribute was set correctly for the fields.

SQL*Loader-00415: column *string* in table *string* cannot use and be the object of an SDF or LOBFILE

Cause: The named column is identified as the target of a secondary data file (SDF) or LOBFILE clause. However, the column also gets its value from an SDF or LOBFILE. If a field name is named in an SDF or LOBFILE clause, then that field cannot have an SDF or LOBFILE clause.

Action: Verify that the SDF and LOBFILE clauses in the SQL*Loader control file name the correct fields. Also verify that the SDF and LOBFILE clauses are specified for the correct field.

SQL*Loader-00416: SDF clause for field *string* in table *string* references a non-existent field.

Cause: The secondary data file clause for the field identified another field that doesn't exist in the table definition for the SQL*Loader control file.

Action: Verify the definition of the secondary data file to make sure it identifies the intended field.

SQL*Loader-00417: SQL string (on column *string*) not allowed in direct path.

Cause: Because the direct path bypasses SQL processing, the SQL string cannot be used.

Action: Remove the SQL string or use the conventional path.

SQL*Loader-00418: Bad datafile datatype for column *string*

Cause: The datatype in the data file specified for the column cannot be used to load the column. This message is often displayed for columns that need to be loaded with special features. For example, BFILE columns can only be loaded via the BFILE directive in the control file; same goes for REF fields. in the SQL*Loader control file. Similarly, REF columns can only be loaded with the REF datatype in the SQL*Loader control file.

Action: Determine the datatype of the column in the database check the documentation for the correct mechanisms to use to load columns of that type.

SQL*Loader-00419: input datatype for column *string* is not supported when loading varrays

Cause: The datatype in the SQL*Loader control file for the column is cannot be used to load data in a varray.

Action: Use a different datatype.

SQL*Loader-00420: unsupported datatype conversion requested for column *string* in table *string*

Cause: The column needs to have its data converted to another datatype before loading the data. The required conversion cannot be done by sqlldr.

Action: Verify that the correct datatype was specified for the column.

SQL*Loader-00421: error converting data

Cause: This message can be displayed as one of the reasons for rejecting a row. The sqldr utility was attempting to convert data for the column from its datatype in the data file to the datatype for the column in the database. This message should be followed with another message describing the conversion error.

Action: Correct the data in the data file so that it can be converted.

SQL*Loader-00422: constant element count of *number* for column *string* is greater than maximum, *number*

Cause: The number of elements specified for a varray column in a table is greater than the maximum number of elements allowed for the type of the varray column.

Action: Increase the number of elements allowed for the type or remove unwanted elements from the data file.

SQL*Loader-00423: element count is greater than maximum allowed for the column

Cause: When building a varray from the data file, SQL*Loader encountered more varray elements than are allowed for the column.

Action: The previous error messages contain the name of the column and the row number containing the bad data.

SQL*Loader-00424: table *string* makes illegal reference to collection field *string*

Cause: A WHEN, OID or SID clause for the table refers to a field declared inside of a collection.

Action: Move the data containing the value for a SID or OID clause outside of the collection definition.

SQL*Loader-00425: column *string* makes illegal reference to collection field *string*

Cause: A clause, such as NULLIF or BFILE clause, for the column refers to a field declared inside of a collection.

Action: Move the data containing the value for a SID or OID clause outside of the collection definition.

SQL*Loader-00426: count of elements in VARRAY *string* comes after the data for the varray

Cause: The COUNT clause for a VARRAY field indicates that the count of elements in the varray is stored in another data field. However, that data field comes after the varray data in the data file. Since finding the count field would require SQL*Loader to know the number of elements in the VARRAY first, SQL*Loader requires that the count field come before the VARRAY data.

Action: Move the count field to be before the collection data in the data file.

SQL*Loader-00427: a field condition references a non-scalar field or a LOB field *string*

Cause: The field condition is referencing a field which is either a nested table, varray, column object, LOB or BFILE field. These fields with these types cannot be referenced by other field.

Action: Correct the NULLIF, DEFAULTIF, or WHEN clauses to reference only non-LOB scalar data fields.

SQL*Loader-00428: count for field *string* not stored in character or integer field

Cause: The count clause for a field references another field, but the referenced field is not a character or integer datatype.

Action: Modify the count field so that it reference a data field that has the count in an integer or character format.

SQL*Loader-00429: insufficient number of elements found for varray

Cause: The COUNT directive was specified for a varray, but the number of elements found is less than the number specified by the COUNT directive.

Action: Correct the data so that the count and the number of elements agree.

SQL*Loader-00430: NULL nested table element is not allowed

Cause: A row in a nested table was set to NULL. Nested tables cannot contain NULL fields.

Action: Correct the data so that there are no NULL rows in the nested table.

SQL*Loader-00431: illegal NULLIF or DEFAULTIF clause specified for nested table column *string*

Cause: Rows in a nested table cannot be set to NULL. SQLLDR displays this error when a NULLIF clause was specified for the element that defines the row that make up a nested table. SQLLDR also displays this error if a DEFAULTIF clause is specified for an element that is a named type, since SQLLDR will set a named type to NULL if the DEFAULTIF evaluates to TRUE.

Action: None

SQL*Loader-00432: converted data too large

Cause: This message is preceded by a message identifying a row and column. It is displayed when there is insufficient room to convert the data from the datatype in the input file to the datatype for the column in the database.

Action: Modify the data so that it fits in the database field.

SQL*Loader-00433: no attributes found for column object *string* in table *string*

Cause: No attributes are to be loaded for a column object named in the control file. This can happen if all fields in the definition for the column object in the control are designated as FILLER fields.

Action: Either specify attributes to load for the column object or remove the column object from the control file.

SQL*Loader-00434: Can not load LOB/XML in a nested table along with the parent table.

Cause: Loading LOBs and XML data within a nested table at the same time as the parent table is not supported.

Action: Load the nested table with the LOB or XML column separately from the parent table.

SQL*Loader-00435: invalid constant value *string* for nested table column *string*

Cause: A constant value was specified for the SETID of a nested table column. An error occurred while translating the character constant into a SETID.

Action: Make sure the constant string contains valid hexadecimal characters and that there are 32 hexadecimal characters.

SQL*Loader-00436: error converting GUID

Cause: The value of the field named in the message is used to populate the column named in the message. Because column is a Set ID or an Object ID, the field needs to be converted. This message indicates that there was a conversion error. If the field is a character field, then the conversion error could be caused by too many or too few hexadecimal characters. Also, one or more of the characters in the field might not be a valid hexadecimal character. If the field contains RAW data, then either too many or too few bytes were specified for the field.

Action: Fix the data and reload the row.

SQL*Loader-00440: Invalid table specified as scope of a REF

Cause: As part of the REF directive one specifies the table name or another fields name which contains the table name of the table which the REF references.

Action: Make sure that the right referenced table name is specified.

SQL*Loader-00456: end of collection found after *number* elements when looking for *number* elements

Cause: A count value was specified for a varray or nested table column and the number of rows found is less than the number of rows specified

Action: Verify that the count field has the correct value and that there is no missing data for the collection.

SQL*Loader-00457: Comparison text of CONTINUEIF LAST must have length 1 not *number*

Cause: The comparison text is too long. It can only be one character.

Action: Reduce the comparison text to one character.

SQL*Loader-00458: Comparison text ('*string*') of CONTINUEIF LAST must be non-whitespace

Cause: The comparison text is a whitespace character (blank or tab).

Action: Change the comparison text to a non-whitespace character.

SQL*Loader-00459: error fetching numeric value for sequence on column (*string*)

Cause: An attempt was made to retrieve a non-numeric value for a sequenced column.

Action: Verify that the data for the sequenced column is numeric. Then retry the operation.

SQL*Loader-00460: Column (*string*), form of use (*number*) does not match char set id of (*number*)

Cause: The given column with the given form of use does not have the same character set ID as a previous column with the same form of use.

Action: This should not happen. Contact ORACLE support and supply the following information: DDL for the table being loaded, and the SQL*Loader control file. ADDED in 8.1

SQL*Loader-00461: direct path loading of datatype for column *string* not supported

Cause: The datatype for the specified column is one that cannot be loaded with direct path.

Action: If the datatype is supported with conventional path, load the table using conventional path.

SQL*Loader-00462: error inserting LOB into column *string*, row *number*, table *string*

Cause: An error occurred while attempting to write a lob into a row.

Action: See accompanying messages describing why the LOB could not be loaded, what actions sqlldr took (if any), and where the errors may be in order to reload.

SQL*Loader-00463: secondary data file for LOB is *string*

Cause: The secondary data file that was in use for populating the LOB when an error occurred.

Action: None

SQL*Loader-00464: file offset for beginning of lob is *string*

Cause: The offset into the secondary data file that contains the start of the LOB that was being written when an error occurred.

Action: None

SQL*Loader-00465: *string* directive expects *number* arguments, *number* found.

Cause: You specified a directive such as COUNT() or BFILE() in the SQL*Loader control file. This directive specifies a fixed number of arguments, but the SQL*Loader control file contains a different number of arguments.

Action: Correct the SQL*Loader control file so that the directive contains the correct number of arguments.

SQL*Loader-00466: Column *string* does not exist in table *string*.

Cause: The SQL*Loader control file specified a table column that does not exist.

Action: None

SQL*Loader-00467: attribute *string* does not exist in type *string* for table *string*.

Cause: The SQL*Loader control file specified an attribute that does not exist for the specified type. The table that contains the type is also identified in the error message.

Action: Verify that the correct table in the correct schema is named in the SQL*Loader control file. Also verify that the column name is spelled correctly.

SQL*Loader-00468: OID directive expects 1 argument, *number* found.

Cause: More than one argument was specified for an OID clause.

Action: Specify the name of the field containing the value to use for the OID. If the OID for the table is user-defined, then do not use the OID clause in the control file.

SQL*Loader-00469: SID directive expects 1 argument, *number* found.

Cause: More than one argument was specified for a SID clause.

Action: Only specify the name of the field containing the value to use for the SID in the SID clause.

SQL*Loader-00470: table *string* does not have system generated OID

Cause: You specified an OID clause for a table but the table is either not an object table or the table is an object table but the OIDs for the rows are not system generated.

Action: Verify that you are loading the correct table. If you are, then you must not specify the OID clause for this table. You should use the OID clause only when the table is an object table, has system generated OIDs and when you want to specify OIDs to be assigned to each row of the table.

SQL*Loader-00471: OID or SID clause has an argument that is CONSTANT

Cause: You specified a CONSTANT as an argument in an OID clause for an object table or in the SID clause for a nested table column. Since these columns must have unique values, SQL Loader does not allow a constant to be specified for their values.

Action: Store the OID for each row in a filler field and specify the name of the filler field as an argument.

SQL*Loader-00472: collections can contain only one non FILLER field specification

Cause: More than one non filler field specification is found in a collection field's member field list.

Action: See correct syntax in the Utilities Manual. If indeed there is more than one attribute that makes up the particular collection, then it must be a collection of a object type which needs to be specified using the COLUMN OBJECT field specification syntax.

SQL*Loader-00473: nesting of collections is not allowed.

Cause: Nesting of one collection type field description within another is not allowed.

Action: Verify that collection nesting is attempted in the SQL*Loader control file. Correct the mistake.

SQL*Loader-00474: no value set for dynamic file for column *string* in table *string* row *number*

Cause: The data for the named column is in a dynamic LOBFILE or secondary data file. This message is returned when the field containing the name of the file with the data for this field has not been set or is NULL. This could be because the record in the data file does not match the format described by the SQL*Loader control file.

Action: Correct any errors in the data file or the SQL*Loader control file.

SQL*Loader-00475: field for dynamic file name is *string* in table *string*

Cause: This message is always displayed after message 474.

Action: None

SQL*Loader-00476: count of elements for collection is not set or null, 0 will be used

Cause: This message is displayed following a message that identifies the column and row that contained the problem. The message indicates that the collection field named in the previous message has the count of elements in the collection stored in another field. This message is displayed if the field containing the count does not have a value or is set to NULL. When this happens, SQL*Loader uses 0 as the number of elements.

Action: If 0 is not the count of elements for the collection, correct the data in the data file.

SQL*Loader-00477: REF directive for field *string* requires at least two arguments

Cause: The SQL Loader control file contains a REF directive for the field, but only one argument was supplied for the directive. The REF directive always requires at least two arguments.

Action: Supply the missing argument to the REF directive. Remember that you must always supply a table name to the REF directive even if the REF is scoped.

SQL*Loader-00478: unable to continue due to missing filename for LOBFILE or SDF

Cause: The name for a LOBFILE or secondary data file is either missing or NULL for the current row. SQL*Loader is unable to continue loading since it can't determine how to get the LOB for the next row.

Action: Correct the data file so that there are valid values for all fields containing the names of LOBFILES and secondary data files.

SQL*Loader-00479: REF directive for column *string* expects *number* arguments; found *number*.

Cause: The number of arguments in the REF directive for the column is incorrect.

Action: Specify the correct number of arguments for REF. Remember that the REF directive always requires a table name. Also, primary key REFs require one argument for each field in the primary key.

SQL*Loader-00480: EXPRESSION may not be used with elements of a collection.

Cause: The EXPRESSION keyword is followed by a required SQL string expression and is used to load a column with the result of the SQL string expression instead of with a value from the input data file. However, this capability is not allowed with elements of a collection.

Action: Remove the EXPRESSION keyword and associated SQL string from the collection element in the control file.

SQL*Loader-00481: HIDDEN may not be used with non-scalar fields.

Cause: The HIDDEN keyword is only allowed for scalar fields.

Action: Remove the HIDDEN keyword from the non-scalar field in the control file.

SQL*Loader-00486: sql-strings may not be specified for collection field *string*

Cause: A sql-string was specified as part of the description of the field that is inside a nested table or varray. Sql-strings cannot be used to load a field in a varray or nested tables.

Action: Remove the sql-string from the field description. Modify the data file so that it contains the values to be loaded into the column in the collection.

SQL*Loader-00487: COUNT clause required for collection *string*

Cause: A VARRAY or NESTED TABLE was defined in the SQL Loader control file and all of the fields in the VARRAY or NESTED TABLE are generated by SQL Loader and do not come from a data file. SQL Loader requires a COUNT clause be specified so that it knows how many elements to add to the VARRAY or NESTED TABLE for each row.

Action: Add a COUNT clause to the VARRAY or NESTED TABLE definition.

SQL*Loader-00488: *string* not a named collection type for filler field *string*

Cause: The FILLER option was specified for a VARRAY or NESTED TABLE field in the SQL Loader control file. However, the type name specified for the field is not the name of a VARRAY or NESTED TABLE type.

Action: Verify that the correct type name was specified. If the type is defined in a different schema, also verify that the correct schema name is specified.

SQL*Loader-00489: cannot insert NULL object into object table *string*, row *number*

Cause: There was no data specified in the control file, a lob file, or a secondary data file for this object column.

Action: Place valid data for this column in the appropriate file prior to invoking SQL*Loader to load data into this table.

SQL*Loader-00490: absolute position is not allowed for inline collections

Cause: The absolute position specification was used for inline collections. Specifying the absolute position for inline collections is not supported.

Action: Use relative positioning for inline collections.

SQL*Loader-00500: Unable to open file (*string*)

Cause: SQL*Loader could not open the named file.

Action: Check the operating system messages below this one in the log file.

SQL*Loader-00501: Unable to read file (*string*)

Cause: SQL*Loader could not read the named file.

Action: Check the operating system messages following this message in the log file.

SQL*Loader-00502: unable to open data file '*string*' for field *string* table *string*

Cause: An attempt to open a LOBFILE or secondary data file failed.

Action: Check the operating system messages following this message for information on why the open failed. Verify that the correct name is specified for the LOBFILE or secondary data file.

SQL*Loader-00503: Error appending extension to file (*string*)

Cause: SQL*Loader could not append the default extension to create the filename. The given name could be too long or contain illegal characters.

Action: Check the specified filename.

SQL*Loader-00504: Error skipping records in file (*string*)

Cause: SQL*Loader could not open the file or could not read from it.

Action: Check that the file is where it is expected and that read access has been granted.

SQL*Loader-00505: error reading LOBFILE

Cause: An attempt to read a secondary data file failed.

Action: Check the operating system message that follows this message for more information.

SQL*Loader-00506: formatting error reading SDF or LOBFILE *string* for column *string* in table *string*

Cause: The the record format of the named LOBFILE or SDF file is incorrect.

Action: Fix the record formatting problems in the file.

SQL*Loader-00507: unexpected EOF reading SDF or LOBFILE *string* for column *string* in table *string*

Cause: The end of file was reached for a secondary data file or LOBFILE before the data for the current row was found.

Action: If the file is a LOBFILE, verify the correct datatype was specified for the field. If the file is a secondary data file, make sure the record format is specified correctly in the SQL*Loader control file.

SQL*Loader-00508: record formatting error in data file *string*

Cause: The data found in the data file does not correspond to the record format in the SQL*Loader control file.

Action: Verify that all records in the data file match the format as described in the SQL*Loader control file.

SQL*Loader-00509: System error: *string*

Cause: A platform-specific error was returned during an operation. This message is used to display the text of the error.

Action: None

SQL*Loader-00510: Physical record in data file (*string*) is longer than the maximum(*number*)

Cause: The datafile has a physical record that is too long.

Action: Use CONCATENATE or CONTINUEIF. Break up the physical records.

SQL*Loader-00511: Unable to initialize read functions

Cause: SQL*Loader could not initialize the read functions.

Action: Check the errors below this message in the log file for more information.

SQL*Loader-00512: Unable to free read buffer

Cause: An internal error has occurred.

Action: Contact customer support.

SQL*Loader-00513: Unable to close file (*string*)

Cause: SQL*Loader could not close the named file.

Action: Check the errors below this message in the log file for more information.

SQL*Loader-00514: Error getting elapsed time

Cause: SQL*Loader could not get the elapsed time from the system.

Action: No action required.

SQL*Loader-00515: Error getting CPU time

Cause: SQL*Loader could not get the CPU time from the system.

Action: No action required.

SQL*Loader-00516: Control file (*string*) has no contents

Cause: The named file was found to be empty.

Action: Check that the intended file was referenced and that it is not empty.

SQL*Loader-00517: Error decomposing file name (*string*)

Cause: SQL*Loader could not break down the filename into its component parts.

Action: Check the filename for illegal characters.

SQL*Loader-00518: Error reassembling file name (*string*)

Cause: SQL*Loader could not put the filename back together again from its components.

Action: Check the filename for illegal characters.

SQL*Loader-00520: Ifimknam failed for file (*string*)

Cause: LFI failed to make a name object for the file.

Action: Contact Oracle Worldwide Support.

SQL*Loader-00521: Ifilini failed for file (*string*)

Cause: LFI failed to create or initialize a file object for the file.

Action: Contact Oracle Worldwide Support.

SQL*Loader-00522: Ifiopn failed for file (*string*)

Cause: LFI failed to open the file.

Action: Check for any possible operating system errors and/or potential memory problems.

SQL*Loader-00523: error *number* writing to file (*string*)

Cause: Could not write to specified file.

Action: Check the following: the file actually resides in the specified location you have write privileges on the file you have sufficient disk space you have not exceeded your disk quota If all of these conditions are satisfied, then retry the operation.

SQL*Loader-00524: partial record found at end of datafile (*string*)

Cause: An incomplete record was found at the end of the indicated datafile.

Action: Make sure the last record in the datafile is complete and has the correct terminating character(s). Also, if fixed-length records are in use, verify that no record exceeds the platform-specific length for a single record.

SQL*Loader-00525: OCI return status: success

Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00526: OCI return status: success with info

Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00527: OCI return status: no data

Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00528: OCI return status: error

Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00529: OCI return status: invalid handle

Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00530: OCI return status: need data

Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00531: OCI return status: still executing

Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00532: OCI return status: continue

Cause: The message describes the status code returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00533: OCI return status: unknown, value is *number*

Cause: An unknown status was returned by an OCI call.

Action: See surrounding messages for more information.

SQL*Loader-00551: internal error: error initializing slf

Cause: An internal error occurred while trying to initialize the file I/O component.

Action: Call customer support.

SQL*Loader-00552: insufficient privilege to open file

Cause: SQL*Loader does not have the privileges required to open the file.

Action: Verify that the correct file was specified and that the file has the appropriate permissions.

SQL*Loader-00553: file not found

Cause: The specified file cannot be found.

Action: verify that the correct name exists and whether the file is in the intended location.

SQL*Loader-00554: error opening file

Cause: An error occurred while trying to open the file. No further information is available.

Action: Verify that the file is accessible.

SQL*Loader-00555: unrecognized processing option

Cause: The processing option specified for the file cannot be processed.

Action: Verify that the processing options specified for the file contain legal syntax for the platform where SQL*Loader is running.

SQL*Loader-00556: unable to allocate read buffer

Cause: Attempt to allocate the read buffer failed.

Action: If possible, try specifying a smaller size for the read buffer.

SQL*Loader-00557: unable to allocate memory

Cause: An attempt to allocate some memory to track I/O for the file failed.

Action: Contact customer support.

SQL*Loader-00558: attempt to use SKIP parameter with linked-in loader

Cause: SKIP parameter was specified with a linked-in file processor.

Action: Do not use the SKIP parameter in this case.

SQL*Loader-00559: error closing file

Cause: An error occurred while closing the file.

Action: Contact customer support.

SQL*Loader-00560: error reading file

Cause: An error occurred while reading the file.

Action: Make sure the file is still accessible.

SQL*Loader-00561: end of file

Cause: End of file reached.

Action: None

SQL*Loader-00562: record too big

Cause: A record in the file is larger than the read buffer.

Action: Verify that the file is not corrupt. If not, try specifying a larger size for the read buffer.

SQL*Loader-00563: bad length for VAR record

Cause: The length portion of a VAR record contains non-numeric data.

Action: Fix the data in the file.

SQL*Loader-00564: illegal hexadecimal literal specified for record delimiter

Cause: A hexadecimal literal that contains the record delimiter for the file does not contain a valid hexadecimal string.

Action: Verify that the correct hexadecimal value was specified in the processing options for the file.

SQL*Loader-00565: unexpected error during skip .

Cause: an unexpected error occurred while attempting to skip records.

Action: This message should be followed by another message giving more specific information about the error

SQL*Loader-00566: partial record found at end of datafile

Cause: An incomplete record was found at the end of file.

Action: Make sure the last record in the datafile is complete and has the correct terminating character(s).

SQL*Loader-00567: unable to derive file name

Cause: An error occurred while attempting to build a name for a data file, bad file, discard file or log file.

Action: Instead of relying on SQL Loader to build these file names, try specifying full file specifications for these files in the control file or on the SQL Loader command line.

SQL*Loader-00568: error writing to file

Cause: Unexpected error occurred while writing to a file. This message is followed by another message with more information about the error.

Action: None

SQL*Loader-00569: READSIZE parameter exceeds maximum value *string* for platform

Cause: The value specified for the READSIZE parameter on the SQL Loader command line was larger than the maximum size allowed on the platform executing the SQL Loader command

Action: Decrease the size of the READSIZE parameter to be less than the maximum size allowed on the platform.

SQL*Loader-00600: Bind size of *number* bytes increased to *number* bytes to hold 1 row.

Cause: The space needed to contain a single row is longer than the specified bind size. The value used for the bind size will be increased to handle the larger size

Action: No action is required. This message will go away if the new value in the error message is specified for the bind size.

SQL*Loader-00601: For INSERT option, table must be empty. Error on table *string*

Cause: A non-empty table is being loaded with the INSERT option.

Action: Use the REPLACE keyword to empty the old table and store the new data in its place. Use the APPEND keyword to leave the table's contents intact and add the new data to it.

SQL*Loader-00602: Maximum converted length *number of column string* is too big for bind array

Cause: The named column cannot undergo the specified character set conversion and still be placed in a contiguous piece of memory on the system.

Action: Specify a shorter data column or eliminate the conversion.

SQL*Loader-00603: Maximum length *number of column string* is too big for bind array

Cause: The named column cannot be put in a contiguous piece of memory on the system.

Action: Specify a shorter data column.

SQL*Loader-00604: Error occurred on an attempt to commit

Cause: An error occurred while trying to commit changes to the database.

Action: Look at the message listed below this one in the log file for more information.

SQL*Loader-00605: Non-data dependent ORACLE error occurred -- load discontinued.

Cause: An error occurred that is independent of the data. For example, an out-of-space condition. Because all further rows will be rejected, the load is discontinued. (If the error were data dependent, then other rows might succeed.)

Action: See the errors below this one in the log file for more information.

SQL*Loader-00606: Object *string* in INTO TABLE clause is not a local table

Cause: The synonym specified in the INTO TABLE clause in the SQL*Loader control file specifies a remote object via a database link. Only a synonym for an existing local table can be specified in the INTO TABLE clause.

Action: Ensure that a local table name or a synonym for a local table is fully specified in the INTO TABLE clause. The table must already exist.

SQL*Loader-00607: partition not empty for INSERT option; table *string*, partition *string*

Cause: An attempt was made to use the INSERT option on a non-empty partition.

Action: Empty the partition, or use the REPLACE or TRUNCATE option.

SQL*Loader-00608: subpartition not empty for INSERT option; table *string*, subpartition *string*

Cause: An attempt was made to use the INSERT option on a non-empty subpartition.

Action: Empty the subpartition, or use the REPLACE or TRUNCATE option.

SQL*Loader-00609: value used for ROWS parameter changed from *number* to *number*

Cause: SQL Loader adjusted the value it was using for the ROWS parameter to the new value reported. This is an informational message and not an error. SQL Loader will adjust the value of the ROWS parameter if the amount of memory specified by BINDSIZE is not large enough to hold data for the number of rows specified. SQL Loader will also change the value of the ROWS parameter for

conventional path loads if the value is larger than 65534. Conventional path load can load at most 65534 rows at a time.

Action: If the limit of 65534 rows for conventional path load is not being reached, then try increasing the value of BINDSIZE.

SQL*Loader-00610: cannot load system partitioned table *string*; partition name(s) required

Cause: An attempt was made to load a system partitioned table with no partitioning clause specified in the SQL*Loader control file.

Action: Specify the partition name(s) in the SQL*Loader control file.

SQL*Loader-00620: Initial enclosure character not found

Cause: A mandatory initial enclosure delimiter was not present. Either it is missing on the current field or the previous field is missing an identical closing delimiter.

Action: Supply the missing delimiters.

SQL*Loader-00621: Field in data file exceeds maximum length

Cause: A field exceeded its maximum allowable length. The maximum length is either the length specified in the SQL*Loader control file, or, for delimitable fields without a length specified, the default maximum length (255 bytes).

Action: Check for missing delimiters and/or shorten the field.

SQL*Loader-00622: Column not found before end of logical record (use TRAILING NULLCOLS)

Cause: The logical record ended before all specified fields were found.

Action: If the missing fields should be loaded as null, use the TRAILING NULLCOLS clause. Otherwise, correct the data.

SQL*Loader-00623: second enclosure string not present

Cause: The logical end of record or the end of a LOBFILE was reached before a second enclosure delimiter was found.

Action: Correct the data file to include the missing delimiter.

SQL*Loader-00624: no terminator found after TERMINATED and ENCLOSED field

Cause: No termination delimiter was found after the enclosed field ended.

Action: Supply the missing termination delimiter.

SQL*Loader-00625: Multibyte character error in control file.

Cause: Incomplete multi-byte character strings were found in the SQL*Loader control file.

Action: Edit the SQL*Loader control file to check that all multi-byte character data is valid.

SQL*Loader-00626: Character set conversion buffer overflow.

Cause: A conversion from the datafile character set to the client character set required more space than that allocated for the conversion buffer. The size of the conversion buffer is limited by the maximum size of a varchar2 column.

Action: The input record is rejected. The data will not fit into the column.

SQL*Loader-00627: Character set conversion graph not available.

Cause: A conversion from the datafile character set to the client character failed due to the conversion graph not being available.

Action: Contact Oracle support. Check NLSRTL installation.

SQL*Loader-00628: Character set conversion error.

Cause: A character set conversion error occurred.

Action: Contact Oracle support. Check NLSRTL installation. Provide a reproduceable test case.

SQL*Loader-00640: Variable length field was truncated.

Cause: The end of the logical record was encountered before the end of a variable length field. The length of each variable-length field is embedded in the field, so SQL*Loader knows that more data should have been present.

Action: Check the data for inadvertent truncation and verify the SQL*Loader control file specifications against the log file; the field may be starting in the wrong place.

SQL*Loader-00641: Invalid packed decimal nibble.

Cause: Each byte in a packed decimal field contains two 4-bit nibbles. Each nibble must have a valid value.

Action: Check the SQL*Loader control file's specifications against the log file to ensure that the field location was specified correctly. Check the contents of the field.

SQL*Loader-00642: Relative start position > absolute field end position.

Cause: A field specified as POSITION(*+n:y) had its relative start occur after the absolute position y.

Action: Check that a delimiter is not missing and that the values of n and y are correct.

SQL*Loader-00643: error executing INSERT statement for table *string*

Cause: A fatal error occurred while attempting to insert data into the table.

Action: Refer to the messages that follow for more information. If you specified SQL strings for any of your columns, verify that strings are correct. Specifically, check for balanced parenthesis and correct use of quotation marks. Another format error

SQL*Loader-00644: end of logical record found when reading length of varying length field

Cause: While attempting to read the length portion of a varying length field, then end of the logical record was reached.

Action: Verify that the SQL*Loader control file describes the data correctly and that the data in the data file matches the description in the SQL*Loader control file

SQL*Loader-00645: error converting character length field to a number

Cause: An error occurred while attempting to convert the characters containing the count portion of a VARCHARC or VARRAWC field.

Action: Verify that the count portion for the column has the correct value.

SQL*Loader-00646: lob set to EMPTY in column *string*, row *number*, table *string*

Cause: Encountered errors (e.g. parsing errors in LOBFILE) while loading LOBs. The row will remain in the table and its LOB column will be initialized to empty. Loading of other records will continue.

Action: Correct the data file (see accompanying messages) and reload.

SQL*Loader-00647: Integer to number conversion error

Cause: An error occurred while attempting to convert an integer to an Oracle number format.

Action: Verify that the integer field in the data file is a valid integer. If the INTEGER(N) syntax was used, then verify that the length specified is valid.

SQL*Loader-00649: Quoted string missing closing quote

Cause: A quoted string in the control file is missing a closing quote.

Action: Insert the closing quote as appropriate.

SQL*Loader-00650: incomplete lob data written for column *string*, row number, table *string*

Cause: Encountered errors (e.g. parsing errors in LOBFILE) while loading LOBs using direct path. The row will remain in the table and its LOB column may not be complete. Loading of other records will continue.

Action: Correct the data file (see accompanying messages) and reload.

SQL*Loader-00651: error skipping lob for column *string*, row number, table *string*

Cause: Encountered errors (e.g. parsing errors in LOBFILE) while skipping LOBs.

Action: Correct the data file (see accompanying messages) and reload.

SQL*Loader-00652: Invalid zoned decimal byte.

Cause: Each byte of a zoned decimal field must have a valid value based on the character set encoding used. ASCII-based zoned decimals must follow the formats specified in the VAX Architecture Reference Manual. EBCDIC-based zoned decimals must follow the formats specified in the ESA/390 Principles of Operations, version 8.1.

Action: Check the SQL*Loader control file's specifications against the log file to ensure that the field location was specified correctly. Check the contents of the field.

SQL*Loader-00653: XML data set to NULL in column *string*, row number, table *string*

Cause: Encountered errors (e.g. parsing errors in LOBFILE) while loading LOBs into an XML column. The row will remain in the table and its XML column will be initialized to null. Loading of other records will continue.

Action: Correct the data file (see accompanying messages) and reload.

SQL*Loader-00654: Variable length field exceeds maximum length.

Cause: A variable length field (with a leading length subfield) exceeded its maximum allowable length. The maximum length is either the length specified in the SQL*Loader control file, or, the default if not specified (4kb).

Action: Shorten the field and its length.

SQL*Loader-00655: cannot load object-relational XML attribute using direct path

Cause: The table being loaded contains a column object which contains an XML attribute with a storage type of object-relational. This type of attribute cannot be loaded with direct path.

Action: Perform the load with conventional path mode.

SQL*Loader-00656: position specification for column *string* is not allowed in external table loads

Cause: Use of a position specification was present in an external table load.

Action: Either remove the position specification, change the position specification to a field name reference, use direct path, or use conventional path.

SQL*Loader-00700: Out of memory while performing essential allocations [*number*]

Cause: SQL*Loader could not allocate the memory it needs.

Action: Check the operating system and process memory. Increase memory available to SQL*Loader, if possible. If using direct path, try lowering the columnarrayrows option (see log file for current default value).

SQL*Loader-00702: Internal error - *string*

Cause: An internal error has occurred.

Action: Make a note of the message and contact customer support.

SQL*Loader-00703: Internal error: argument *number*

Cause: An internal error has occurred.

Action: Make a note of the message and the number, then contact customer support.

SQL*Loader-00704: Internal error: *string* [*number*]

Cause: An internal error has occurred.

Action: Make a note of the message and the number, then contact customer support.

SQL*Loader-00705: Internal error

Cause: An internal error has occurred.

Action: Contact customer support.

SQL*Loader-00706: Bad argument to ulerr [*number*].

Cause: An internal error has occurred.

Action: Contact customer support.

SQL*Loader-00708: Internal error: unknown status *number* returned from sllf layer

Cause: An unknown status was returned by a call to the sllf layer.

Action: Contact customer support.

SQL*Loader-00709: Internal error calling SLTS layer: *string* failed

Cause: A nonsuccess status was returned by a call to the SLTS layer.

Action: Contact customer support.

SQL*Loader-00710: Internal error: direct path stream buffer not loaded

Cause: A direct path stream buffer was built but not loaded.

Action: Contact customer support.

SQL*Loader-00711: Internal error: bad address for little endian UTF16 conversion

Cause: Address for little endian UTF16 data not in a valid buffer.

Action: Contact customer support.

SQL*Loader-00712: Internal error: bad address for big endian UTF16 conversion

-
- Cause:** Address for big endian UTF16 data not in a valid buffer.
Action: Contact customer support.
- SQL*Loader-00713: Internal error calling SLTS layer: *string* failed with return code [number].**
Cause: A nonsuccess status was returned by a call to the SLTS layer.
Action: Contact customer support.
- SQL*Loader-00800: *string* specified and ignored**
Cause: An option was specified that is not supported by External Table load.
Action: Do not specify the unsupported option or do not use External Table load.
- SQL*Loader-00801: all INTO TABLE clauses must have the same options (*string*)**
Cause: At least two INTO TABLE clauses have different options set.
Action: Set the options to be the same or do the loads separately.
- SQL*Loader-00802: numeric EXTERNAL with DEFAULTIF clause not supported by External Table**
Cause: A numeric EXTERNAL type was specified with a DEFAULTIF clause and that is not supported by External Table Load.
Action: Remove the clause if possible or do not use External Table Load.
- SQL*Loader-00803: *string* field type not supported by External Table**
Cause: The specified field type is not supported by External Table Load.
Action: Remove the specified field type or do not use External Table Load.
- SQL*Loader-00804: SEQUENCES with intervals are not supported by External Table Load.**
Cause: A sequence with an interval is specified and is not supported by External Table Load.
Action: Remove the interval from the sequence, or the the sequence itself, or do not use External Table Load.
- SQL*Loader-00805: *string* not supported by External Table**
Cause: The specified option is not supported by External Table Load.
Action: Remove the specified option or do not use External Table Load.
- SQL*Loader-00806: unknown record format specified for data file**
Cause: The osd string containing file processing options in the control file specified an unknown file processing option.
Action: Verify the correct options are specified for the platform being used.
- SQL*Loader-00807: error loading table**
Cause: An INSERT statement used to load a table from an external table or a temporary internal table failed. The statement that failed is shown immediately preceding this message.
Action: See subsequent messages for more information about the error.
- SQL*Loader-00808: error creating sequence: *string***
Cause: An attempt to create a sequence needed for the load failed.
Action: See messages that follow this one for information about the failure.

SQL*Loader-00809: error dropping sequence: *string*

Cause: A sequence needed to be dropped either because SQL Loader found a sequence with the same name it is trying to create or because SQL Loader is cleaning up from sequences it created at the beginning of the load.

Action: See messages that follow this one for information about why the attempt to drop the sequence failed.

SQL*Loader-00810: error creating external table: *string*

Cause: An attempt to create the external table sued for the load failed.

Action: See messages that follow for more information about the failure.

SQL*Loader-00811: error dropping external table: *string*

Cause: An error occurred when trying to drop an external table. Note that the table may have been left from a previous load.

Action: None

SQL*Loader-00812: error creating internal table: *string*

Cause: An error was encountered trying to create a temporary internal table. The internal table is used only when loading multiple tables from the same data file. The internal table is loaded once and the target tables are loaded from the internal table.

Action: None

SQL*Loader-00813: error dropping internal table: *string*

Cause: An error was encountered trying to drop a temporary internal table. The internal table is used only when loading multiple tables from the same data file. The internal table is loaded once and the target tables are loaded from the internal table. The internal table may have been left from a previous build.

Action: None

SQL*Loader-00816: error creating temporary directory object *string* for file *string*

Cause: No existing directory object was found in the database for the directory containing the file. Since all files loaded by external tables must be in a directory named by a directory object, SQL Loader tried to create a directory object for the file.

Action: See error messages that follow this message for more information.

SQL*Loader-00817: error dropping directory object *string*

Cause: SQL Loader created a directory object as part of an external table load. An attempt to cleanup the directory object failed.

Action: See messages following this one for more information about the error.

SQL*Loader-00820: cannot create where clause with range for table *string*

Cause: The EXTERNAL_TABLE parameter was specified for a multi-table load, and a WHEN clause for one of the tables contains a reference to a range of bytes in the record. SQL Loader uses the WHEN clause from the control file to generate the WHERE clause in the INSERT statement. If the WHERE clause contains a reference to a range of bytes in the table, then a valid WHERE clause can not be generated. Note that SQL Loader will proceed as if GENERATE_ONLY was specified for the EXTERNAL_TABLE parameter.

Action: Modify the control file to only use field references in the WHEN clause. Note that this may require creating a filler field. Another alternative is to create one control file for each table to be loaded and load the table separately.

SQL*Loader-00821: switching to GENERATE_ONLY

Cause: SQL Loader is not able to execute the SQL statements it generated for loading the data using external tables. See previous messages for more information.

Action: None

SQL*Loader-00822: operation not supported on external organized table

Cause: User attempted an operation on an external table which is not supported.

Action: Don't do that!

SQL*Loader-00823: TREAT AS clause for object tables not supported for external tables

Cause: A TREAT AS clause was specified in the INTO TABLE clause for an object table in the SQL*Loader control file and the EXTERNAL_TABLES command line parameter was set to either EXECUTE or GENERATE_ONLY. External tables can be used to load the data, but SQL*Loader does not generate the correct SQL statements to do this.

Action: Use SQL*Loader direct path or SQL*Loader conventional path to load the table.

SQL*Loader-00901: Error logging on to ORACLE:

Cause: An attempt was made to log on to Oracle in direct path load mode.

Action: Ensure that the instance is up and running. Check the Oracle messages below this one in the log file for more information.

SQL*Loader-00902: Error opening cursor: [number]

Cause: An internal error has occurred.

Action: Check the Oracle messages below this one in the log file and contact customer support.

**SQL*Loader-00903: Database must be at least version
number.number.number.number.number for direct path**

Cause: The direct path load mode is being used with an incompatible database.

Action: Upgrade the database to the specified version or else use the conventional path load.

SQL*Loader-00904: You cannot use the direct path when linked with v5 of the database

Cause: The direct path mode is being used after SQL*Loader has been linked with a Version 5 database.

Action: Use the conventional path.

SQL*Loader-00905: Error parsing SQL statement for upi: [number]

Cause: Header message.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00906: Error executing SQL statement for upi: [number]

Cause: An internal error has occurred.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00909: Loader views must be loaded (as SYS) for direct path to be used

Cause: Database views required for the direct path mode are not present.

Action: The Oracle7 Server Administrator's Guide details how to run the required scripts as user SYS for loading the required views.

SQL*Loader-00910: Error binding input variables for upi: [number]

Cause: Header message.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00911: Error defining output variable(s) for upi: [number]

Cause: Header message.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00913: Error fetching results of select statement (upi): [number]

Cause: Header message.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00914: Error locking table *string* in exclusive mode.

Cause: The direct path mode could not lock the named table.

Action: Check the message below this one in the log file for more information. Check that the necessary privileges have been granted.

SQL*Loader-00915: Error closing cursor: [number]

Cause: Header message.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00916: Error checking path homogeneity

Cause: To do a direct path load when the front end and back end of the database are on separate hardware systems, the systems must be identical, using the same machine, operating system, and character set. This error occurs when SQL*Loader detects a difference between the systems that will prevent a direct load from operating properly.

Action: Use a conventional path load for this configuration.

SQL*Loader-00918: The catalog must be loaded (as SYS) for SQL*Loader to be used

Cause: The catalog is not loaded.

Action: Logon as user SYS and load the Oracle7 catalog and the views in the script ULVIEW.SQL.

SQL*Loader-00919: Error during upi fetch: [number]

Cause: An internal error has occurred.

Action: Check the message below this one in the log file for more information.

SQL*Loader-00925: Error while *string*

Cause: An internal error has occurred.

Action: Check the message below this one in the log file for more information. The table or column referenced may not be accessible.

SQL*Loader-00926: OCI error while *string* for table *string*

Cause: An OCI error has occurred.

Action: Check the message below this one in the log file for more information. The table or column referenced may not be accessible.

SQL*Loader-00929: Error parsing insert statement for table *string*.

Cause: The table's insert statement caused a parse error.

Action: Check all SQL strings that were used.

SQL*Loader-00930: Error parsing insert statement for table *string* column *string*.

Cause: The named column's INSERT statement caused a parse error.

Action: Check the message below this one in the log file for more information. Check the SQL string used for this column.

SQL*Loader-00931: OCI error while binding variable for column *string* in table *string*

Cause: An OCI error has occurred.

Action: Check the errors below it for more information. The SQL string for this column may be in error.

SQL*Loader-00932: Could not truncate table *string*.

Cause: Truncation of the table was attempted and failed.

Action: Check the following errors for more information. Truncation due to referential constraints should not occur.

SQL*Loader-00933: Specified file *string* not part of database

Cause: The specified filename to load the table is not a database file.

Action: Specify a valid datafile.

SQL*Loader-00934: Incorrect data file *string* specified for table *string*

Cause: A datafile name was given to load the table that is not a part of the tablespace in which the table resides.

Action: Specify a valid datafile.

SQL*Loader-00935: Error verifying required option for parallel load.

Cause: An error was encountered because a required option was not found or was invalid.

Action: Correct the problem as described in the accompanying Oracle message.

SQL*Loader-00937: parallel load requested and *string* has enabled triggers or constraints

Cause: A request was made for a parallel direct load, but the object to be loaded has an enabled constraint (check, referential) and/or enabled triggers.

Action: Disable the offending enabled constraints and/or triggers and retry the parallel direct load.

SQL*Loader-00938: partition load requested and *string* has enabled triggers or constraints

Cause: A request was made for a direct load of a single partition, but the object to be loaded has an enabled constraint (check, referential) and/or enabled triggers.

Action: Disable the offending enabled constraints and/or triggers and retry the parallel direct load.

SQL*Loader-00939: OCI error while *string* for table *string* partition *string*

Cause: Header message.

Action: Check the following errors for more information. The table or partition referenced may not be accessible.

SQL*Loader-00940: UPI error while setting NCHAR bind attributes for column *string* table *string*

Cause: An error occurred while setting the charsetform attribute of an NCHAR column.

Action: This is an internal error. Report to ORACLE support.

SQL*Loader-00941: Error during describe of table *string*

Cause: Error while executing a describe of a select list on the given table. Check the error immediately preceding this error.

Action: None

SQL*Loader-00942: partition *string* not part of table *string*

Cause: the specified partition is not part of the specified table

Action: None

SQL*Loader-00943: incorrect datafile *string* specified for table *string* partition *string*

Cause: The specified datafile is not in the tablespace of the specified partition. Due to use of FILE= keyword on a partitioned table. When loading all partitions of a partitioned table, the partitions must be in the same tablespace. When loading a single partition, the tablespace of the partition being loaded must be the same as the tablespace in which the specified datafile file resides.

Action: None

SQL*Loader-00944: error preparing insert statement for table *string*.

Cause: A call to OCISmtPrepare for the table's insert statement returned an error.

Action: Refer to the message that follows for information about the error returned by OCISmtPrepare. Make sure the syntax is correct for all SQL strings specified in the SQL*Loader control file.

SQL*Loader-00945: record size *number* too large for direct path

Cause: The maximum size of records in the data file is larger than the maximum size supported by direct path, which is 65535

Action: Load the data file using conventional path.

SQL*Loader-00946: OCI error while *string* for table *string* subpartition *string*

Cause: Header message.

Action: Check the following errors for more information. The table or subpartition referenced may not be accessible.

SQL*Loader-00947: subpartition load requested and *string* has enabled triggers or constraints

Cause: A request was made for a direct load of a single subpartition, but the object to be loaded has an enabled constraint (check, referential) and/or enabled triggers.

Action: Disable the offending enabled constraints and/or triggers and retry the parallel direct load.

SQL*Loader-00948: subpartition *string* not part of table *string*

Cause: the specified subpartition is not part of the specified table

Action: None

SQL*Loader-00949: incorrect datafile *string* specified for table *string* subpartition *string*

Cause: The specified datafile is not in the tablespace of the specified subpartition. Due to use of FILE= keyword on a subpartitioned table. When loading all subpartitions of a subpartitioned table, the subpartitions must be in the same tablespace. When loading a single subpartition, the tablespace of the subpartition being loaded must be the same as the tablespace in which the specified datafile file resides.

Action: None

SQL*Loader-00950: Error shipping data structures across 2-task

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00951: Error calling once/load initialization

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00952: Error calling once/data file initialization

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00953: Error shipping read buffer across 2-task

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00954: Error shipping index to read buffer across 2-task

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00955: Error calling col array build, block formatter

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00956: Error calling once/data file finishing

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00957: Error shipping text string across 2-task

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00958: Error popping data relocation address stack

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00959: Error shipping buffer across 2-task

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00961: Error calling once/load finishing for table *string*

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00962: Error setting user-side Ctrl-C handler

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00963: Error clearing user-side Ctrl-C handler

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00965: Error *number* disabling constraint *string* on table *string*

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00966: Error *number* disabling all triggers on table *string*

Cause: Header message.

Action: Check the error(s) below it for more information.

SQL*Loader-00969: Error performing file name translation on kernel side

Cause: File specified for parallel load is probably not a valid database file.

Action: Specify a valid database file.

SQL*Loader-00970: enabled constraint on an XML column not allowed in direct path

Cause: An enabled check constraint existed on an XML column.

Action: Disable the check constraint before attempting to load the table data using the direct path mode, or leave the constraint enabled but use the conventional path mode instead.

SQL*Loader-00971: parallel load option not allowed when loading lob columns

Cause: An attempt was made to load lob columns using parallel=true. This error will also be issued when loading columns stored as lobes (such as varrays and xml types)

Action: Do not use the parallel option when loading lob columns.

SQL*Loader-00972: Warning: ROWS parameter ignored when NO_INDEX_ERRORS is used.

Cause: Specifying save points using the ROWS parameter was not supported with NO_INDEX_ERRORS=TRUE.

Action: Remove the ROWS parameter from the command-line arguments or do not specify NO_INDEX_ERRORS=TRUE.

SQL*Loader-00973: Warning: ROWS parameter ignored when PARTITION_MEMORY is used.

Cause: Specifying save points using the ROWS parameter was not supported with PARTITION_MEMORY=n.

Action: Remove the ROWS parameter from the command-line arguments or do not specify PARTITION_MEMORY=n.

SQL*Loader-02026: the load was aborted because SQL Loader cannot continue.

Cause: The load cannot continue. See the error message before this * message for the cause of the error.

Action: See the action for the error message that precedes this one.

SQL*Loader-02050: Multibyte character error.

Cause: Text specified by POSITION or terminated by newlines is invalid.

Action: Edit the SQL*Loader control file or the data file to fix alignment of column.

SQL*Loader-03120: Resumable parameters ignored -- current session not resumable

Cause: Current session is not resumable.

Action: Must specify RESUMABLE=TRUE to enable resumable session in order for the RESUMABLE_NAME and RESUMABLE_TIMEOUT parameters to take effect.

KUP-00552 to KUP-11024

KUP-00552: internal XAD package failed to load

Cause: An error was encountered while attempting to initialize the XAD package.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

KUP-00554: error encountered while parsing access parameters

Cause: The parser detected a syntax error.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

KUP-00561: invalid length for binary integer field *string*

Cause: An integer field was specified with an invalid length. The only supported lengths for binary integer fields are 1, 2, 4, and 8.

Action: None

KUP-00562: unknown escape sequence

Cause: An unknown escape sequence was specified to the parser. An escape sequence is a backslash followed by a character.

Action: Consult documentation for list of allowable control characters.

KUP-00600: internal error, arguments [*string*] [*string*] [*string*] [*string*] [*string*]

Cause: An internal XAD error occurred.

Action: Contact Oracle Support.

KUP-00601: fatal XAD error

Cause: A fatal error has occurred.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

KUP-01006: error signalled during parse of access parameters

Cause: An error was signalled during parsing of the access parameters.

Action: This message should be accompanied by other error message(s) indicating the cause of the error.

KUP-01007: at line *number* column *number*

Cause: This is an informational message indicating the line and column where a syntax error was detected.

Action: None

KUP-01008: the bad identifier was: *string*

Cause: This is an informational message indicating the identifier token that caused a syntax error.

Action: None

KUP-02000: wrong message file version (msg *number* not found)

Cause: The kupxx.msb file is not the correct version.

Action: Check that the installation was done correctly.

KUP-02001: unrecognized punctuation symbol "*string*"

Cause: An illegal punctuation character was encountered.

Action: Remove the illegal character.

KUP-02002: unexpected end of input file reached

Cause: This is probably caused by failure to supply the closing quote for a quoted string.

Action: Correct the input.

KUP-02003: unrecognized character: *string*

Cause: An input character that is neither an alpha, digit, or punctuation was encountered.

Action: Remove the character.

KUP-02004: quoted string too big

Cause: A quoted string longer than 2000 bytes was encountered.

Action: This may be caused by a missing close quote. If so, add the missing quote, otherwise shorten the string.

KUP-02005: token too big

Cause: A token longer than 1000 bytes was encountered

Action: Tokens must be separated by whitespace or punctuation. Either add the missing whitespace or punctuation, or shorten the token.

KUP-02006: script line too long

Cause: a line longer than 500 bytes was encountered

Action: break the line up into shorter lines

KUP-03001: fatal error during library cache pre-loading

Cause: This message should be accompanied by other error message(s) indicating the cause of the error.

Action: Check the accompanying errors.

KUP-03002: end position (*number*) <= start position (*number*) for field: *string*

Cause: Error in specifying position for the specified field in the access parameters."

Action: Check that the specified end position is greater than the specified start position.

KUP-03003: absolute end(*number*) - start(*number*) != fieldlength (*number*) for field *string*

Cause: The number of bytes occupied by the field as specified by the starting offset and ending offset of the field is not the same as the number of bytes specified for the datatype of the field.

Action: Verify the absolute begin/end position(s) specified match the length of the field.

KUP-03004: absolute end (*number*) specified with relative start (*number*) for field *string*

Cause: The position of field was specified with a relative start and an absolute end.

Action: Use relative end with relative start

KUP-03005: relative end (*number*) specified does not match fieldlen(*number*) for field *string*

Cause: The number of bytes specified by the relative end position for the field does not match the number of bytes in the datatype.

Action: Correct either the datatype length or the relative end position.

KUP-03006: error initializing handle for character set *string*

Cause: Error attempting to retrieve information for the character set.

Action: Verify that the character set name is valid.

KUP-03007: end position (*number*) is less than start position (*number*) for range

Cause: A byte range specified a start position that comes after the end position.

Action: Verify the start and end positions are correctly specified.

KUP-03008: OCI error getting column parameters.

Cause: An error occurred while trying to obtain column parameters.

Action: Contact Oracle Support.

KUP-03009: OCI error getting column name.

Cause: An error occurred while trying to obtain column name.

Action: Contact Oracle Support.

KUP-03010: OCI error getting database column type.

Cause: An error occurred while trying to obtain database column type.

Action: Contact Oracle Support.

KUP-03011: OCI error getting database column size.

Cause: An error occurred while trying to obtain database column size.

Action: Contact Oracle Support.

KUP-03012: OCI error getting database column precision.

Cause: An error occurred while trying to obtain database column precision.

Action: Contact Oracle Support.

KUP-03013: OCI error getting database column scale.

Cause: An error occurred while trying to obtain database column scale.

Action: Contact Oracle Support.

KUP-03014: OCI error getting datetime fsprecision.

Cause: An error occurred while trying to obtain a datetime column precision value."

Action: Contact Oracle Support.

KUP-03015: OCI error getting datetime lfprecision.

Cause: An error occurred while trying to obtain database column precision.

Action: Contact Oracle Support.

KUP-03016: length specified for FIXED records must be greater than 0

Cause: A record format of FIXED was specified with a length of 0.

Action: None

KUP-03017: length specified for VARIABLE records must be greater than 0

Cause: A record format of VARIABLE was specified with a length of 0.

Action: None

KUP-03018: invalid date mask "string" specified for column string

Cause: The date mask for the specified column is invalid.

Action: None

KUP-03019: directory object not specified in LOBFILE clause for field string

Cause: A LOBFILE clause was specified for the field, but no directory object was specified. When no directory object is specified, then the default directory specified for the external table is used, but no default directory was specified.

Action: Specify a directory object in the LOBFILE clause or specify a default directory for the external table.

KUP-03020: empty delimiter specified for record

Cause: An empty delimiter string was specified for a record delimiter.

Action: Specify the string used to delimiter records.

KUP-03021: clause references unknown field string

Cause: A WHEN, NULLIF or DEFAULTIF clause referenced a field that doesn't exist in the data file.

Action: None

KUP-03022: lob data could not be found for field string

Cause: The field specified in the data source that contains the name of the lob file for the record could not be identified.

Action: None

KUP-03023: string for TERMINATED BY or ENCLOSED BY clause for record is longer than maximum number

Cause: The string value for a TERMINATED BY or ENCLOSED BY clause is longer than the maximum number of bytes allowed. If the character set of the data file is different than the character set of the database, the string will be converted to the character set of the data file. If the length of the converted string is too large, then this error will also be returned.

Action: Use shorter delimiters in the data file and the access parameters.

KUP-03024: string for TERMINATED BY or ENCLOSED BY clause for column string is longer than maximum number

Cause: The string value for a TERMINATED BY or ENCLOSED BY clause for the columns is longer than the maximum number of bytes allowed. If the character set of the data file is different than the character set of the database, the string will be converted to the character set of the data file. If the length of the converted string is too large, then this error will also be returned.

Action: Use shorter delimiters in the data file and the access parameters.

KUP-03998: error *number* formatting KUP message *number*

Cause: error occurred while attempting to format a KUP message.

Action: contact Oracle support.

KUP-03999: error occurred while processing a date format: ORA-*number*: *string*

Cause: Error converting a date format string into an internal representation.

Action: Verify that the date format strings specified in the access parameters are valid.

KUP-04000: error initializing IO state for file *string* in *string*

Cause: An unexpected error occurred while preparing the file.

Action: Contact Oracle support.

KUP-04001: error opening file *string*

Cause: An error occurred while attempting to open the specified file. This message should be followed by another message with more information about the error.

Action: See the error that follows to determine the action to be taken.

KUP-04002: error getting file size for file *string*

Cause: An error occurred while retrieving the number of bytes in the specified file.

Action: See the error that follows to determine the action to be taken.

KUP-04003: error while closing file *string*

Cause: An error occurred while closing the specified file.

Action: See the error that follows to determine the action to be taken.

KUP-04004: error while reading file *string*

Cause: An error occurred while reading the specified file.

Action: See the error that follows to determine the action to be taken.

KUP-04005: file operation successful

Cause: A file operation succeeded.

Action: None

KUP-04006: file operation failed

Cause: An operation on a file failed. The file is named in the message preceding this one.

Action: See subsequent message for more information about the error.

KUP-04007: end of file reached

Cause: The end of file was reached for a file. The file is named in the message preceding this one.

Action: See the message that follows this one for more information.

KUP-04008: access to file denied

Cause: Access to a file was denied. The file is named in the message preceding this one.

Action: See the message that follows for more information. Verify that the correct files are being used and that the appropriate access is allowed to those files.

KUP-04009: invalid SLF handle

Cause: An internal error caused a data structure associated with the file to become corrupt.

Action: Contact Oracle support.

KUP-04010: file does not exist

Cause: A file operation failed because a file does not exist. The message preceding this message contains the name of the file.

Action: Verify that the correct file name was specified.

KUP-04011: file system is full

Cause: An operation on a file failed because the file system is full. The message preceding this one contains the name of the file.

Action: Free space on the file system or move the file to a different file system.

KUP-04012: file length is too large for output field

Cause: Size of a file is too large.

Action: Break the file up into smaller files.

KUP-04013: other system error

Cause: Internal component SLF was unable to complete an operation because of a system error.

Action: The message displayed before this message describes the operation that was being performed when the error occurred.

KUP-04014: invalid SLF parameter

Cause: An invalid parameter was passed in a call to internal component SLF.

Action: Contact Oracle support.

KUP-04015: internal SLF error

Cause: Internal component SLF encountered an internal error.

Action: Contact Oracle support.

KUP-04016: unknown SLF status code *number*

Cause: Internal component SLF returned an unknown error code.

Action: Contact Oracle support.

KUP-04017: OS message: *string*

Cause: An error occurred. This message contains the message associated with this error that was returned by the operating system. The message displayed before this one should indicate the operation that failed.

Action: None

KUP-04018: partial record at end of file *string*

Cause: An incomplete record was found at the end of the file.

Action: Verify the file is not corrupt or missing data.

KUP-04019: illegal length found for VAR record in file *string*

Cause: A record in a VAR file has an length field with either no numeric characters in it or with non numeric characters in it.

Action: Verify the records in the file have the correct length specified for them.

KUP-04020: found record longer than buffer size supported, *number*, in *string*

Cause: a record in the data source was longer than the maximum data size supported. The number reported is the maximum supported size of a record.

Action: None

KUP-04021: field formatting error for field *string*

Cause: There was an error trying to find the contents of the specified field in a record.

Action: This message should be followed by another message containing more specific information about the cause of the error.

KUP-04022: field start is before start of record

Cause: The position of the start of a field is before the start of a record. This can occur if a negative number is used to indicate the relative start of a field.

Action: Verify that the definition of the layout of fields in the data file is correct.

KUP-04023: field start is after end of record

Cause: This can happen when specifying either absolute or relative positioning for a field.

Action: Verify that the definition of the layout of fields in the data file is correct. If it is valid for fields at the end of the record to be missing, use the MISSING FIELD VALUES ARE NULL clause in the access parameters.

KUP-04024: field end is before field start

Cause: The end of the field comes after the start of the field. This can happen if the field is defined with a relative start position and an absolute end position.

Action: Verify that the definition of the layout of fields in the data file is correct.

KUP-04025: field extends beyond end of record

Cause: This can happen when specifying either absolute or relative positioning for a field.

Action: Verify that the definition of the layout of fields in the data file is correct.

KUP-04026: field too long for datatype

Cause: The character field in the record is larger than the maximum length specified.

Action: Make sure the definition of the layout of the fields in the data file is correct. Also make sure the correct maximum size was specified for a character datatype.

KUP-04027: file name check failed: *string*

Cause: The check of the filename failed. These checks are platform specific, but they can include verifying that there are no hard links in the file path, the file is not a soft link, the file specification includes a parent reference ("../" on Unix), or the file was modified between the time the check was made and the file was opened.

Action: Use a file location that does not violate any of the checks.

KUP-04028: conversion of character length to a number failed

Cause: The character length portion of the field could not be converted to a number. This message is followed by another message with information on why the conversion failed.

Action: Make sure the data is correct. Also verify the datatypes specified for the fields are correct.

KUP-04029: numeric field overflowed

Cause: An attempt to convert a character string to number failed because the value of the number in the string was too large.

Action: None

KUP-04030: invalid numeric data

Cause: An attempt to convert a character string to a number failed because non-numeric characters were found.

Action: None

KUP-04031: empty filename specified for LOB file in column *string*

Cause: The field in the data file that was supposed to contain the name of a LOB file was empty.

Action: Correct the data so that it contains a valid file name.

KUP-04032: internal error *string* while parsing field *string*:

Cause: An internal error occurred while parsing a field.

Action: Contact Oracle support.

KUP-04035: beginning enclosing delimiter not found

Cause: The beginning enclosure was not found for a field that is enclosed by delimiters.

Action: Verify that the data is correct. Also verify that the correct enclosing delimiters were specified and whether the enclosing delimiter should be optional.

KUP-04037: terminator not found

Cause: The terminator for the field is missing.

Action: Verify that the records are formatted correctly.

KUP-04038: internal error: *string*

Cause: an unexpected error condition was detected.

Action: contact Oracle customer support

KUP-04039: unexpected error while trying to find file *string* in *string*

Cause: An error occurred while trying to find path containing the file.

Action: This message should be followed by another message with more information about the error.

KUP-04040: file *string* in *string* not found

Cause: The file was not found in the directory specified

Action: Verify the correct file and directory names were specified.

KUP-04041: error generating full file name for *string* in *string*

Cause: Unexpected error occurred while trying to form a file name.

Action: None

KUP-04043: table column not found in external source: *string*

Cause: A column in the external table was not found in the access parameters that define the contents of the data source

Action: Verify that the external table is defined correctly and that the abstract parameters are also correct.

KUP-04044: error positioning file *string*

Cause: An attempt to position a file to an absolute file offset failed.

Action: See messages that follow for more information.

KUP-04045: unexpected OCI status *string*

Cause: An OCI call returned a status that cannot be handled.

Action: Contact Oracle support.

KUP-04047: error parsing record from external data source

Cause: An error occurred while trying to extract a record from the data source.

Action: Look in the log file for more messages about the error.

KUP-04048: internal error parsing record from external data source

Cause: An unexpected or unhandled error occurred while getting a record from the data source

Action: Contact Oracle support.

KUP-04049: record *number* discarded from file *string*

Cause: Informational message displayed whenever the WHEN clause has been satisfied. If a DISCARD file has been specified for the operation, the record will be written to that file.

Action: None

KUP-04050: error while attempting to allocate *number* bytes of memory

Cause: d by insufficient memory.

Action: Reconnect to the instance and retry the operation.

KUP-04051: error processing column *string* in row *number* for datafile *string*

Cause: an error occurred while trying to convert the data from the data file into the type of a column in the external table.

Action: See messages that follow for more details.

KUP-04052: error processing column *string* in a row for datafile *string*

Cause: an error occurred while trying to convert the data from the data file into the type of a column in the external table.

Action: See messages that follow for more details.

KUP-04053: record number *number*

Cause: This message identifies a record number in a file for a record that had an error. The message preceding this one contains information about the error and the name of the file.

Action: None

KUP-04054: internal error: invalid bad row *number* identified for bad column *number*

Cause: This is an internal error.

Action: Contact Oracle support.

KUP-04055: column *string* is both a field in the data file and a column transform

Cause: The specified column was in the list of fields in the data file and in the list of column transforms. The column should be in one list or the other, but not both.

Action: Determine whether the value for the field in the data file or the value for the field in the column transform should be loaded in to the table. If the value for the data file is to be loaded, then remove the column transform. If the value for the column transform is to be loaded, then rename the field in the data file so that it does not match the name of a field in the table.

KUP-04056: internal error: OCI error while fetching record: *number*

Cause: An OCI error occurred while processing the granule.

Action: Contact Oracle support.

KUP-04057: internal error: OCI error while fetching record.

Cause: An OCI error occurred while processing the granule.

Action: Contact Oracle support.

KUP-04058: unrecoverable error occurred, operation aborted.

Cause: An unrecoverable error occurred during processing.

Action: See preceding error messages for more information.

KUP-04059: found EOF in length portion of VARIABLE record in file *string*

Cause: The record parser was looking for the size portion of a file a record format of VARIABLE. It found EOF before finding all the bytes for the length.

Action: Correct the corruption in the file.

KUP-04060: field *string* referenced by lobfile column *string* not found

Cause: The LOBFILE transform for the named column referenced a field for either the directory object portion or the name portion of the LOBFILE. However, that field did not exist anywhere in the definition of the data file.

Action: Verify that the LOBFILE clause is specified correctly. Also verify that the field definitions for the data file are correct.

KUP-04061: directory object *string* specified for LOBFILE column *string* is not valid

Cause: The column being loaded from a LOBFILE specified the directory object containing the LOBFILE through another field in the data file. In this case, the LOBFILE clause in the access parameters must specify a list of all directory objects that will be used for this field. This error occurs because a field contains the name of a directory object that is not in this list.

Action: Verify that the data file contains the correct directory object and verify that the list of valid directory objects in the LOBFILE clause for this column is complete.

KUP-04062: no data source specified

Cause: No location for the data source of the external table was specified when the external table was created. An empty string is not valid.

Action: Specify the name of the data source in the LOCATION clause when creating an external table.

KUP-04063: unable to open log file *string* OS error *string*

Cause: An attempt to open the log file failed.

Action: Specify a different log file or use NO LOGFILE to disable logging.

KUP-04064: fatal error during initialization

Cause: An unexpected error occurred while initializing access to an external table.

Action: Contact Oracle support.

KUP-04065: error processing LOBFILE for field *string*

Cause: An error occurred while opening or reading a LOBFILE for a column in a row.

Action: See message in log file for more information about the error.

KUP-04066: error initializing access to external table source

Cause: An error occurred while attempting to retrieve information about a data source.

Action: See messages preceding this one for more information about the error.

KUP-04067: internal error allocating handle type *string*

Cause: An attempt to create an internal object failed.

Action: Contact Oracle support.

KUP-04068: internal error fetching attribute *string*

Cause: An attempt to fetch information about an internal object failed.

Action: Contact Oracle support.

KUP-04069: error fetching data for external table

Cause: An error occurred while attempting to fetch data from an external table.

Action: See messages that precede this one for more information.

KUP-04070: field *string* referenced by column transform *string* not found

Cause: The column transform for the named column references a field that did not exist anywhere in the definition of the data file.

Action: Verify that the column transform clause is specified correctly. Also verify that the field definitions for the data file are correct.

KUP-04071: record discarded from file *string*

Cause: Informational message displayed whenever the WHEN clause has been satisfied. If a DISCARD file has been specified for the operation, the record will be written to that file. The record number in the source data file is not known because multiple servers are loading from the file.

Action: None

KUP-04072: error writing to file *string*

Cause: An error occurred while attempting to write to the named file.

Action: See messages that follow this message for more information about the error.

KUP-04073: record ignored because all referenced fields are null for a record

Cause: A record was rejected because all fields in the data file referenced by the query were NULL.

Action: None

KUP-04074: no write access to directory object *string*

Cause: The user does not have write access to the directory object used for a log, bad or reject file.

Action: None

KUP-04075: no read access to directory object *string*

Cause: The user does not have read access to the directory object used for a data file.

Action: None

KUP-04076: file name cannot contain a path specification: *string*

Cause: The name of a data file, log file, bad file or reject file contains a path specification.

Action: Use the name of a directory object to indicate where the file should be stored.

KUP-04077: unknown format specifier in file name *string*

Cause: A format specifier is a percent sign followed by a character. The percent sign and character are replaced by a value depending on the character. This error occurs when the character following the percent sign is not defined to have a value.

Action: See the documentation for information on valid format specifiers. If the file to be opened needs to have a percent sign in its name then use two percent signs. They will get replaced by a single percent sign in the resulting file name.

KUP-04078: invalid file name specified: *string*

Cause: Attempt to parse the file name failed.

Action: Specify a valid file name.

KUP-04079: error fetching list of valid directories

Cause: An attempt to retrieve a list of valid directories that can be used by the user to open files failed. See messages that follow for more information.

Action: Contact Oracle support. As a workaround try specifying no log file, no discard files and no bad files.

KUP-04080: directory object *string* not found

Cause: The directory object specified for an input file or a log, bad or discard file does not exist in the database or the user has no privileges to access this directory.

Action: None

KUP-04081: field *string* used in concatenation for column *string* is not a character type

Cause: The specified field was part of a concatenation of strings used to create the value for the names column. However, the field was not of a character datatype. Only character fields may be used as part of concatenating fields.

Action: Verify the correct field was used in the CONCAT clause. Also verify that the correct datatype is specified for the field in the field list.

KUP-04082: error converting field *string* for LOBFILE column *string*

Cause: The LOBFILE column had either its directory object name or filename specified by a field in the data file and that field needed to be converted to the server's character set before it could be used. This message indicates that an attempt to convert the field failed.

Action: Verify that the data file has the correct value for the fields. Also verify that the correct character set was specified for the data file.

KUP-04083: no directory object specified in LOBFILE clause for column *string*

Cause: There was no directory object specified for the LOB files used to populate the named column and no default directory was specified for the external table.

Action: Either specify a directory name, or the name of a data field containing the name of the directory object that contains the files.

KUP-04084: The ORACLE_DATAPUMP access driver does not support the ROWID column.

Cause: A query of an external table of type ORACLE_DATAPUMP tried to reference the ROWID column. The ORACLE_DATAPUMP access driver does not support ROWIDs.

Action: Remove the ROWID from the query. If that is not possible, create a table in the database with the same columns as the external table, copy the data from the external table into the newly created table, and use that new table for the query.

KUP-04085: duplicate directory object *string* and file *string* specified for unload

Cause: A CREATE TABLE AS SELECT statement was executed for an external table of type ORACLE_DATAPUMP and the same directory object and filename combination was specified multiple times.

Action: Issue the CREATE TABLE AS SELECT command again but make sure the combination of directory objects and filenames is unique.

KUP-04086: length of file name exceeds platform maximum of *number*

Cause: The length of a filename is longer than the maximum length supported by Oracle on the server platform.

Action: Verify that the name is correct. If so, use a shorter file name.

KUP-04087: no execute access to directory object *string*

Cause: Execute access to the directory object used for a preprocessor file was not granted.

Action: Grant execute privilege on the directory object or specify a different directory which already has execute privilege enabled.

KUP-04088: data sampling is not supported by this access driver

Cause: A query of an external table requested a sample of the data returned. The access driver for the external table does not support sampling.

Action: Do not try to use sampling for this external table.

KUP-04089: column transform *string* is not the name of a table column

Cause: The specified column was in the list of column transforms but a column by that name does not exist in the table

Action: Verify that the correct name was specified in the column transform.

KUP-04090: big endian byte order mark found when little endian expected in *string*

Cause: A big endian byte order mark was found at the beginning of the specified file and either the access parameters specified the data was in little endian order or the byte order mark for a previous file was little endian.

Action: The file needs to be loaded separately. If a byte order was specified in the access parameters, make sure it is changed to be big endian.

KUP-04091: little endian byte order mark found when big endian expected in *string*

Cause: A little endian byte order mark was found at the beginning of the specified file and either the access parameters specified the data was in big endian order or the byte order mark for a previous file was big endian.

Action: The file needs to be loaded separately. If a byte order was specified in the access parameters, make sure it is changed to be little endian.

KUP-04092: attempt to audit directory object *string* returned internal error *number*

Cause: An error occurred while attempting to enable auditing for the specified directory object.

Action: Contact Oracle Support Services.

KUP-04094: preprocessing cannot be performed if Database Vault is installed

Cause: The Database Vault option did not permit the execution a program from an Oracle directory object.

Action: If preprocessing must be performed, then the Database Vault option must not be installed.

KUP-04095: preprocessor command *string* encountered error "*string*"

Cause: The specified preprocessor command encountered an error during execution.

Action: Verify that the preprocessor command along with any arguments are correct.

KUP-04097: RECORDS clause specified without a record format

Cause: The RECORDS clause was part of the external table access parameters but no record format type was provided.

Action: If the RECORDS clause is used, then it must be followed by one of the VARIABLE, FIXED, or DELIMITED BY clauses.

KUP-04100: record rejected in file *string*

Cause: A record in the data file was not loaded into the table because of an error while finding fields in the record. See the previous error for more information. The record will be written to the BAD file, if one is being used. The record number in the source data file is not known because multiple servers are loading from the file.

Action: None

KUP-04101: record *number* rejected in file *string*

Cause: A record in the data file was not loaded into the table because of an error while finding fields in the record. See the previous error for more information. The record will be written to the BAD file, if one is being used.

Action: None

KUP-04102: record *number* discarded from file *string*

Cause: Informational message displayed whenever the WHEN clause has been satisfied. If a DISCARD file has been specified for the operation, the record will be written to that file.

Action: None

KUP-04103: error converting zoned decimal field to number for *string*

Cause: An error occurred converting a zoned decimal number to an Oracle number.

Action: Verify that the zoned decimal number is formatted correctly.

KUP-04104: zoned decimal field has bad values for *string*

Cause: A zoned decimal number has an invalid format.

Action: Verify that the zoned decimal number is formatted correctly.

KUP-04105: zoned decimal to number conversion caused overflow for *string*

Cause: A zoned decimal number could not be converted to an Oracle number because the number is too big for an oracle number.

Action: Verify that the zoned decimal number is formatted correctly.

KUP-04106: precision for zoned decimal number is too large for *string*

Cause: The precision of a zoned decimal number is larger than the precision that can be stored in an Oracle number.

Action: Verify that the zoned decimal number is formatted correctly.

KUP-04108: unable to reread file *string*

Cause: The query that is executing requires that a data source for an external table be read multiple times. However, the data source is a sequential device that cannot be reread. Examples of this type of data source is a tape or pipe.

Action: There are a few ways around this problem. One is to rewrite the query so that the external table is referenced only once. Another option is to move the data source to a rereadable device such as a disk file. A third option is to load the data for the external table into a temporary table and change the query to reference the temporary table.

KUP-04109: specified path for directory object "*string*" is invalid

Cause: The default directory or a directory object specified for an input data file or an output dump, log, bad or discard file contains an invalid path name.

Action: Specify a valid path name for the directory object.

KUP-05004: Warning: Intra source concurrency disabled because parallel select was not requested.

Cause: Intra source concurrency can only be used when parallel select has been requested.

Action: No action is required this message is informational.

KUP-05005: Warning: Intra source concurrency disabled because a field of type RECNUM exists.

Cause: Intra source concurrency cannot be used with RECNUM fields.

Action: No action is required this message is informational.

KUP-05006: Warning: Intra source concurrency disabled because a complex terminator string is being used.

Cause: Intra source concurrency cannot be used with terminators where replicated substrings in the terminator could cause ambiguity during record parsing. \n\n"

Action: No action is required this message is informational.

KUP-05007: Warning: Intra source concurrency disabled because the preprocessor option is being used.

Cause: Intra source concurrency cannot be used with the PREPROCESSOR option.

Action: No action is required this message is informational.

KUP-05008: Warning: Intra source concurrency disabled because the input data is in DELIMITED record format and the character set is neither fixed width nor UTF8.

Cause: Intra source concurrency cannot be used with the DELIMITED record format if the character set is neither fixed width or UTF8.

Action: No action is required this message is informational.

KUP-05009: Warning: Intra source concurrency disabled because the input data is in VARIABLE record format.

Cause: Intra source concurrency cannot be used with the VARIABLE record format.

Action: No action is required this message is informational.

KUP-11000: file truncated error

Cause: A truncated file was used for the load operation.

Action: Verify unload operation completed successfully.

KUP-11001: files not from the same unload operation

Cause: Files used for the load operation were not from the same unload operation.

Action: Verify the files used are from the same unload operation.

KUP-11002: unable to read data chunk *string*

Cause: A read or seek to this data chunk was not possible. This chunk may not have existed.

Action: Verify the files used for the load operation are correct.

KUP-11003: bad data encountered while reading from file *string*

Cause: There was a datatype conversion error while attempting to convert the data in the data file to match the datatype of a column in the external table. The message that follows this one displays the name of the column and the start of the data for the column that could not be converted. The row containing the bad data is rejected and not included as a row in the external table.

Action: If the row containing the bad data should not be filtered out, then modify the definition of the external table so that the datatypes of the columns match the datatypes of the fields in the data file.

KUP-11004: requested version *string* not supported by ORACLE_DATAPUMP

Cause: This database version (defaulted to COMPATIBLE if not user-specified) was not supported by ORACLE_DATAPUMP external table access driver. Note: Database versions before 9.2 were not supported.

Action: Specify a supported version and rerun the operation.

KUP-11005: error seeking in file: *string*

Cause: An attempt to seek to the specified position in file failed.

Action: Review the error message. Resolve the problem and retry the the operation. Contact Oracle Support Services if the problem cannot be resolved.

KUP-11006: file truncated error in *string*

Cause: A truncated or incomplete file was used for the load operation.

Action: Verify unload operation completed successfully.

KUP-11007: conversion error loading table *string.string*

Cause: A row could not be loaded into the table because there was a conversion error for one or more columns in a row.

Action: See the message that follows for more information about the row that could not be loaded. To avoid this error, make sure the definition of the table being loaded matches the definition of the table being unloaded.

KUP-11008: conversion error loading table *string.string* partition *string*

Cause: A row could not be loaded into the table because there was a conversion error for one or more columns in a row.

Action: See the message that follows for more information about the row that could not be loaded. To avoid this error, make sure the definition of the table being loaded matches the definition of the table being unloaded.

KUP-11009: data for row: *string*

Cause: A conversion error occurred while loading data into a table. The message shows values for the field in the row that had the conversion error.

Action: None. This is only an informational message.

KUP-11010: unable to open at least one dump file for fetch

Cause: None of the files in the LOCATION clause can be opened for a fetch on an external table.

Action: A fetch operation on an external table in SQL mode requires that at least one file could be opened. Check that the directory object and file names to the dump files are correct.

KUP-11011: the following file is not valid for this load operation

Cause: This file could not be used for this load operation. See the following message for more information.

Action: Verify all the files in the LOCATION clause are from the same unload operation and that the unload was successful.

KUP-11012: file *string* in *string* already exists

Cause: The specified file could not be used for this unload because that would mean overwriting an existing file.

Action: Specify a file that does not currently exist.

KUP-11013: internal number in header in file *string* is not valid

Cause: The specified file could not be used for this operation because the internal number in the header was not valid.

Action: If the dump files were transferred over, verify the transfer operation was done correctly.

KUP-11014: internal metadata in file *string* is not valid

Cause: The specified file could not be used for this operation because the internal metadata stored in this file does not match the metadata stored in the first file piece set.

Action: Verify all the files in the LOCATION clause are the correct dump files to use.

KUP-11015: error in unloading or loading data

Cause: An error has occurred in a stream unload or load operation.

Action: Contact Oracle Support Services.

KUP-11016: database version in file *string* is not valid

Cause: The specified file could not be used for this fetch because its database version was not compatible with the database version in the other files in the LOCATION clause.

Action: Verify all the files in the LOCATION clause were populated with compatible database versions.

KUP-11017: file *string* not found

Cause: The file was not found.

Action: Verify the correct file (path and file name) was specified.

KUP-11018: file *string* not a valid dump file

Cause: This file did not have the correct file format. It could not be used for an external table fetch operation.

Action: Verify this file is from a SQL mode external table populate operation and that the operation was successful.

KUP-11019: the following file is not valid for this fetch operation

Cause: A file could not be used for this fetch. See the following message for more information.

Action: Verify all the files in the LOCATION clause are from successful populate operations. If the files were generated from various populate operations, then verify that those were done with common attributes such as with the same tables and compatible database versions.

KUP-11020: header in file *string* may not contain correct information

Cause: The header may be corrupted.

Action: Contact Oracle Support Services.

KUP-11021: header in file *string* has an incompatible version number

Cause: A dump file was specified for a load operation whose version number is incompatible with the dump file version currently produced by the Oracle server on the system. Usually this message indicates that the dump file was produced by a newer version of the Oracle server.

Action: Load this dump file using the same version of the Oracle server that created the file.

KUP-11022: specified file name "*string*" is invalid

Cause: The file name specified for a dump or log file was invalid or null.

Action: Specify a valid file name for the dump or log file.

KUP-11023: specified path for directory object "*string*" is invalid

Cause: The default directory or a directory object specified for a dump or log file contained an invalid path name or was null.

Action: Specify a valid path name for the directory object.

KUP-11024: This external table can only be accessed from within a Data Pump job.

Cause: An attempt was made to access a temporary external table that was created by Data Pump to be used internally during the execution of an export or import job.

Action: None

UDE-00001 to UDE-00054

UDE-00001: user requested cancel of current operation

Cause: User has requested a cancellation of current job.

Action: No action is needed.

UDE-00002: invalid username or password

Cause: An invalid username or password was specified.

Action: Retry with a valid username and password.

UDE-00003: all allowable logon attempts failed

Cause: Attempts were repeatedly made to log on with an invalid username or password.

Action: Shut down the utility, then restart and retry with a valid username and password.

UDE-00004: operation generated ORACLE error *number*

Cause: The operation unexpectedly produced the specified error. Refer to the description of that error for more information.

Action: s.

UDE-00005: unexpected End-Of-File encountered while reading input

Cause: Encountered an End-Of-File while reading the user input.

Action: If input to export is being redirected, check the file for errors.

UDE-00006: failed to allocate memory of size *number*

Cause: Unable to allocate the necessary memory.

Action: Record the messages that follow and report this to Oracle Customer Support as an Export internal bug.

UDE-00007: attempt to free unallocated memory

Cause: An attempt was made to free memory that was not allocated.

Action: Contact Oracle Worldwide Support

UDE-00010: multiple job modes requested, *string* and *string*.

Cause: Multiple job modes were specified.

Action: Specify only one valid mode, then retry.

UDE-00011: parameter *string* is incompatible with parameter *string*

Cause: An invalid combination of parameters was specified.

-
- Action:** Refer to documentation for the set of valid modes, then retry.
- UDE-00012: table mode exports only allow objects from one schema**
Cause: Multiple schemas were selected for export.
Action: Retry export specifying only one schema.
- UDE-00013: internal expdp error.**
Cause: Fatal internal Data Pump client error.
Action: Contact Oracle Customer Support
- UDE-00014: invalid value for parameter, 'string'.**
Cause: Could not parse the specified parameter or parameter value.
Action: Refer to documentation for valid parameter values.
- UDE-00015: invalid context or job state for parameter, 'string'.**
Cause: Invalid job state or context for specified parameter.
Action: Refer to documentation for correct parameter usage.
- UDE-00016: 'string' parameter requires a value.**
Cause: Parameter was specified without a value.
Action: Refer to documentation for correct parameter usage.
- UDE-00017: Data Pump job is already executing.**
Cause: Incorrect Data Pump job state for requested operation.
Action: Refer to documentation for correct usage.
- UDE-00018: Data Pump client is incompatible with database version *string***
Cause: The Export utility is at a higher version than the database version and is thereby incompatible.
Action: Use the same version of Export utility as the database.
- UDE-00019: 'string' parameter list is too long.**
Cause: Requested parameter list exceeds 4000 character maximum.
Action: Reduce the specified number of parameter values and rerun.
- UDE-00020: Data Pump client is incompatible with Data Pump API.**
Cause: The Export utility is at a higher version than the Data Pump server and is thereby incompatible.
Action: Use the same version of Export utility as the server.
- UDE-00050: Unable to setup parameter processing.**
Cause: An unexpected error occurred during parameter manager initialization.
Action: Record the messages that follow and report this to Oracle Customer Support as an Export internal bug.
- UDE-00051: unable to set NLS_NUMERIC_CHARACTERS to required defaults.**
Cause: Export was unable to set NLS_NUMERIC_CHARACTERS to '.,'
Action: Record the accompanying messages and report this as an Export internal error to Oracle customer support.
- UDE-00052: incorrect Data Pump client for operation: *string***
Cause: Export client attempted to attach to import job.

Action: Use appropriate client when attaching to an existing job

UDE-00053: unrecognized client command '*string*'

Cause: Invalid interactive client command.

Action: Refer to documentation for valid client commands.

UDE-00054: Deprecated Legacy Mode parameter '*string*' specified at or on: *string*

Cause: The Legacy Mode parameter specified has no corresponding Data Pump mapping.

Action: Review the location referred to in the error message ((either 'Command Line', 'Parameter File', or 'Environment Variable') and remove the parameter.

UDI-00001 to UDI-00054

UDI-00001: user requested cancel of current operation

Cause: User has requested a cancellation of current job.

Action: No action is needed.

UDI-00002: invalid username or password

Cause: An invalid username or password was specified.

Action: Retry with a valid username and password.

UDI-00003: all allowable logon attempts failed

Cause: Attempts were repeatedly made to log on with an invalid username or password.

Action: Shut down the utility, then restart and retry with a valid username and password.

UDI-00004: operation generated ORACLE error *number*

Cause: The operation unexpectedly produced the specified error. Refer to the description of that error for more information.

Action: s.

UDI-00005: unexpected End-Of-File encountered while reading input.

Cause: Encountered an End-Of-File while reading the user input.

Action: If input to import is being redirected, check the file for errors.

UDI-00006: failed to allocate memory of size *number*

Cause: Unable to allocate the necessary memory.

Action: Record the messages that follow and report this to Oracle Customer Support as an Import internal bug.

UDI-00007: attempt to free unallocated memory

Cause: An attempt was made to free memory that was not allocated.

Action: Contact Oracle Customer Support

UDI-00010: multiple job modes requested, *string* and *string*.

Cause: Invalid job mode was specified.

Action: Specify only one valid mode, then retry.

UDI-00011: parameter *string* is incompatible with parameter *string*

Cause: An invalid combination of parameters was specified.

-
- Action:** Refer to documentation for the set of valid modes, then retry.
- UDI-00012: table mode imports only allow objects from one schema**
Cause: Multiple schemas were selected for import.
Action: Retry import specifying only one schema.
- UDI-00013: internal impdp error.**
Cause: Fatal internal Data Pump client error.
Action: Contact Oracle Customer Support.
- UDI-00014: invalid value for parameter, 'string'**
Cause: Could not parse the specified parameter or parameter value.
Action: Refer to documentation for valid parameter values.
- UDI-00015: invalid context or job state for parameter, 'string'.**
Cause: Invalid job state or context for specified parameter.
Action: Refer to documentation for correct parameter usage.
- UDI-00016: 'string' parameter requires a value.**
Cause: Parameter was specified without a value.
Action: Refer to documentation for correct parameter usage.
- UDI-00017: Data Pump job is already executing.**
Cause: Incorrect Data Pump job state for requested operation.
Action: Refer to documentation for correct usage.
- UDI-00018: Data Pump client is incompatible with database version string**
Cause: The Import utility is at a higher version than the database version and is thereby incompatible.
Action: Use the same version of Import utility as the database.
- UDI-00019: 'string' parameter list is too long.**
Cause: Requested parameter list exceeds 4000 character maximum.
Action: Reduce the specified number of parameter values and rerun.
- UDI-00020: Data Pump client is incompatible with Data Pump API.**
Cause: The Export utility is at a higher version than the Data Pump server and is thereby incompatible.
Action: Use the same version of Export utility as the server.
- UDI-00050: unable to setup parameter processing.**
Cause: An unexpected error occurred during parameter manager initialization.
Action: Record the messages that follow and report this to Oracle Customer Support as an Import internal bug.
- UDI-00051: unable to set NLS_NUMERIC_CHARACTERS to required defaults.**
Cause: Import was unable to set NLS_NUMERIC_CHARACTERS to '.,'
Action: Record the accompanying messages and report this as an Import internal error to Oracle Customer Support.
- UDI-00052: incorrect Data Pump client for operation: string**
Cause: Import client attempted to attach to export job.

Action: Use appropriate client when attaching to an existing job

UDI-00053: unrecognized client command '*string*'

Cause: Invalid interactive client command.

Action: Refer to documentation for valid client commands.

UDI-00054: Deprecated Legacy Mode parameter '*string*' specified at or on: *string*

Cause: The Legacy Mode parameter specified has no corresponding Data Pump mapping.

Action: Review the location referred to in the error message ((either 'Command Line', 'Parameter File', or 'Environment Variable') and remove the parameter.

DBV-00200 to DBV-00201

DBV-00200: Block, DBA *number*, already marked corrupt

Cause: The block was previously corrupted. It has been marked as corrupt by the Oracle database server.

Action: If the block is not currently allocated to a database object, then no action is required. If the block is allocated, then the options and required action depend on the type and nature of the object which owns the block. To repair an allocated block, perform block or file media recovery.

DBV-00201: Block, DBA *number*, marked corrupt for invalid redo application

Cause: The block was marked corrupt by the Oracle database server for invalid redo application, ex: media recovery of a NOLOGGING object or direct loaded data.

Action: If the block is not currently allocated to a database object, then no action is required. If the block is allocated, then the object will need to be rebuilt, or data to be reloaded.

NID-00001 to NID-00604

NID-00001: Illegal command line syntax - parse error = (*number*)

Cause: Illegal operand on command line.

Action: Remove illegal operand.

NID-00002: Parse error: *string*

Cause: An error was encountered while parsing the command line.

Action: Remove offending operand.

NID-00010: Password:

Cause: Password was not specified in command line.

Action: Type password at this prompt.

NID-00100: Cannot open datafile "*string*"

Cause: The specified datafile could not be opened.

Action: Ensure that the specified datafile exists and is writable.

NID-00101: LOGFILE (*string*) not accessible

Cause: The specified log file could not be opened.

Action: Specify a log file that is writable.

NID-00102: Garbled target string

Cause: The supplied connect string could not be parsed. The connect string does not have the correct format.

Action: Refer to Oracle9i Database Concepts.

NID-00103: Missing password in connect string "*string*"

Cause: Could not find the password in the supplied connect string. The connect string does not have the correct format.

Action: Refer to Oracle9i Database Concepts.

NID-00104: Need to specify TARGET connection parameter in command line

Cause: The mandatory parameter TARGET was not specified.

Action: Specify TARGET=<username>/<password> when invoking this utility.

NID-00105: Need to specify "LOGFILE=<logfile>" when using APPEND=YES option

Cause: The APPEND parameter was specified without a LOGFILE.

Action: Specify APPEND=YES only when LOGFILE is also specified.

-
- NID-00106: LOGIN to target database failed with Oracle error: *string***
Cause: An Oracle error was reported while attempting to log in to the target database.
Action: Follow the actions for the specified Oracle error.
- NID-00107: File I/O error on datafile "*string*" during *string* operation (*number/string*)**
Cause: An operating system error was reported while performing the specified operation in the specified file.
Action: Verify the datafile and check for operating system errors.
- NID-00109: DBNAME *string* length *number* exceeds maximum length of *number***
Cause: The specified new database name exceeded the maximum size.
Action: Specify a shorter, valid name.
- NID-00110: Cannot use REVERT and specify a database name at the same time**
Cause: Conflicting options were specified in the command line.
Action: Choose only one of the options.
- NID-00111: Oracle error reported from target database while executing *string string***
Cause: An Oracle error was reported when executing an OCI operation.
Action: Follow the actions for the specified Oracle error.
- NID-00113: Error reading answer - aborting**
Cause: Response caused an error.
Action: Retry the operation.
- NID-00114: Must specify new database name when SETNAME is used**
Cause: SETNAME=YES was specified but no DBNAME was provided.
Action: Specify DBNAME or remove the SETNAME=YES option.
- NID-00115: Database should be mounted**
Cause: The database was not mounted.
Action: Mount the database.
- NID-00120: Database should be mounted exclusively**
Cause: The database was started in parallel mode. To change the DBID, the database must be mounted exclusively.
Action: Shut down the database and start it in exclusive mode.
- NID-00121: Database should not be open**
Cause: The database was open. To change the DBID, the database must be mounted exclusively.
Action: Shutdown the database and mount it in exclusive mode.
- NID-00122: Database should have no offline immediate datafiles**
Cause: The database has one or more datafiles that are in OFFLINE IMMEDIATE mode.
Action: Drop the datafiles or recover them and bring them online.
- NID-00123: Magic number for datafile "*string*" is incorrect**

-
- Cause:** Block 0 header has an incorrect magic number for the specified datafile.
Action: Verify that the datafile is correct and retry the operation.
- NID-00124: Mismatched dbid for datafile *string*, expected *number*, found *number***
Cause: The dbid of the datafile does not match the 'old' DBID or the 'new' DBID.
Action: Verify that this datafile belongs to the database. You may need to restore a backup of the datafile.
- NID-00125: Database should have no disabled datafiles**
Cause: The database has one or more datafiles that are disabled.
Action: Drop the datafiles or recover them and bring them online.
- NID-00126: Database should have no datafiles in unknown state**
Cause: The database has one or more datafiles that are in an unknown state.
Action: Drop the datafiles or recover them and bring them online.
- NID-00127: All online files in the database must have the same checkpoint SCN**
Cause: The database has one or more datafiles that have a checkpoint SCN that does not match the database checkpoint SCN.
Action: Restart the database and shut it down cleanly, then retry the operation.
- NID-00128: Cannot revert change of database, change not in progress**
Cause: The REVERT option was used, but the control file does not show that a change of DBID was in progress.
Action: Do not use the REVERT option, or possibly restore the control file that was in place when the utility was started.
- NID-00129: Invalid DBID for datafile "*string*", expecting *number*, found *number***
Cause: A datafile header shows a different DBID from the rest of the database files.
Action: Ensure that the file belongs to this database.
- NID-00130: Mismatched CHECKPOINT_CHANGE# in datafile "*string*", expecting *string*, found *string***
Cause: The datafile header does not match information in the control file.
Action: Revert the change, open the database, and verify that all datafiles are consistent. Then, shut down the database and retry the operation.
- NID-00131: Control file is not current**
Cause: A non-current control file is currently mounted.
Action: Perform necessary actions to make the control file current and retry.
- NID-00132: CHECKPOINT_CHANGE# in datafile "*string*": *string* in the future of controlfile: *string***
Cause: The checkpoint in the datafile header is ahead of the checkpoint in the control file.
Action: Make the database consistent and retry.
- NID-00133: Database should have only consistent datafiles**
Cause: The database has one or more datafiles that are marked FUZZY in the control file.
Action: Restart the database and shut down consistently, then retry the operation.

NID-00134: Datafile "*string*" is not consistent

Cause: The datafile is marked as fuzzy in its header.

Action: Restart the database and shut down cleanly, then retry the operation.

NID-00135: There are *number* active threads

Cause: is that the database crashed the last time it was shut down.

Action: Ensure that all threads are closed before retrying the operation. Start and open the database to perform crash recovery, then shut down with the NORMAL or IMMEDIATE options to close it cleanly. Finally, try running the utility again.

NID-00137: All datafiles that are not dropped should be readable

Cause: The database had one or more files that could not be read.

Action: Restore the missing files and retry the operation.

NID-00138: Block verification failed for datafile *string* (*number*)

Cause: Block header checksum yields a nonzero value for the specified datafile.

Action: Verify that the datafile is correct and retry the operation.

NID-00139: Mismatched dbname for datafile *string*, expected *string*, found *string*

Cause: The dbname of the datafile does not match the 'old' dbname or the 'new' dbname.

Action: Verify that this datafile belongs to the database. You may need to restore a backup of the datafile.

NID-00140: Specified database name *string* does not match previous name used *string*

Cause: This is a continuation of a failed attempt. However in the failed attempt, the database name is different than the one used in the last attempt.

Action: Retry the command using the original database name.

NID-00141: No database name specified, previous attempt used *string*

Cause: This is a continuation of a failed attempt. However, in the failed attempt, a database name was provided.

Action: Retry the command using the original database name.

NID-00142: Only changing database name, previous attempt changed dbid to *number*

Cause: This is a continuation of a failed attempt. However, in the failed attempt, the database id was also being changed.

Action: Retry the command removing SETNAME=YES.

NID-00143: Mismatched controlfile *string*

Cause: A controlfile did not have the correct status.

Action: Shutdown the database, remove the mismatched controlfile, mount the database, and retry the operation.

NID-00144: New name for database *string* is the same as current name *string*

Cause: The specified name is the same as the current name of the database.

Action: Specify a different name or do not use the DBNAME option.

NID-00145: nls subsystem initialization failure for product=*string*, facility=*string*

Cause: The NLS product/facility error message file could not be located or properly initialized.

Action: Check that the error message directory and file(s) have been properly installed.

NID-00300: Connected to database *string* (DBID=*number*)

Cause: Informational message.

Action: No action required.

NID-00301: Datafile *string* - dbid changed, wrote new name

Cause: Informational message.

Action: No action required.

NID-00302: Datafile *string* - dbid changed

Cause: Informational message.

Action: No action required.

NID-00303: Datafile *string* - wrote new name

Cause: Informational message.

Action: No action required.

NID-00304: Datafile *string* - reverted

Cause: Informational message.

Action: No action required.

NID-00305: Datafile *string* - already changed

Cause: Informational message.

Action: No action required.

NID-00306: Datafile *string* - no revert needed

Cause: Informational message.

Action: No action required.

NID-00307: Control File *string* - dbid changed, wrote new name

Cause: Informational message.

Action: No action required.

NID-00308: Control File *string* - dbid changed

Cause: Informational message.

Action: No action required.

NID-00309: Control File *string* - wrote new name

Cause: Informational message.

Action: No action required.

NID-00310: Control File *string* - reverted

Cause: Informational message.

Action: No action required.

NID-00311: Control File *string* - modified

Cause: Informational message.

Action: No action required.

NID-00312: Connected to server version *string*
Cause: Informational message.
Action: No action required.

NID-00315: Operation already in progress, continuing
Cause: Informational message.
Action: No action required.

NID-00320: Operation cancelled at user request
Cause: Informational message.
Action: No action required.

NID-00321: Proceeding with operation
Cause: Informational message.
Action: No action required.

NID-00330: The following datafiles are offline immediate:
Cause: Informational message.
Action: No action required.

NID-00331: The following datafiles are disabled:
Cause: Informational message.
Action: No action required.

NID-00332: The following datafiles are in unknown state:
Cause: Informational message.
Action: No action required.

NID-00333: Cannot read the header of the following datafiles:
Cause: Informational message.
Action: No action required.

NID-00334: The following datafiles are not checkpointed to *string*:
Cause: Informational message.
Action: No action required.

NID-00335: The following datafiles are not consistent:
Cause: Informational message.
Action: No action required.

NID-00336: The following datafiles are offline clean:
Cause: Informational message.
Action: No action required.

NID-00337: The following datafiles are read-only:
Cause: Informational message.
Action: No action required.

NID-00338: Control Files in database:

Cause: Informational message.
Action: No action required.

NID-00350: *string (number) string*
Cause: Informational message.
Action: No action required.

NID-00351: *string (number)*
Cause: Informational message.
Action: No action required.

NID-00352: *string (number), error: number*
Cause: Informational message.
Action: No action required.

NID-00353: *string*
Cause: Informational message.
Action: No action required.

NID-00354: **Instance shut down**
Cause: Informational message.
Action: No action required.

NID-00370: **Change database ID of database *string*? (Y/[N]) =>**
Cause: Informational message.
Action: No action required.

NID-00371: **Change database name of database *string* to *string*? (Y/[N]) =>**
Cause: Informational message.
Action: No action required.

NID-00372: **Change database ID and database name *string* to *string*? (Y/[N]) =>**
Cause: Informational message.
Action: No action required.

NID-00373: **Revert changes for database *string* (Y/[N]) =>**
Cause: Informational message.
Action: No action required.

NID-00390: **These files must be writable by this utility.**
Cause: Informational message.
Action: No action required.

NID-00395: **Reverting database name from *string* to *string***
Cause: Informational message.
Action: No action required.

NID-00396: **Reverting database ID from *number* to *number***
Cause: Informational message.
Action: No action required.

-
- NID-00397: Changing database name from *string* to *string***
Cause: Informational message.
Action: No action required.
- NID-00398: Changing database ID from *number* to *number***
Cause: Informational message.
Action: No action required.
- NID-00400: DBNEWID - Completed with errors.**
Cause: Informational message.
Action: No action required.
- NID-00401: Must finish REVERT changes before attempting any database operation.**
Cause: Informational message.
Action: No action required.
- NID-00402: Must finish change or REVERT changes before attempting any database operation.**
Cause: Informational message.
Action: No action required.
- NID-00403: DBNEWID - Completed with validation errors.**
Cause: Informational message.
Action: No action required.
- NID-00404: DBNEWID - Completed successfully.**
Cause: Informational message.
Action: No action required.
- NID-00405: Reversion of database name and database ID failed.**
Cause: Informational message.
Action: No action required.
- NID-00406: Reversion of database name failed.**
Cause: Informational message.
Action: No action required.
- NID-00407: Reversion of database ID failed.**
Cause: Informational message.
Action: No action required.
- NID-00410: Reversion of database changes failed during validation - database is intact.**
Cause: Informational message.
Action: No action required.
- NID-00415: Change of database name and database ID failed.**
Cause: Informational message.
Action: No action required.

NID-00416: Change of database name failed.

Cause: Informational message.

Action: No action required.

NID-00417: Change of database ID failed.

Cause: Informational message.

Action: No action required.

NID-00420: Change of database name and ID failed during validation - database is intact.

Cause: Informational message.

Action: No action required.

NID-00421: Change of database name failed during validation - database is intact.

Cause: Informational message.

Action: No action required.

NID-00422: Change of database ID failed during validation - database is intact.

Cause: Informational message.

Action: No action required.

NID-00425: Database name restored to *string*.

Cause: Informational message.

Action: No action required.

NID-00426: Database ID for database *string* restored to *number*.

Cause: Informational message.

Action: No action required.

NID-00430: Database is ready to be open or shut down.

Cause: Informational message.

Action: No action required.

NID-00431: DBNEWID - Reversion completed.

Cause: Informational message.

Action: No action required.

NID-00435: Database name changed to *string*.

Cause: Informational message.

Action: No action required.

NID-00436: Modify parameter file and generate a new password file before restarting.

Cause: Informational message.

Action: No action required.

NID-00440: Database ID for database *string* changed to *number*.

Cause: Informational message.

Action: No action required.

-
- NID-00441: All previous backups and archived redo logs for this database are unusable.**
Cause: Informational message.
Action: No action required.
- NID-00442: Database has been shutdown, open database with RESETLOGS option.**
Cause: Informational message.
Action: No action required.
- NID-00450: Successfully changed database name and ID.**
Cause: Informational message.
Action: No action required.
- NID-00451: Successfully changed database name.**
Cause: Informational message.
Action: No action required.
- NID-00452: Successfully changed database ID.**
Cause: Informational message.
Action: No action required.
- NID-00480: Database is intact - database is ready to be open or shut down.**
Cause: Informational message.
Action: No action required.
- NID-00481: DBNEWID - Cancelled.**
Cause: Informational message.
Action: No action required.
- NID-00482: Database is not aware of previous backups and archived logs in Recovery Area.**
Cause: Because the database id was changed, previous backups and archived redo logs in recovery area are not managed by this database.
Action: This is the informational message only.
- NID-00490: LOG being redirected to STDERR due to errors.**
Cause: Could no write message to log file.
Action: None
- NID-00500: Keyword Description (Default)**
Cause: Informational message.
Action: No action required.

NID-00503: DBNAME New database name (NONE)

Cause: Informational message.

Action: No action required.

NID-00504: LOGFILE Output Log (NONE)

Cause: Informational message.

Action: No action required.

NID-00505: REVERT Revert failed change NO

Cause: Informational message.

Action: No action required.

NID-00506: SETNAME Set a new database name only NO

Cause: Informational message.

Action: No action required.

NID-00507: APPEND Append to output log NO

Cause: Informational message.

Action: No action required.

NID-00508: HELP Displays these messages NO

Cause: Informational message.

Action: No action required.

NID-00600: Internal Error - [number] [number] [number] [number]

Cause: This is the generic internal error number for program exceptions. This indicates that the program has encountered an exceptional condition.

Action: Report as a bug - the first argument is the internal error number

NID-00601: Internal Error - [number] [string] [number] [number]

Cause: This is the generic internal error number for program exceptions. This indicates that the program has encountered an exceptional condition.

Action: Report as a bug - the first argument is the internal error number

NID-00602: Could not allocate *number* bytes for "*string*"

Cause: Memory allocation failed.

Action: Free memory at the operating system level and retry operation.

NID-00603: No datafiles found in database

Cause: Controlfile has not datafiles recorded

Action: Report as a bug - the first argument is the internal error number

NID-00604: No control files found in database

Cause: Instance has no control files recorded

Action: Report as a bug - the first argument is the internal error number

DGM-16900 to DGM-17017

DGM-16900: Unable to initialize client

Cause: The client could not be initialized.

Action: This is an internal error. Contact Oracle Support Services.

DGM-16901: Unable to initialize environment

Cause: The database environment could not be allocated and initialized.

Action: This is an internal error. Contact Oracle Support Services.

DGM-16902: Unable to allocate handle

Cause: The database handle could not be allocated.

Action: This is an internal error. Contact Oracle Support Services.

DGM-16903: Unable to connect to database

Cause: The specified database was unreachable because it did not exist or was not started.

Action: Start the database or validate network connections and try again.

DGM-16904: Unable to set attribute

Cause: The server attributes could not be set.

Action: Check additional error messages.

DGM-16905: Failed.

Cause: The command failed to execute.

Action: Check additional error messages.

DGM-16906: Unable to accept commands: no memory

Cause: No memory was available for the attempted operation.

Action: Check your system and retry the command.

DGM-16909: Fatal error - quitting...

Cause: A fatal error was encountered.

Action: See additional error messages and/or contact Oracle Support Services.

DGM-16910: Unable to issue command to server

Cause: Command could not be issued to the server.

Action: See additional error messages and/or contact Oracle Support Services.

DGM-16912: Unrecognized command "*string*", try "help"

Cause: An unrecognized command was issued.

Action: Try again using a valid command.

DGM-16916: Missing site name, try "help"

Cause: The site name is missing from the command.

Action: Try the command again using correct syntax.

DGM-16934: start up instance "string" of database "string"

Cause: The operation completed successfully and requires a restart of the specified instance. DGMGRL attempted to restart the instance but was unable to.

Action: Start the specified instance manually.

DGM-16943: connect to instance "string" of database "string"

Cause: The operation required DGMGRL to connect to a specific instance to complete, but DGMGRL could not automatically connect to the given instance.

Action: Connect to the specified instance and issue the command again.

DGM-16944: Failover succeeded, new primary is "string"

Cause: The failover command completed successfully."

Action: No action is required.

DGM-16945: Syntax error before or at "string"

Cause: The command could not be processed because of a syntax error in the named token.

Action: Try the command again using valid syntax.

DGM-16946: Site "string" was not found

Cause: The named site could not be found.

Action: Try the command again using a valid site name.

DGM-16948: Unable to switchover, primary database is still "string"

Cause: The switchover operation could not be executed due to the errors reported with this error message. The primary role has not been changed.

Action: Correct the errors and try the SWITCHOVER command again.

DGM-16949: Object "string" was not found

Cause: The named object was not found.

Action: Try the command again using a valid database name.

DGM-16951: Unable to failover

Cause: The failover operation could not be executed due to the errors reported with this error message.

Action: Correct the errors and try the FAILOVER command again.

DGM-16952: Configuration details cannot be determined by DGMGRL

Cause: The broker configuration could not be found.

Action: 1) The Data Guard broker process (DMON) could not be contacted. Verify that the DMON process is running. 2) No broker configuration currently exists. You must create one. 3) You are connected to a standby database in the broker configuration that has either been disabled or deleted. While the standby is in this state, the details of the broker configuration are not available on the standby database. Connect to the primary database and reissue the command. 4) You are

connected to a database in the broker configuration that must be reinstated or reinstantiated. While in this state, details of the broker configuration are not available. Either reinstate or re instantiate the database and reissue the command, or connect to the primary database and reissue the command.

DGM-16953: XML document is too long

Cause: The length of the XML document exceeded the internal limit.

Action: This is an internal error. Contact Oracle Support Services.

DGM-16954: Unable to open and lock the Observer configuration file

Cause: The Observer configuration file cannot be opened or cannot be locked for exclusive access.

Action: Make sure the Observer has the correct operating system privileges to write the file and there is no other Observer that is using the same file. Try the command again.

DGM-16959: No response from broker server process

Cause: No response was received from the broker server process (DMON).

Action: The Data Guard broker process (DMON) is not available. Verify that the DMON process is running and retry the command.

DGM-16960: Status not available

Cause: The status could not be retrieved.

Action: The Data Guard broker process (DMON) is not available. Verify that the DMON process is running and retry the command.

DGM-16979: Unable to log on to the primary or standby database as SYSDBA

Cause: The username/password used by the observer to log on to the primary database and Fast-Start Failover target standby database does not have valid SYSDBA credentials.

Action: Make sure the primary database and Fast-start failover target database are using a remote login password file. Make sure the SYSDBA password is the same at both databases and that the SYSDBA password is used in the CONNECT command. Start the observer again.

DGM-16991: Two or more resources have the name "*string*"

Cause: The named resource exists on more than one site.

Action: Use the ON SITE clause and reissue the command.

DGM-16999: Instance "*string*" was not found

Cause: The named instance could not be found.

Action: Try the command again using a valid instance name.

DGM-17000: Two or more instances have the name "*string*"

Cause: The named instance exists on more than one database.

Action: Use the ON DATABASE clause and reissue the command.

DGM-17002: Primary database cannot be removed

Cause: The named database to be removed is the primary database.

Action: Remove the broker configuration instead.

DGM-17007: Unsupported platform, observer cannot start

Cause: The Observer was started on an operating system that does not support multi-threading.

Action: Start the Observer on an operating system that supports multi-threading.

DGM-17009: New primary database "*string*" is opening...

Cause: The Data Guard broker is opening the specified new primary database. The new primary database is ready to accept transactions once it is open.

Action: None

DGM-17016: failed to retrieve status for database "*string*"

Cause: DGMGRL could not retrieve the StatusReport property from the given database and thus could not report the database status.

Action: See accompanying messages for details.

DGM-17017: unable to determine configuration status

Cause: The Data Guard broker could not execute a health check at the moment, so the configuration status could not be determined.

Action: See accompanying messages for details.

DIA-48001 to DIA-51705

DIA-48001: internal error code, arguments: *[string]*, *[string]*, *[string]*, *[string]*,
[string], *[string]*, *[string]*, *[string]*

Cause: This is the generic internal error number for program exceptions. This indicated that a process encountered an exceptional condition.

Action: Report as a bug - the first argument is the internal error number.

DIA-48002: thread terminated by fatal error

Cause: The thread was in an unrecoverable state.

Action: Examine the thread trace file for more information.

DIA-48003: out of process memory when trying to allocate *string* bytes
(*string*,*string*)

Cause: Operating system process private memory was exhausted.

Action: None

DIA-48004: unable to allocate *string* bytes of shared memory
("*string*",*string*,"*string*","*string*")

Cause: More shared memory is needed than was allocated in the shared pool.

Action: Reduce your use of shared memory or increase the amount of available shared memory.

DIA-48007: name is already used by an existing product type

Cause: An attempt was made to define a product type with the same name as an already defined product type.

Action: Use the already existing product type with the specified name, or use a different name for the product type.

DIA-48008: id is already used by an existing product type

Cause: An attempt was made to define a product type with the same id as an already defined product type.

Action: Choose a different name for the product type.

DIA-48100: error encountered when attempting to open a file

Cause: There was an error encountered when attempting to open a file with the ADR file interface.

Action: Check that the specified directory name, file name, and open options are valid.

DIA-48101: error encountered when attempting to read a file *[string]* *[string]* *[string]*

Cause: There was an error encountered when attempting to read a file with the ADR file interface.

Action: Check the specified arguments to the read interface.

DIA-48102: encountered the end-of-file when reading the file

Cause: The ADR file interface encountered the end-of-file when reading the file.

Action: Handle the end of file condition.

DIA-48103: error encountered when attempting to write a file [string] [string] [string]

Cause: There was an error encountered when attempting to write a file with the ADR file interface.

Action: Check the specified arguments to the write interface.

DIA-48104: read mismatch on blocks requested and returned, [string], [string]

Cause: There was a mismatch between the number of blocks requested for reading and the number of blocks actually returned.

Action: Check the file to make sure there are no partial blocks.

DIA-48105: write mismatch on blocks requested and returned, [string], [string]

Cause: There was a mismatch between the number of blocks requested for writing and the number of blocks actually written.

Action: Check that there is enough space left on the device to write the requested number of blocks.

DIA-48106: error initializing the ADR string object

Cause: There was an error encountered during the initialization of one of the ADR file objects.

Action: Check the validity of the specified directory name and file name.

DIA-48107: invalid Bfile input, [string]

Cause: An invalid Bfile was passed into the routine to convert the bfile into a file handle.

Action: Verify the contents of the specified Bfile.

DIA-48108: invalid value given for the diagnostic_dest init.ora parameter

Cause: The value given for the diagnostic_dest directory is not a valid directory. Either the directory does not exist or the process does not have read/write privileges on the directory.

Action: Use a value for diagnostic_dest that is a valid directory with the proper read and write privileges.

DIA-48109: invalid lock mode for file descriptor, [string]

Cause: The lock mode associated with the file descriptor was invalid in the context of the routine.

Action: Verify that a file is not trying to obtain multiple locks and that the file is holding a lock when attempting to release the lock.

DIA-48110: error encountered while attempting to get a file lock [string] [string]

Cause: There was an error encountered while trying to get a file lock.

Action: Check the state of the file and operating system.

DIA-48111: error encountered while attempting to release a file lock [string]

Cause: There was an error encountered while trying to release a file lock.

Action: Check the state of the file and operating system.

DIA-48112: invalid flags for open file, string

Cause: Invalid flags were passed in to the open file routine.

Action: Check to see if the flags are a valid combination.

DIA-48113: unable to write to stream file because of out of space condition

Cause: The system is unable to write the requested number of bytes to a stream file. This is due to an out of space condition. The additional information shows how many bytes were not written.

Action: Check that there is enough space left on the device to write the requested number of bytes.

DIA-48114: error encountered when attempting to close a file

Cause: There was an error encountered when attempting to close a file with the ADR file interface.

Action: Check the validity of the file descriptor.

DIA-48115: error encountered while seeking a file position

Cause: There was an error encountered while seeking a position in a file.

Action: Check that the requested file position falls within the file boundaries.

DIA-48116: error encountered when attempting to create a directory [string]

Cause: There was an error encountered when attempting to create a directory.

Action: Check the directory name.

DIA-48117: error encountered when attempting to remove a directory [string]

Cause: There was an error encountered when attempting to remove a directory.

Action: Check the directory name.

DIA-48118: error encountered with list directory [string]

Cause: There was an error with listing the elements of a directory.

Action: Check the state of the operating system.

DIA-48119: error encountered when attempting to remove a file [string] [string]

Cause: There was an error encountered when attempting to remove a file with the ADR file interface.

Action: Check the directory name and file name.

DIA-48120: error encountered when attempting to retrieve the file size [string] [string]

Cause: There was an error encountered when attempting to retrieve the file size with the ADR file interface.

Action: Check the directory name and file name.

DIA-48121: error with opening the ADR stream file [string] [string]

Cause: An error was encountered when attempting to open an ADR stream file.

Action: Check the rest of the error stack for details of the actual error that was encountered.

DIA-48122: error with opening the ADR block file [string] [string]

Cause: An error was encountered when attempting to open an ADR block file.

Action: Check the rest of the error stack for details of the actual error that was encountered.

DIA-48123: error encountered when attempting to flush a file

Cause: There was an error encountered when attempting to flush a file with the ADR file interface.

Action: Check the state of the file.

DIA-48124: device full encountered during write to a file

Cause: The device full error was encountered during the write to a file.

Action: Check the amount of free space on the device.

DIA-48125: illegal identifier length, argn:string, len:string, lim:string

Cause: An input identifier was passed in that has a length that is greater than the max length.

Action: Make sure the input identifier has a length that is less than the max length.

DIA-48126: attempting to create a file that already exists

Cause: The client attempted to create a file that already exists.

Action: Either remove the file or check if it is okay if the file already exists.

DIA-48127: attempting to open a file that does not exist

Cause: An attempt was made to open a file that does not exist.

Action: Either create the file or check why the file does not exist.

DIA-48128: opening of a symbolic link is disallowed

Cause: An error was encountered when attempting to open a file that is a symbolic link. Users are not allowed to open symbolic links.

Action: Check the specified file name.

DIA-48129: invalid input for the full path specification

Cause: Input was incorrectly specified for the full path specification, or the default extension may have been incorrectly specified. Or an empty string was passed in for the full path.

Action: Check that the full path string is non-NULL. If you want to specify a relative path from ADR Home for the full path specification, then use '<ADR_HOME>' instead of the actual path to ADR Home. For ADR Base, use '<ADR_BASE>'.

DIA-48130: invalid lock parameters for get file lock [string]

Cause: Invalid lock parameters passed in for the get file lock routine. The user must pass in file as the lock type. Or, there is a lock mode mismatch. Exclusive locks are not allowed in read-only mode, and shared locks are not allowed in write-only mode.

Action: Check that correct lock type is specified and that the correct lock mode is requested for the file given its open flags.

DIA-48131: error encountered when attempting to tell the file position

Cause: An error was encountered when attempting to tell the file position using the ADR file interface.

Action: Check the directory and file name of the file along with the open state.

DIA-48132: requested file lock is busy, [string] [string]

Cause: The requested file lock is busy because another process is holding the file lock.

Action: Try to get the file lock again at a later time.

DIA-48133: file descriptor has already been opened [string] [string]

Cause: The specified file descriptor has already been opened.

Action: Do not open a file that has previously been opened, or check your code to make sure you are cleaning up a file descriptor that is being reused correctly.

DIA-48134: invalid file descriptor state for operation, string, string, string

Cause: The state of the file descriptor was invalid for the requested operation. An example is that a file was opened for read, but a write operation to the file was requested.

Action: Check the state of the file descriptor and make sure it matches the operation.

DIA-48135: uninitialized file descriptor

Cause: The specified file descriptor is uninitialized.

Action: Make sure the file descriptor is initialized before passing it into the routine.

DIA-48136: directory already exists [string]

Cause: Operation failed because the specified directory already exists.

Action: Remove the directory or ignore this error.

DIA-48137: uninitialized file handle

Cause: The specified file handle is uninitialized.

Action: Make sure the file handle is initialized before passing it into the routine.

DIA-48138: invalid directory name input for client address

Cause: An invalid directory name was specified as part of the address path specification.

Action: Check that the directory name is non-NULL and that the directory name length does not exceed the maximum length.

DIA-48139: invalid input to ADR initialization routine

Cause: There was an invalid input to the ADR initialization routine.

Action: Check the length of the ADR base, product ID, and instance ID input arguments.

DIA-48140: the specified ADR Base directory does not exist [string]

Cause: The specified ADR Base Directory does not exist.

Action: Check that the specified ADR Base Directory is a valid path name and that the directory exists.

DIA-48141: error creating directory during ADR initialization [string]

Cause: Error encountered when creating a directory during the initialization of the ADR subsystem.

Action: Check the input arguments to the ADR initialization routine and the state of the operating system.

DIA-48142: invalid permissions input for change permissions

Cause: Invalid permissions passed into change permissions routine.

Action: Check the value of the permissions input.

DIA-48143: error changing permissions for a file

Cause: Error encountered while changing the permissions for a file

Action: Check the specified directory and file and the state of the operating system.

DIA-48144: error encountered while performing standard file I/O

Cause: Error encountered while performing standard file I/O

Action: Check the validity of standard in, out, and error.

DIA-48145: invalid seek location, [string], [string]

Cause: Invalid seek location specified for routine.

Action: Check the validity of specified seek location.

DIA-48146: missing read, write, or exec permission on directory during ADR initialization [string] [string]

Cause: Error encountered when checking if the process has read, write, and exec privileges on directories needed by the ADR subsystem. This error occurs during the initialization of the ADR subsystem.

Action: Check the input arguments to the ADR initialization routine and the state of the operating system. Ensure that the user has the proper permissions on the ADR directories.

DIA-48147: invalid home location specification for ADR, [string], [string], [string]

Cause: Invalid read or write home location specification for ADR.

Action: An invalid home was specified for the ADR Read or Write Home location.

DIA-48148: error encountered when attempting to move a file

Cause: There was an error encountered when attempting to move a file with the ADR file interface.

Action: Check the directory name and file name.

DIA-48149: error encountered when attempting to copy a file

Cause: There was an error encountered when attempting to copy a file with the ADR file interface.

Action: Check the directory name and file name.

DIA-48150: error encountered with set current working directory

Cause: There was an error with setting the current working directory.

Action: Check the path used, or the state of the operating system.

DIA-48151: error getting operating system time for a file

Cause: Error encountered while getting the operating system time for a file.

Action: Check the specified directory and file and the state of the operating system.

DIA-48152: lock table is full

Cause: Lock table is full - too many locks granted

Action: Try again later

DIA-48153: error encountered when getting ADR base directory default

Cause: There was an error encountered when attempting to get the ADR base directory default value.

Action: Check your environment to see if the \$ORACLE_BASE and \$ORACLE_HOME environment variables are set.

DIA-48154: reached end of file for alert log

Cause: The end of file was reached for reading the Alert Log. There are no more messages to read in the Alert Log.

Action: Do not read from the Alert Log

DIA-48155: error encountered when read alert log [string]

Cause: There was an error encountered when attempting to read a message from the Alert Log.

Action: Check the error message and the contents of the alert message.

DIA-48156: Alert log purge has occurred - retry operation

Cause: The purge of the alert log has occurred.

Action: Retry the operation.

DIA-48157: null input to ADR initialization

Cause: There was a null input to the ADR initialization routine.

Action: Check the ADR base, product ID, and instance ID input arguments.

DIA-48158: invalid input for ADR base directory

Cause: An invalid input was passed in for the ADR base directory name. The ADR base directory name is either NULL or too long of a string.

Action: Check the ADR base directory input argument.

DIA-48159: invalid input for ADR product type

Cause: An invalid input was passed in for the ADR product type. The ADR product type is out of bounds.

Action: Check the ADR product type input argument.

DIA-48160: invalid input for ADR product id

Cause: An invalid input was passed in for the ADR product id. The ADR product id is either NULL or too long of a string.

Action: Check the ADR product id input argument.

DIA-48161: invalid input for ADR instance id

Cause: An invalid input was passed in for the ADR instance id. The ADR instance id is either NULL or too long of a string.

Action: Check the ADR instance id input argument.

DIA-48162: string buffer too small to hold input, [string], [string], [string]

Cause: The string buffer is too small to copy an input string into.

Action: Check the size of the string buffer and the input string. Look in the argument for the location in the code where the error occurs.

DIA-48163: error concatenating directory onto path, [string], [string], [string]

Cause: Error encountered while concatenating a directory onto a path name.

Action: Check the error returned by the OS and the size of the input and output buffers.

DIA-48164: error concatenating file onto path, [string], [string], [string]

Cause: Error encountered while concatenating a directory onto a path name.

Action: Check the error returned by the OS and the size of the input and output buffers.

DIA-48165: user missing read, write, or exec permission on specified ADR Base directory [string]

Cause: The specified ADR Base Directory does not have the correct permissions.

Action: Check the read, write, and exec permissions on the specified ADR Base Directory

DIA-48166: error with opening ADR block file because file does not exist [string] [string]

Cause: An error was encountered with opening an ADR block file because the file does not exist.

Action: Check the existence of the ADR Block File.

DIA-48167: invalid argument for checking ADR initialization

Cause: Invalid arguments were specified for the routine to check ADR initialization.

Action: Check the inputs to the ADR initialization routine.

DIA-48168: the ADR sub-system is not initialized

Cause: The ADR subsystem has not been initialized. The requested operation cannot be performed.

Action: Check the usage of the call to the ADR services. The ADR sub-system must be initialized for the call to work.

DIA-48169: incorrect arguments to ADR deferred initialization

Cause: There are incorrect arguments to the ADR deferred initialization.

Action: Check the input arguments. It could be possible that the product is not set up for deferred initialization.

DIA-48170: unable to lock file - already in use

Cause: the file is locked by another process, indicating that it is currently in use by another process

Action: determine which process legitimately owns this file.

DIA-48171: unable to get share lock - file not readable

Cause: share lock request was made on a file not open for read access.

Action: file must be open read-only or read-write to get a share lock.

DIA-48172: unable to find a valid ADR base

Cause: Unable to find a valid ADR base. We tried the ORACLE_BASE, ORACLE_HOME, home, and tmp directories, but none of the directories exist for read/write access.

Action: Check the validity of the ORACLE_BASE, ORACLE_HOME, home, and tmp directories.

DIA-48173: error checking directory existence during ADR initialization [string]

Cause: Error encountered when checking directory existence during the initialization of the ADR subsystem. Either the diag or product type directory does not exist underneath the ADR base.

Action: The directory in the error message must exist in order for ADR initialization to succeed. Make sure the directories exist.

DIA-48174: error encountered with get current working directory

Cause: There was an error with getting the current working directory.

Action: Check the state of the operating system or the size of the path buffer.

DIA-48175: the path name must not contain the string '..'.

Cause: The specified path name contains '..'.

Action: Correct the path name and retry the operation.

DIA-48176: error translating a path name into its full path name

Cause: An error was encountered when translating a path name into its full path name.

Action: Check the inputted path name to make sure it is a valid relative path.

DIA-48177: file name with full path information [string] not allowed

Cause: Input was incorrectly specified for the file name. The inputted file name is greater than the maximum length, or the file name has path information. In this case, the file name should not have any path information. The path information should be specified in a separate argument.

Action: Check that the string for the file name is not too long and does not have path information.

DIA-48178: error encountered while reading an ADR block file during ADR initialization [string]

Cause: An error was encountered while reading an ADR block file during the initialization of the ADR subsystem.

Action: Check the state of the file system.

DIA-48179: OS file synchronization failure

Cause: OS command to synchronize the changes to a file with the operating system failed.

Action: Check the state of the file system and the amount of free space left on your device.

DIA-48180: OS open system call failure

Cause: OS open system call failed. The system failed to open or create a file in the requested mode.

Action: Check the OS error code

DIA-48181: OS write system call failure

-
- Cause:** OS write system call failed. The system failed to write to a file.
Action: Check the OS error code
- DIA-48182: OS read system call failure**
Cause: OS read system call failed. The system failed to read to a file.
Action: Check the OS error code
- DIA-48183: OS close system call failure**
Cause: OS close system call failed. The system failed to close a file.
Action: Check the OS error code
- DIA-48184: OS seek system call failure**
Cause: OS seek system call failed. The system failed to seek to a position in a file.
Action: Check the OS error code
- DIA-48185: OS file size system call failure**
Cause: OS file size call failed. The system failed to retrieve the file size for a file.
Action: Check the OS error code
- DIA-48186: OS check file exists system call failure**
Cause: OS check file exists system call failed. The system failed to perform the check file exists command for a file.
Action: Check the OS error code
- DIA-48187: specified directory does not exist**
Cause: The specified directory does not exist.
Action: Check the directory name.
- DIA-48188: user missing read, write, or exec permission on specified directory**
Cause: The user does not have valid permissions on the specified directory. The user is missing either the read, write, or execute permission.
Action: Check the permissions of the specified directory.
- DIA-48189: OS command to create directory failed**
Cause: The OS command to create a directory failed.
Action: Check the error number associated with the create directory failure.
- DIA-48190: OS unlink system call failure**
Cause: OS unlink system call failed. The system failed to perform unlink on the specified file.
Action: Check the OS error code
- DIA-48191: user missing read or write permission on specified file**
Cause: The user does not have valid permissions on the specified file. The user is missing either the read or write permission.
Action: Check the permissions of the specified file.
- DIA-48192: OS command to move a file failed**
Cause: The OS command to move a file failed.
Action: Check the error number associated with the move file.

DIA-48193: OS command to open a directory failed

Cause: The OS command to open a directory failed.

Action: Check the OS error associated with the open directory failure.

DIA-48194: OS command to close a directory failed

Cause: The OS command to close a directory failed.

Action: Check the OS error associated with the close directory failure.

DIA-48195: OS command to remove a directory failed

Cause: The OS command to remove a directory failed.

Action: Check the OS error associated with the remove directory failure.

DIA-48196: OS command to release advisory lock failed

Cause: The OS command to release the advisory lock failed

Action: Check the OS error associated with the release advisory lock failure.

DIA-48197: OS command to get the file status failed

Cause: The OS command to get the file status failed. This could be because the file is not open or file descriptor is invalid.

Action: Check the OS error associated with the get file status failure.

DIA-48198: OS command to change the file permissions failed

Cause: The OS command to change the file permissions failed.

Action: Check the OS error associated with the failure.

DIA-48199: OS command to copy a file failed

Cause: The OS command to copy a file failed.

Action: Check the error number associated with the copy file.

DIA-48200: Illegal Input Argument [*string*]

Cause: An illegal argument was passed in.

Action: Fix the call.

DIA-48201: Field Length Exceeds Maximum [*string*] [*string*] [*string*]

Cause: An illegal field length was used.

Action: Fix the call.

DIA-48202: Illegal Identifier [*string*] [*string*]

Cause: Illegal identifier specified.

Action: Use a valid identifier.

DIA-48203: Illegal Data Type [*string*]

Cause: Illegal data type specified.

Action: Use a valid data type.

DIA-48204: Illegal Identifier Length [*string*] [*string*] [*string*]

Cause: The input identifier is too long.

Action: Specify a shorter identifier.

DIA-48205: Record Length too Big [*string*] [*string*] [*string*]

-
- Cause:** The sum of the maximum lengths of all fields exceeds the maximum record length that is supported.
- Action:** Remove or shorten some of the fields.
- DIA-48206: Illegal Number of Fields** [*string*] [*string*] [*string*]
- Cause:** The number of fields specified exceeds the supported maximum.
- Action:** Remove some of the fields in the relation.
- DIA-48207: Illegal Field Name** [*string*]
- Cause:** The field name is invalid.
- Action:** Specify a valid field name.
- DIA-48208: Duplicate Field Names** [*string*]
- Cause:** The list of fields specified contains a duplicate field.
- Action:** Remove the duplicate field.
- DIA-48209: Relation Already Exists**
- Cause:** The relation already exists.
- Action:** Remove the relation.
- DIA-48210: Relation Not Found**
- Cause:** The relation was not found.
- Action:** Either specify a valid relation name or create one with that name.
- DIA-48211: Illegal Access Mode** [*string*] [*string*]
- Cause:** The supplied access mode is not recognized.
- Action:** Supply a valid mode.
- DIA-48212: Open Record Access Not Done**
- Cause:** The open record access call was not performed.
- Action:** The open record access call is required before attempting this call.
- DIA-48213: Incorrect Access Mode for Operation** [*string*] [*string*]
- Cause:** The relation was opened in a mode not compatible with the attempted operation being done.
- Action:** Reopen the relation in the correct mode.
- DIA-48214: Sequence Overflow** [*string*] [*string*] [*string*]
- Cause:** The sequence number will exceed the system maximum.
- Action:** Reset the sequence number.
- DIA-48215: Sequence Invalid Operation** [*string*] [*string*]
- Cause:** The specified sequence operation is not valid.
- Action:** Specify a valid operation.
- DIA-48216: Field Len Exceeds Max Field Length** [*string*] [*string*] [*string*] [*string*]
- Cause:** The field length specified exceeds the defined maximum for the field.
- Action:** Supply a smaller field length.
- DIA-48217: Out of Space on Device**
- Cause:** The storage subsystem is out of space.

Action: Add more space to the storage subsystem.

DIA-48218: Duplicate Key Name [*string*] [*string*]

Cause: The key name already exists.

Action: Specify a different key name.

DIA-48219: Key Name Doesn't Match Any Existing Key

Cause: The key name provided doesn't match an existing key.

Action: Specify a key name that exists.

DIA-48220: Too Many Keys Defined [*string*] [*string*]

Cause: A key is trying to be created that exceeds the maximum number of keys supported.

Action: Drop another key.

DIA-48221: Key Exceeds Maximum Allowed Length [*string*] [*string*] [*string*]

Cause: The sum of the lengths of the fields in the key exceeds the maximum length supported.

Action: Remove one or more fields from the key.

DIA-48222: Predicates/Order By Not Allowed

Cause: A predicate or order by can not be added after fetch has started.

Action: Put the predicate or order by call before the first fetch.

DIA-48223: Interrupt Requested - Fetch Aborted - Return Code [*string*] [*string*]

Cause: User interrupt has occurred.

Action: None

DIA-48224: DDL has occurred since parse - reparse [*string*] [*string*] [*string*]

Cause: Another session has performed a DDL (i.e. add field, create key, drop key) that prevents this session from being to continue.

Action: Call open record access again.

DIA-48225: No More Space in Order By Buffer

Cause: The order by buffer size is not sufficient for the number of rows.

Action: Increase the order by buffer size specified.

DIA-48226: No Fetch in Progress

Cause: An attempt to perform update or delete has occurred without a fetch.

Action: You must first perform a fetch.

DIA-48227: Invalid Relation File - [*string*] [*string*] [*string*] [*string*]

Cause: The AMS file is invalid or corrupt.

Action: Do a repair relation

DIA-48228: Missing Define Call [*string*]
